- *Step 4:* Determine prospective HCC risk score growth for each Medicare enrollment type. Prospective HCC risk score growth would be measured as the ratio of the ACO's performance year prospective HCC risk score for that enrollment type to the ACO's BY3 prospective HCC risk score for that enrollment type. Before calculating

these prospective HCC risk ratios, the prospective HCC risk scores for each enrollment type for each year would be renormalized by dividing by the national mean prospective HCC risk score for that enrollment type for that year.

- *Step 5:* Calculate the aggregate growth in prospective HCC risk scores by calculating the dollar-weighted average prospective HCC risk ratio across the four enrollment types to obtain a single aggregate dollar-weighted average prospective HCC risk ratio, using the same dollar weights and the same approach described in Step 2.

- *Step 6:* Determine if the ACO will be subject to the cap. If the ACO's aggregate dollar-weighted average prospective HCC risk ratio determined in Step 5 is less than the aggregate cap determined in Step 3, no cap would apply to the prospective HCC risk ratio for any enrollment type, even if the prospective HCC risk ratio for a given enrollment type is higher than the aggregate cap. If the ACO's aggregate dollar-weighted average prospective HCC risk ratio determined in Step 5 is greater than or equal to the aggregate cap determined in Step 3, proceed to Step 7.

- *Step 7:* Compare the prospective HCC risk ratio for each enrollment type calculated in Step 4 to the aggregate cap determined in Step 3. If the prospective HCC risk ratio for a given enrollment type is greater than the aggregate cap, the prospective HCC risk ratio for that enrollment type would be set equal to the aggregate cap. If the prospective HCC risk ratio for a given enrollment type is less than or equal to the aggregate cap, no cap would apply to the prospective HCC risk ratio for that enrollment type.

The resulting prospective HCC risk ratios would then be multiplied by the ACO's historical benchmark expenditures for the relevant Medicare enrollment type at the time of reconciliation for a performance year to account for changes in severity and case mix for the ACO's assigned beneficiary population between BY3 and the performance year.

Table 63 provides a numeric example of this proposed methodology for a hypothetical ACO that is determined to be subject to the cap:

²⁶⁷ CMS. Accountable Care Organization (ACO) Realizing Equity, Access, and Community Health (REACH) Model. February 24, 2022. Available at <https://www.cms.gov/newsroom/fact-sheets/accountable-care-organization-aco-realizing-equity-access-and-community-health-reach-model>.

²⁶⁸ Refer to the Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications (version #7, February 2019), section 3.4.2, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/Shared-Savings-Losses-Assignment-Spec-V7.pdf>.

TABLE 63: Example of Risk Score Calculation for Hypothetical ACO Subject to Proposed Cap

Medicare Enrollment Type	Dollar Weights	Demographic Risk Ratio	Aggregate Cap	Prospective HCC Risk Ratio (Before Cap)	Is ACO Subject to Cap?	Prospective HCC Risk Ratio (After Cap, if Applicable)
ESRD	0.050	1.035		0.980		0.980
Disabled	0.075	1.020		1.050		1.050
Aged/dual	0.080	0.990		1.089		1.056
Aged/non-dual	0.795	1.030		1.076		1.056
Weighted Average		1.026	1.056	1.070	Yes	

For this hypothetical ACO, the dollar-weighted average demographic risk ratio is 1.026, meaning that demographic risk score growth averaged across the four enrollment types was 2.6 percent from BY3 to the performance year for the ACO's assigned beneficiaries, when measured against national mean risk score growth. To calculate the cap, we would add 0.03 to this value, arriving at an aggregate cap of 1.056. This ACO is determined to be subject to the cap because its dollar-weighted average prospective HCC risk ratio of 1.070 was higher than the aggregate cap. When

comparing the aggregate cap to the prospective HCC risk ratio for each individual enrollment type, risk score growth for both the aged/dual eligible and aged/non-dual eligible enrollment types would be constrained by the cap. In this example, the aggregate cap that is ultimately applied is higher than the current 3 percent cap, meaning that this hypothetical ACO would benefit from the proposed policy relative to the current policy.

In the second numeric example described in Table 64, the ACO's aggregate demographic risk ratio is less than 1 and its aggregate cap of 1.028 is

less than the current effective risk score cap of 1.030. In this case, the ACO's dollar-weighted average prospective HCC risk ratio of 1.013 is below the aggregate cap meaning that no cap would be applied to the prospective HCC risk score growth for any enrollment type, even though the ACO's ESRD, disabled, and aged/dual eligible populations all have prospective HCC risk ratios above the aggregate cap. This ACO would also benefit from the proposed policy relative to the current policy, with its benefit solely stemming from the use of an aggregate cap.

TABLE 64: Example of Calculation for a Hypothetical ACO Not Subject to Proposed Cap

Medicare Enrollment Type	Dollar Weights	Demographic Risk Ratio	Aggregate Cap	Prospective HCC Risk Ratio (Before Cap)	Is ACO Subject to Cap?	Prospective HCC Risk Ratio (After Cap, if Applicable)
ESRD	0.041	1.046		1.051		1.051
Disabled	0.098	1.027		1.032		1.032
Aged/dual	0.139	1.023		1.047		1.047
Aged/non-dual	0.722	0.986		1.002		1.002
Weighted Average		0.998	1.028	1.013	No	

While the examples above show ACOs that would benefit from the proposed risk adjustment policy relative to the current policy, there are ACOs that would receive a lower updated benchmark under this proposed policy, all else being equal. Namely, ACOs with a dollar-weighted average demographic risk ratio less than 1 found to be subject to the aggregate cap (which by default, will be less than 1.030) will have their upward risk score growth constrained more by the proposed aggregate cap than the existing 3 percent cap.

We simulated the impact of this proposed policy change using

performance year 2020 financial reconciliation data from ACOs in agreement periods beginning on or after July 1, 2019. This simulation found that 45 percent of ACOs would have had a higher updated benchmark with the proposed policy compared to the current policy, 5 percent would have had a lower updated benchmark with the proposed policy, and 50 percent would have been unaffected (that is, because they were not subject to any cap under either policy). Fifty-three ACOs had their prospective HCC risk ratio capped for at least one Medicare

enrollment type under the proposed policy, compared to 177 ACOs under the current policy. Among ACOs that were capped under the current policy but not the proposed policy, many had prospective HCC risk score growth above 1.030 for one or more of the typically smaller enrollment types (that is, ESRD, disabled, aged/dual eligible) but not for their aged/non-dual eligible population. Table 65 illustrates that 47 percent of ACOs were subject to the current 3 percent cap imposed at the enrollment type level for one or more of the ESRD, disabled or aged/dual eligible

enrollment types versus 17 percent for aged/non-dual eligible. Under the

proposed policy, the share would fall to 14 percent for both groups.

TABLE 65: Share of ACOs Subject to Actual or Proposed Risk Score Cap by Enrollment Type

	ESRD	Disabled	Aged/dual	ESRD, disabled and/or aged/dual	Aged/non-dual
Capped under Current Policy (Actual)	22%	22%	23%	47%	17%
Capped under Proposed Policy (Simulated)	5%	10%	10%	14%	14%

Based on this modeling, we believe that a significant share of ACOs would either be unaffected by or benefit from the proposed policy, especially those with increases in health risk as measured by demographic risk ratios, while a small share would do worse, likely reflecting decreases in health risk for their assigned beneficiary population as measured by demographic risk ratios. Additionally, ACOs would be much less likely to have prospective HCC risk ratios for ESRD, disabled, and aged/dual eligible Medicare enrollment types capped under this proposed policy which would improve the incentives for treating these medically complex, high cost populations. At the same time, we believe that this proposed policy would continue to be protective of the Trust Funds by continuing to limit incentives for coding intensity, as it would retain the 3 percent cap on growth in prospective HCC risk scores after accounting for all changes in demographic risk scores for the ACO's assigned beneficiary population.

Under the second option that we considered, we would continue to employ a fixed 3 percent cap on positive adjustments to prospective HCC risk scores, but we would apply the cap at the aggregate level. Specifically, the current 3 percent cap on risk score growth would apply in aggregate across the four Medicare enrollment types (ESRD, disabled, aged/dual eligible, and aged/non-dual eligible) instead of being applied separately for the population of beneficiaries in each Medicare enrollment type. We would only apply the current 3 percent cap on risk score growth for a particular enrollment type if the ACO's aggregate growth in prospective HCC risk scores, calculated as the dollar-weighted average growth in prospective HCC risk scores across the four enrollment types, exceeds the value of the cap.

One advantage of this second, alternative option over the proposed approach, which allows aggregate prospective HCC risk score growth above 3 percent when aggregate

demographic risk score growth is positive, is that no ACOs would receive a lower updated benchmark under this methodology compared to the current approach. However, according to our simulations using performance year 2020 financial reconciliation data from ACOs in agreement periods beginning on or after July 1, 2019, while around 5 percent of ACOs would have had higher benchmarks under this second, alternative approach compared to the proposed approach, around 12 percent would have had lower benchmarks under this approach compared to the proposed approach. Thus, we believe that this second, alternative approach would, in aggregate, be less advantageous to ACOs than the proposed approach.

Under the third option that we considered, which we also described in the CY 2022 PFS proposed rule (86 FR 39294), we would allow the cap on an ACO's risk score growth to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO's regional service area. The percentage applied would be equal to 1 minus the ACO's regional market share. For example, if regional risk score growth for a particular enrollment type was 5 percent and the ACO's regional market share was 20 percent, we would increase the cap on the ACO's risk score growth for that enrollment type by an amount equal to the difference between the regional risk score growth and the existing cap (2 percent) multiplied by one minus the ACO's regional market share (80 percent). Thus, the ACO would face a cap for this enrollment type equal to 4.6 percent instead of 3 percent (3 percent + (2 percent × 80 percent)). This approach would raise the existing cap while limiting the ability for ACOs with high penetration in their regional service areas to increase their cap by engaging in coding intensity initiatives that significantly raise their regions' prospective HCC risk scores. While this third, alternative option could potentially mitigate concerns raised by

some commenters about the impacts of regional prospective HCC risk score growth, modeling suggested that relatively fewer ACOs would benefit under this alternative approach as compared to the proposed methodology incorporating demographic risk score growth. A key reason for this is that a relatively small share of ACOs affected by the existing 3 percent cap on risk score growth operated in regional service areas where regional risk score growth was greater than 3 percent.

Furthermore, we still have concerns that allowing the cap on an ACO's risk score growth to increase with regional risk score growth could incentivize ACOs, particularly those highly penetrated in their regional service areas, to engage in coding behavior that would increase their cap, even if this incentive would be mitigated to some degree by limiting the allowable increase in the cap based on the ACO's market share. We believe that our proposed methodology would avoid this undesired incentive while still accounting for changes in health risk for an ACO's assigned beneficiary population to a greater extent than the current policy and would also help to address cases where regional risk score growth stems from higher volatility due to small sample sizes or shifting demographics within a regional service area.

Our modeling suggests that a majority of ACOs that operate in regions with risk score growth in excess of 3 percent for at least one Medicare enrollment type would have had a higher updated benchmark under the proposed policy than the current policy. In addition, we believe that our proposal to incorporate a prospective, external factor in the growth rates used to update the historical benchmark (see section III.G.5.c.(3) of this proposed rule) would further help to mitigate concerns raised by some commenters about the impacts of regional risk score growth, by decreasing the weight placed on the two-way blend of national and regional growth rates when updating an ACO's

historical benchmark for each performance year in the ACO's agreement period.

Although requested by some commenters, we decline to consider an approach that would limit the impact of prospective HCC risk score decreases at this time. As we have described in past rulemaking (83 FR 68011), we remain concerned that such approach would encourage favorable risk selection. If ACOs seek to attract low-cost beneficiaries or avoid high-cost beneficiaries, they could lower their performance year expenditures without any corresponding adjustment to their benchmark due to the cap on negative prospective HCC risk adjustments. We continue to believe that this effect would be detrimental to medically complex patients, who may miss the opportunity to receive better coordinated care through an ACO, as well as to the Medicare Trust Funds. We also decline to consider an approach that would impose a direct cap on risk score growth in an ACO's regional service area, as requested by some commenters as we are concerned that such an approach would create adverse incentives for coding behavior, especially for ACOs that are highly penetrated in their regional service areas. Currently, ACOs that are highly penetrated in their regional service area have a disincentive to engage in coding initiatives, as it could increase risk score growth in their regional service area and potentially decrease the value of the regional component of their update factor. Capping risk score growth in an ACO's regional service area could change the incentives and encourage ACOs to engage in coding initiatives.

We propose to revise the regulations governing risk adjustment under the BASIC track and the ENHANCED track at § 425.605(a)(1) and § 425.610(a)(2), respectively, to reflect the proposed modifications to the risk adjustment methodology.

We seek comment on the proposed changes to the risk adjustment methodology for agreement periods beginning on or after January 1, 2024. While we believe that the modifications that we are proposing to the program's risk adjustment methodology in conjunction with other policies we are proposing in this proposed rule would provide the best balance between addressing concerns raised by interested parties and limiting incentives for coding intensity and risk selection, we also seek comment on the two alternatives considered. We will consider the comments received on these alternative options along with the comments on our proposed changes to

the risk adjustment methodology, and may consider adopting one of these alternatives in place of the proposed approach if we conclude that it would better address the concerns with the current risk adjustment methodology.

f. Increased Opportunities for Low Revenue ACOs to Share in Savings

(1) Background

In the November 2011 final rule (76 FR 67927 through 67929), we explained that a goal of the Shared Savings Program is to use a portion of the savings (the difference between the ACO's actual expenditures and the benchmark) to encourage and reward participating ACOs for coordinating the care for an assigned beneficiary population in a way that controls the growth in Medicare expenditures for that patient population while also meeting the established quality performance standards. However, we also acknowledged that observed savings can also occur as a result of normal year-to-year variations in Medicare beneficiaries' claims expenditures in addition to the ACO's activities. Thus, even if an ACO engages in no activities to improve the quality and efficiency of the services it delivers, in certain cases, differences between the benchmark expenditures and assigned patients' expenditures would be observed during some performance periods merely because of such normal variation. Consequently, section 1899(d)(1)(B)(i) of the Act requires us to specify an MSR to account for the normal variation in expenditures, based upon the number of Medicare FFS beneficiaries assigned to the ACO. As we stated in the November 2011 final rule, the MSR should be set in a way that gives us some assurance that the ACO's performance is a result of its interventions, not normal variation in expenditures. However, we also do not want an outcome where savings that have been earned are not recognized.

Establishing an MSR on the basis of standard inferential statistics that take into account the size of an ACO's beneficiary population provides confidence that, once the savings achieved by the ACO exceed the MSR, the change in expenditures represents actual performance improvements by the ACO as opposed to normal variations. There are several policy implications associated with the methodology used to set the MSR. A higher MSR would provide greater confidence that the shared savings amounts reflect real quality and efficiency gains, and offer greater protection to the Medicare Trust Funds.

However, due to the larger barrier to achieving savings, a higher MSR could also discourage potentially successful ACOs, especially physician-organized ACOs and smaller ACOs in rural areas, from participating in the program. In contrast, a lower MSR would encourage more potential ACOs to participate in the program, but would also provide less confidence that shared saving amounts are a result of improvements in quality and efficiency made by an ACO. In the original rulemaking establishing the Shared Savings Program, we stated that we believed that the most appropriate policy concerning determination of the "appropriate percent" for the MSR would achieve a balance between the advantages of making incentives and rewards available to successful ACOs and prudent stewardship of the Medicare Trust Funds. In the November 2011 final rule, we finalized an approach wherein the MSR and MLR are calculated as a percentage of the ACO's updated historical benchmark (see §§ 425.604(b) (Track 1), 425.606(b) (Track 2)).

In the June 2015 final rule, we finalized an approach to offer Track 2 ACOs and ACOs in the new Track 3 (subsequently renamed the ENHANCED track) the opportunity to select the MSR/MLR that will apply for the duration of the ACO's 3-year agreement period from several symmetrical MSR/MLR options (80 FR 32769 through 32771, and 80 FR 32779 and 32780; §§ 425.606(b)(1)(ii) and 425.610(b)(1)). We explained our belief that offering ACOs a choice of MSR/MLR will encourage ACOs to move to two-sided risk, and that ACOs are best positioned to determine the level of risk they are prepared to accept. For instance, ACOs that are more hesitant to enter a performance-based risk arrangement may choose a higher MSR/MLR, to have the protection of a higher threshold before the ACO would become liable to repay shared losses, thus mitigating downside risk, although the ACO would in turn be required to meet a higher threshold before being eligible to receive shared savings. ACOs that are comfortable with a lower threshold of protection from risk of shared losses may select a lower MSR/MLR to benefit from a corresponding lower threshold for eligibility for shared savings. We also explained our belief that applying the same MSR/MLR methodology in both of the risk-based tracks reduces complexity for CMS' operations and establishes more equal footing between the risk models. ACOs participating in the Track 1+ Model were also allowed

the same choice of MSR/MLR to be applied for the duration of the ACO's agreement period under the Track 1+ Model.²⁶⁹

ACOs applying to a two-sided model (Track 2, Track 3 or the Track 1+ Model) could select from the following options:

- Zero percent MSR/MLR.
- Symmetrical MSR/MLR in a 0.5 percent increment between 0.5–2.0 percent.
- Symmetrical MSR/MLR that varies based on the ACO's number of assigned beneficiaries according to the methodology established under § 425.604(b) for Track 1. The MSR is the same as the MSR that would apply in the one-sided model, and the MLR is equal to the negative MSR.

In the December 2018 final rule, we finalized policies governing the MSR/MLR for ACOs in the BASIC track at § 425.605(b). Under the final policies, ACOs in a one-sided model of the BASIC track's glide path have a variable MSR based on the number of beneficiaries assigned to the ACO

(§ 425.605(b)(1)). The variable MSR (ranging from 3.9 percent for ACOs with 5,000 assigned beneficiaries to 2.0 percent for ACOs with 60,000 or more assigned beneficiaries) is determined using the same methodology that was used for Track 1. ACOs in a two-sided model of the BASIC track are able to choose among the MSR/MLR options that are available to ACOs in the ENHANCED track. ACOs participating under Level A or B of the BASIC track's glide path will choose an MSR/MLR, ranging from zero to 2 percent (in 0.5 percent increments), or that is variable based on number of beneficiaries assigned to the ACO, before the start of their first performance year in a two-sided model (§ 425.605(b)(2)(i)). This selection will occur before the ACO enters Level C, D or E of the BASIC track's glide path, depending on whether the ACO is automatically transitioned to a two-sided model (Level C or E) or elects to more quickly transition to a two-sided model within the glide path (Level C, D, or E), and

will be in effect for the duration of the agreement period that the ACO is under two-sided risk (§ 425.605(b)(2)(ii)).

In addition to the MSR/MLR, we also use an ACO's quality score as part of the determination of eligibility for and calculation of shared savings and shared losses. In the CY 2021 PFS final rule, we adopted a new regulation at § 425.512(a) to reflect the new quality performance requirements under the Shared Savings Program for performance year 2021 and subsequent performance years. For performance years beginning on January 1, 2021, and subsequent performance years, if the ACO meets the quality performance standard established under § 425.512, the ACO will share in savings at the maximum sharing rate based on the ACO's track/level of participation (refer to Table 66). The final sharing rate is applied to an ACO's savings on a first dollar basis up to the applicable performance payment limit, expressed as a percentage of the ACO's updated benchmark.

TABLE 66: Maximum Sharing Rate by Track

	BASIC Track's Glide Path				ENHANCED Track (risk/reward)
	Level A & B (one-sided model)	Level C (risk/reward)	Level D (risk/reward)	Level E (risk/reward)	
Shared Savings (once MSR met or exceeded)*	1 st dollar savings at a rate of 40% if quality performance standard is met; not to exceed 10% of updated benchmark.	1 st dollar savings at a rate of 50% if quality performance standard is met; not to exceed 10% of updated benchmark.	1 st dollar savings at a rate of 50% if quality performance standard is met; not to exceed 10% of updated benchmark.	1 st dollar savings at a rate of 50% if quality performance standard is met; not to exceed 10% of updated benchmark.	1 st dollar savings at a rate of 75% if quality performance standard is met; not to exceed 20% of updated benchmark.

* For BASIC Track Levels A and B refer to § 425.605(d)(1)(i) and (d)(1)(ii), for Levels C, D, and E refer to § 425.605(d)(1)(iii)(A) and (B), (d)(1)(iv)(A) and (B), and (d)(1)(v)(A) and (B), and for the ENHANCED Track refer to § 425.610 (d) and (e).

As discussed in the November 2011 final rule and during subsequent rulemaking cycles, we have received comments from ACOs and other interested parties expressing concerns regarding the MSR/MLR methodology and proposing revisions. Commenters responding to the April 2011 proposed rule²⁷⁰ expressed concern that the proposed (and later finalized) methodology for establishing the MSR on a sliding scale based on population size would disadvantage smaller ACOs,

including ACOs likely to form in rural areas and those largely comprised of small- and medium-sized physician practices, and discourage their participation by setting too high a bar on shared savings (76 FR 67928 and 67929). Some commenters considered the potential long-term consequences of this dynamic, indicating it could ultimately result in diminished provider competition in some markets or stifle the development of innovative care coordination strategies. Further, as other

commenters indicated, smaller ACOs are likely to be in greatest need of additional capital to support start-up and operational expenses. Some commenters suggested that the MSRs that apply to smaller ACOs based on their number of assigned beneficiaries may make it impossible for these ACOs to ever share in savings.

Additionally, a number of commenters offered that other proposed policies under the Shared Savings Program, including, for example, the

²⁶⁹ Refer to the Medicare ACO Track 1+ Model Participation Agreement, section V, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>.

²⁷⁰ The proposed rule proposing the establishment of the Shared Savings Program entitled "Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations" appeared in the April 7, 2011 **Federal Register** (76

FR 19528) (herein referred to as the "April 2011 proposed rule").

rigorous quality performance standards and the requirement that all ACOs ultimately accept downside performance risk, are sufficient to ensure savings are a result of actions by ACOs and obviate the need for an MSR. One commenter suggested a blended approach such that if an ACO exceeds the 2 percent MSR, it would be eligible for a lower sharing rate, but would not receive the full sharing rate unless it exceeded its statistically adjusted MSR.

In the December 2018 final rule (83 FR 67924 through 67928), we summarized commenters' responses to the proposals described in August 2018 proposed rule related to the MSR and MLR. One commenter asked that CMS reconsider its proposals in order to "lessen restrictions and remove barriers to participation in risk sharing arrangements," but did not specify which aspects of the MSR/MLR proposals they believed to be restrictive or to create barriers. A number of commenters supported a combination of a lower MSR and higher sharing rates for low revenue ACOs participating in the BASIC track and offered several different alternatives. Commenters explained that combining a lower MSR and higher final sharing rate was necessary to ensure there are sufficient and attainable incentives to support ACOs' efforts to improve quality and lower cost, to provide early returns on investments as well as predictability of savings and the financial support ACOs need to ensure successful participation, and to incentivize low revenue and physician-led ACOs to participate in the

redesigned participation options under the Shared Savings Program.

While it remains important to ensure performance payments are not based on normal expenditure fluctuations, we believe modification to our MSR policy would provide payments to ACOs with the greatest need for shared savings, in particular smaller, rural ACOs which tend to be less capitalized, allowing for investments in care redesign and quality improvement activities. This modification would also align with the other changes we are proposing to the participation options and financial methodologies under the Shared Savings Program to encourage participation by new ACOs and ACOs that focus on underserved populations, such as the proposal to offer AIPs to new low revenue ACOs joining the BASIC track as described in section III.G.2. of this proposed rule.

(2) Proposed Revisions

We are proposing to use our authority under section 1899(i)(3) of the Act, for the use of other payment models, to expand the eligibility criteria to qualify for shared savings to enable certain low revenue ACOs participating in the BASIC track to share in savings even if the ACO does not meet the MSR as required under section 1899(d)(1)(B)(i) of the Act. Specifically, we are proposing to modify the relevant provisions of § 425.605 to specify that ACOs participating in the BASIC track that do not meet the MSR requirement, but do meet the quality performance standard or the proposed alternative quality performance standard under § 425.512 and otherwise maintain

eligibility to participate in the Shared Savings Program, would qualify for a shared savings payment if the following criteria are met:

- The ACO has average per capita Medicare Parts A and B fee-for-service expenditures below the updated benchmark.
- The ACO is a low revenue ACO as defined in § 425.20 at the time of financial reconciliation for the relevant performance year.
- The ACO has at least 5,000 assigned beneficiaries at the time of financial reconciliation for the relevant performance year.

Eligible ACOs that meet the quality performance standard required to share in savings at the maximum sharing rate would receive half of the maximum sharing rate for their level of participation (20 percent instead of 40 percent under Levels A and B, and 25 percent instead of 50 percent under Levels C, D, and E). For eligible ACOs that do not meet the quality performance standard required to share in savings at the maximum sharing rate but meet the proposed alternative quality performance standard, the sharing rate would be further adjusted according to the proposal described in section III.G.4.b. of this proposed rule, which would reinstate a sliding scale approach for determining shared savings. This calculation would use an ACO's quality performance score, which would reflect the inclusion of health equity adjustment bonus points as proposed in section III.G.4.b.(7) of this proposed rule, if finalized. A numerical example is provided in Table 67.

TABLE 67: Numerical Example of Proposed Modification to BASIC Track Sharing Rates for Eligible ACOs

Track	BASIC Track, Level E
Total Benchmark Expenditures	\$150,000,000
Total Performance Year Expenditures	\$149,850,000
Total Benchmark Expenditures minus Total Performance Year Expenditures (Savings)	\$150,000
Savings as a Percent of Benchmark	0.1%
Minimum Savings Rate	2%
Maximum Sharing Rate	50%
Health Equity Adjusted Quality Performance Score	45%
Met Criteria in Quality Performance Standard for Maximum Sharing Rate?	No
Met Quality Performance Standard for Scaled Sharing Rate?	Yes
Earned Performance Payment (before sequestration and application of shared savings limit)	
Current Policy	\$0
Proposed Policy	$(\frac{1}{2} * 50\%) * 45\% * \$150,000 = \$16,875$

This approach would apply to low revenue ACOs entering an agreement period in the BASIC track beginning January 1, 2024, and in subsequent years. High revenue ACOs in the BASIC track, ACOs below 5,000 assigned beneficiaries at the time of financial reconciliation, and ACOs in the ENHANCED track would not be eligible for this option. We are proposing that this policy would apply to all ACOs meeting the criteria, including new, renewing, and re-entering ACOs, in order to provide incentives both for new ACOs to join the Shared Savings Program and for existing ACOs to remain in the program. This differs from the proposed eligibility criteria for AIPs listed in section III.G.2.a.(2) of this proposed rule, which are limited to ACOs that are new to the Shared Savings Program with the intent of lowering barriers to entry. Although as described in section III.G.2.b.(2) of this proposed rule we are proposing to revise our regulations to permit otherwise eligible ACOs that are inexperienced with performance-based risk Medicare ACO initiatives to elect to participate in one, 5-year agreement period under a one-sided model of the BASIC track's glide path regardless of revenue status, we believe it would be appropriate to limit this proposed policy change to the low revenue ACOs in the BASIC track in order to direct the payments to ACOs with the greatest need for capital, in particular smaller, rural ACOs which tend to be less capitalized, allowing for investments in care redesign and quality improvement

activities. We do not believe it is necessary or appropriate to extend this opportunity to high revenue ACOs as these ACOs, which tend to include institutional providers and are typically larger and better capitalized, have the potential to exert more influence, direction, and coordination over the full continuum of care, and thus have a greater potential to achieve the level of savings necessary to meet the MSR. We believe that by retaining the requirement that high revenue ACOs meet or exceed their MSR, we will drive more meaningful systematic change by the ACOs that have the greatest potential to achieve significant change in spending. Furthermore, we note that our proposal to exclude ACOs with fewer than 5,000 assigned beneficiaries at the time of financial reconciliation aligns with the requirement under section 1899(b)(2)(D) of the Act and § 425.110 that an ACO have at least 5,000 assigned beneficiaries and guards against the heightened risk—absent an MSR—that any savings are the result of random variation.

We simulated the impact of this proposal using financial reconciliation data from performance years 2020, 2019, and 2019A.²⁷¹ There were 80, 109, and 60 positive within corridor ACOs (that is, ACOs that had performance year

²⁷¹ Performance year 2019 refers to both the 12-month performance year from January 1, 2019 through December 31, 2019 and the 6-month performance year from January 1, 2019 through June 30, 2019. Performance year 2019A refers to the 6-month performance year from July 2, 2019 through December 31, 2019.

expenditures below benchmark expenditures but did not meet the MSR and did not receive shared savings payments) in each year, respectively. Of these positive within corridor ACOs, 35 ACOs in 2020 and 2019 and 18 ACOs in 2019A would have met the criteria described in this section and received a shared savings payment under our proposed policy change. On average, the positive within corridor ACOs that would benefit from the proposed policy change had fewer assigned beneficiaries in all 3 performance years and a larger share of these ACOs were classified as rural in performance years 2020 and 2019.²⁷² We believe by offering additional opportunities for low revenue ACOs to share in savings, this proposed approach could increase participation in the Shared Savings Program by providing an incentive for new ACOs to join the program and for existing ACOs to remain in the program. In addition, this proposal would enable low revenue ACOs, which are most in need of additional capital, to make investments in care redesign and quality improvement activities, and would also recognize incremental improvements in care by ACOs that receive AIPs.

To exercise our authority under section 1899(i) of the Act, we must determine that a payment model under which certain low revenue ACOs participating in the BASIC track may

²⁷² For this analysis, ACOs were classified as rural if the plurality of their assigned beneficiaries resided in either micropolitan or noncore counties as defined by The United States Census Bureau and the Office of Management and Budget (OMB).

qualify for shared savings payments even when the MSR as required under 1899(d)(1)(B)(i) is not met, will improve the quality and efficiency of items and services furnished under the Medicare program, and that program expenditures under the alternative methodology would be equal to or lower than those that would result under the statutory payment model. By supporting expanded and sustained participation by ACOs in the Shared Savings Program, we believe this proposed approach would allow for lower growth in Medicare FFS expenditures. We also believe this proposed approach would lead to improvement in the quality of care furnished to Medicare FFS beneficiaries because participating ACOs would have an incentive to perform well on quality measures in order to maximize the shared savings they may receive. Further, the proposed approach would provide additional capital to enable low revenue ACOs to make investments in care redesign and quality improvement activities, potentially leading to improvements in the quality and efficiency of items and services furnished to Medicare FFS beneficiaries. We also believe this proposal, along with many of the other proposals in this proposed rule, would expand participation among ACOs serving higher cost beneficiaries for whom the savings potential is greater (relative to ACOs serving lower cost beneficiaries that may already find the current regional adjustment methodology an adequate incentive to participate in the program), and among low revenue ACOs, which have historically performed well in the program. For example, in performance year 2018, about 49 percent of low revenue Shared Savings Program ACOs shared in savings compared to 28 percent of high revenue ACOs. These proportions were 63 percent and 40 percent in PY 2019, 69 percent and 40 percent in PY 2019–A, and 75 percent and 59 percent in PY 2020.²⁷³ Lastly, as discussed in the Regulatory Impact Analysis (see section VII. of this proposed rule), this proposed change is not expected to result in a situation in which all policies adopted under the authority of section 1899(i) of the Act, when taken together, result in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

We are proposing to amend the regulation at § 425.605, which governs calculation of shared savings and shared losses under the BASIC track, to specify an exception to the MSR requirement for eligible ACOs participating in an agreement period beginning on January 1, 2024, and in subsequent years, in a new provision at § 425.605(h). We are also proposing modifications to the provisions in § 425.605(d)(1) specifying the calculation of the final sharing rate for the different levels of the BASIC track. Further we are proposing conforming changes to §§ 425.100(b)(1), 425.605(a), 425.605(b)(3), and 425.605(c)(2) to reflect this exception to the MSR requirement.

We seek comment on this proposal to expand the criteria ACOs can meet to qualify for shared savings under the BASIC track.

g. Ongoing Consideration of Concerns About the Impact of the Public Health Emergency (PHE) for COVID–19 on ACOs' Expenditures

On January 31, 2020, Health and Human Services Secretary, Alex M. Azar II, declared a PHE for the United States to aid the nation's healthcare community in responding to COVID–19 (hereafter referred to as the PHE for COVID–19). On March 11, 2020, the World Health Organization (WHO) publicly characterized COVID–19 as a pandemic. On March 13, 2020, the President of the United States declared the COVID–19 outbreak a national emergency. The term “Public Health Emergency,” as defined in the regulation at § 400.200, identifies the PHE determined to exist nationwide as of January 27, 2020, by the Secretary under Section 319 of the Public Health Service Act on January 31, 2020, as a result of confirmed cases of COVID–19, including any subsequent renewals. This determination was, as of this publication, subsequently renewed on April 21, 2020, July 23, 2020, October 2, 2020, January 7, 2021, April 15, 2021, July 19, 2021, October 15, 2021, January 14, 2022, and April 12, 2022. In the March 31st COVID–19 IFC (85 FR 19267 and 19268) and the May 8th COVID–19 IFC (85 FR 27573 through 27587) we adopted several modifications to policies under the Shared Savings Program in response to the PHE.

In the March 31st COVID–19 IFC (85 FR 19267 and 19268), we removed the restriction which prevented the application of the Shared Savings Program extreme and uncontrollable circumstances (EUC) policy for disasters that occur during the quality reporting period if the reporting period is extended, to offer relief under the

Shared Savings Program to all ACOs that may have been unable to completely and accurately report quality data for 2019 due to the PHE for COVID–19.

In the May 8th COVID–19 IFC (85 FR 27573 through 27587), we modified certain Shared Savings Program policies to: (1) allow ACOs whose current agreement periods expired on December 31, 2020, the option to extend their existing agreement period by 1 year; (2) allow ACOs in the BASIC track's glide path the option to elect to maintain their current level of participation for PY 2021; (3) adjust certain program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (4) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication.

As discussed in the May 8th COVID–19 IFC (85 FR 27578 through 27582) and in accordance with § 425.611, all Parts A and B fee-for-service (FFS) payment amounts for an episode of care for treatment of COVID–19 are excluded from the following Shared Savings Program calculations:

- Calculation of Medicare Parts A and B FFS expenditures for an ACO's assigned beneficiaries for all purposes including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.

- Calculation of FFS expenditures for assignable beneficiaries as used in determining county-level FFS expenditures and national Medicare FFS expenditures.

- Calculation of Medicare Parts A and B FFS revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified in § 425.605(d).

- Calculation of total Medicare Parts A and B FFS revenue of ACO participants and total Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, and determining an ACO's eligibility for participation options according to § 425.600(d).

- Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

As part of the March 2020 Coronavirus Aid, Relief, and Economic Security (CARES) Act, Medicare sequestration adjustments were

²⁷³ Refer to *Data.CMS.gov*, Performance Year Financial and Quality Results, available at <https://data.cms.gov/medicare-shared-savings-program/performance-year-financial-and-quality-results/data>.

temporarily suspended. This suspension has been further extended through subsequent legislation. Most recently, the Protecting Medicare and American Farmers from Sequester Cuts Act extended the suspension through March 31, 2022. From April 1, 2022, to June 30, 2022, sequestration will be 1 percent. Starting July 1, 2022, sequestration will increase to 2 percent. When full Medicare sequestration is in effect, we are required to make a 2 percent reduction to shared savings payments that is applied before applying an ACO's shared savings limit. As a result of the suspension of sequestration in 2020 and 2021, shared savings payments made in 2020 and 2021 were roughly 2 percent higher than they would have been otherwise for ACOs that did not earn shared savings in excess of their shared savings limit.

In December 2017, we issued an interim final rule with comment period entitled "Medicare Program; Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017" (hereinafter referred to as the "December 2017 IFC"), which appeared in the **Federal Register** on December 26, 2017 (82 FR 60912 through 60919). In the December 2017 IFC, we established a policy for mitigating shared losses for Shared Savings Program ACOs participating in a performance-based risk track, when the ACO's assigned beneficiaries were located in geographic areas that were impacted by extreme and uncontrollable circumstances, such as hurricanes, wildfires, or other triggering events, during PY 2017. In the CY 2019 PFS final rule (83 FR 59707), we extended the extreme and uncontrollable circumstances policy finalized for PY 2017 to PY 2018 and subsequent performance years. We apply determinations made under the Quality Payment Program with respect to whether an extreme and uncontrollable circumstance has occurred and the affected areas. Further, we have sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred and the percentage of the ACO's assigned beneficiaries residing in the affected areas.

The Secretary's declaration of the PHE for COVID-19 in January 2020 triggered the Medicare Shared Savings Program's Extreme and Uncontrollable Circumstances Policy. The extreme and uncontrollable circumstances of the PHE for COVID-19 began in January 2020, and will apply nationwide for the duration of the PHE for COVID-19. As set forth in §§ 425.605(f) (applicable to ACOs in two-sided models of the BASIC

track) and 425.610(i) (applicable to ACOs in the ENHANCED track), we reduce the amount of an ACO's shared losses by an amount determined by multiplying the shared losses by the percentage of the total months in the performance year affected by an extreme and uncontrollable circumstance, and the percentage of the ACO's assigned beneficiaries who reside in an area affected by an extreme and uncontrollable circumstance. The PHE for COVID-19 was considered an extreme and uncontrollable circumstance that applied to all counties in the United States for the entirety of PY 2020 and PY 2021, and no ACOs were liable for shared losses for those performance years as any such losses were fully mitigated by the adjustment for extreme and uncontrollable circumstances.

As a result of forgoing the 2021 application cycle for new applications, agreement periods starting in 2022 are the first agreement periods for which 2020 and 2021 serve as benchmark years for ACOs in the Shared Savings Program. Interested parties have expressed concern that the policy adjustments made in response to the PHE for COVID-19 may not fully address the potential for relatively lower expenditures resulting from lower utilization by non-COVID-19 patients. For example, in 2020, Parts A and B FFS expenditures decreased by 7 percent nationally compared to 2019. This decrease in utilization and expenditures could result in relatively lower benchmark year expenditures for ACOs in agreement periods beginning in 2022, 2023 or 2024 for which 2020 and/or 2021 are benchmark years. Several interested parties have suggested alternative approaches to establishing benchmarks for ACOs for which 2020 and 2021 are benchmark years, including using alternative years (such as 2017, 2018, and 2019), or differently weighting COVID-19 affected years in the calculation of financial benchmarks. The impact of COVID-19 was not uniform for all areas of the country as surges occurred in different geographic areas at different times. Removing specific years from benchmark calculations would have varied effects on different geographic areas depending on when COVID-19 had the largest impact in those areas. We believe such approaches could produce mixed results; one analysis performed by the Institute for Accountable Care²⁷⁴

estimated that 55 percent of ACOs would have lower benchmarks if 2020 were dropped from the benchmark period.

OACT's analysis of current data indicates that ACOs exhibiting sharp declines in spending in 2020 tend to show rebounds in spending in 2021 such that historical benchmarks averaged across a base period including both 2020 and 2021 would appear to represent a reasonable basis from which to update ACO spending targets going forward. Due to the rebound in 2021 national expenditures, which increased by roughly 8.4 percent between 2021 Q1 (lowest observed expenditures since the PHE for COVID-19 began) and 2021 Q4, we believe that the current blended national-regional trend and update factors will be sufficient to address and mitigate the impact of the start of the PHE for COVID-19 on benchmark year expenditures. ACOs that did not experience such an increase in spending between 2021 Q1 and 2021 Q4 would still be subject to a regional adjustment that could beneficially impact their benchmark determination. The proposal described in section III.G.5.c.(3) of this proposed rule to utilize a three-way blend of the ACPT/national-regional growth rates to update benchmarks would further mitigate any potential adverse effects of the PHE for COVID-19 on historical benchmarks while also protecting against unanticipated variation in performance year expenditures and utilization resulting from a future PHE. We seek comment on this analysis regarding the impact of the PHE for COVID-19 on Shared Savings Program ACOs' expenditures. In addition, we will continue to monitor the impact of the PHE for COVID-19 to determine whether any further changes may be necessary to account for the effects of this PHE or future PHEs.

h. Proposed Supplemental Payment for Indian Health Service and Tribal Hospitals and Hospitals Located in Puerto Rico

As discussed in the December 2018 final rule (83 FR 67856 and 67857), we exclude Indirect Medical Education (IME), Disproportionate Share Hospital (DSH) and uncompensated care payments from ACOs' assigned and assignable beneficiary expenditure calculations because we do not wish to incentivize ACOs to avoid the types of providers that receive these payments, and for other reasons described in earlier rulemaking (76 FR 67919 through 67922, and 80 FR 32796 through 32799).

²⁷⁴ Institute for Accountable Care. Analysis of Policy Options to Reduce the Impact of COVID-19 on ACO Benchmarks. October 13, 2021. Available

at <https://www.institute4ac.org/covid-19-aco-benchmarks-analysis/>.

In the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28396 through 28398), we are proposing to use our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to establish a new supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico, beginning in FY 2023. As explained in the FY 2023 IPPS/LTCH PPS proposed rule, we have determined that this supplemental payment is necessary to avoid causing undue long-term financial disruption to IHS/Tribal hospitals and hospitals located in Puerto Rico as a result of a proposed change in the data used to determine uncompensated care payments for these hospitals beginning in FY 2023.

In order to align Shared Savings Program policies with updates made to Medicare FFS payment policies, we are proposing to exclude this supplemental payment for IHS/Tribal Hospitals and hospitals located in Puerto Rico from the determination of Medicare Parts A and B expenditures for purposes of calculations under the Shared Savings Program, if the proposal to establish this new supplemental payment is finalized in the FY2023 IPPS/LTCH PPS final rule. Further, for consistency with our current approach of using total revenue, including IME, DSH and uncompensated care payments, in Shared Savings Program calculations of ACO participant revenue,²⁷⁵ we propose to similarly include the proposed supplemental payment to IHS/Tribal hospitals and hospitals located in Puerto Rico in such calculations for the performance year beginning January 1, 2023, and subsequent performance years. More specifically, ACO participant revenue is used in determining whether an ACO is a low revenue ACO or high revenue ACO as defined in § 425.20, and in determining the revenue-based loss sharing limits under two-sided models of the BASIC track's glide path in accordance with § 425.605. Because this proposed new supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico is intended to prevent disruptions due to a change in the uncompensated care payment methodology for these hospitals and uses these hospitals' FY 2022 uncompensated care payments as the starting point for this calculation, we believe that it should be treated

consistently with how we currently treat uncompensated care payments in Shared Savings Program calculations. We seek comment on this proposed change to the determination of Medicare Parts A and B expenditures for purposes of calculations under the Shared Savings Program, including the determination of benchmark and performance year expenditures, as well as the calculation of ACO participant revenue.

In the November 2011 final rule (76 FR 67919), we explained that section 1899(d) of the Act provides flexibility to adjust the benchmark for IME and DSH payments, and certain other adjustments to Parts A and B payments. Section 1899(d)(1)(B)(ii) of the Act states, among other things, that the benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate. However, when it comes to performance year expenditures, section 1899(d)(1)(B)(i) of the Act provides authority to adjust expenditures in the performance period for beneficiary characteristics, but does not provide authority to adjust for "other factors." Thus, we noted that while we could make some adjustments to the benchmark pursuant to section 1899(d)(1)(B)(ii) of the Act, to exclude certain payments, we could not make similar adjustments in our calculation of performance year expenditures. In the November 2011 final rule (76 FR 67921 and 67922), we adopted an alternate payment methodology that excluded IME and DSH payments from ACO benchmark and performance year expenditures, as authorized by section 1899(i) of the Act. We have maintained this approach to excluding IME and DSH payments across all Shared Savings Program calculations of benchmark and performance year expenditures, as specified in 42 CFR part 425, subpart G.

Consistent with our longstanding policy with respect to excluding IME and DSH payments from benchmarking and performance year expenditures, we are proposing to use our authority under section 1899(i)(3) of the Act to use other payment models to remove the proposed supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico from performance year expenditures. To exercise our authority under section 1899(i)(3) of the Act to use other payment models, we must demonstrate that the payment model would improve the quality and efficiency of items and services furnished under the Medicare program and that program expenditures under the alternative methodology would be

equal to or lower than those that would result under the statutory payment model. Because we are proposing to exclude the supplemental payment from benchmark year expenditures using our authority under section 1899(d)(1)(B)(ii) of the Act, removing this payment from performance year expenditures would ensure greater parity between benchmark and performance year expenditure calculations. Further, by removing the proposed supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico from performance year expenditures we can reward more accurately actual decreases in unnecessary utilization of health care services. Excluding supplemental payments for IHS/Tribal hospitals and hospitals located in Puerto Rico from performance year expenditure calculations ensures these payments do not make it more challenging for an ACO to generate shared savings as compared to its updated historical benchmark. We also note that, for ACOs participating under two-sided models of the BASIC track's glide path, excluding the supplemental payment from performance year expenditures may help to mitigate the amount of losses generated by an ACO, although including the supplemental payment in the calculation of ACO participant revenue used to determine the revenue-based loss sharing limit may result in a relatively higher loss sharing limit used in determining an ACO's shared losses.

Considering the balance of these factors we believe that the proposed approach could help ensure participation of IHS/Tribal hospitals and hospitals located in Puerto Rico in ACOs, and their engagement in the accountable care model. In turn, this could result in Medicare beneficiaries receiving higher quality, better coordinated and more cost-efficient care in these settings. We also do not expect that excluding the proposed new supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico from performance year expenditures will result in greater payments to ACOs than would otherwise have been made if this proposed new supplemental payment were included. We will continue to reexamine this policy in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would

²⁷⁵ In the December 2018 final rule, see for example the discussion of the calculation of ACO participant revenue as used in the determining the revenue-based loss sharing limits under the BASIC track (83 FR 67856) and the determination of whether an ACO qualifies as a low revenue ACO or a high revenue ACO (83 FR 67875).

undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

We propose to modify the provisions of the existing regulations describing calculations of benchmark year and performance year expenditures to incorporate a reference to the exclusion of the proposed new supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico, if finalized, for the performance year beginning January 1, 2023, and subsequent performance years, and to include this exclusion in proposed new sections of the regulations as follows:

- Within § 425.601(a)(1)(i) and the proposed new section of the regulations at § 425.652(a)(1)(i), specifying the calculation of payment amounts included in Parts A and B FFS claims using a 3-month claims run out with a completion factor, for computing per capita Medicare Part A and B benchmark expenditures for beneficiaries that would have been assigned to ACO in any of the 3 most recent years prior to the start of the agreement period.
- Within § 425.601(c)(2)(i) and the proposed new section of the regulations at § 425.654(a)(2)(i), specifying the calculation of county-level assignable beneficiary expenditures using payment amounts included in Parts A and B FFS claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, using a 3-month claims run out with a completion factor.
- Within § 425.605(a)(5)(i), describing the calculation of performance year expenditures under the BASIC track using payment amounts included in Medicare Parts A and B FFS claims for the ACO's assigned beneficiary population for the performance year.
- Within § 425.610(a)(6)(i), describing the calculation of performance year expenditures under the ENHANCED track using payment amounts included in Medicare Parts A and B FFS claims for the ACO's assigned beneficiaries for the performance year.
- Within the proposed new section of the regulations at § 425.660(b)(1)(i), describing the calculation of the ACPT.

i. Organization and Structure of the Regulations Text Within 42 CFR Part 425 Subpart G; Technical and Conforming Changes

Since the Shared Savings Program was established in 2012, the benchmarking methodology has been specified in several sections of the Shared Savings Program regulations

within 42 CFR part 425, subpart G. Section 425.601 specifies the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on July 1, 2019, and in subsequent years. Sections 425.602 and 425.603 specify the benchmarking methodology applicable to earlier agreement periods for new and renewing ACOs, respectively. To date, we have tended to include the entirety of the benchmarking methodology applicable to ACOs, based on their agreement period start date, within a single section of the regulations. However, there are currently a limited number of unused sections within the range between §§ 425.600 and 425.613, and no remaining sections in sequential order immediately following the existing benchmarking sections.

A variety of other provisions are contained within subpart G. Specifically, § 425.600 specifies selection of risk models. The methodology for calculation of shared savings or losses (as applicable) under each of the Shared Savings Program's financial models is specified within §§ 425.604 (Track 1), 425.605 (BASIC track), 425.606 (Track 2), and 425.610 (ENHANCED track). Several sections specify particular requirements or exceptions relating to determining performance for ACOs in earlier performance years: § 425.608 applied to determine first year performance for ACOs beginning their participation in the program on April 1 or July 1, 2012; and § 425.609 applied to determine performance for a 6-month performance year (or performance period) during CY 2019. Section 425.611 specifies adjustments to Shared Savings Program calculations to address the COVID-19 pandemic. Section 425.612 specifies waivers of payment rules and other Medicare requirements, including the SNF 3-day rule waiver, and § 425.613 addresses expanded use of telehealth services furnished by physicians or other practitioners participating in applicable Shared Savings Program ACOs.

We have considered how to restructure the regulations to incorporate the proposed modifications to the benchmarking methodology in this proposed rule. One consideration is that the existing provisions of the regulations under subpart G are referred to within programmatic material, including guidance and technical specifications documents. For continuity and clarity, we believe it is important to maintain the organization of the existing provisions, as opposed to renumbering these existing sections. We also considered the need for a

regulations text structure that would organize the details for the multiple aspects of the benchmarking calculations, each of which is detailed and complex. Lastly, as discussed in section III.G.2. of this proposed rule, we are proposing to specify the policies governing the proposed AIPs in a new section of the regulations at § 425.630. For these reasons, we are proposing to specify the proposed modifications to the benchmarking methodology for agreement periods beginning on January 1, 2024, and in subsequent years in a series of new regulations at §§ 425.650 through 425.660. We propose the following organization and structure for subpart G of the regulations:

- Reserve sections §§ 425.614 through 425.629, prior to the proposed new section of the regulations at § 425.630 on the option to receive AIPs.
- Reserve sections §§ 425.631 through 425.649.
- Establish a new section of the regulations at § 425.650, generally describing the organization of the sections on the benchmarking methodology within 42 CFR part 425, subpart G.
- Establish a new section of the regulations at § 425.652 which specifies the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.
- Establish a new section of the regulations at § 425.654, which specifies the methodology for calculating county expenditures and regional expenditures for agreement periods beginning on January 1, 2024, and in subsequent years.
- Establish a new section of the regulations at § 425.656, which specifies the methodology for calculating the regional adjustment to the historical benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.
- Establish a new section of the regulations at § 425.658, which specifies the methodology for calculating the prior savings adjustment to the historical benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.
- Establish a new section of the regulations at § 425.660, which specifies the methodology for calculating the ACPT used in updating the historical benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

We also propose to make certain technical and conforming changes to the following provisions to reflect our proposal to add new regulations at

§§ 425.652 through 425.660 to establish the benchmarking methodology applicable to all agreement periods starting on January 1, 2024, and in subsequent years.

- Under subpart C, which governs application procedures, add a reference to § 425.652 in § 425.204(g).

- Under subpart G, which governs shared savings and losses calculations, do the following—

- ++ In § 425.600(f)(4), add a reference to § 425.656(d) in § 425.600(f)(4)(ii) and a reference to § 425.652(c) in § 425.600(f)(4)(iii);

- ++ Revise § 425.601 to specify that it applies to agreement periods beginning on or after July 1, 2019, and before January 1, 2024;

- ++ Add references to § 425.652 in §§ 425.605(a), 425.605(a)(2), 425.605(d)(1)(iii)(D)(2), 425.605(d)(1)(iv)(D)(2), 425.605(d)(1)(v)(D)(2), 425.610(a), and 425.610(g);

- ++ Add reference to § 425.652(a)(10) in § 425.610(a)(3);

- ++ Add reference to § 425.654(a) in § 425.611(c)(2)(i);

- ++ Add reference to § 425.652(a)(4) in § 425.611(c)(2)(ii)(A);

- ++ Add reference to § 425.654(a)(3) in § 425.611(c)(2)(ii)(B);

- ++ Within § 425.611(c)(2)(iii), remove the specific reference to 5 percent of national per capita FFS expenditures for assignable beneficiaries, to account for the proposed modifications to the cap on the regional adjustment as specified in section III.G.5.c.(5) of this proposed rule, and to add a reference to § 425.656(c)(3), which refers to the cap of 5 percent of the national per capita expenditure amount applied to positive regional adjustments, and the cap of 1.5 percent of the national per capita expenditure amount applied to negative regional adjustments for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years; and add a reference to § 425.652(a)(8)(iv) which refers to the cap equal to 5 percent of the national per capita expenditure amount that is applied in calculating the prior savings adjustment; and

- ++ Add references to § 425.652(a)(5)(ii) (referring to the national component of the blended growth rates used to trend forward BY1 and BY2 expenditures to BY3) and § 425.652(b)(2)(i) (referring to the national component of the blended growth rate used to update the benchmark) in § 425.611(c)(2)(v).

- Under subpart I, which governs the reconsideration review process, add a reference to § 425.652 in § 425.800(a)(4).

We also propose to correct the following inadvertent errors in cross-references:

- In § 425.601(f)(5)(ii), remove the reference “paragraph (f)(4)(i) of this section”, and add in its place the reference “paragraph (f)(5)(i) of this section”.

- In § 425.601(f)(5)(iv), remove the reference “paragraphs (f)(1) and (2) of this section”, and add in its place the reference “paragraphs (f)(1) through (3) of this section”.

Additionally, we believe it is appropriate to specify in the proposed new regulation at § 425.656(e) a narrower set of special rules for determining the weights used in calculating the regional adjustment for certain ACOs that previously participated in the Shared Savings Program. In the December 2018 final rule (83 FR 68024), we established § 425.601(e)(2)(ii) which specifies that for renewing or re-entering ACOs whose prior agreement period benchmark was calculated according to § 425.603(c), we consider the agreement period the ACO is entering upon renewal or re-entry in combination with either of the following in determining the weight used in the regional adjustment calculation in the ACO's new agreement period: (A) The weight previously applied to calculate the regional adjustment to the ACO's benchmark in the ACO's most recent prior agreement period; or (B) For new ACOs that are identified as re-entering ACOs, we consider the weight previously applied to calculate the regional adjustment to the benchmark for the ACO in which the majority of the new ACO's participants were participating previously. With the agreement period beginning on January 1, 2022, all ACOs continuing their participation in the Shared Savings Program that were previously under the benchmarking rebasing methodology specified in § 425.603 are now participating under the benchmarking methodology specified in § 425.601. However, it is possible that an ACO that participated in a second agreement period beginning on January 1, 2017, January 1, 2018, or January 1, 2019, and whose rebased benchmark was established in accordance with § 425.603(c), and whose participation agreement expired without having been renewed, or whose participation agreement was terminated under § 425.218 or § 425.220, may seek to re-enter the Shared Savings Program. Therefore, we believe it is necessary to maintain special rules for determining the weights used in the regional adjustment calculation for re-entering ACOs. Accordingly, we propose to

incorporate the policies that currently apply to re-entering ACOs under § 425.601(e)(2)(ii) in the new regulation at § 425.656(e).

Lastly, we propose to remove from the existing regulations on calculating county expenditures and regional expenditures an extraneous step in the calculation specified under § 425.601(d)(3). This provision specifies that CMS weights aggregate expenditure values determined for each population of beneficiaries according to Medicare enrollment type to reflect the proportion of the ACO's overall beneficiary population in the applicable Medicare enrollment type for the relevant benchmark or performance year. However, at no point in the calculation do we actually combine the risk adjusted regional expenditures across the four Medicare enrollment types to determine a single risk adjusted regional expenditure value. Risk adjusted regional expenditures are incorporated in all relevant calculations at the Medicare enrollment type level. Similarly, as part of our proposal to establish a new regulation at § 425.654 to govern the calculation of county expenditures and regional expenditures for agreement periods beginning on January 1, 2024, and in subsequent years, we would also omit this extraneous step in the calculation.

6. Reducing Undue Administrative Burden and Other Policy Refinements

a. Overview

We are dedicated to reducing unnecessary ACO and CMS administrative burden where possible. In response to requests from interested parties from prior rules, we are proposing 2 burden reduction proposals and 2 policy refinements in this proposed rule. If finalized in the CY 2023 PFS final rule, the policy proposals and refinements would be implemented January 1, 2023. Specifically, we propose the following, which are discussed in more detail in sections (b) through (e) below:

- Modify § 425.310 to eliminate the requirement for an ACO to submit marketing materials to CMS for review and approval prior to disseminating notifications to beneficiaries and participants.

- Amend the beneficiary notification requirements at § 425.312 to reduce the frequency of certain beneficiary notifications from once annually to once in an agreement period, and to further clarify the settings in which ACO participants are expected to make required beneficiary notifications by displaying signs in their facilities.

- Streamline the SNF 3-Day Rule Waiver application review process by amending requirements at § 425.612(a)(1)(i)(A) to include an ACO attestation that plan narratives are in place and available to CMS upon request.

- Amend regulations at §§ 425.702(c)(2) and 425.704(b) to recognize ACOs structured as OHCA for data sharing purposes.

We anticipate that, collectively, these proposals would significantly reduce administrative burden in the Shared Savings Program.

b. Proposal To Modify Marketing Material Review Requirements

(1) Background

The Shared Savings Program regulations define “marketing materials and activities” at § 425.20 to include, without limitation, “general audience materials” and activities used or conducted by or on behalf of the ACO, or by ACO participants, or ACO providers/suppliers when used to educate, solicit, notify, or contact Medicare beneficiaries or providers and suppliers about the Shared Savings Program. General audience materials include brochures, advertisements, outreach events, letters to beneficiaries, web pages, data-sharing opt-out letters, mailings, and social media. The following beneficiary communications are not marketing materials and activities: certain informational materials customized or limited to a subset of beneficiaries; materials that do not include information about the ACO, its ACO participants, or its ACO providers/suppliers; materials that cover beneficiary-specific billing and claims issues or other specific individual health-related issues; educational information on specific medical conditions; written referrals for health care items and services; and materials or activities that do not constitute “marketing” under 45 CFR 164.501 and § 164.508(a)(3)(i).

In addition, the Shared Savings Program regulations impose certain marketing requirements at § 425.310 regarding the content and approval of marketing materials and activities. Specifically, under § 425.310(c), all marketing materials and activities must: (1) use template language developed by CMS, if available; (2) not be used in a discriminatory manner or for discriminatory purposes; (3) comply with § 425.304 regarding beneficiary incentives; and (4) not be materially inaccurate or misleading. Under § 425.310(a), marketing materials may be used 5 business days following their

submission to CMS if: (1) The ACO certifies compliance with all the marketing requirements under this section; and (2) CMS does not disapprove the marketing materials or activities. Under § 425.310(b), marketing materials and activities are deemed approved after the initial 5-day review period. In other words, if CMS has not disapproved of the marketing submission within 5 days, the ACO may use the submitted marketing materials. CMS may subsequently issue a written notice of disapproval at any time, including after the expiration of the initial 5-day review period, at which point the ACO must discontinue use of the disapproved marketing materials. Per § 425.310(d), failure of an ACO to comply with the marketing requirements will subject the ACO to pre-termination actions sets forth in § 425.216, termination from the program under § 425.218, or both.

As indicated in the November 2011 final rule (74 FR 67948), we finalized these marketing policies as an aspect of patient-centeredness, indicating that we believed it would be appropriate and consistent with the purpose and intent of the statute to limit and monitor the use of ACO-related marketing activities and materials to ensure that such communications and marketing are used only for appropriate purposes, such as notification that a beneficiary’s healthcare provider is participating in the ACO, issuance of any CMS-required notices, or notification of provider or ACO terminations. We indicated that we were sensitive to the operational burden imposed on ACOs by these marketing requirements, such as the ACO bearing sole responsibility for collecting and submitting to CMS all marketing materials in use by the ACO, ACO participants, and ACO providers/suppliers, and we noted our desire to balance this burden with the need for appropriate beneficiary protections.

Historically, the majority of marketing submissions for the Shared Savings Program are approved upon review or are found not to constitute marketing materials and activities, as defined at § 425.20. For example, in 2021, of 241 Shared Savings Program marketing material submissions reviewed by CMS, 163 (~68 percent) of those submissions were approved, while only 1 submission (0.4 percent) was denied. For the remaining 77 submissions (~32 percent), 58 submissions did not meet the definition of marketing materials and activities; 9 were approved after the ACO responded with additional information or resubmitted revised materials; 9 were withdrawn for unspecified reasons, and 1 was neither

approved nor denied and remained in non-compliant status.

We believe that marketing materials and activities are important communications between an ACO and its patients and participants, and we remain committed to patient-centered care, patient engagement, and program transparency in the Shared Savings Program. However, given the breakdown of marketing material review dispositions, the time and resources CMS currently expends to review all submitted marketing materials, and the additional effort for ACOs to submit these materials prior to use, we believe the current submission requirements create an unnecessary administrative burden for both CMS and ACOs that is not outweighed by the benefits of the current policy.

(2) Proposal To Modify Regulations on Review of ACO Marketing Materials

To reduce unnecessary administrative burden, we propose to remove the requirement at § 425.310(a) that ACOs submit marketing materials and activities to CMS before use, but would maintain the requirement that ACOs must provide marketing materials upon request. Additionally, we propose to remove the provisions in § 425.310(b) regarding deemed approval of marketing materials and activities after a 5-day review period. We note that ACOs must continue to comply with all Shared Savings Program regulations, including the marketing material content requirements that currently appear at § 425.310(c). Our proposed policy does not affect an ACO’s obligation to comply with marketing content requirements, and we propose to retain the authority to request the submission of marketing materials and activities at any time. We propose that if we determine an ACO’s marketing materials and activities to be non-compliant, we will issue a written notice of disapproval under proposed § 425.310(b)(1). In addition, we propose that ACOs must discontinue (and must require its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities to discontinue) use of any disapproved materials or activities. Under our proposal, we would retain language stating that the failure to comply with the requirements of § 425.310 will subject the ACO to the penalties set forth in § 425.216, termination under § 425.218, or both.

We believe that the existing marketing material content requirements and our proposed policy to review marketing materials and activities upon request would provide sufficient safeguards and

appropriate patient protections. Additionally, beneficiaries may express concerns regarding ACO marketing materials by utilizing the 1–800–MEDICARE hotline, contacting their healthcare provider, or submitting a complaint to the Medicare Ombudsman’s office, while ACOs and other interested parties may use any of these avenues, as well as express concerns via the Shared Savings Program mailbox or via their ACO coordinators.

We would codify our proposal by revising § 425.310 to remove existing references to CMS’ collection, review, and approval of marketing materials. Specifically, we propose to remove the marketing material file and use requirement at § 425.310(a) so that they may be used without prior approval. We propose that § 425.310(a) would set forth without change the marketing material content requirements that currently appear in paragraph (c) (for example, the requirement to use template language and not be materially inaccurate or misleading). We propose to revise paragraph (b) to remove language at § 425.310 (b)(1) regarding deemed approval after expiration of a 5-day review period and to retitle the section “Monitoring.” Under proposed paragraph (b)(1), CMS may request the submission of marketing materials and activities at any time, and if CMS determines that the marketing materials and activities do not comply with the content requirements of paragraph (a), CMS will issue written notice of disapproval to the ACO. Proposed paragraph (b)(2) sets forth without change language that currently appears § 425.310(b)(2)(ii) regarding the duty to cease use of disapproved marketing materials and activities. Finally, proposed paragraph (c) would set forth without change the sanctions provision that currently appears at § 425.310(d).

If finalized, our proposed modifications to § 425.310 would become effective on January 1, 2023. We believe that, if finalized, this proposal would reduce administrative burden for both CMS and for ACOs, while maintaining program integrity and beneficiary protections. We believe the revised regulation would provide sufficient safeguards and appropriate patient protections.

c. Proposal To Modify Beneficiary Notification Requirements

(1) Background

Under § 425.312(a), an ACO is required to ensure that Medicare FFS beneficiaries are notified of the following: (1) that each ACO participant

and its ACO providers/suppliers are participating in the Shared Savings Program; (2) the beneficiary’s opportunity to decline claims data sharing; and (3) the ability to, and process by which, the beneficiary may identify or change identification of a primary care provider for purposes of voluntary alignment.

Section 425.312(a)(2) sets forth the manner in which ACOs or ACO participants are required to notify beneficiaries of this information. ACO participants must post signs in their facilities and, in settings in which beneficiaries receive primary care services, make standardized written notices available upon request. In addition, in the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, the ACO or ACO participant must provide each FFS beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year (§ 425.312(a)(2)(ii)). Finally, in the case of an ACO that has selected prospective assignment, the ACO or ACO participant must provide the standardized written notice to each prospectively assigned beneficiary prior to or at the first primary care visit of the performance year (§ 425.312(a)(2)(iii)).

We periodically receive inquiries from ACOs seeking clarification as to the types of facilities in which signs are required to be posted. In addition, ACOs have continued to express concern regarding the obligation to provide an annual standardized notification prior to or at a beneficiary’s first primary care service visit of the performance year. Specifically, ACOs state that such notices may confuse beneficiaries, who misinterpret the notice and believe that it signifies a change to their Medicare benefits or otherwise represents an undesirable or disadvantageous change regarding their health care services. ACOs assert that this confusion may cause a beneficiary to opt out of data sharing, which could result in less cohesive care, duplicative or unnecessary medical tests, or contraindicated prescription drug therapy. ACOs have reported that the information in the beneficiary information notice is unclear and that the frequency of notifications containing identical information is redundant. According to ACOs, the beneficiary notices also cause unnecessary administrative burden to ACOs because ACOs retain documentation that the notices were sent, and ACOs may be required to perform additional follow-up for patients contacting ACOs with questions regarding the notice.

CMS remains committed to program transparency. Beneficiary notices are important communication tools, and we believe that ACOs are in the best position to communicate with beneficiaries regarding their care and the purposes for Medicare claims data sharing. We want to ensure that beneficiaries understand the advantages of their participation in ACOs, that their data is secure, that only the minimum necessary data is collected, and how this data is used for purposes of improving the quality of care for beneficiaries in the Shared Savings Program. We are working to improve the beneficiary notice to ensure that the content of the notice utilizes plain language and is beneficiary-friendly, as well as affirming patient choice and clarifying the beneficiary’s opportunity to decline claims data sharing.

(2) Proposal To Clarify Location of Beneficiary Notification Signage

ACOs and ACO participants frequently ask whether CMS requires signage to be posted in all facilities or only those where primary care services are provided. Although we believe the existing regulation text is clear on this point, we wish to provide clarification in this proposed rule that ACO participants are required to post beneficiary notification signs in all of their facilities, whether or not primary care services are provided in every facility. Accordingly, we propose to modify § 425.312(a)(2)(i) to move the requirement for standardized written notices available to the newly proposed, redesignated § 425.312(a)(2)(ii). With this modification, CMS clarifies that an ACO participant must post signs in “all” of its facilities and make standardized written notices available upon request in “all” settings in which beneficiaries receive primary care services. Signage notifies the entirety of a patient population that the facility participates in an ACO and is therefore qualitatively different from standardized written notices provided directly to individual patients in conjunction with primary care service visits. We note that the requirement to furnish standardized written notices upon the request of a beneficiary applies only in settings or facilities in which beneficiaries receive primary care services. We are not proposing to expand the care settings in which standardized written notices must be furnished to beneficiaries upon request.

(3) Proposal To Reduce the Frequency of Annual Standardized Written Notices

In addition to providing standardized written notices to beneficiaries upon

request, ACOs and ACO participants are currently required to furnish standardized written notices prior to or at the first primary care visit of the performance year (§ 425.312(a)(2)(iii), (iv)). We continue to believe that requiring periodic beneficiary notifications affords ACOs and ACO participants an opportunity for direct engagement with the beneficiary, thereby serving to strengthen the beneficiary's relationship with the ACO and ACO participants from whom the beneficiary may receive care. The requirement promotes program transparency and empowers patients with the knowledge of the ACO's mission, data sharing requirements, and ACO operations, thereby allowing patients to make informed decisions about where they receive care. Therefore, we intend to retain the beneficiary notification policies, but in the interest of an overall reduction in administrative burden, we propose to modify § 425.312(a) to reduce the frequency with which an ACO or ACO participant must furnish standardized written notifications to beneficiaries from up to 5 times per agreement period to once per agreement period. We also propose to implement a new follow-up beneficiary communication that we expect will reduce beneficiary confusion and improve beneficiary comprehension. Our proposed changes would become effective January 1, 2023.

First, we propose to revise the requirements regarding annual beneficiary notifications, which currently appear at § 425.312(a)(2)(ii) and (iii). Specifically, at proposed § 425.312(a)(2)(iii), we propose to provide that, in the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, the ACO or ACO participant must provide each FFS beneficiary with a standardized written notice at least once during an agreement period. Similarly, at proposed § 425.312(a)(2)(iv), we propose to provide that, in the case of an ACO that has selected prospective assignment, the ACO or ACO participant must provide each prospectively assigned beneficiary with a standardized written notice at least once during an agreement period. In either case, the standardized written notice must be furnished prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant, and the notice must be in the form and manner specified by CMS.

Second, in the interest of ensuring program transparency, maintaining beneficiary protections, reducing

beneficiary confusion, and improving beneficiary comprehension, we propose at § 425.312(a)(2)(v) to require the ACO or ACO participant to follow up with each beneficiary to whom it furnished the standardized written notice pursuant to proposed § 425.312(a)(2)(iii) or (iv). We propose that the follow-up communication may be verbal or written and must occur no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the first standardized written notice was provided. The follow up communication must afford the beneficiary an additional opportunity to ask any outstanding questions they may have, thereby reducing any potential beneficiary confusion and improving their understanding of the advantages of value-based care. The follow-up communication may be provided in any manner, so long as the form of the follow up communication includes a meaningful opportunity for beneficiaries to ask questions and engage with a representative of the ACO or ACO participant with regard to the beneficiary notice. Because of the flexibility granted to ACOs in communicating key features of the beneficiary notification, we propose that ACOs track and document how this beneficiary communication is implemented and make this documentation available to CMS upon request.

ACOs should administer the communication in the way that best suits their beneficiary population. We believe that while the follow-up communication would be most effective when occurring during a primary care service visit, it may be delivered in another manner. We note that while it is permissible to provide the standardized written notice again during the course of the follow-up communication, simply providing the same standardized written notice as the full extent of the follow-up communication is not sufficient to satisfy the proposed requirements at 425.412(a)(v), since doing so would not allow for an opportunity to engage the beneficiary and ensure they have the chance to ask any questions they may have as a result of receiving the standardized written notice. The implementation of the follow-up communication does not create a new benefit or billable service and therefore, no additional payment will be made for the follow-up communication.

We are actively engaged in efforts to improve beneficiary notification materials, which include gathering feedback from beneficiaries and beneficiary representatives to make

improvements as to how we disseminate information to beneficiaries. Further, we will work expeditiously to provide any updated and new materials as they become available. Although our proposal will reduce the frequency with which beneficiaries will receive the information that appears in standardized written notices, we note that this information is also readily available via signage in ACO facilities, as well as in the Medicare & You handbook. Additionally, we will maintain the requirement for ACO participants to make the notice available upon request in all settings in which beneficiaries receive primary care services. We note that ACOs and ACO participants may choose to provide the standardized written notice or follow-up beneficiary engagement communications more frequently than once per agreement period, and we would support their efforts to do so.

We seek comment on the proposed frequency of the notification and whether our proposal will reduce net burden and mitigate any potential beneficiary confusion.

d. Streamline SNF 3-Day Rule Waiver Application Review Process

Under section 1861(i) of the Act, beneficiaries must have a prior inpatient hospital stay of no fewer than 3 consecutive days to be eligible for Medicare coverage of inpatient skilled nursing facility (SNF) care (the SNF 3-day rule). Section 1819(a) of the Act defines a SNF, in part, as an institution (or a distinct part of an institution) that is not primarily for the care and treatment of mental diseases but is primarily engaged in providing the following to residents: skilled nursing care and related services for residents who require medical or nursing care; or rehabilitation services for the rehabilitation of injured, disabled, or sick persons. The Medicare SNF benefit applies to beneficiaries who require a short-term intensive stay in a skilled nursing facility or rehabilitation facility, or both.

In the CY 2015 Shared Savings Program final rule (80 FR 32692), CMS used its authority under section 1899(f) to waive the SNF 3-day rule under section 1861(i) of the Act in order to carry out the provisions of section 1899 of the Act by offering ACOs that have accepted two-sided risk under the Shared Savings Program more flexibility under FFS Medicare to provide appropriate care for beneficiaries in the most appropriate care setting. CMS believes this is an opportunity to provide experienced, risk-bearing ACOs

with additional flexibilities to increase quality and decrease costs.

The waiver is codified in the Shared Savings Program regulations at § 425.612(a)(1). Specifically, for PY 2017 and subsequent performance years, CMS waives the SNF 3-day rule for eligible beneficiaries that are assigned to an ACO participating in a two-sided model (or as provided in § 425.612(a)(1)(iv) during a grace period for beneficiaries excluded from prospective assignment to such an ACO) and who receive covered post-hospital extended care services furnished by an eligible SNF that has entered into a written agreement to partner with the ACO (a “SNF Affiliate”). An ACO is eligible to use the SNF 3-Day Rule Waiver if the ACO participates in performance-based risk (for example, Levels C, D, or E of the BASIC track or the ENHANCED track) and has a SNF affiliate list. All other statutory and regulatory provisions regarding Medicare Part A post-hospital extended care services continue to apply.

An eligible ACO may apply for a programmatic waiver of the SNF 3-day rule to allow its assigned beneficiaries to receive coverage for inpatient SNF care without a prior 3-day inpatient hospital stay when admitted to a SNF affiliate. A SNF affiliate is a SNF that has executed a written agreement with an eligible ACO that meets the requirements of § 425.612(a)(1)(iii)(B) and is included on the ACO’s SNF affiliate list. If the SNF affiliate is eligible to be included in the CMS 5-star Quality Rating System, it must have and maintain an overall rating of 3 or higher (§ 425.612(a)(1)(iii)(A)).

It is important to note that the Shared Savings Program SNF 3-Day Rule Waiver does not create a new benefit or extend Medicare SNF coverage to patients who could be treated in outpatient settings or who require long-term custodial care. Also, the SNF 3-Day Rule Waiver does not restrict a beneficiary’s choice of provider or supplier. A beneficiary will continue to have the option to seek care from any Medicare FFS provider or supplier, including from a SNF or other facility that is not an affiliate of an ACO participating in the Shared Savings Program. If a beneficiary that is assigned to an ACO chooses to receive care from a SNF or other facility that is not an affiliate of the ACO, normal Medicare requirements apply, including the requirement for a 3-day inpatient hospitalization. The SNF 3-Day Rule Waiver is intended to provide ACOs that are participating in certain performance-based risk tracks with

additional flexibility to increase quality and decrease costs.

(1) SNF 3-Day Rule Waiver Application Process

An ACO participating or applying to participate in performance-based risk within the BASIC track under § 425.605 or the ENHANCED track under § 425.610 may request to use the SNF 3-Day Rule Waiver at the time of application to participate in the program or during its agreement period. The waiver request must be submitted in a form and manner and by a deadline specified by CMS, which typically occurs once each year. Any ACO, including those applying for the waiver during the term of an existing participation agreement, must apply during the annual application process. Current regulations require that an ACO submit an application demonstrating that it has the capacity to identify and manage beneficiaries who would either be directly admitted to a SNF or admitted to a SNF after an inpatient hospitalization of fewer than 3 days. Under § 425.612(a)(1)(i), to be eligible to use the SNF 3-Day Rule Waiver, an ACO must submit supplemental application materials that include, but are not limited to, a list of SNFs with whom the ACO will partner (that is, a SNF affiliate list), along with executed written SNF affiliate agreements between the ACO and each listed SNF, in addition to 3 narratives describing how the ACO plans to implement the waiver. The narratives must include: the communication plan between the ACO and its SNF affiliates, a care management plan for beneficiaries admitted to a SNF affiliate, and a beneficiary evaluation and admission plan approved by the ACO medical director and the healthcare professional responsible for the ACO’s quality improvement and assurance processes.

Historically, the SNF 3-Day Rule Waiver originated from the CMS Innovation Center’s Pioneer ACO and Next Generation ACO Models. These models included application questions (answered by the ACO in a narrative format) which, while not codified in regulation, were transformed into plan narrative requirements in the Shared Savings Program SNF 3-Day Rule Waiver application. In the CY 2015 Shared Savings Program final rule (80 FR at 32805), we discussed a variety of issues that could be addressed in these narratives, such as the protocol that will be followed by ACOs for evaluating and approving admissions to a SNF under the waiver and consistent with the beneficiary eligibility requirements and

the education and training for eligible SNFs regarding waiver requirements. We have not set forth specific ways that ACOs must address issues in their plan narratives because we believe the ACO is in the best position to establish its protocols, develop SNF training, and otherwise determine how to best coordinate care for patients transferred to their SNF affiliates.

After successfully implementing the Shared Savings Program SNF 3-Day Rule Waiver for several performance years, we determined in 2017 that some application requirements were burdensome for both CMS and ACOs, did not add value to the application review, or were not permitted by regulation. For example, the SNF 3-Day Rule Waiver application originally included a narrative describing any financial relationships between an ACO, SNF affiliate and acute care hospital. Because the Shared Savings Program regulations do not prohibit ACOs or SNFs from having financial arrangements with acute care hospitals, nor do they require such arrangements, we discontinued the submission of this narrative. Previously, ACOs also submitted documentation for each proposed SNF affiliate demonstrating they met minimum star rating requirements. Because CMS could obtain the required star rating information directly from the CMS Care Compare website, this application submission requirement was discontinued. We removed the requirement for these two application elements in the CY 2018 PFS final rule (82 FR 52976).

At the time of these modifications, CMS chose to retain the three narratives related to an ACO’s communication plan, care management plan, and beneficiary evaluation and admission plan without establishing specific criteria for an ACO’s process for implementing the SNF 3-Day Rule Waiver. We have since found that these plan narratives have not aided in our ability to evaluate an ACO’s capacity to identify and manage beneficiaries who may be admitted to a SNF affiliate beyond what is otherwise established within the application. These narratives describe the plans that exist and that the ACO will adhere to requirements for beneficiary eligibility set forth in the waiver, but the program continues to provide operational flexibility to ACOs to develop their own internal processes and protocols.

(2) Proposal To Modify the CMS Review Process for ACOs Applying for a Shared Savings Program SNF 3-Day Rule Waiver

We remain committed to reducing unnecessary application and/or program burden where possible and consider application attestations as a way of streamlining processes when appropriate. The submission of the three remaining narratives has largely functioned as a mechanism for ACOs to confirm they have established operations for communicating between the ACO and its SNF affiliates, establishing a care management plan, and beneficiary evaluation and admission plan. The existence of the three narrative plans provides some assurance of an ACO's capacity to identify and manage beneficiaries who may be admitted to a SNF affiliate. However, as a payer, we do not have the experience that would be required to evaluate the appropriateness of the contents of these plans. Therefore, to reduce CMS burden, we propose to remove the requirement to submit the plan narratives and instead propose to require ACOs to certify that they have a communication plan, care management plan, and beneficiary evaluation and admission plan in place prior to SNF 3-Day Rule Waiver approval. Such plans should continue to address the issues we previously discussed in the CY 2015 Shared Savings Program final rule at 80 FR 32805. ACOs must continue to develop robust processes to implement the 3-Day Rule Waiver and to successfully transition care for their identified FFS beneficiaries and must be able to provide upon request a narrative describing their communication plan, care management plan, and beneficiary evaluation and admission plan. If our proposed policy is finalized, an ACO would be subject to compliance action if it fails to submit, upon CMS request, the narratives about its capacity to manage patients under the waiver. The proposed attestation requirement retains oversight for ensuring that an ACO has the capacity to identify and manage beneficiaries while reducing burden during the application process.

Furthermore, we have determined that other provisions of our regulations provide sufficient safeguards to ensure that CMS can assess an ACO's capacity to identify and manage beneficiaries who would be either directly admitted to a SNF or admitted to a SNF after an inpatient stay of less than 3 days. We have found that these experienced, risk-bearing ACOs focus on care coordination and clinically-integrated,

patient-centered care. Such investments in care coordination not only improve patient outcomes, but also serve to reduce the cost of care. In addition, our ongoing oversight and program compliance monitoring of the use of the waiver by ACOs helps us to ensure that ACOs have the capacity to identify and manage beneficiaries who are admitted to a SNF under the SNF 3-Day Rule Waiver.

In summary, we propose to amend § 425.612(a)(1)(i)(A) to require that an ACO applying to use the SNF 3-Day Rule Waiver must submit an attestation that it has established plan narratives (communication plan, care management plan, and beneficiary evaluation and admission plan) and will make them available to CMS upon request. We are making minor revisions to the narrative language by replacing “the communication plan” with “a communication plan” in § 425.612(a)(1)(i)(A)(1). We expect that, when implemented, our proposal will reduce the application review burden on CMS, as well as the burden on ACOs to submit this information.

e. Updating Shared Savings Program Data Sharing Regulations To Recognize ACOs Structured as Organized Health Care Arrangements (OHCAs) for Data Sharing Purposes

In the CY 2022 PFS final rule (86 FR 65261), we stated that we were considering whether it would be appropriate to revise the regulations at §§ 425.702(c) and 425.704(b) to allow data sharing with a Shared Savings Program ACO that has structured its relationship with its ACO participants as an OHCA, as that term is defined in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) regulations at 45 CFR 160.103. This was in response to commenters who shared concerns about collecting patient-level all-payer data (eQMs/MIPS CQM) from patients who were not assigned to the ACO. These commenters cited HIPAA and patient consent concerns related to sharing non-Medicare patient information with the ACO and with CMS for a population that is not assigned to the ACO and indicated that obtaining this consent would be an additional burden.

As we explained in the CY 2022 PFS final rule (86 FR 65261), we believe the disclosure of this all-payer data to CMS as required by § 414.1340(a) is permitted by the HIPAA Privacy rule under the provision that permits disclosures of protected health information (PHI) as “required by law.”²⁷⁶ We also

encouraged ACOs and their ACO participants to consult with their legal counsel as necessary to ensure that their business associate agreements (BAAs) address the need to share data for patients covered by all payers with the ACO to permit the ACO to comply with its legal obligation to completely and accurately report this data to CMS. Nevertheless, these comments prompted us to consider whether the current Shared Savings Program regulations provide sufficient flexibility regarding different arrangements permitted under HIPAA. In the CY 2022 PFS final rule, we stated that we were specifically considering potential revisions to the regulations at §§ 425.702(c) and 425.704(b) to permit data sharing with an ACO structured as an OHCA. We are now proposing those changes as part of this proposed rule.

In the April 2011 proposed rule (76 FR 19528, 19556), we discussed the importance of data sharing and beneficiary protections in light of existing HIPAA requirements. We noted that ACO participants and ACO providers/suppliers are also covered entities, provided they are health care providers as defined by 45 CFR 160.103 and they or their agents electronically engage in one or more HIPAA standard transactions, such as for claims, eligibility or enrollment transactions. We also stated that an ACO may itself be a HIPAA covered entity if it is a health care provider that conducts such transactions or may qualify as the business associate of its covered entity ACO participants and ACO providers/suppliers based on the quality assessment and improvement activities that the ACO is conducting on behalf of those ACO participants and ACO providers/suppliers (76 FR 19556). In the November 2011 final rule (76 FR 67846 through 67851), we established requirements for data sharing with ACOs that are designed around the HIPAA provisions for “health care operations” disclosures. These provisions permit CMS to disclose PHI without obtaining individual authorization for the health care operations activities of the recipient of the data (that is, the ACO).²⁷⁷ As we explained in the CY 2015 PFS final rule (80 FR 32692), ACOs work with their ACO participants and ACO providers/suppliers to evaluate their performance, conduct quality assessment and improvement activities, perform care coordination activities, and conduct population-based activities relating to improved health for their assigned beneficiary population. When done by

²⁷⁶ 45 CFR 164.512(a).

²⁷⁷ 45 CFR 164.506(c)(4).

or on behalf of a covered entity, these are activities that would qualify as health care operations under the first and second paragraphs of the definition of “health care operations” at 45 CFR 164.501 (76 FR 19558). Therefore, in the Shared Savings Program data sharing regulations at §§ 425.702(c)(2) and 425.704(b), we have focused on ACOs that are themselves HIPAA-covered entities, or that are acting as business associates on behalf of their ACO participants and ACO providers/suppliers who are HIPAA-covered entities.

We believe that most ACOs are acting as business associates of their covered entity ACO participants (the providers and suppliers that are part of the ACO). However, we believe it is possible that some ACOs may choose to operate as an OHCA.

An OHCA is another type of entity that is recognized under the HIPAA regulations. An OHCA is a distinct entity from a covered entity or a business associate under HIPAA, although it is made up of covered entities. As most relevant to Shared Savings Program ACOs, under 45 CFR 160.103, an OHCA is defined to include an organized system of health care in which more than one covered entity participates and in which the participating covered entities hold themselves out to the public as participating in a joint arrangement and participate in specified joint activities such as quality assessment and improvement activities and payment activities.²⁷⁸ In addition, the purpose of the OHCA is that participants in such clinically integrated settings are able to share health information freely not only for purposes of care, but also to improve their joint operations (65 FR 82494). The HIPAA Privacy Rule has specific provisions relevant to OHCA. For example, under 45 CFR 164.506(c)(5), a covered entity that participates in an OHCA may disclose PHI about an individual to other participants in the OHCA for any health care operations activities of the OHCA.

We note that the Office for Civil Rights (OCR) and the Office of the National Coordinator for Health Information Technology (ONC) have recognized in joint guidance that ACOs may operate as OHCA.²⁷⁹ An ACO that operates as an OHCA would be able to share PHI among the covered entities in the OHCA without getting authorization

from individuals for the health care operations of the OHCA and would be permitted to share PHI for the health care activities of the OHCA without entering into BAAs with each other.²⁸⁰

Effective for performance year 2023 and subsequent performance years, we propose to modify the Shared Savings Program data sharing regulations at §§ 425.702(c)(2) and 425.704(b) to specify that ACOs acting as OHCA may request aggregate reports and beneficiary-identifiable claims data from CMS, respectively. As outlined above, these proposed changes would recognize an OHCA as an additional organizational structure under which an ACO can request data from CMS. Our intention is to update the data sharing regulations to reflect how ACOs may be structured and provide flexibility with respect to the different arrangements permitted under HIPAA for purposes of data sharing.

Separately, we believe that an OHCA structure potentially could address some of the concerns that commenters have raised about ACOs collecting and reporting all-payer data to CMS as required under the APP. However, we note that our proposal is limited to the Shared Savings Program regulations governing CMS’ data sharing with ACOs and is not intended to affect or modify any existing obligations under the HIPAA Privacy Rule. It is the ACOs’ responsibility to consult with their legal counsel and others as necessary to determine how to structure their arrangements with their ACO participants and ACO providers/suppliers to comply with HIPAA requirements.

7. Seeking Comment on Incorporating an Administrative Benchmarking Approach Into the Shared Savings Program

a. Background on Longer Term Approach to Benchmarking Under the Shared Savings Program

We have set a goal that 100 percent of Original Medicare beneficiaries will be in a care relationship with accountability for quality and total cost of care by 2030.²⁸¹ Achieving this goal

will require significant growth in the number of ACOs participating in the Shared Savings Program, or the number of beneficiaries served by existing ACOs, or both. Benchmarks are a core policy instrument for providing sufficient incentives for ACOs to enter and remain in the Shared Savings Program, with significant implications on impacts to the Medicare Trust Funds.

The benchmark is a cost target used to determine savings or losses for an ACO compared to performance year expenditures for its assigned beneficiary population and, importantly, to create incentives for ACOs to reduce spending and generate savings, which will be shared by the ACO and CMS; by extension, these savings opportunities also create incentives for providers and suppliers to participate in ACOs. Many factors need to be considered in establishing benchmarks including the variability in the composition of ACOs, the beneficiary populations they serve, and their experience with accountable care models, as well as the need to protect the Trust Funds and minimize unintended consequences such as market consolidation and patient risk selection. In this section of this proposed rule, we describe and seek comment on a modified benchmarking methodology which may boost participation, increase savings to the Medicare Trust Fund and make long-term participation in the Shared Savings Program possible for more ACOs.

Currently, we establish, adjust, update and reset the historical benchmark under the Shared Savings Program in accordance with § 425.601. An ACO’s benchmark is established based on historical expenditures for a population of beneficiaries that would have been assigned to that ACO in the 3 years prior to the start of its agreement period. In establishing the benchmark, we adjust the benchmark based on the ACO’s spending relative to its service area (referred to as the regional adjustment). For each performance year of the ACO’s 5-year agreement period, we risk adjust the benchmark for changes in severity and case mix of the ACO’s assigned beneficiaries, and we update the benchmark using growth rates that are a blend of observed national and regional FFS spending trends. We reset (or rebase) the ACO’s benchmark at the start of the ACO’s second and each subsequent agreement period. Refer to section III.G.5. of this proposed rule for a more detailed description of the statutory and regulatory background of the Shared Savings Program’s current benchmarking methodology and certain benchmark calculations, as well as proposed modifications to the current

²⁷⁸ For the complete definition of an OHCA, see 45 CFR 160.103.

²⁸⁰ Please see HIPAA For Professionals FAQ 242 (Are covered entities that engage in joint activities under an organized health care arrangement (OHCA) required to have business associate contracts with each other?) (<https://www.hhs.gov/hipaa/for-professionals/faq/242/may-i-share-protected-health-information-directly-with-another/index.html>).

²⁸¹ Seshamani M, Fowler E, Brooks-LaSure C. Building On The CMS Strategic Vision: Working Together For A Stronger Medicare. *Health Affairs*. January 11, 2022. Available at <https://www.healthaffairs.org/doi/10.1377/jforefront.20220110.198444>.

benchmarking methodology for agreement periods starting on January 1, 2024, and in subsequent years.

ACOs and other interested parties have expressed concerns about the effects of current benchmarking methods on ACOs' incentives to generate savings, the extent to which they are able to share in those savings, and thus the incentives for ACOs to enter and remain in the program over the long-term. Specifically, there are two ways in which the use of factors based on realized FFS spending (which reflects any ACO spending reductions) can lead to lower benchmarks, which we will refer to as "ratchet" effects: (1) downward pressure on an individual ACO's benchmark resulting from the impact of its achieved spending reductions on its historical benchmark expenditures, regional adjustment, and update factor; and (2) downward pressure on benchmarks due to program-wide spending reductions across all ACOs.

The first type of ratchet effect occurs at the individual ACO level, when an ACO's own savings reduce its benchmark, which can occur when we reset the historical benchmark at the start of the ACO's second or subsequent agreement period. When the benchmark years correspond to performance years from the ACO's preceding agreement period, the benchmark reflects a portion of any spending reductions achieved by the ACO. A ratchet effect can also occur through the use of factors based on the regional FFS expenditures to adjust the benchmark and update an ACO's benchmark; specifically, when an ACO reduces spending, it also reduces average spending in its region, thereby lowering the regional adjustment to its benchmark. This effect becomes more prominent as an ACO has increasing market share in its region. Critically, ACOs must be able to retain the ability to achieve savings over the long-term to have an incentive to take the steps necessary to generate them, as there are

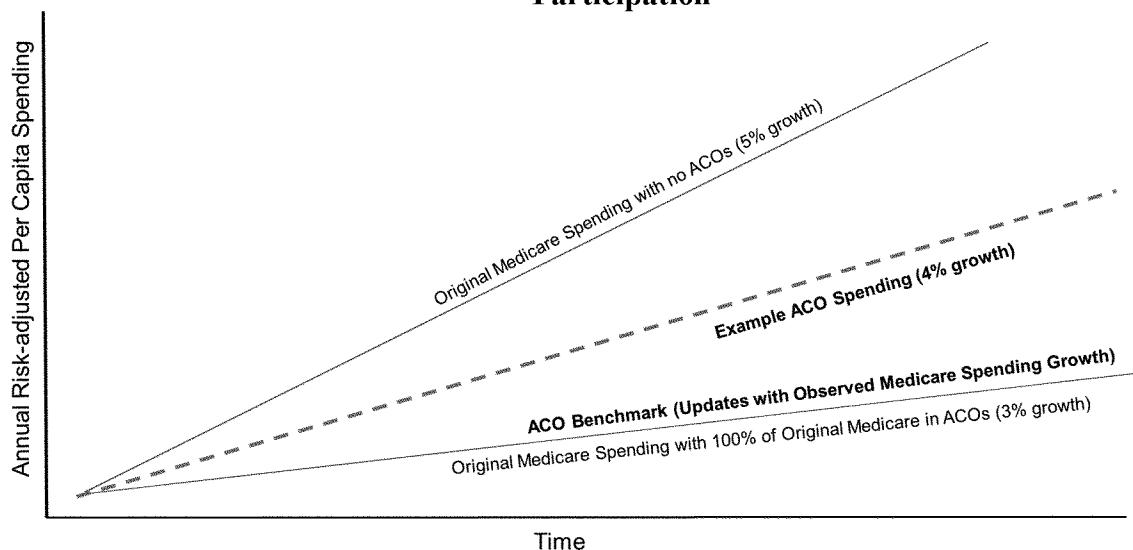

costs associated with delivering care outside of the fee-for-service construct and in running an ACO to lower (and maintain) reduced spending levels.

The second type of ratchet effect occurs at the program level, where overall program success can apply downward pressure on ACOs' benchmarks through the method for updating benchmarks each performance year for changes in expenditures between Base Year 3 (BY3) and the performance year. We determine the update factor retrospectively using a blend of realized national and regional FFS expenditure growth rates, which incorporates the collective impact of ACOs on spending across Original Medicare. As a greater portion of Medicare FFS beneficiaries are assigned to ACOs, this program level ratcheting effect increasingly diminishes incentives to participate in the Shared Savings Program. If all beneficiaries enrolled in the Original Medicare FFS program under Parts A and B were assigned to an ACO, calculating the update factor based on realized spending growth rates would necessitate that some ACOs would experience expenditure growth in excess of the update factor (and forgo shared savings), even if all ACOs reduced spending growth. That is, an ACO would have to reduce spending more than the average ACO in order to earn savings, all else equal (absent regional adjustments to historical benchmarks). Similarly, program-wide savings lower the average per capita amounts of expenditures for an ACO's regional service area which are used in computing the regional adjustment to the historical benchmark. As ACOs' benchmarks converge toward average realized FFS spending, approximately half of ACOs will necessarily be given benchmarks below their spending at the start of their current agreement period, even if all ACOs have generated spending reductions relative to the counterfactual (that is, what spending would have been

without the ACO). This downward pressure of program success on benchmark updates means that ACOs collectively keep less of the savings they generate. In the context of CMS' strategic objective to increase the number of Medicare beneficiaries in a care relationship with quality and total cost of care accountability, we anticipate that this program level ratcheting effect will become more pronounced with the growth in the number of beneficiaries assigned to ACOs, further weakening incentives to participate in the Shared Savings Program with the potential for impeding progress towards the fulfillment of this same goal.

For illustrative purposes, consider a scenario in which all Original Medicare beneficiaries are receiving the plurality of their primary care from an ACO provider/supplier, and thus are assigned to an ACO. Assume that FFS expenditure growth in the absence of ACOs would be 5 percent each year, but that ACOs, on average, slow expenditure growth to 3 percent each year. Under the current benchmarking approach, the update factor applied to an ACO's benchmark would be 3 percent, matching the average overall FFS expenditure growth rate under 100 percent ACO penetration. However, because 3 percent is the average growth rate, there will be ACOs with both higher and lower growth rates than 3 percent, meaning that some ACOs' growth in expenditures will outpace their benchmarks, even if they reduced spending relative to the counterfactual. In this example, an ACO that limited expenditure growth to 4 percent would (ignoring regional adjustments to the benchmark) show losses, despite reducing spending relative to the 5 percent growth rate expected without ACOs. Figure 2 provides a visual example of this scenario. provides a visual example of this scenario.

FIGURE 2: Illustrative Example of ACO Benchmarking and Spending Compared to Medicare Spending Growth With 100% ACO Participation and Without ACO Participation

MedPAC and researchers are also examining the Shared Savings Program benchmarking methodology and have noted many of the above concerns. MedPAC has discussed ratchet effects in ACO benchmarks in its November 2021 public meeting²⁸² and January 2022 public meeting,²⁸³ with the general consensus that eliminating ratcheting effects is essential for the long-term sustainability of the Shared Savings Program. Many of the commissioners discussed a longer-term approach under which CMS would update ACOs' benchmarks annually using "exogenous" factors, meaning factors not impacted by the individual or collective performance of ACOs. Under this approach, which has also been referred to as administratively set benchmarks, benchmarks may be set prospectively based on projected growth in volume and intensity of FFS services, with guardrails in place to account for actual changes in FFS prices, demographics, and large projection errors. McWilliams, Chen, and Chernen have also raised concerns about ACO benchmark ratchet effects in outlining a

blueprint for ACO benchmark changes in a recent white paper.²⁸⁴

Addressing these ratchet effects may also improve the experience of beneficiaries assigned to ACOs. ACOs are incentivized through sharing savings to provide services to beneficiaries that may not have been traditionally reimbursed under Medicare FFS. However, because any costs incurred in providing such services are not reflected in observed FFS spending but may help to reduce that spending and thus result in the ratcheting down of future benchmarks, incentives to provide such services are diminished. We anticipate that addressing these ratchet effects under the current benchmarking methodology will allow ACOs and their ACO participants to provide additional services and therefore improve the beneficiary experience in ACOs.

We have used a variety of approaches to mitigate the effect of ACO performance on their historical benchmarks, as described in earlier rulemaking and as summarized in section III.G.5. of this proposed rule, including: adjusting the ACO's rebased benchmark to account for savings generated by the ACO in its prior agreement period (§ 425.603(b)(2), June 2015 final rule, 80 FR 32788 through 32791); subsequently replacing the prior savings adjustment with an approach

that incorporated factors based on regional FFS expenditures in resetting the ACO's benchmark through a regional adjustment (§ 425.603(c) through (f), June 2016 final rule, 81 FR 37953 through 37991); in addition, more recent modifications to use blended national-regional growth factors to trend and update the ACO's historical benchmark help ameliorate the ACO-specific ratchet effect caused by the use of regional trends to update benchmarks in areas where ACOs contribute substantially to regional trends (§ 425.601(a)(5), (b), December 2018 final rule, 83 FR 68005 through 68030).

In particular, the regional adjustment has reduced the impact of rebasing by partially decoupling an ACO's benchmark from its prior savings performance. Importantly, this adjustment also begins to converge benchmarks toward a consistent basis within a region, which we believe is an important objective for creating equitable payment within a market that rewards ACOs for relative efficiency. However, recent experience suggests that the regional adjustment may have led to selective participation, with 80–87 percent of ACOs subject to a regional adjustment having spending below their region for performance years 2017 through 2020, as shown in Table 68.²⁸⁵

²⁸² <https://www.medpac.gov/wp-content/uploads/2021/09/aco-benchmarks-medpac-nov-2021.pdf>; https://www.medpac.gov/wp-content/uploads/2021/11/november21_medpac_transcript_sec.pdf.

TABLE 68: Regional Adjustments to Benchmarks, All ACOs Subject to Regional Adjustment

All ACOs Subject to Regional Adjustment				
PY	Number of ACOs Subject to Regional Adjustment	Number of ACOs with Positive Regional Adjustment	Number of ACOs with Negative Regional Adjustment	Percent of ACOs with Positive Regional Adjustment
2017	73	59	14	80.8%
2018	136	113	23	83.1%
2019	133	107	26	80.5%
2019A*	205	178	27	86.8%
2020	412	357	55	86.7%

* PY2019A refers to the 6-month performance year from July 1, 2019, to December 31, 2019.

Furthermore, as shown in Table 69, selective participation effects are stronger for ACOs subject to downside risk, with 92–100 percent of ACOs having positive regional adjustments. This suggests that as ACOs are required to participate under performance-based

risk and higher levels of downside risk, these selective participation effects may continue to grow. Setting aside the net costs to the Trust Funds from subsidizing participation by ACOs with spending already below their region, the chief concern with this pattern of

participation under the current methodology is that the providers/suppliers with the greatest savings potential (those with high spending relative to their region) have fewer incentives to participate.

TABLE 69: Regional Adjustments to Benchmarks, ACOs in Two-sided Risk with Regional Adjustment

Two-sided Risk ACOs & Regional Adjustment				
PY	Number of ACOs Subject to Regional Adjustment	Number of ACOs with Positive Regional Adjustment	Number of ACOs with Negative Regional Adjustment	Percent of ACOs with Positive Regional Adjustment
2017	6	6	0	100.0%
2018	25	24	1	96.0%
2019	26	24	2	92.3%
2019A	97	93	4	95.9%
2020	176	168	8	95.5%

Through the benchmarking changes proposed in section III.G.5. of this proposed rule, we seek to more immediately address certain ratchet effects and features within the existing benchmarking methodology that result in selective participation. Specifically, the proposals to incorporate a prior savings adjustment, mitigate the impact of the negative regional adjustment, and to modify the benchmark update to incorporate a prospective, external factor (ACPT) are intended to address these dynamics. In this RFI, we seek comment on broader changes to the benchmarking methodology that may be needed to further strengthen incentives for providers and suppliers to participate in the Shared Savings Program and generate savings while preserving a mechanism for convergence to a consistent regional

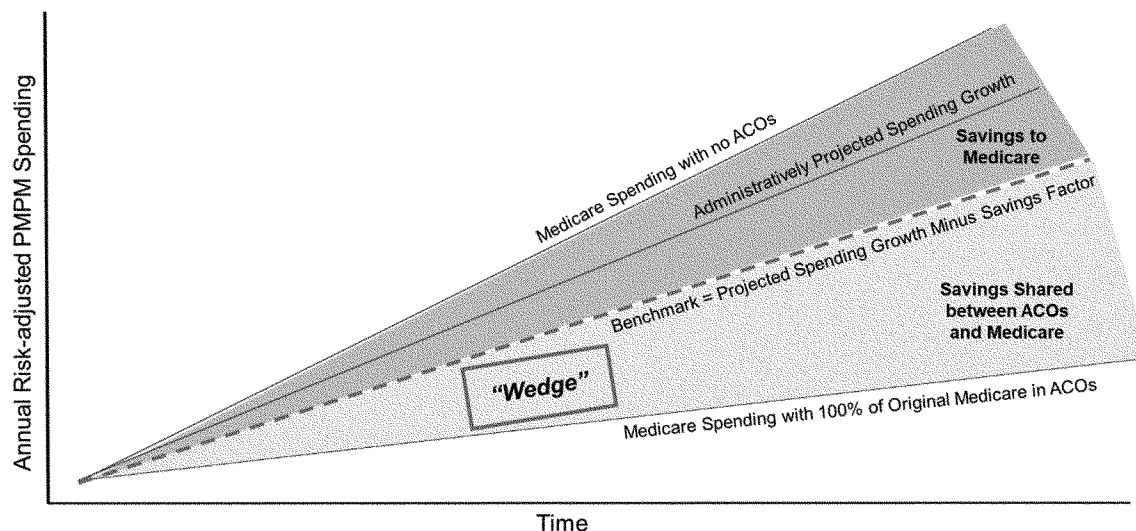

benchmarking approach that does not elicit selective participation.

b. Administratively-Established Benchmarks as a Potential Solution To Address Benchmarking Concerns

In this section, we describe and seek comment on a direction for future benchmarking that is designed to create a sustainable pathway for long term program savings for both ACOs and CMS and to address interested parties' concerns around ratcheting. Within this section, we provide an overview of and discuss details of key components of this approach.

This approach involves separating benchmarking update factors from realized FFS expenditure growth through the implementation of a prospective, administratively set annual growth rate to update benchmarks. Under this approach, benchmarks

would be allowed to rise above realized FFS expenditure growth as ACOs generate savings, allowing ACOs to retain more of their savings and thus strengthening incentives to participate and achieve savings. Over time, use of this administratively set growth rate would allow for a wedge to accrue between average benchmarks and realized spending reductions, offering greater and more sustainable savings opportunities over the long-term for both Medicare and ACOs. Importantly, average benchmark growth would only exceed realized FFS spending growth to the extent that ACOs reduce spending, such that benchmarks remain at or below FFS spending levels projected in the absence of ACO participation. A graphic depiction of administratively-established benchmarking is provided in Figure 3.

FIGURE 3: Illustrative Example of Administratively-Established Benchmarking**Approach**

In concert with shifting from a benchmark update based on observed, or realized, FFS expenditure growth to a prospectively set trend that does not ratchet benchmarks downward as ACOs slow observed FFS expenditure growth, we are considering approaches that would minimize rebasing effects between agreement periods.

An administratively set benchmarking approach also offers a path for converging benchmarks gradually towards a common risk-adjusted rate in each region, which we anticipate would mitigate selective participation and improve the savings potential of the program. Allowing benchmarks to remain above observed FFS spending as ACOs lower spending also allows convergence of benchmarks to a regional rate that is above average regional FFS spending. Accordingly, convergence would not require ACOs operating in the same region to outcompete each other to accrue savings and should not discourage participation by ACOs with above average observed spending to the same extent that they are discouraged under the present methodology. As long as ACOs are generating savings collectively, this approach would allow all ACOs a chance to earn shared savings while reducing overall spending relative to projections and protecting the Trust Funds. In addition, benchmarks that exceed FFS spending would give ACOs flexibility to meet beneficiary needs through alternative modes of care such as virtual care or care management programs that have not traditionally been reimbursed under FFS.

Through the design of this approach, we believe CMS could address the selective participation effects that currently discourage participation by ACOs with higher spending compared to their regional services area. For example, we are considering an approach that would remove the negative regional adjustment to ACO historical benchmarks. This approach would mean that an ACO with spending above its regional average would receive a historical benchmark set at the ACO's average historical FFS expenditures, rather than below its historical spending levels due to the negative regional adjustment.

Ultimately, we envision such an approach would generate sufficient spending reductions for higher spending providers and suppliers such that CMS could consider a further modified benchmarking methodology under which ACOs' benchmarks would be calculated using a regionally consistent baseline. This longer-term option is discussed in section III.G.7.d. of this proposed rule. To maintain the divergence between benchmarks and realized FFS expenditures, regional baselines would be set to incorporate accrued FFS expenditure reductions relative to projected growth, rather than setting regional baselines at average FFS spending, which would effectively claw back the accrued savings. We consider regionally consistent benchmarks to be an important objective for the longer-term sustainability of the Shared Savings Program in that it would create equitable payment within a market by rewarding ACOs for their relative

efficiency. Such an approach could also reduce complexity relative to both the current methodology (including the proposed changes described in section III.G.5. of this proposed rule) and the administratively established benchmark methodology used to generate convergence.

We invite comments on these concepts and on the design of an administratively established benchmarking methodology. In the remaining discussion in this section of this proposed rule, we provide additional details on the key features of an administrative benchmarking concept to inform commenters' consideration of this approach, including the administratively established update and discount factors, the continued use of certain factors in establishing and adjusting an ACO's historical benchmark, the convergence to a regional benchmark, and considerations for the post-convergence phase. We also welcome comments on the stages for implementing such an approach within the Shared Savings Program, particularly on an initial convergence phase and a post-convergence phase, and any other considerations related to this approach that we have not addressed in this proposed rule. We note that any such modifications to the benchmarking methodology would need to be adopted through notice and comment rulemaking.

We are continuing to consider the financial impact of this modified approach, and are also considering other modifications to the design of the

Shared Savings Program that may be needed along with an administratively established benchmarking methodology, including potential changes to the program's participation options and financial models (level of risk and potential reward). We seek comment on any additional modifications to the design of the Shared Savings Program that should be considered in conjunction with administratively set benchmarks.

Lastly, we note that a number of the features of an administratively established benchmarking methodology diverge from the benchmarking requirements under section 1899(d)(1)(B)(ii) of the Act and would require the use of our authority under section 1899(i)(3) of the Act. Under section 1899(i)(3) of the Act, in order to use a payment model other than the payment model described in section 1899(d) of the Act, we must determine that the alternative payment methodology will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. Accordingly, we also seek comment on the extent to which the use of administratively set benchmarks might have the potential to improve the quality and efficiency of care furnished to Medicare beneficiaries and any anticipated impact on Medicare expenditures. We will consider the information submitted as part of any determination of whether to propose in future rulemaking to implement aspects of an administratively-established benchmarking methodology in the Shared Savings Program.

c. Establishing an Administrative Benchmark Update Factor

(1) Overview

Under the administratively-established benchmarking concept, we would continue to utilize an ACO's historical FFS expenditures to establish the ACO's historical benchmark. However, we would modify the existing methodology to fully remove negative regional adjustments to the benchmark. We would otherwise retain much of the existing methodology for calculating the historical benchmark, including, if finalized, the proposed changes detailed in section III.G.5. of this proposed rule.

When setting the historical benchmark, we would continue to calculate the annualized and truncated per capita expenditures for beneficiaries who would have been assigned to the ACO using the 3 most recent years prior to the start of the agreement period for each of the four Medicare enrollment

types. We would then trend the BY1 and BY2 expenditures forward to BY3, using the existing blend of national and regional FFS expenditure growth rates, adjust for health risk using the CMS-HCC model, and apply benchmark year weights to the trended, risk-adjusted expenditures for each Medicare enrollment type. The benchmark year weights would remain as follows: for new ACOs, BY1 (10 percent), BY2 (30 percent), BY3 (60 percent), and for ACOs in their second or subsequent agreement period, each benchmark year is weighted equally.

As described in the following sections, we would apply an alternative approach to annually updating the ACO's historical benchmark, using an OACT-projected ACPT factor, and applying a discount to the benchmark update to support savings to the Medicare program; the discount factor would vary based on the ACO's regional efficiency to converge benchmarks gradually between ACOs with higher and lower spending compared to their regions. We also further explain that with the use of a discount factor, we would no longer apply a negative regional adjustment. We conclude this section with an overview of the steps for the calculation for the administratively-established benchmark update factor.

(2) Use of Accountable Care Prospective Trend in the Benchmark Update

We are considering an approach that would transition the proposed three-way blend between the prospective ACPT and retrospectively determined regional and national growth rates (as described in section III.G.5.c. of this proposed rule) to an entirely prospectively set trend. This approach would further decouple benchmark updates from growth in realized FFS expenditures, thereby strengthening incentives for ACOs to participate in the Shared Savings Program and achieve savings.

OACT annually develops and publishes United States Per Capita Cost (USPCC) growth projections for Medicare spending. As described in section III.G.5.c. of this proposed rule, we are proposing that OACT would calculate an ACPT, based on a modification of the existing USPCC growth projections used annually for establishing Medicare Advantage rates. We envision that an ACPT, with some additional modifications as described below, would serve as the core component of the administratively set benchmark update under the longer-term approach.

We are considering how to calculate and apply the ACPT in a manner that

maintains a consistent national benchmark update trend across ACOs for a given performance year, independent of when the ACO's agreement period began. We are considering an approach under which we would establish an ACPT every 5 years which would apply during that 5-year window. For example, if we were to establish an average annual trend for the years 2025 through 2029, we would then calculate a new average annual trend for the years 2030 through 2034, then for 2035 through 2039, and so on for each subsequent period.²⁸⁶ An ACO's update factor for a given performance year would be derived from the average annual trend established for the 5-year window that includes the applicable performance year.

For example, an ACO beginning its 5-year agreement period in 2025 would have a single update factor trend for all performance years under the agreement period. For illustration, Table V.D1 from the 2021 Medicare Trustees Report²⁸⁷ projects overall per capita spending growth for Medicare Parts A and B at an annualized rate of 5.1 percent from a 2024 base year to what would be a fifth performance year in 2029. Note that this projected spending growth serves as an illustrative proxy for what a corresponding ACPT might show, though it is based on a different methodology that is not customized to the mix of spending categories included in Shared Savings Program benchmark calculations. In contrast, an ACO beginning its 5-year agreement period in 2027 would have one trend rate for its first 3 performance years (2027, 2028, and 2029) and another for its last 2 performance years (2030 and 2031), as the update factor would be reset every 5 calendar years. This update factor would not change for the duration of the 5-year period in response to changes to the OACT projection, with the exception of an adjustment for changes to the price and demographic components of the ACPT trend as described below, or to account for extreme and uncontrollable circumstances. We would plan to continue to apply the update factor as a flat dollar, risk-adjusted amount, consistent with the methodology for the

²⁸⁶ ACPT 5-year growth projection trends include different growth rates for each year within the 5-year projection. However, for the purposes of simplicity, the overall average annualized growth rate over the 5-year period would be utilized, such that the growth rate is constant over each of the 5 years. Price and demographic projections would be considered at an annual level for the purposes of the adjustment for forecasting error.

²⁸⁷ <https://www.cms.gov/files/document/2021-medicare-trustees-report.pdf>.

proposed use of ACPT in a three-way blend described in section III.G.5.c. of this proposed rule.

We are considering further refinements to calculating the ACPT as part of a longer-term approach for updating benchmarks using entirely administratively set update factors. For example, we are considering maintaining separate projections within the ACPT for price growth, volume/intensity growth, and demographic factors (with potential exceptions for certain service types such as Part B drugs, which are not currently projected using disaggregated growth assumptions). This disaggregation of these factors could be utilized in ACO benchmark updates (for service types where possible), as ACOs are anticipated to have impacts on volume/intensity growth but have minimal impact on price growth and demographic factors. Therefore, the ACPT volume-intensity trend would be held constant for the duration of the agreement period, but retrospective adjustments could be made annually to account for any differences between projected and actual price growth and demographic factors. This would mitigate the effects of unexpected changes in assignable beneficiary demographics, as well as of inflationary pressures or other price changes on ACOs benchmarks. We would also incorporate adjustments to the ACPT to account for changes in relative price levels across counties, as has been done in other ACO initiatives that use national trend projections, such as the Next Generation ACO Model.

By incorporating annual adjustments for changes in price and demographics, we expect that the administrative growth projection will exceed the observed volume/intensity growth, as ACOs generate savings relative to the growth projection. However, we are considering adding potential guardrails to the administrative growth projection in early years to ensure that forecasting error does not unfairly penalize ACOs or discourage participation. One option is to phase-in the administrative trend over the first 5 years, increasing the weighting of the administrative trend component of the update in the three-way blend calculation from 33 percent in PY1 to 50 percent in PY2, 75 percent in PY3, and 100 percent thereafter. Another option would be to limit the contribution of forecasting error to savings and loss calculations during the first 5 years of the new methodology. For example, a floor could be set such that the national mean benchmark could not fall more than 2 percent below national mean FFS spending. CMS may

consider applying either or both of these guardrail options as part of a prospectively-set update factor.

As detailed in section III.G.5.c. of this proposed rule, we are proposing a prior savings adjustment with a 50 percent scaling factor for renewing and re-entering ACOs. Together, this proposed change and the changes to the benchmark update described in this RFI would act to limit the impact of an ACO's performance on its own benchmark. Increasing the 50 percent scaling factor for prior savings adjustments could be considered to further limit the impact of rebasing. The prospective update factor would remove this link within an agreement period and the prior savings adjustment would mitigate the impact of rebasing between agreement periods. After benchmarks converge to a regional baseline (as discussed in section III.G.7.d. of this proposed rule), the link between an ACO's savings and its subsequent benchmark would be severed completely. We anticipate that these changes would create and improve long-term incentives for ACOs to generate savings.

We would also need to establish a process for considering additional factors when recalculating the ACPT prospective update factor every 5 years. One factor may be the size of the accrued wedge between benchmarks and realized FFS spending. It is vital that ACOs are permitted to retain savings in subsequent agreement periods for there to be a strong incentive to generate savings. Allowing a permanent wedge between benchmarks and FFS spending is also vital to giving ACOs flexibility to meet patient needs by providing care that has been traditionally unreimbursed under FFS, such as care management programs or services addressing social needs. Should this wedge grow excessive, however, the update trend may need to be slowed to recover more savings for the Medicare program and its beneficiaries. Over time, updated OACT ACPT projections would also come to reflect the impact of ACOs on spending, and therefore we may need to use other external indices as factors in determining the preset benchmark update factor to ensure that ACOs continue to retain accrued savings.

We seek comment on these considerations for calculating an ACPT to be used as an administratively set benchmark update factor. We seek comment on the 5-year intervals for establishing an ACPT, and alternative approaches that would tie the ACPT to an ACO's agreement period. We also seek comment on approaches to

accounting for price growth and demographic factors versus volume/intensity and considerations for guardrails to protect against projection error. Finally, we seek comment on approaches to updating the ACPT that would ensure it does not overly reflect ACOs' collective impact on spending.

(3) Discount Factor

Under the approach we are considering for implementing a common risk-adjusted regional benchmark (described in section III.G.7.d. of this proposed rule) that encourages participation by both historically efficient (spending below regional average) and inefficient (spending above regional average) ACOs, we believe there would need to be a period of gradual convergence in spending between efficient and inefficient ACOs, while allowing benchmarks for both to remain above realized FFS spending as ACOs generate savings. Therefore, we are seeking comment on the approach of subtracting a modest annual discount factor from the fixed 5-year ACPT growth trend based on the relative efficiency of the ACO. For example, if the projected ACPT trend was 5.1 percent annual growth, an ACO with a 0.2 percent discount factor would have a benchmark update factor based on a 4.9 percent annual growth rate (5.1 percent minus 0.2 percent). Overall, these discount factors would be intended to provide realistic targets that encourage participation by ACOs and providers and suppliers with spending above their regional average. Once in the program, these ACOs and providers and suppliers would have incentives to generate savings, and thus, gradually converge their spending more in line with historically lower spending ACOs.

To determine what discount would be applied to an ACO's update factor, we would calculate a measure of the ACO's regional efficiency. We would compare the ACO's historical spending (the weighted-average spending for the ACO in benchmark year 3 to a regional benchmark (the weighted-average regional FFS expenditures for benchmark year 3). This calculation would be similar to the approach used to determine the difference between the average per capita expenditures for the ACO's regional service area, and the average per capita amount of the ACO's historical benchmark under § 425.601(a)(8)(ii)(A). The discount would vary according to the regional efficiency of each participating ACO but, importantly, would not grow if an ACO successfully lowers spending (as it would under the current regional

adjustment methodology). Sample discount factors are shown in Table 70. If an ACO's historical spending was greater than its regional benchmark, we would apply a discount to the amount of the benchmark update, scaled such that a larger discount is applied for

ACOs with increasingly higher spending (less efficient) compared to their regional benchmark. No discount would be applied to the update amount for ACOs with spending 2 percent or more below their regional benchmark. Applying larger discount factors to less

efficient ACOs would converge benchmarks towards regionally consistent levels, allowing CMS to remove negative regional adjustments as further discussed in section III.G.7.c.(4) of this proposed rule while still driving convergence.

TABLE 70: Sample Discount Factors for ACOs with Varying Regional Efficiency

Regional Efficiency	Discount Factor
ACO historical spending > 1.05 * regional benchmark	0.333%
1.00 * regional benchmark < ACO historical spending ≤ 1.05 * regional benchmark	0.200%
0.98 * regional benchmark < ACO historical spending ≤ 1.00 * regional benchmark	0.100%
ACO historical spending ≤ 0.98 * regional benchmark	0.000%

We have observed that ACOs make significant changes in composition of ACO participant TINs during an agreement period, by adding and removing ACO participants. To account for ACO participant TIN changes, we would recalculate the ACO's discount factor for each performance year of the agreement period based on its regional efficiency using the composition of its ACO participant TINs for the applicable performance year. That is, we would use the ACO's certified ACO participant list for the performance year to determine the ACO's historical spending based on expenditures for the beneficiaries who would have been assigned to the ACO in benchmark year 3 and determine the ACO's regional service area for calculating the ACO's regional benchmark, and thus its regional efficiency.

We seek comment on this approach for calculating and applying a discount factor in determining the amount of an ACO's benchmark update. We seek comment on the intervals of the discount we described, and alternative approaches such as use of a sliding scale in determining the discount amount. We also seek comment on approaches to ensuring the discount is reflective of the ACO's regional efficiency, including the approach of recalculating the discount factor to reflect changes in an ACO's regional efficiency as a result of changes in the ACO's composition during its agreement period.

(4) Removal of Negative Regional Adjustments to the Benchmark

In accordance with § 425.601(a)(8), we apply a regional adjustment in establishing the ACO's historical benchmark, which is equal to a percentage of the difference between the average per capita amount of expenditures for the ACO's regional

service area for BY3 and the ACO's historical benchmark.

In the administratively-established benchmarking concept, we would no longer apply negative regional adjustments to the benchmark, although positive regional adjustments would remain. Under this approach, ACOs with higher than average historical spending would begin with a benchmark calculated solely using their historical experience. This would encourage providers and suppliers with higher historical spending relative to their region to participate in the Shared Savings Program, while continuing to reward ACOs with lower-than-average historical spending for their efficiency relative to their region. This approach builds on the policies proposed in section III.G.5.c.(5) of this proposed rule to mitigate the impact of the negative regional adjustment on ACOs, particularly those caring for high-risk populations.

We are also considering approaches for addressing a potential concern that efficient ACOs would be disincentivized from adding less efficient providers and suppliers as ACO participants because it would reduce their regional adjustment. One approach would be to scale an ACO's initial, larger positive regional adjustment based on the overlap in beneficiaries that would have been aligned to the ACO using the ACO's initial ACO participant list and its updated ACO participant list. In this way, an ACO with spending below its regional average would retain its advantage conferred by the regional efficiency adjustment under its initial ACO participant list (to the extent it retains those ACO participants) while also being able to pursue the expanded savings opportunity afforded by the new benchmarking approach by adding less

efficient providers and suppliers to its ACO participant list.

We seek comment on this approach, and considerations related to removing the negative regional adjustment in establishing the ACO's historical benchmark under an administratively-established benchmark approach. We also seek comment on considerations for limiting disincentives for efficient ACOs to add less efficient providers and suppliers.

(5) Detailed Administratively-Established Benchmark Update Calculation

The following is a step-by-step example of the administratively-established benchmark update calculation on which we are seeking comment:

- *Step 1:* Calculate the historical benchmark according to the existing Shared Savings Program benchmarking methodology (including, if finalized, the proposed changes detailed in section III.G.5. of this proposed rule), without applying negative regional adjustments.

- *Step 2:* Risk-adjust the historical benchmark to account for changes in severity and case mix between BY3 and the performance year for each enrollment type.

- *Step 3:* Apply the update factor to the risk-adjusted historical benchmark for each enrollment type, calculated as follows:

++ Start with the overall OACT-projected Shared Savings Program ACPT 5-year projected trend²⁸⁸

²⁸⁸ As described in section III.G.5.c. of this proposed rule, we are proposing that OACT would develop a Shared Savings Program-specific ACPT to incorporate into the update factor calculation. This projected trend would vary from the USPPC projections designed for MA payment purposes in that adjustments would be made to make it applicable to ACO spending calculations, including

applicable for the ACO based on the start of its agreement period and the performance year for each enrollment type.²⁸⁹ The update rate over an agreement period may include ACPT projected trends from more than one 5-year period if the ACO's agreement period does not align with the 5-year cycle for ACPT calculation.

++ Apply the average projected trend based on the number of years between BY3 and the performance year.

++ Apply any retrospective adjustments to the trend based on divergence between the price and demographic components of the ACPT projected trend and observed price trends and demographic changes. This retrospective adjustment would be calculated annually after the end of each performance year only for the price and demographic components (no such adjustment would be made for the volume-intensity component).

++ Subtract the relevant discount factor (as per the examples in Table 70, based on the regional efficiency of the ACO in BY3) from the adjusted trend for each year between BY3 and the performance year to determine the ACO's trend percentage.

++ Multiply the ACO's trend percentage by the average national ACPT value for assignment eligible beneficiaries (adjusted to reflect the ACO's relative risk in each eligibility category) to determine the flat dollar update amount.

++ Apply any guardrails as described in section III.G.7.c.(2) of this proposed rule.

++ Add the flat dollar update amount to the ACO's risk-adjusted historical benchmark for the applicable enrollment type.

• *Step 4:* Calculate a single per capita benchmark amount by taking a weighted average across each enrollment type.

d. Convergence to Regional Benchmarks; Post-Convergence Phase

Ultimately, this administratively-established benchmark approach would be partially intended to drive ACOs towards regional spending convergence, such that the Shared Savings Program could consider further benchmarking changes under which benchmarks would be established on a regionally

consistent risk-adjusted basis across ACOs in the same area. This post-convergence phase would completely eliminate ratcheting effects by removing rebasing and would also decouple benchmarks from an ACO's historical spending, thereby creating a sustainable benchmarking approach that would support high ACO participation levels and reward ACOs for increased efficiency.

Regionally consistent benchmarking has precedent in other CMS models and programs. Medicare Advantage benchmarks are established using beneficiary risk scores and the Medicare Advantage Ratebook of county risk-standardized benchmarks, as described in §§ 422.258 and 422.306. In the ACO REACH Model,²⁹⁰ the baseline component of the benchmark will be calculated either entirely or in part using a rate book with county benchmark expenditures and beneficiary risk scores. The Shared Savings Program calculates risk-adjusted county FFS expenditures for individual calendar years using a comparable approach, as discussed in section III.G.5.d. of this proposed rule.

ACO benchmarks in this post-convergence phase would be calculated based on a rate book of risk-standardized average per capita rates at the county level and beneficiary level risk scores. Crucially, the initial per capita county rates would reflect the average benchmark levels in the county, inclusive of the accrued wedge between benchmarks and realized spending, as opposed to reflecting average expenditures. An ACO's benchmark would be the product of its average beneficiary risk score, weighted by assigned beneficiary months, and its average regional benchmark rate, calculated as the weighted average of the county rates, weighted by the number of months of experience contributed by assigned beneficiaries residing in each county. The administratively set update factor described above would continue to be applied to ACO benchmarks in the post-convergence phase to determine average benchmark growth. As an example, say an ACO has assigned beneficiaries that reside entirely in two counties (County A and County B), with 50 percent of the assigned beneficiary population in each county. If the rate book rate for County A is \$1,300 per beneficiary per month (PBPM) and the rate for County B is \$1,100 PBPM, then the ACO's average regional benchmark rate would be

\$1,200 PBPM. If the ACO's assigned beneficiaries have an average risk score of 1.5, then the risk-adjusted benchmark would be \$1,800 PBPM, pending application of the update factor. A regionally consistent benchmarking approach as described above would likely involve an annual determination of county rates tied to the publication of the rate book.

The convergence phase would be intended to converge benchmarks toward some level above realized spending, but below predicted spending absent ACOs, assuming ACOs generate savings. We are considering several approaches for developing county per capita rates. One method under consideration would be to calculate risk-standardized average per capita expenditures and apply a scalar adjustment that accounts for prior savings or the accrued wedge. Alternatively, another approach could involve developing county rates by calculating a weighted average benchmark across ACO-assigned and unassigned beneficiary populations in the county. In either case, we would continue to use an administratively-established factor to update county rates over time; however, we anticipate the need for a process to monitor the size of the wedge within a region (the risk-adjusted difference between the benchmark and FFS spending) and to establish bounds that restrict regional rates from exceeding a certain level above FFS spending.

We anticipate that the convergence phase will last between 5–10 years, depending on participation rates and the pace of spending convergence within regions. We expect ACO spending will converge within regions under the changes described in preceding sections of this RFI because the incentives for providers and suppliers with high spending for their region to participate in ACOs and lower spending would be much stronger, and the ACOs in which those providers and suppliers participate would have strong savings potential. Convergence in risk-adjusted spending may also be fostered by improvements to the risk adjustment methodology. Convergence in spending would not have to be complete, however, to transition to a post-convergence phase in which benchmarks are set based on a common regional rate that is risk-adjusted for an ACO's aligned population characteristics. We expect some continued variation in ACO spending, but the convergence to regional rates would still provide all ACOs an opportunity to lower spending below their benchmarks. Still, the timing for

adding back hospice and removing IME, DSH, and uncompensated care payments (as is already done for benchmarking under the Global and Professional Direct Contracting Model and will continue when the model transitions to the redesigned ACO REACH Model on January 1, 2023).

²⁸⁹ The ACPT would include trends for Aged & Disabled (A&D) and End Stage Renal Disease (ESRD) beneficiaries. The Aged & Disabled trend would apply for the disabled, aged/dual eligible, aged/non-dual eligible enrollment types.

²⁹⁰ See the ACO REACH Request for Applications at <https://innovation.cms.gov/media/document/aco-reach-rfa>.

transitioning to the post-convergence phase is important, as it may cause a significant shift in benchmarks for many ACOs as the baseline component shifts from population-specific to regionally consistent. In order to maintain participation, it would be essential that this phase does not occur until a sufficient portion of providers are below the administratively projected regional benchmark.

If the convergence phase takes longer than 5 years, we would need to address the potential rebasing effects for ACOs renewing for subsequent agreement periods under the new benchmarking approach. One approach would be to completely eliminate rebasing, and use the historical benchmark period from an ACO's first agreement period under the new benchmarking approach for subsequent agreement periods until the post-convergence phase. This approach would most directly eliminate rebasing effects, but would risk weakening the accuracy of the historical baseline expenditures as the number of years separating the baseline period and performance year increases. In prior rulemaking, we have acknowledged concerns about an approach that depends on older historical data in benchmark calculations (see, for example, February 2016 proposed rule, 81 FR 5832 through 5834, 5865 and 5866), including operational complications and potential biases that result from use of older historical data when the ACO's composition of providers and suppliers changes over time. These complicating circumstances may become more pronounced with a longer convergence period and a larger gap between the historical benchmark and performance period. An alternative approach would be to continue to use a baseline period of 3 years directly proceeding the start of the agreement period, but with ACO-specific adjustments to limit rebasing effects. For example, we are considering approaches that would build on the proposal, discussed in section III.G.5.c. of this proposed rule, to add prior ACO savings into subsequent benchmarks, with weighting to address changes in ACO composition.

We seek comment on—

- Considerations for the design of a regionally consistent benchmarking approach, including how to set fair and accurate risk-standardized benchmarks, the process for annual updates to regional rates, and how to distinguish between enrollment types.

- Considerations for the required conditions and timing for reaching this post-convergence phase with the use of regionally consistent benchmarks, as

well as incentives to promote ACO spending convergence within a region.

- Approaches to addressing rebasing effects for renewing and re-entering ACOs in subsequent agreement periods during the convergence phase.

- Considerations for converging to nationally consistent spending versus regionally consistent spending.

e. Request for Comment on Addressing Health Equity Through Benchmarking

Consistent with the Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (E.O. 13985), we are committed to advancing equity in health and healthcare for all individuals and addressing inequities that exist in our policies and programs that serve as barriers to equal opportunity. The term “equity” is defined in E.O. 13985 as “the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities that have been denied such treatment”

Benchmarks based on historically observed spending may be inequitable to the extent that historical patterns reflect existing inequities in both access to care and the provision of care. We are interested in considering how direct modification of benchmarks to account for existing inequities in care can be used to advance health equity. Direct increases to benchmarks for historically underserved populations would grant additional financial resources to health care providers accountable for the care of these populations, and may work to offset historical patterns of underspending that influence benchmark calculation. Furthermore, setting payment in excess of current spending for groups experiencing disadvantage would incentivize ACOs to attract those groups with care and enhancements valued by these beneficiaries. Pairing such benchmark changes with monitoring of use of resources, quality, and outcomes can ensure that increased benchmarks are being used to address care inequities, rather than solely generating increased shared savings potential for ACOs benefitting from positive benchmark adjustments.

The redesigned ACO REACH Model²⁹¹ will be implementing a benchmark adjustment to address historical health inequities within CMS ACO initiatives, with the intent of incentivizing ACOs to seek out and form

relationships with historically underserved beneficiaries. The ACO REACH benchmark adjustment is calculated at the beneficiary level, and provides for a \$30 per beneficiary per month (PBPM) increase to an ACO's benchmark for each assigned beneficiary classified as being in the top decile of underserved beneficiaries across all beneficiaries in the ACO REACH Model. The adjustment is designed in a budget neutral manner, in which benchmarks will be reduced by a smaller \$6 PBPM adjustment for each assigned beneficiary classified as being in the bottom five deciles. Beneficiaries will be stratified using a composite measure that incorporates a combination of ADI (percentile score from 1–100) and Dual Medicaid Status (Medicare only vs. Full or Partial Dual Eligibility). The area-level measure (Area Deprivation Index)²⁹² captures local socioeconomic factors correlated with medical disparities and underservice, while the beneficiary level measure (Dual Medicaid Status) captures economic challenges directly affecting individual beneficiaries' ability to access high-quality care. Because ADI is measured as a percentile (continuous variable), while Medicaid Status is a binary metric, a simple blending of the variables would underweight the ADI. Therefore, CMS will calculate the measure by starting with the ADI for a given beneficiary's census block group of residence (scored from 0–99 based on percentile relative to the nation), and applying a 25-point increase to the score for dually eligible beneficiaries. For example, a dually eligible beneficiary residing in a census block group with an ADI in the 75th percentile would receive a score of $75 + 25$, for a total of 100.

Each ACO will then receive a net benchmark adjustment based on the number of its assigned beneficiaries in each category. For example, an ACO with 100 beneficiaries scoring in the top decile and 500 beneficiaries in the bottom five deciles in a given month would receive a net neutral benchmark impact for that month $[(\$30 \text{ PBPM} \times 100) - (\$6 \text{ PBPM} \times 500)] = 0$.

The ACO REACH health equity benchmark adjustment addresses

²⁹² The University of Wisconsin Neighborhood Atlas website (<https://www.neighborhoodatlas.medicine.wisc.edu/>) Area Deprivation Index was developed by researchers at the University of Wisconsin based on a measure developed by the Health Resources and Services Administration (HRSA) over 3 decades ago. It has been adapted to the Census Block Group level and includes factors measuring income, education, employment, and housing quality, which have been linked to a number of healthcare outcomes, to rank neighborhoods by socioeconomic disadvantage.

²⁹¹ See the ACO REACH Request for Applications at <https://innovation.cms.gov/media/document/aco-reach-rfa>.

inequity in benchmarks calculated primarily using historical expenditures, where historical underspending for underserved beneficiaries informs benchmarks. In the context of the benchmarking approach outlined elsewhere in this section of this proposed rule, our intent would be to converge spending to the point where benchmarks can be calculated on a regionally consistent basis, which would address equity concerns associated with entrenched historical underspending. By utilizing risk-standardized regional rates to derive benchmarks, rather than blends of historical and regional spending that can entrench inappropriately low levels of spending for populations with unmet needs, the new benchmarking approach would facilitate setting benchmarks above current levels of spending for providers caring for underserved populations. Such adjustments could be implemented within the estimation of the predictive model of spending used for risk adjustment (the CMS–HCC model) or in a post-estimation benchmark adjustment as in ACO REACH so that benchmarks would support optimal rather than current spending for historically marginalized groups. These adjustments would not only act to correct resource disparities but also establish incentives for ACOs to attract underserved groups with enhanced care.

Likewise, these and other approaches could be employed to preserve (if not expand) existing payment differentials that set payment higher for certain providers. Equity-motivated benchmark adjustments could be implemented, for example, to support additional funding for safety net providers (for example, CAHs, RHCs, and FQHCs). In other cases, add-on payments, such as DSH and IME, might continue to be carved out of ACO benchmarks and performance year expenditures, as they are now. We seek comment on other policy adjustments that should be considered for benchmark setting in the post-convergence phase.

We seek comment on—

- Approaches, generally, to addressing health inequities via the benchmark methodology for the Shared Savings Program, and specifically to incentivize ACOs to serve historically underserved communities.

- Considerations for what data would need to be collected on Medicare beneficiaries and their communities (for example, need for and access to health care providers, transportation, and social services) and what factors should be considered to identify underserved

communities and adjust ACO benchmarks.

- Considerations for including a health equity benchmark adjustment in the Shared Savings Program in the near term comparable to the equity adjustment being tested within the ACO REACH Model.

- Considerations for addressing health inequities in the context of the benchmarking concept outlined in this section of this proposed rule.

- Considerations for monitoring and program integrity tools that would track the use of any health equity benchmark adjustments for the intended purposes.

- Considerations for whether benchmark adjustments for ACOs that include CAHs, RHCs, FQHCs, and REHs as ACO participants would improve care for rural and underserved populations and increase participation by these providers and suppliers in the Medicare Shared Savings Program.

H. Medicare Part B Payment for Preventive Vaccine Administration Services

1. Statutory Background

Under section 1861(s)(10) of the Act, Medicare Part B covers both the vaccine and its administration for the specified preventive vaccines—the influenza, pneumococcal, and hepatitis B virus (HBV) vaccines. Under sections 1833(a)(1)(B) and 1833(b)(1) of the Act, respectively, there is no applicable beneficiary coinsurance, and the annual Part B deductible does not apply for these vaccinations or the services to administer them. Payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for a particular vaccine product except where payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or Federally qualified health center (FQHC). We note that many other preventive vaccine products are not specified for Medicare Part B coverage under section 1861(s)(10) of the Act, such as the shingles vaccine, and instead are covered and paid for under Medicare Part D.

Section 1861(s)(10)(A) of the Act, as amended by section 3713 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136) includes the COVID–19 vaccine and its administration in the same subparagraph as the influenza and pneumococcal vaccines and their administration. We implemented this change in the interim final rule with comment period titled, “Additional Policy and Regulatory Revisions in

Response to the COVID–19 Public Health Emergency,” published in the November 6, 2020 **Federal Register** (85 FR 71145 through 71150). In that rule, we established that payments for COVID–19 vaccines and vaccine administration would be made in the same manner as payments for the influenza and pneumococcal vaccines. In section III.H.5. of this proposed rule, we propose to permanently codify regulatory changes published in the November 6, 2020 IFC.

2. Refinement to the Payment Amount for Preventive Vaccine Administration

a. Background for Medicare Part B Payment for Administration of Influenza, Pneumococcal, HBV Vaccines

Vaccine administration services described under section 1861(s)(10) of the Act are not technically valued or paid under the PFS, as they are not included within the statutory definition of physicians’ services in section 1848(j)(3) of the Act. Prior to CY 2022, we had based payment rates for the administration of these preventive vaccines by suppliers such as physicians, NPPs, and mass immunizers on an evaluation of the resource costs involved in furnishing the service, which is similar to the methodology that we use to establish payment rates for the PFS. Payments for the administration of the preventive vaccines by these suppliers are geographically adjusted based on the location of where the service was performed. Under the Outpatient Prospective Payment System (OPPS), we assign a payment rate for administering these preventive vaccines and the payment rates are applicable for preventive vaccine administration services by hospitals and home health agencies. Certain other types of providers and suppliers, such as RHCs, FQHCs and critical access hospitals (CAHs), are paid based on reasonable cost for vaccine administration.

We provided a discussion in the CY 2022 PFS final rule on the history of the valuation of the three HCPCS codes, G0008, G0009, and G0010, which describes the services to administer an influenza, pneumococcal, and HBV vaccine, respectively (86 FR 65180 through 65182). We explained that we generally had established payment rates for the three codes based on a direct crosswalk to the PFS payment rate for CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Additionally, we stated that using this methodology resulted in reductions in

the payment rates for the preventive vaccine administration services over several years and raised concerns from interested parties. Therefore, we attempted to address the reduction in payment rates for these vaccine administration HCPCS codes in the CY 2020 and CY 2021 PFS final rules (84 FR 62798 and 85 FR 84626 through 84628, respectively) by maintaining the CY 2019 payment rate for all three codes.

In rulemaking for the CY 2022 PFS, we continued efforts to establish payment for vaccine administration services on a long-term basis. In the CY 2022 PFS proposed rule (86 FR 39220 through 39224), we included a comment solicitation requesting information that specifically identifies the resource costs and inputs that should be considered when determining the payment amount for vaccine administration services. In the CY 2022 PFS final rule (86 FR 65183 through 65187), we discussed the feedback received from a wide variety of interested parties in response to our comment solicitation. In that rule, we explained that we agreed with commenters on the need to establish stable payment rates that consider the costs associated with administering the preventive vaccines included in the Part B preventive vaccine benefit. In particular, we agreed that the payment rates for administration of the influenza, pneumococcal and hepatitis B vaccines are too low and need to be adjusted to reflect the costs incurred by healthcare providers. Furthermore, we agreed with commenters who stated that we should decouple payment for these vaccine administration services from the crosswalk to the PFS and treat them independently.

Additionally, in the CY 2022 PFS final rule (86 FR 65185), we explained that based on the history and status of payment for preventive vaccine administration and given the concerns gathered through the comment solicitation we believed that we needed to act expeditiously to update payment rates for the administration of preventive vaccines paid under Medicare Part B, effective January 1, 2022. In addition, we believed that the timing was appropriate for establishing a predictable payment rate for preventive vaccine administration since the PHE had ignited a hypervigilance for infectious diseases.

Therefore, for CY 2022, we finalized a uniform payment rate of \$30 for the administration of an influenza, pneumococcal or HBV vaccine covered under the Medicare Part B preventive vaccine benefit at section 1861(s)(10) of the Act. We explained that since the

administration of the preventive vaccines described under section 1861(s)(10) of the Act are finalized independent of the PFS, that these payment rates will be updated as necessary independently of the valuation of any specific codes under the PFS.

b. Background for Medicare Part B Payment for Administration of COVID–19 Vaccines

In the CY 2022 PFS final rule we stated that under the authority provided by section 3713 of the CARES Act, we have established specific coding and payment rates for the COVID–19 vaccine and its administration through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on the CMS website.²⁹³ We also provided a detailed history on how the initial payment rates for the administration of the COVID–19 vaccines were determined and how the payment policy evolved to a rate of \$40 per dose (86 FR 65181 and 65182).

As discussed above in this section, in the CY 2022 PFS proposed rule (86 FR 39220 through 39224) we included a comment solicitation requesting information that specifically identifies the resource costs and inputs that should be considered when determining a payment amount for preventive vaccine administration. As part of the comment solicitation, we requested feedback specifically related to the circumstances and costs associated with furnishing the COVID–19 vaccines to ensure we took these into consideration when determining our payment policy. In the CY 2022 PFS final rule (86 FR 65185), we discussed the feedback received in response to our comment solicitation with regard to the COVID–19 pandemic. In that rule, we recognized that the PHE has posed and continues to pose unique challenges for vaccination providers, particularly with respect to the administration of vaccines for COVID–19. For example, we anticipate that healthcare providers will continue to experience unusual costs associated with staffing, scheduling, and reporting requirements as increasing numbers of patients receive additional doses and boosters of the COVID–19 vaccines in the near future, and as health care providers adapt their vaccine delivery infrastructure accordingly. However, after the PHE, we anticipate that these costs will go down as patient volumes stabilize and as healthcare providers incorporate tasks

such as scheduling and reporting into their routine clinical practice. For example, while we may see annual vaccination for COVID–19 similar to influenza, these vaccinations may happen in a more predictable manner, which would provide healthcare settings more time and ability to plan ahead for future vaccination needs. In addition, we noted that healthcare providers will have already made certain capital investments associated with the COVID–19 vaccines, such as ultra-cold storage freezers and software upgrades, during the course of the PHE, and thus, after the PHE such investments will no longer represent a significant additional cost over and above the costs of administering other preventive vaccines. For example, we believe recurrent staffing costs for COVID–19 vaccines may mirror the staffing needs for the administration of the yearly influenza vaccine. At the same time, we recognized that the formal termination of the PHE will not necessarily coincide with an immediate return to pre-pandemic circumstances, and that some of the additional costs mentioned above may persist while conditions normalize. For these reasons, we believed that it was appropriate to establish a single, consistent payment rate for the administration of all Part B preventive vaccines following the end of the calendar year in which the PHE expires. That is, effective January 1 of the year following the year in which the PHE ends, the \$40 payment rate for administration of the COVID–19 vaccines will be adjusted to align with the payment rate for the administration of other Part B preventive vaccines (86 FR 65185).

c. Proposed Adjustment to the Payment Amount for Administration of Preventive Vaccines for Geographic Locality

Our method of paying for the administration of preventive vaccines has varied over time. Prior to March 1, 2003, we paid for the administration of an influenza, pneumococcal, or HBV vaccine, at the same rate as CPT code 90782 for the year corresponding to the date of service on the claim.²⁹⁴ For dates of service on or after March 1, 2003 through December 31, 2021, the vaccine administration payment rates for an influenza, pneumococcal, or HBV vaccine were established through notice-and-comment rulemaking using a crosswalk to the payment rate for similar services paid under the PFS,

²⁹³ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-mono-clonal-antibodies>.

²⁹⁴ Pub. 100–04, Chapter 18, Section 10.2.5.2. <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c18pdf.pdf>.

such as, CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*) or CPT code 36000 (*Introduction of needle or intracatheter, vein*). Using the direct crosswalk to a similar service under the PFS requires applying the PFS payment calculation. This formula that uses a HCPCS code's relative value units (RVUs) for work, practice expense (PE), and malpractice (MP) adjusted by the location where the service is furnished (that is, geographic practice cost indices (GPCIs)). The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the average national costs for furnishing the service. Thus, in order to calculate the payment for the vaccine administration codes, the work, PE, and MP RVUs are adjusted by the GPCIs to reflect the variations in the costs of furnishing the services.

For CY 2022, we decoupled payment for these vaccine administration services from the PFS crosswalk and finalized a payment rate of \$30 for the administration of an influenza, pneumococcal, or HBV vaccine and a payment rate of \$40 for the administration of COVID-19 vaccines. However, in the CY 2022 PFS final rule, we inadvertently neglected to address a geographic adjustment policy for these payment rates and instead, noted only that payments would be geographically adjusted. When we posted the CY 2022 payment rates for preventive vaccine administration to the seasonal influenza web page, we posted locality-specific payment rates based on application of the PFS GPCIs to the finalized payment rate.²⁹⁵ Similarly, when we posted the CY 2022 payment rates for the COVID-19 vaccine administration to the COVID-19 vaccine web page, we posted locality-specific payment rates based on application of the PFS GPCIs to the finalized payment rate.²⁹⁶

In this proposed rule, we are proposing a geographic adjustment policy that would apply to preventive vaccine administration services for CY 2023 and subsequent years. We continue to believe that it is appropriate to adjust the payment amount for the administration of preventive vaccines to reflect cost differences for each geographic locality. For example, suppliers' costs for rent or employee wages could vary significantly across different geographic areas. We also continue to believe that the geographic

variation in costs of administering preventive vaccines provided by suppliers such as physicians, NPPs, and mass immunizers is similar to the geographic variation in the cost of physicians' services paid under the PFS.

Since we have decoupled payment for these vaccine administration services from the PFS crosswalk and finalized a payment rate for them, we believe the next step in establishing appropriate payment for preventive vaccine administration services independent of the PFS would be to consider a more independent approach to geographic payment adjustment. The PFS GPCIs reflect cost differences for each geographic locality for each of the three distinct components of PFS services (work, PE, and MP). In contrast, the payment rate we have established for administration of the flu, pneumococcal, and HBV preventive vaccines is a flat rate payment of \$30, and for the administration of COVID-19 vaccines is a flat rate payment of \$40. As such, a single adjustment factor could be used to apply the geographic locality adjustment for these services. In addition to calculating the three component GPCIs (work, PE and MP) to adjust payment under the PFS, under section 1848(e)(2) of the Act, we also calculate a Geographic Adjustment Factor (GAF) for each fee schedule area and, as we explain below, we are proposing to use this GAF described in § 414.26 to geographically adjust payment for preventive vaccine administration services beginning for CY 2023. Specifically, we are proposing to use the GAF to adjust the payment to reflect the costs of administering preventive vaccines in each of the PFS fee schedule areas. The GAF is calculated using the three component GPCIs under the PFS (work, PE, and malpractice), and is calculated for each PFS fee schedule area as the weighted composite of all three GPCIs for each fee schedule area using the national GPCI cost share weights. The GAF, which is described under our regulation at § 414.26, is further discussed in section II.D. of this proposed rule, and the specific proposed GAF values for each fee schedule area are posted in Addendum D to this proposed rule.

We also considered continuing to adjust the payment amount for administration of preventive vaccines by applying the PFS GPCIs to reflect cost differences for each geographic area. However, to effectuate this adjustment, this method would require a crosswalk to the RVUs established under the PFS for a CPT code that describes a similar service and is reflective of the mix of work, PE and MP

for preventive vaccine administration services. Having recently disconnected payment for preventive vaccine administration services from the PFS through rulemaking as explained above, we did not believe it would be appropriate to continue connecting these payments to the PFS in this way for purposes of geographic adjustment.

We have opted to propose use of the GAFs to adjust payment for the preventive vaccine administration services for geographic cost differences beginning for CY 2023. As we discuss above and in the CY 2022 PFS final rule (86 FR 65180–65194), we engaged the preventive vaccine community and established a stable payment amount for preventive vaccine administration that is based on resource costs. Since calculation of the GAFs incorporates the fundamental relative cost structure of the PFS GPCIs, but is a single factor that is weighted by the overall relative share of the three PFS component GPCIs, we believe application of the single GAF to geographically adjust the payment rate for preventive vaccine administration services based on costs in a given locality would be a more appropriate, streamlined approach to geographic adjustment that results in similar payment. Additionally, this method avoids the need to refer to the component RVUs for any particular reference service that is valued under the PFS, and thus gets us closer to updating the preventive vaccine administration rates independent of the PFS.

We propose to amend our regulation at § 410.152 to codify the use of the GAFs for each PFS fee schedule area to adjust payment amounts for the preventive vaccine administration services (influenza, pneumococcal, HBV, and COVID-19) to reflect the cost differences in furnishing these services in different fee schedule areas. We note that under this proposal, beginning January 1, 2023 we would apply the GAF to the \$40 payment amount for COVID-19 vaccine administration service so long as the EUA declaration is still in place, as discussed in section III.H.4.d.i. of this proposed rule. We also note that we discuss payment for the administration of COVID-19 monoclonal antibody products in section III.H.4. of this proposed rule.

We invite public comment on our proposal to adjust the payment amount for the administration of preventive vaccines for geographic cost variations using the GAF. We also welcome comments on any other factors that could be used to make this payment adjustment to reflect geographic cost differences.

²⁹⁵ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McPartBDrugAvgSalesPrice/VaccinesPricing>.

²⁹⁶ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-monoclonal-antibodies>.

In this proposed rule, we are also proposing to amend our regulations to codify the payment amount established for administration of preventive vaccines in the CY 2022 PFS final rule and the proposed method for adjusting this rate for cost differences in each geographic locality. We note, as discussed in section III.H.2.d. of this proposed rule, we are proposing additional revisions to § 410.152 to reflect an annual adjustment to the payment amount for administration of preventive vaccines to reflect changes in cost using the Medicare Economic Index (MEI).

We also note that § 410.152(h) currently contains outdated payment policies for pneumococcal vaccine administration. Therefore, in this proposed rule we propose to revise § 410.152 by replacing the current paragraph (h) to reflect the following:

- Effective January 1, 2022, the established payment amount under Medicare Part B for administration of influenza, pneumococcal, and HBV vaccines is \$30. For preventive vaccines administered January 1, 2022 through December 31, 2022, payments under Medicare Part B for administration of preventive vaccines are adjusted to reflect geographic cost variations using the GPCIs established under the PFS and the RVUs for a designated reference code under the PFS. Beginning January 1, 2023, we would adjust the payment amount for the administration of preventive vaccines for geographic cost variations using the GAF described in § 414.26.

- Effective January 1, 2022, the established payment amount under Medicare Part B for administration of COVID-19 vaccines is \$40. For COVID-19 vaccines administered January 1, 2022 through December 31, 2022, payments under Medicare Part B for administration of COVID-19 vaccines are adjusted to reflect geographic cost variations using the GPCIs established under the PFS and the RVUs for a designated reference code under the PFS. Beginning January 1, 2023, we would adjust the payment amount for the administration of COVID-19 vaccines for geographic cost variations using the GAF described in § 414.26.

- Effective January 1 of the year following the year in which the PHE ends, the payment rate for administration of the COVID-19 vaccines will be adjusted to align with the payment amount for the administration of other Part B preventive vaccines. We note, as discussed in section III.H.4.d.i. of this proposed rule, we are proposing to clarify that this policy would be

dependent on the declaration under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act), that is, EUA declaration for drugs and biological products.

We solicit comment on these proposals and the proposed amendments to the regulation text.

d. Proposed Annual Adjustment to the Payment Amount for Administration of Preventive Vaccines To Reflect Changes in Cost

As part of the comment solicitation in the CY 2022 PFS proposed rule, we requested feedback on whether CMS should use a different process to update the payment rates for administration of the preventive vaccines described in section 1861(s)(10) of the Act on an annual basis. Some commenters provided feedback in response to this specific inquiry. One commenter suggested that incremental updates should be made to the payment rate each year. Another commenter stated that annual updates to the vaccine administration payment rates based on OPPS claims data would be a reliable and data-based method for updating the payment rate and would prevent the issues that have occurred in the past with the crosswalk under the PFS to CPT code 96372. In response to those comments, we stated that we would continue to seek feedback on an appropriate mechanism for updating these payments on a yearly basis by, for example, applying an annual inflation factor, for example the increase in the MEI, to the payment rate in order to reflect increases in costs faced by providers and suppliers that furnish the service; and that we plan to address updating the payment rate for Part B preventive vaccine administration in future rulemaking.

We believe that finalizing a \$30 payment amount that is adjusted for geographic locality for the service to administer preventive vaccines in CY 2022 was the first step in the development of a Part B payment methodology that provides predictable payment to the providers/suppliers furnishing these vaccines. For CY 2023, we discuss below how we propose to annually update the \$30 payment amount to account for changes in costs associated with furnishing the service.

To account for the change in costs of administering preventive vaccines, we are proposing to update the payment amount (that is, \$30) established in the CY 2022 PFS final rule for the administration of preventive vaccines based upon the annual increase to the MEI. The MEI is defined in section 1842(i)(3) of the Act and is used to

update payment amounts in other healthcare settings. For example, the MEI is used to update the non-drug component of the OTP payment bundle and is also used to update the fixed-dollar payment amount for the originating site facility fee for Medicare telehealth services. The MEI is a fixed-weight input price index that reflects the physicians' own time and the physicians' practice expenses, with an adjustment for the change in economy-wide, private nonfarm business total factor productivity. The MEI was last revised in the CY 2014 PFS final rule with comment period (78 FR 74264) and the proposal to rebase and revise the MEI for CY 2023 can be found in section II.M. of this proposed rule. The current forecast of the increase in the MEI for CY 2023 is 3.8 percent based on the proposed 2017-based MEI. We note that the CY 2023 MEI increase factor for the final rule will be based on historical data through the 2nd quarter of 2022.

In developing the proposed method to update the payment amount for administering preventive vaccines, we considered other potential update factors, such as the Bureau of Labor Statistics Consumer Price Index for All Items for Urban Consumers (Bureau of Labor Statistics #CUUR0000SA0 (<https://www.bls.gov/cpi/data.htm>)). The Consumer Price Index for All Items (CPI-U) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. However, we concluded that a healthcare-specific update factor, such as the MEI, would be more appropriate for suppliers that administer preventive vaccines than the CPI-U, which measures general inflation, as the MEI would more accurately reflect the change in the prices of goods and services included in the vaccine administration service. We also considered using a labor-specific series for the inflation factor since a main source of the expenses related to the administration of vaccines are related to the staff who administer them. For example, we considered the Employment Cost Index (ECI)—Wages and salaries for All Civilian workers in Hospitals (current forecast through CY 2023 is 4.2 percent) or the ECI—Wages and salaries for All Civilian workers in Health care and social assistance (current forecast through CY 2023 is 3.8 percent). However, we concluded that an update factor that takes into account other costs, such as the MEI, would be more appropriate for suppliers that administer preventive vaccines than the ECI.

We note that under this proposal, beginning January 1, 2023 we would

update the \$40 payment amount for COVID-19 vaccine administration service based upon the proposed 2017-based MEI so long as the EUA declaration is still in place, as discussed in section III.H.4.d.i. of this proposed rule. We also note that we discuss payment for the administration of COVID-19 monoclonal antibody products in section III.H.4. of this proposed rule.

Accordingly, we propose to annually update the payment amount for administration of preventive vaccines based upon the most recently available historical annual growth in the MEI available at the time of rulemaking. We propose to codify this proposal in tandem with the revisions discussed above in section III.H.2.c. of this proposed rule under § 410.152. We invite public comment on this proposal. We also welcome comments on potential approaches to updating payment rates for administration of preventive vaccines other than the MEI that could be used as an annual adjustment to account for the change in costs associated with administering preventive vaccines.

e. Summary of Proposals and Implementation

In summary, for CY 2023 we propose to annually update the payment amount for the administration of Part B preventive vaccines based upon the increase in the MEI. Additionally, we propose to adjust this payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the preventive vaccine is administered using the GAF. These adjustments would apply to HCPCS codes G0008, G0009, and G0010 effective January 1, 2023.

With regard to COVID-19 vaccine administration, we stated in the CY 2022 PFS final rule that we will maintain the current payment rate of \$40 per dose, which is geographically adjusted as described above, for the administration of the COVID-19 vaccines through the end of the calendar year in which the ongoing PHE ends. Effective January 1 of the year following the year in which the PHE ends, the payment rate for COVID-19 vaccine administration will be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines. For example, if the COVID-19 PHE ends in CY 2022, the payment amount for COVID-19 vaccine administration would change from \$40 to \$30 effective January 1, 2023, and we would apply the proposed geographic adjustments and the proposed annual update as proposed for the other

preventive vaccine administration services as discussed above. We note, as discussed in section III.H.4.d.i. of this proposed rule, we are proposing to clarify that this policy would be dependent on the declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products. Several CPT codes used for billing COVID-19 vaccine administration and a list of effective COVID-19 vaccine administration codes is available on the CMS web page.²⁹⁷

3. In-Home Additional Payment for Administration of COVID-19 Vaccines

a. Background

On June 9, 2021, we announced a new add-on payment with a national rate of approximately \$35.00 when a COVID-19 vaccine is administered in the home, and on August 24, 2021, we expanded the circumstances under which the in-home add-on payment is available.^{298 299} Under this policy, providers and suppliers that administer a COVID-19 vaccine in the home under certain circumstances can bill Medicare for one of the existing COVID-19 vaccine administration CPT codes³⁰⁰ along with HCPCS code M0201 (*COVID-19 vaccine administration inside a patient's home; reported only once per individual home per date of service when only COVID-19 vaccine administration is performed at the patient's home*). The total national average payment to providers and suppliers administering a COVID-19 vaccine in the home is \$75.50 dollars per dose (\$40 for COVID-19 vaccine administration and \$35.50 for the additional payment for administration in the home), and both payments are geographically adjusted using PFS GPCIs as discussed in section III.H.2.c. of this proposed rule. In the CY 2022 PFS final rule (86 FR 65187 and 65188), we provide a detailed explanation on how the payment amount was established. In announcing the add-on payment for in-home COVID-19 vaccine administration, we noted that we established these policies on a preliminary basis to ensure access to COVID-19 vaccines during the public health emergency and that we will continue to evaluate the needs of

Medicare patients and these policies, and address them in the future, as needed.

In the CY 2022 PFS proposed rule (86 FR 39224 through 39226), we included a comment solicitation to collect feedback on these policies and potential future changes. As part of the comment solicitation, we requested feedback related to our definition of “home”, program integrity concerns, changes that we should consider, costs associated with administering COVID-19 vaccines in the home, and whether outside of a PHE there is a need to vaccinate people in the home rather than going to a health care provider or supplier. In the CY 2022 PFS final rule (86 FR 65188 through 65190), we discussed the feedback received and that commenters overwhelmingly recommended that we continue making the additional payment beyond the end of the PHE, with many also supporting extending the payment to other preventive vaccines, either permanently or until the end of the PHE. Commenters emphasized the importance of increasing vaccination rates and making vaccines available to vulnerable homebound beneficiaries who face barriers including chronic illness, financial and social precarity, and lack of access to digital resources.

In that rule, we agreed with commenters that the added costs and compelling needs required CMS to adopt the in-home add-on payment rate for COVID-19 vaccine administration. In addition, we stated that since we did not expect those needs or costs to diminish immediately with the end of the PHE, we believed it would be appropriate to leave the in-home add-on payment rate in place through the end of the CY in which the PHE ends. For example, we anticipated that additional COVID-19 vaccine booster doses will be needed. In addition, we believed that this policy would set clear expectations for vaccine providers and suppliers and allow for a more gradual transition to a permanent payment policy.

Therefore, we finalized continuation of the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home under certain circumstances until end of the calendar year in which the PHE ends. As we discussed in the CY 2022 PFS final rule, extending the availability of the in-home add-on payment past the end of the PHE maximizes access to COVID-19 vaccines for vulnerable homebound beneficiaries during the gradual return to normal conditions following the formal termination of the PHE. We also explained that this

²⁹⁷ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-mono-clonal-antibodies>.

²⁹⁸ <https://www.cms.gov/newsroom/press-releases/biden-administration-continues-efforts-increase-vaccinations-bolstering-payments-home-covid-19>.

²⁹⁹ <https://www.cms.gov/newsroom/press-releases/cms-expands-medicare-payments-home-covid-19-vaccinations>.

³⁰⁰ <https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-mono-clonal-antibodies>.

extension of payment past the end of the PHE affords CMS the opportunity to monitor vaccine uptake data (86 FR 65189).

b. Conditions for Billing HCPCS Code M0201

In establishing the additional payment for COVID-19 vaccine administration in the home, we also established certain conditions for the add-on payment described by HCPCS code M0201. In the CY 2022 PFS final rule, we provide a detailed discussion on how we established the certain conditions under which the code can be used, and the situations we contemplated to arrive at our final payment policy (86 FR 65187 and 65188).

For purposes of this add-on payment for in-home COVID-19 vaccine administration, the following requirements apply when billing for HCPCS code M0201:^{301 302}

- The patient has difficulty leaving the home to get the vaccine, which could mean any of these:
 - ++ They have a condition, due to an illness or injury, that restricts their ability to leave home without a supportive device or help from a paid or unpaid caregiver;
 - ++ They have a condition that makes them more susceptible to contracting a pandemic disease like COVID-19; or
 - ++ They are generally unable to leave the home, and if they do leave home, it requires a considerable and taxing effort.

- The patient is hard-to-reach because they have a disability or face clinical, socioeconomic, or geographical barriers to getting a COVID-19 vaccine in settings other than their home. These patients face challenges that significantly reduce their ability to get vaccinated outside the home, such as challenges with transportation, communication, or caregiving.

- The sole purpose of the visit is to administer the COVID-19 vaccine. Medicare will not pay the additional amount if the provider or supplier furnished another Medicare covered service in the same home on the same date.

- A home can be:
 - ++ A private residence, temporary lodging (for example, a hotel or motel, campground, hostel, or homeless shelter);
 - ++ An apartment in an apartment complex or a unit in an assisted living

facility or group home (including assisted living facilities participating in the CDC's Pharmacy Partnership for Long-Term Care Program when their residents are vaccinated through this program);

- ++ A patient's home that is made provider-based to a hospital during the PHE for COVID-19; or

- ++ Communal spaces of a multi-unit or communal living arrangement.

- A home cannot be:
 - ++ An institution that meets the requirements of sections 1861(e)(1), 1819(a)(1), or 1919(a)(1) of the Act, which includes hospitals and skilled nursing facilities (SNFs), as well as most nursing facilities under Medicaid.³⁰³

The COVID-19 vaccine must be administered inside an individual's home. For this purpose, an individual unit in a multi-dwelling building is considered a home. For example, an individual apartment in an apartment complex or an individual bedroom inside an assisted living facility or group home is considered a home. HCPCS code M0201, as noted in the code descriptor, can be billed only once per individual home per date of service. Medicare pays the additional payment amount for up to a maximum of 5 vaccine administration services per home unit or communal space within a single group living location; but only when fewer than 10 Medicare patients receive a COVID-19 vaccine dose on the same day at the same group living location.

c. Proposal for CY 2023

Subsequent to the CY 2022 PFS final rule, we have received suggestions from interested parties that this in-home add-on payment should be applied more broadly to all preventive vaccines, and concerns that discontinuation of the payment would negatively impact access to preventive vaccines for vulnerable homebound beneficiaries. While we agree with these concerns, we also believe that we need to learn more about the populations served through the current in-home add-on payment, and other potential populations that may not have been able to access a COVID-19 vaccine despite the availability of the in-home add-on payment, to understand the barriers they face in receiving vaccinations in their home versus in the community. We also need to consider potential program integrity concerns.

We believe continuing the additional payment for at-home COVID-19 vaccinations for another year would provide us time to track utilization and

trends associated with its use to inform the policy for CY 2024. At this time, we are not extending the policy to include the other preventive vaccines. One of the reasons we established this rate is to account for the post-administration time that the health care professional must spend in the home to monitor the patient after administration of the COVID-19 vaccine. Administration of the COVID-19 vaccine typically involves monitoring the patient for at least 15–30 minutes post-injection which is not the general administration protocol for other vaccines. The in-home add-on payment helps to account for the costs associated with special handling of the vaccine and the extra time spent with the patient when a vaccine is administered in the home.

Therefore, for CY 2023 we propose to continue the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home under the certain circumstances described above in section III.H.3.b of this proposed rule. We are also proposing to adjust this payment amount for geographic cost differences as we do the payment for the preventive vaccine administration service. That is, for CY 2023, we would adjust this payment amount to reflect cost differences for the geographic area based upon the fee schedule area where the COVID-19 vaccine is administered using the GAF. In addition, for CY 2023, we would update the \$35.50 by the CY 2023 MEI as we proposed to do for the other preventive vaccine administration services. Both proposals are discussed above in section III.H.2.c. and III.H.2.d. of this proposed rule, respectively. We believe that this policy will continue to provide access to beneficiaries who would otherwise have difficulty getting vaccinated, while we continue to monitor utilization and receive information to be considered in developing our policy for the future. We welcome comments and suggestions on steps we could take related to program integrity and beneficiary protections associated with payments for administering preventive vaccines in the home, including the COVID-19 vaccine and other preventive vaccines under Medicare Part B.

4. Clarification on Policies for COVID-19 Vaccine and Monoclonal Antibody Products

a. Background

Under section 319 of the Public Health Service (PHS) Act (42 U.S.C. 247d), the Secretary can declare a public health emergency (PHE) if he determines that: (1) a disease or disorder

³⁰¹ <https://www.cms.gov/medicare/covid-19/medicare-covid-19-vaccine-shot-payment>.

³⁰² <https://www.cms.gov/files/document/vaccine-home.pdf>.

³⁰³ 42 CFR 409.42(a).

presents a PHE; or (2) a PHE, including significant outbreaks of infectious diseases or bioterrorist attacks, otherwise exists. A PHE declaration allows the Secretary to take certain actions in response to the PHE. In addition, a PHE declaration under section 319 of the PHS Act can be a necessary step in authorizing the Secretary to take a variety of discretionary actions to respond to the PHE under the statutes HHS administers.³⁰⁴ If the criteria under section 564 of the FD&C Act are met, the Secretary may make a declaration that the circumstances exist justifying an emergency use authorization (EUA) of unapproved drugs, devices, or biological products, or of approved drugs, devices, or biological products for an unapproved use.³⁰⁵

On January 31, 2020, under section 319 of the PHS Act, the Secretary determined that a PHE as a result of confirmed cases of 2019 Novel Coronavirus existed nationwide and had existed since January 27, 2020 (hereafter referred to as the PHE for COVID-19). The Secretary has since renewed this declaration for successive 90-day periods, most recently on April 12, 2022.³⁰⁶ On March 27, 2020, the Secretary declared that circumstances exist justifying the authorization of emergency use of drugs and biological products during the COVID-19 pandemic, pursuant to section 564 of the FD&C Act, subject to the terms of any authorization issued under that section (85 FR 18250 through 18251). This latter declaration enabled the Commissioner of Food and Drugs to issue an EUA for a drug or biological product if the Commissioner reasonably concludes that, among other criteria, based on the totality of available scientific evidence, the product may be effective in diagnosing, treating or preventing such disease or condition, and the product's known and potential benefits when used to diagnose, prevent, or treat such disease or condition, outweigh its known and potential risks.

b. Timing Distinction Between Section 319 of the PHS Act and Section 564 of the FD&C Act Declarations

Declarations under section 319 of the PHS Act generally last for 90 days, but may be extended³⁰⁷ by the Secretary. After each extension, the declaration lasts for 90 days or until the Secretary declares the emergency no longer exists, whichever occurs first. In contrast, an emergency declaration pursuant to section 564 of the FD&C Act (an "EUA declaration") continues until specifically terminated.³⁰⁸ An EUA declaration may remain in effect beyond the duration of the section 319 PHE declaration. When an EUA declaration is to be terminated, notice of termination will be published in the **Federal Register** that provides a reasonable period of advance notice to the public that the EUA declaration is being terminated, to permit manufacturers, health care facilities, providers, patients, and other interested parties to transition away from EUA products and the policies that support them.

c. Medicare Part B Coverage and Payment of COVID-19 Vaccine and Therapeutic Monoclonal Antibody Products

At the time of drafting this proposed rule, three COVID-19 vaccines are authorized or approved for use in the US to prevent COVID-19.³⁰⁹ FDA has approved licensure of Pfizer-BioNTech and Moderna COVID-19 mRNA vaccines for use in certain individuals, but there are also individuals for whom these vaccines continue to be available under an EUA. FDA has limited the authorized use of the Janssen-manufactured COVID-19 viral vector vaccine to individuals 18 years of age and older for whom other FDA-authorized or licensed COVID-19 vaccines are not accessible or clinically appropriate, and to individuals 18 years of age and older who elect to receive the Janssen COVID-19 vaccine because they would otherwise not receive a COVID-19 vaccine. In addition, there are other COVID-19 vaccines that are not licensed or authorized under an EUA, but are in Phase 3 clinical trial.³¹⁰

Regarding availability of COVID-19 monoclonal antibody products, there are no monoclonal antibody products approved for the treatment or prevention of COVID-19. There are five authorized monoclonal antibody COVID-19 products; four are authorized for the treatment of COVID-19 and one is authorized as pre-exposure prophylaxis for prevention of COVID-19.³¹¹ We note that each of the four monoclonal antibody products for treatment or post-exposure prevention of COVID-19 that have been granted an EUA is not authorized for use in geographic regions where infection was likely caused by a non-susceptible variant. Due to data indicating decreased activity for three of these treatments against Omicron variants currently in wide circulation, only one of these treatments is currently authorized in any U.S. region until further notice by FDA.

In the interim final rule with comment (IFC) period titled, "Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency," which appeared in the November 6, 2020 **Federal Register**, we discussed how we believed it is appropriate for Medicare to consider any EUA under section 564 of the FD&C Act issued for a COVID-19 vaccine during the PHE to be tantamount to a license under section 351 of the PHS Act for the sole purpose of considering such a vaccine to be described in section 1861(s)(10)(A) of the Act (85 FR 71145 through 71148). That is, even though section 3713 of the CARES Act refers to a COVID-19 vaccine "licensed under section 351 of the PHS Act," CMS could consider any vaccine for which FDA issued an EUA during the PHE, when furnished consistent with terms of the EUA, to be eligible for Medicare coverage and payment.

Subsequent to the November 6, 2020 IFC and discussed in the CY 2022 PFS final rule (86 FR 65190 through 65194), when COVID-19 monoclonal antibody products were granted EUAs during the PHE for COVID-19, we made the determination to cover and pay for them under the Part B vaccine benefit in section 1861(s)(10) of the Act. This determination effectively extended the policy decision for COVID-19 vaccines to COVID-19 monoclonal antibody products, that is, that an EUA under section 564 of the FD&C Act issued for a COVID-19 monoclonal antibody

product during the PHE is tantamount to a license under section 351 of the PHS Act for the sole purpose of considering such a COVID-19 monoclonal antibody product to be described in section 1861(s)(10)(A) of the Act.

The decision to cover and pay for monoclonal antibody products used to treat COVID-19 under the Part B vaccine benefit prioritized access to these products during the COVID-19 pandemic by allowing almost all Medicare enrolled providers and suppliers, as permitted by State law and consistent with the terms of the EUA, to furnish and bill for administering these products across settings of care. Covering and paying for these services under the Part B vaccine benefit also means that beneficiaries are not responsible for any cost sharing for the product or the service to administer it.

We note that under the Part B preventive vaccine benefit, Medicare pays for the vaccine product (when such product is not free to the provider/supplier, as is the case for COVID-19 vaccines as of the publication of this rule) and its administration. Typically, payment for the vaccine product is made at 95 percent of the AWP, but some healthcare settings, such as RHCs, are paid at 100 percent of their reasonable cost. Typically, payment for the administration of the preventive vaccine shots is approximately \$30 per dose, but again, some healthcare settings are paid at 100 percent of their reasonable cost. In contrast, payment for administration of COVID-19 monoclonal antibody products under the Part B preventive vaccine benefit depends on the route of administration, and whether the product is furnished in a healthcare setting or in the beneficiary's home. As discussed in more detail in the CMS COVID-19 Monoclonal Toolkit, payment for administration of monoclonal antibodies can range from \$150.50 to \$750.00.³¹²

In the CY 2022 PFS final rule (86 FR 65179 through 65193) we discussed several steps CMS has taken to promote broad and timely access to COVID-19 vaccines and monoclonal antibody products used to treat COVID-19 paid for under the Part B preventive vaccine benefit, during the PHE for COVID-19. We specifically discussed the unique circumstances providers and suppliers face when administering COVID-19 vaccines and recognized the difficulty to predict when resource costs relating to COVID-19 vaccination will align with those for other vaccinations after the

PHE ends, as we believe the scale of this PHE is unique in Medicare payment history. We finalized the policy to maintain the current payment rate of \$40 per dose for the administration of the COVID-19 vaccines through the end of the calendar year in which the PHE ends; effective January 1 of the year following the year in which the PHE ends, the payment rate for COVID-19 vaccine administration will be set at a rate that aligns with the per dose payment rate for administration of other Part B preventive vaccines (86 FR 65186).

In the CY 2022 PFS final rule, we contemplated how to cover and pay for COVID-19 monoclonal antibody products following the end of the PHE for COVID-19, including whether we should align their payment and coverage with other biologicals (86 FR 65190 through 65194). After review of the comments received, we agreed with commenters who recommended CMS transition to treating monoclonal antibody therapies used to treat COVID-19 as biologicals that are paid using methodologies under section 1847A of the Act following the end of the calendar year in which the PHE expires. We noted that Medicare considers other monoclonal antibody products—that is, monoclonal antibody products used in the treatment of other health conditions—to be “biologicals,” and Medicare pays for them based on the methodology in section 1847A of the Act when they are furnished in physician offices or ambulatory infusion clinics, and under a similar methodology under the hospital OPPIs. For these care settings, we typically rely on the applicable AMA CPT codes to describe and pay for drug administration services performed by providers and suppliers.

In the CY 2022 PFS final rule, we also explained that the public health needs that prompted coverage of monoclonal antibody products used to treat COVID-19 paid for under the Medicare Part B vaccine benefit will gradually stabilize following the end of the PHE, and that extending the current payment approach to the end of the year will give healthcare providers adequate time to prepare for the change in payment methodology while continuing to maximize access to beneficiaries, including those who receive these treatments in the home. In addition, we stated that since we do not expect those needs or costs to diminish immediately with the end of the PHE, we believe it would be appropriate to continue to provide payment and coverage for COVID-19 monoclonal antibody therapies under the Medicare Part B

vaccine benefit in place through the end of the CY in which the PHE ends, when such treatments are used consistent with the scope and conditions of authorization in the relevant EUA (while in effect). In the CY 2022 PFS final rule, we recognized that once an EUA declaration is terminated,³¹³ EUAs issued under that declaration will no longer remain in effect,³¹⁴ which may affect the availability of some products either for the diagnosis, treatment, or prevention of COVID-19, because they will need to have the requisite marketing authorization to remain on the market. To the extent there are products that would no longer have the requisite marketing authorization to remain on the market after a revocation of an EUA, we believe a transition period would be appropriate to allow for adjustments, as needed, to care plans that included such products (86 FR 65192).

d. Clarification of Medicare Part B Policies

In light of the timing distinctions between a PHE declared under section 319 of the PHS Act and an EUA declaration under section 564 of the FD&C Act, we have reconsidered the policies finalized in the CY 2022 PFS final rule and believe a clarification is necessary. Throughout our discussions and specifically in policy statements related to payment and coverage for COVID-19 vaccines and monoclonal antibody products, we have used phrases such as, “through the end of the calendar year in which the PHE ends” and “effective January 1 of the year following the year in which the PHE ends.” While we acknowledge that the intent at the time was to refer to the declaration under section 319 of the PHS Act, we have reconsidered this position in light of the fact that the March 27, 2020 EUA declaration under section 564 of the FD&C Act is distinct from, and not dependent on, the PHE declaration under section 319 of the PHS Act. Therefore, an EUA for a drug or biological product issued pursuant to the March 27, 2020 EUA declaration may remain in effect beyond the duration of the section 319 declaration if all statutory conditions are met.³¹⁵ On further consideration, we believe that

³¹³ Subsequent to the issuance of the final rule, we found that we incorrectly stated ‘once the COVID-19 PHE declaration is terminated.’ The correct statement is ‘once the EUA declaration is terminated.’

³¹⁴ <https://www.fda.gov/media/97321/download>.

³¹⁵ <https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/faqs-what-happens-euas-when-public-health-emergency-ends>.

³¹² <https://www.cms.gov/monoclonal>.

our goal to promote broad and timely access to COVID-19 vaccines and COVID-19 monoclonal antibody products, will be better served if our policies with respect to payment for these products, as addressed in the November 2020 IFC and CY 2022 PFS final rule, continue until the EUA declaration for drugs and biological products (see 85 FR 18250) is terminated. Therefore, we propose to clarify our policies as stated below. In section III.H.4.f of this proposed rule, Table 71 displays the CY 2023 Part B payment for preventive vaccine administration if the EUA declaration persists into CY 2023 and Table 72 displays the Part B payment for preventive vaccine administration beginning January 1, 2023, if the EUA declaration ends on or before December 31, 2022.

i. COVID-19 Vaccines and Their Administration

CMS will maintain the current payment rate of \$40 per dose for the administration of the COVID-19 vaccines through the end of the calendar year in which the March 27, 2020 EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products ends. Effective January 1 of the year following the year in which the EUA declaration ends, the payment rate for COVID-19 vaccine administration will be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines. We note a summary of proposals for Part B preventive vaccine administration for CY 2023 is discussed in section III.H.2.e. of this proposed rule.

ii. In-Home Administration of COVID-19 Vaccines

We note that the policy for in-home administration of COVID-19 vaccines was also discussed in the CY 2022 PFS final rule and we finalized that CMS will continue the additional payment of \$35.50 for COVID-19 vaccine administration in the home under certain circumstances through the end of the calendar year in which the PHE ends. However, in section III.H.3 of this proposed rule, we discuss proposals for this policy for CY 2023. We are proposing to continue the in-home additional payment of \$35.50 for administering COVID-19 vaccines for CY 2023, which is no longer tied to the end of the declaration under section 319 of the PHS Act.

iii. Monoclonal Antibody Products Used for Treatment or for Post-Exposure Prophylaxis of COVID-19

We propose to continue to pay for COVID-19 monoclonal antibody products under the Medicare Part B vaccine benefit through the end of the calendar year in which the EUA declaration under section 564 of the FD&C Act for drugs and biological products is terminated. Until the end of the calendar year in which the EUA declaration for drugs and biological products is terminated, we will maintain the payment rate for administering a COVID-19 monoclonal antibody product used for treatment or for post-exposure prophylaxis of COVID-19 in a healthcare setting, as well as the payment rates for administering a COVID-19 monoclonal antibody product in the home as described on the CMS COVID-19 Monoclonal Toolkit.³¹⁶ Effective January 1 of the year following the year in which the EUA declaration for drugs and biological products ends, CMS would pay physicians and other suppliers for covered COVID-19 monoclonal antibody products used for the treatment or for post-exposure prophylaxis of COVID-19 as biological products paid under section 1847A of the Act; healthcare providers and practitioners will be paid under the applicable payment system, and using the appropriate coding and payment rates, for administering COVID-19 monoclonal antibody therapies similar to the way they are paid for administering other complex biological products (86 FR 65192).

As we explain above, since an EUA for a drug or biological product issued pursuant to the March 27, 2020 EUA declaration may remain in effect beyond the duration of the section 319 declaration, we contemplated our proposed policies summarized in section III.H.2.e of this proposed rule. Since we do not know when FDA would terminate the March 27, 2020 EUA declaration, we believe that we need to give notice on how these proposals would impact payments for administering COVID-19 monoclonal antibody products in the event the EUA declaration persists in CY 2023. Therefore, beginning January 1, 2023, we propose to apply the GAF to the payment amount for the administration of monoclonal antibody products used for treatment or for post-exposure prophylaxis of COVID-19 so long as the EUA declaration is still in place. We believe that it is appropriate to continue

to adjust this payment amount to reflect cost differences for each geographic area.

Regarding an update based upon the MEI beginning January 1, 2023, we would not extend the proposal to update the payment amount for the administration of these products. We believe that the payment amounts established for the administration of monoclonal antibody products used for treatment or for post-exposure prophylaxis of COVID-19 were approximations intended to reflect resource costs associated with furnishing these particular services during the pandemic response and generally corresponding to the time frame the EUA declaration is effective. We also note that some of the resource costs reflected in those rates, such as costs to establish the necessary operational infrastructure, may dissipate over time, even as the pandemic persists. Consequently, we do not believe it would be appropriate to establish annual updates to reflect increased costs that would likely be offset to some extent by reduced costs given the more established infrastructure and delivery approaches. We point out, too, that the current payment rates effective during the years in which the PHE continues correspond with OPPS New Tech payment amounts that are intended to serve as estimates of overall costs, in contrast to more finely tuned amounts that are typically subject to annual updates (increases or reductions) to reflect greater efficiency. Therefore, we are proposing to maintain the current rates for CY 2023 for administration of a COVID-19 monoclonal antibody product used for treatment or for post-exposure prophylaxis of COVID-19, and to not update these rates based on the increase in the MEI.

e. Monoclonal Antibody Products Used as Pre-Exposure Prophylaxis for Prevention of COVID-19

As we mention in section III.H.4.c of this proposed rule, there are no monoclonal antibody products approved by the FDA for the treatment or prevention of COVID-19 as of the publication of this proposed rule. However, there are currently three COVID-19 products authorized under an EUA; two are authorized for the treatment of COVID-19, and one is authorized as pre-exposure prophylaxis for prevention of COVID-19.³¹⁷ The

³¹⁶ <https://www.cms.gov/monoclonal>.

³¹⁷ Viewed 5/6/2022. <https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization>.

monoclonal antibody product for use as pre-exposure prophylaxis prevention of COVID-19 was granted an EUA subsequent to the CY 2022 PFS final rule. Therefore, our policies regarding coverage of COVID-19 monoclonal antibody products as finalized in the CY 2022 PFS final rule, and clarified in section III.H.4. of this proposed rule, do not address monoclonal antibody products used as pre-exposure prophylaxis for prevention of COVID-19. Nevertheless, we note that when this COVID-19 monoclonal antibody pre-exposure prophylactic product was granted an EUA, we promptly provided payment and coverage for it under the Part B vaccine benefit in section 1861(s)(10) of the Act as we discuss in section III.H.4.c and as we have done for the other COVID-19 monoclonal antibody products.³¹⁸

We recognize that there are certain individuals for whom these pre-exposure prophylactic products may be their only preventive option against COVID-19. These individuals would include, for example, those who are not currently infected with COVID-19, who have not had a known recent exposure to an individual infected with COVID-19, and for whom vaccination with any

available COVID-19 vaccine is not recommended due to a history of severe adverse reaction (for example, severe allergic reaction) to a COVID-19 vaccine(s) and/or COVID-19 vaccine component(s). Therefore, we are proposing to clarify that our policy of coverage and payment under the Part B vaccine benefit for monoclonal antibody products includes those used as pre-exposure prophylaxis for prevention of COVID-19. In addition, to ensure the aforementioned beneficiaries have access to COVID-19 pre-exposure prophylactic products, we propose to continue the existing policy to pay for these products and their administration under the Part B vaccine benefit even after the EUA declaration for drugs and biological products is terminated, so long as after the EUA declaration is terminated, such products have market authorization.

Since we propose to pay for pre-exposure prophylaxis monoclonal antibody products for COVID-19 under the Part B vaccine benefit, we also propose to apply the GAF to the payment amount for the administration of those monoclonal antibody products, effective January 1, 2023. However, at this time we are not proposing to update

the payment amount with the MEI beginning January 1, 2023. The payment amounts established for the administration of monoclonal antibody products used as pre-exposure prophylaxis for COVID-19 were intended to account for resource costs associated with pandemic response, and like the payment amounts for administration of other COVID-19 mAbs, reflects an approximation. Therefore, we are proposing to maintain the current amount without a specified update mechanism, but also seek comment on how best to consider refining rates for administration of this specific kind of product in the future. We solicit comment on these proposals.

f. Summary of Payment Amounts for CY 2023 With or Without an EUA Declaration for Drugs and Biologicals

Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products, and our proposed policies that plan for both a continuation or termination of that EUA, we are including Tables 71 and 72 that summarize our proposals in both scenarios.

TABLE 71: CY 2023 Part B Payment for Preventive Vaccine Administration if EUA Declaration Persists into CY 2023

Category of Part B Product Administration	Part B Payment Amount (Unadjusted)	Annual Adjustment?	Geographic Adjustment?
Influenza, Pneumococcal, Hepatitis B Vaccines^{1,4}	\$30	MEI	GAF
COVID-19 Vaccine^{2,4}	\$40	MEI	GAF
COVID-19 Monoclonal Antibodies (for Treatment or Post-Exposure Prophylaxis)³			
Infusion: Health Care Setting	\$450.00	N/A	GAF
Infusion: Home	\$750.00	N/A	GAF
Intravenous Injection: Health Care Setting	\$350.50	N/A	GAF
Intravenous Injection: Home	\$550.50	N/A	GAF
Injection: Health Care Setting	\$150.50	N/A	GAF
Injection: Home	\$250.50	N/A	GAF
COVID-19 Monoclonal Antibodies (for Pre-Exposure Prophylaxis)^{3,4,5}			
Injection: Health Care Setting	\$150.50	N/A	GAF
Injection: Home	\$250.50	N/A	GAF

³ Payment is in accordance with the applicable payment system of the setting in which the product is administered and beneficiary coinsurance and deductible are applicable.

⁴ Beneficiary coinsurance and deductible are not applicable.

⁵ There are no monoclonal antibody products for pre-exposure prophylaxis of COVID-19 that have marketing authorization at this time.

5. Regulatory Updates and Conforming Changes

In the interim final rule with comment (IFC) period titled, “Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,” which appeared in the November 6, 2020 **Federal Register**, we published several changes to the regulations governing Part B preventive vaccines and their administration, in order to include the COVID–19 vaccine and its administration (85 FR 71147). Since Section 3713 of the CARES Act added the COVID–19 vaccine and its administration to section 1861(s)(10)(A) of the Act in the same subparagraph as the flu and pneumococcal vaccines and their administration, the COVID–19 vaccine was similarly added in several regulations regarding the influenza, pneumococcal, and hepatitis B virus (HBV) vaccinations. We intend to finalize the following regulatory changes, which were adopted in the November 6, 2020 IFC:

- § 410.152 (l)(1), which includes the COVID–19 vaccine to the list of vaccines for which Medicare Part B pays 100 percent of the Medicare payment amount.

- § 410.160 (b)(2), which includes the COVID–19 vaccine in the list of vaccines that are not subject to the Part B annual deductible and do not count toward meeting that deductible.

- § 411.15 (e)(5), which adds an exception for COVID–19 vaccinations to the general exclusion of coverage for immunizations.

- § 414.701, which includes the COVID–19 vaccine in the list of statutorily covered drugs.

- § 414.707 (a)(2)(iii), which includes the COVID–19 vaccine in the list of vaccines with a payment limit calculated using 95 percent of the AWP.

- § 414.900(b)(3), which includes the COVID–19 vaccine in the list of statutorily covered drugs.

- § 414.904(e)(1), which includes the COVID–19 vaccine in the list of vaccines with payment limits calculated using 95 percent of the AWP.

In the course of developing the proposed changes to § 410.152 described above at III.H.2.c., we came across several outdated and incomplete regulations regarding Part B preventive vaccines and vaccine administration. We propose updates and corrections to the following regulations:

- At § 410.10, Medical and other health services: Included services, we are proposing to amend paragraph (l) to list pneumococcal, influenza, and COVID–19 vaccines and their administration.

- At § 410.10, Medical and other health services: Included services, we are proposing to amend paragraph (p) to list both Hepatitis B vaccine and its administration, as defined in § 410.63(a).

- At § 410.57, we are proposing to amend the section title to read “Preventive Vaccinations,” to amend paragraph (a) to state only that Medicare Part B pays for pneumococcal vaccine and its administration, to remove the remainder of the outdated language, and to add paragraph (d) to state that Medicare Part B pays for the Hepatitis

B vaccine and its administration, as defined in § 410.63(a).

- At § 410.63, Hepatitis B vaccine and blood clotting factors: Conditions, we are proposing to amend the introductory paragraph to replace the outdated reference to § 405.310 with an updated reference to § 411.15.

- At § 414.707, Basis of Payment, we are proposing to amend paragraph (a)(2)(iii) to replace the phrase in parentheses with “as defined in § 410.63(a) of this subchapter.”

- At § 414.904, Average sales price as the basis for payment, we are amending paragraph (e)(1) to replace the parentheses with “as defined in § 410.63(a) of this subchapter.”

I. Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

1. Background–Nonemergency, Scheduled, Repetitive Ambulance Service

a. General Discussion

Section 1861(s)(7) of the Act states that, for the purposes of Medicare, the term “medical and other health services” includes ambulance services, but only “where the use of other methods of transportation is contraindicated by the individual’s condition, but only to the extent provided in regulations.” Regulations at § 410.40 govern Medicare coverage of ambulance services. Under § 410.40(e), Medicare Part B covers ground (land and water) and air (fixed-wing and rotary-wing) ambulance transport services only if they are furnished to a

Medicare beneficiary whose medical condition is such that other means of transportation are contraindicated. The beneficiary's condition must require both the ambulance transportation itself and the level of service provided for the billed services to be considered medically necessary.

Section 410.40(e) provides that nonemergency transportation by ambulance is appropriate if either the beneficiary is bed-confined, and it is documented that the beneficiary's condition is such that other methods of transportation are contraindicated; or, if his or her medical condition, regardless of bed confinement, is such that transportation by ambulance is medically required. For a beneficiary to be considered bed-confined, § 410.40(e) states that *all* of the following criteria must be met: (1) the beneficiary is unable to get up from bed without assistance; (2) the beneficiary is unable to ambulate; and (3) the beneficiary is unable to sit in a chair or wheelchair. Section 410.40(e) further provides that bed confinement is not the sole criterion in determining the medical necessity of ambulance transportation, but is one factor that is considered in medical necessity determinations. In all cases, a beneficiary's condition must be documented appropriately for coverage of services.

In the "Medicare Program; Coverage of Ambulance Services and Vehicle and Staff Requirements" final rule with comment period ³¹⁹ (64 FR 3637, January 25, 1999) (hereinafter referred to as the "January 25, 1999 final rule"), we finalized language at § 410.40(d)(3) to require ambulance providers or suppliers, in the case of nonemergency, unscheduled, ambulance services to obtain a physician certification statement (PCS). There, we explained that: (1) nonemergency ambulance service is a Medicare service furnished to a beneficiary for whom a physician is responsible, and, therefore, the physician is responsible for the medical necessity determination; and (2) the PCS would help to ensure that the claims submitted for ambulance services are reasonable and necessary, because other methods of transportation are contraindicated (64 FR 3648).

We further stated that we believed the requirement would help to avoid Medicare payment for unnecessary ambulance services that are not medically necessary even though they may be desirable to beneficiaries. However, in the January 25, 1999 final rule we also addressed the ability of

ambulance providers or suppliers to obtain a written order from the beneficiary's attending physician and agreed with interested parties that while it is reasonable to expect that an ambulance provider or supplier could obtain a pre-transport PCS for routine, scheduled trips, it is less reasonable to impose such a requirement on unscheduled transports, and that it was not necessary that the ambulance providers and suppliers have the PCS in hand prior to furnishing the service. To avoid unnecessary delays for unscheduled transports, we finalized a requirement that required documentation can be obtained within 48 hours after the ambulance transportation service has been furnished.

In the "Medicare Program; Fee Schedule for Payment of Ambulance Services and Revisions to the Physician Certification Requirements for Coverage of Nonemergency Ambulance Services" final rule with comment period ³²⁰ (67 FR 9100) (hereinafter referred to as the "February 27, 2002 final rule"), in response to interested parties response, we modified our documentation regulations, noting that we had been made aware of instances in which ambulance providers and suppliers, despite having provided ambulance transports, were experiencing difficulty in obtaining the necessary PCS within the required 48-hour timeframe through no fault of their own. We stated that the 48-hour period remained the appropriate period of time, but, with respect to unscheduled, or scheduled but non-repetitive nonemergency ambulance transports, created alternatives for ambulance providers and suppliers unable to obtain a PCS. We finalized an alternative at § 410.40(e)(3)(iii) where ambulance providers and suppliers unable to obtain a PCS from the attending physician could obtain a signed certification (*not* a physician certification statement) from certain other staff. At that time, we identified, at § 410.40 (a)(iii), several staff members, including a physician assistant (PA), nurse practitioner (NP), clinical nurse specialist (CNS), registered nurse (RN), and a discharge planner as staff members able to sign such a non-physician certification statement. The only additional constraints were: (1) that the staff be employed by the beneficiary's attending physician or by the hospital or facility where the beneficiary is being treated and from which the beneficiary is transported; and (2) that the staff have

personal knowledge of the beneficiary's condition at the time the ambulance transport is ordered or the service is furnished.

Since being finalized in the February 27, 2002 final rule, § 410.40(e)(2) has stated that Medicare covers medically necessary nonemergency, scheduled, repetitive ambulance services if the ambulance provider or supplier, before furnishing the service to the beneficiary, obtains a written order from the beneficiary's attending physician certifying that the medical necessity requirements of paragraph (e)(1) of this section are met (67 FR 9132).

In the November 16, 2012 final rule with comment period ³²¹ (77 FR 68892), we finalized provisions currently at § 410.40(e)(2), incorporating nearly the same provision found at § 410.40(e)(3)(v) to clarify that a PCS does not, in and of itself, demonstrate that a nonemergency, scheduled, repetitive ambulance service is medically necessary for Medicare coverage. As we note above, the 1861(s)(7) definition of "ambulance service" in the context of Medicare expresses the clinical medical necessity requirement that the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations.

In the November 15, 2019 final rule ³²² (84 FR 62568), in response to interested parties' requests, we clarified the requirements for certification statements based on potential confusion surrounding the format, content, and use of both PCS and non-physician certification statements. Further, we added licensed practical nurses (LPNs), social workers and case managers as individuals listed at § 410.40 (a)(iii) who may sign the non-physician certification

³²¹ Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of NonRandom Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013; <https://www.govinfo.gov/content/pkg/FR-2012-11-16/pdf/2012-26900.pdf>.

statement if the ambulance provider or supplier is unable to obtain the attending physician's signature within 48 hours of the transport.

Other factors have significantly altered the Medicare ambulance benefit, notably section 637 of the American Taxpayer Relief Act of 2012 (Pub. L. 112–240, enacted January 2, 2013) (ATRA), which required a 10-percent reduction in fee schedule payments for nonemergency (BLS transports of beneficiaries with ESRD) to and from both hospital-based and freestanding renal dialysis treatment facilities, for non-emergent dialysis services. Section 53108 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted February 9, 2018) increased the payment reduction of fee schedule payments for BLS transports to and from renal dialysis treatments, from ATRA's 10 percent to 23 percent.

The Department of Health and Human Services (HHS) Office of Inspector General (OIG) has published numerous reports about Medicare's ambulance benefit and has concluded that this benefit is highly vulnerable to abuse. In September 2015, in a report titled, "Inappropriate Payments and Questionable Billing for Medicare Part B Ambulance Transports,"³²³ the OIG reported that approximately one in five ambulance suppliers had questionable billing, and that suppliers that had questionable billing provided nonemergency basic life support transports more often than other suppliers.

In addition, in June 2013, MedPAC published a report that included an analysis of nonemergent ambulance transports to dialysis facilities. The report showed that transports to and from dialysis facilities continue to grow and represent a large share of non-emergent ambulance claims. In the 5-year period between 2007 and 2011, the volume of transports to and from a dialysis facility increased 20 percent, more than twice the rate of all other ambulance transports combined. In 2011, ambulance transports to and from dialysis facilities accounted for nearly \$700 million in Medicare spending or approximately 13 percent of Medicare expenditures on ambulance services. The report further found that certain States had dramatically higher spending on ambulance transportation for dialysis treatment than other States. We believe that the provisions that we propose here are consistent with MedPAC's recommendations that the agency

promulgate national guidelines to more precisely define medical necessity requirements. This will ensure consistent application of the benefit across beneficiary populations, regardless of geographic location.

Under section 1115A of the Act, CMS initiated the testing of the Repetitive, Scheduled Non-Emergent Ambulance Transport (RSNAT) Prior Authorization Model, which tested whether prior authorization helped to reduce expenditures while maintaining or improving quality of care. Beneficiaries who qualify for these services are typically transported to receive either cancer treatment or dialysis, although there are other services for which this type of transportation is needed. Section 515 of the Medicare Access and CHIP Reauthorization Act (Pub. L. 114–10, enacted April 16, 2015) (MACRA), required this model to be expanded to include eight States and the District of Columbia, not later than January 1, 2016. Also in section 515 of MACRA, Congress amended section 1834(l) of the Act to require the model be expanded to all States, beginning January 1, 2017, to the extent that the expansion that Congress required above satisfied certain criteria specified at 1115A(c) of the Act.

We released two Interim Evaluation Reports³²⁴ and a Final Evaluation Report³²⁵ on the model. The Final Evaluation Report, similar to the two Interim Evaluation Reports, found that the model was successful in reducing nonemergency, scheduled, repetitive ambulance transport spending and total Medicare spending while maintaining the overall quality of and access to care. In comparison to groups of similar States, the model reduced nonemergency, scheduled, repetitive ambulance transport use by 72 percent and expenditures by 76 percent, for Medicare beneficiaries with end-stage renal disease (ESRD) and/or severe pressure ulcers in the model States, resulting in a reduction of approximately \$750 million in expenditures. This decrease in nonemergency, scheduled, repetitive ambulance transport expenditures contributed to a 2.4 percent (\$1 billion over the first 5 years of the model) decrease in total Medicare fee-for-service (FFS) expenditures among beneficiaries with ESRD and/or pressure ulcers relative to the comparison groups. Overall, the findings suggested

that the model had few to no adverse effects on quality of care or access to care.

On March 28, 2018, CMS' Chief Actuary certified that expansion of the model would reduce program spending under the Medicare program, thereby satisfying the requirements of section 1115A(c)(2) of the Act for expansion of the model. Based on the CMS Chief Actuary certification and the first Interim Evaluation Report, the HHS Secretary determined that the model met the statutory criteria for expansion under sections 1115A(c)(1) and (c)(3) of the Act. Therefore, on September 22, 2020, CMS announced that it would expand the model nationwide under section 1834(l)(16) of the Act.³²⁶ The 8 participating States and the District of Columbia were transitioned to the national model on December 2, 2020. After a delay due to the COVID–19 public health emergency, HHS began expanding the model nationwide through multiple phases starting on December 1, 2021. HHS continues the expansion throughout fiscal year 2022.

Inconsistent application of payments for medically necessary, nonemergent, repetitive, scheduled ambulance services has the potential to disproportionately and substantially impact communities of color, underserved communities (including rural communities), and modest-income beneficiaries. Further, these communities may disproportionately suffer from conditions for which nonemergent, repetitive, scheduled ambulance services are necessary, creating access to care issues with corresponding clinical complications. We believe that improving clarity in our regulatory provisions will have positive impacts on the health and well-being of beneficiaries. Therefore, we are proposing and requesting public comment on policy clarifications to ensure beneficiaries receive the care they need.

b. Legal Authorities

The legal authority for our proposed provision is section 1861(s)(7) of the Act that provides general authority for the ambulance benefit and grants the Secretary authority to prescribe regulations for the administration of the benefit.

2. Proposed Revision to § 410.40

We seek public comment on proposed language that clarifies documentation and medical necessity requirements for

³²³ Inappropriate Payments and Questionable Billing for Medicare Part B Ambulance Transports (OEI-09–12–00351; 09/15) (*hhs.gov*).

³²⁴ <https://innovation.cms.gov/files/reports/rsnat-firstintevalrpt.pdf> and <https://innovation.cms.gov/data-and-reports/2020/rsnat-secondintevalrpt>.

³²⁵ <https://innovation.cms.gov/data-and-reports/2021/rsnat-finalevalrpt>.

³²⁶ <https://www.cms.gov/newsroom/press-releases/cms-expand-successful-ambulance-program-integrity-payment-model-nationwide>.

nonemergency, scheduled, repetitive ambulance services, by modifying § 410.40(e)(2)(ii).

Section 410.40 describes the Medicare Part B ambulance benefit, generally. Because medical necessity is a requirement of the statutory requirement at section 1861(s)(7) of the Act, the requirements for coverage are more fully explained in paragraph (e) of § 410.40, starting with general rules covering all Part B ambulance services, and the special rules that only apply to nonemergency, scheduled, repetitive ambulance services are situated in paragraph (e)(2). For the reasons discussed above, we propose to modify existing language in § 410.40(e)(2)(ii) and add additional language to provide needed clarity and ensure consistent application of the nonemergency, scheduled, repetitive ambulance service benefit. We solicit comments on our proposal.

We propose at § 410.40(e)(2)(ii) to retain the existing language stating that in all cases, the provider or supplier must keep appropriate documentation on file and, upon request, present it to CMS (OMB control number 0938–0969). We are maintaining the language that states that the ambulance service must meet all program coverage criteria including vehicle and staffing requirements. We are also maintaining the language that states that a signed PCS does not alone demonstrate that transportation by ground ambulance was medically necessary. We are clarifying that the PCS, and additional documentation from the beneficiary's medical record, may be used to support a claim that transportation by ground ambulance is medically necessary. Further, we are clarifying that the PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance, as described at 410.41(a). Finally, we are clarifying that coverage includes observation or other services rendered by qualified ambulance personnel, as described in 410.41(b).

J. Medicare Provider and Supplier Enrollment and Conditions of DMEPOS Payment

1. Enrollment Process

a. General Discussion

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers into the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers

seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all Federal and State requirements to do so. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from entering and inappropriately billing Medicare. Since 2006, we have undertaken rulemaking efforts to outline our enrollment procedures. These regulations are generally codified in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.570 and hereafter occasionally referenced as subpart P). They address, among other things, requirements that providers and suppliers must meet to obtain and maintain Medicare billing privileges.

As outlined in § 424.510, one such requirement is that the provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the appropriate enrollment form, typically the Form CMS–855 (OMB Control No. 0938–0685). The Form CMS–855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532, PECOS), collects important information about the provider or supplier. Such data includes, but is not limited to, general identifying information (for example, legal business name), licensure and/or certification data, and practice locations. After receiving the provider's or supplier's initial enrollment application, CMS or the MAC reviews and confirms the information thereon and determines whether the provider or supplier meets all applicable Medicare requirements. We believe this screening process has greatly assisted CMS in executing its responsibility to prevent Medicare fraud, waste, and abuse.

As previously mentioned, over the years we have issued various final rules pertaining to provider enrollment. These rules were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against providers and suppliers: (1) engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items. Consistent with this, and as discussed further in section III.J. of this proposed rule, we propose several changes to our existing Medicare provider enrollment regulations. (We note that section III.K of this proposed rule addresses a

proposed change to one of our Medicaid provider enrollment provisions.)

b. Legal Authorities

There are two principal categories of legal authorities for our proposed Medicare provider enrollment provisions:

- Section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers.

- Sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

With respect to our Medicaid proposal in section III.K. of this proposed rule:

- Section 1902(kk)(3) of the Act,³²⁷ as amended by section 6401(b) of the Affordable Care Act, which mandates that States require providers and suppliers to comply with the same disclosure requirements established by the Secretary under section 1866(j)(5) of the Act.³²⁸

- Section 2107(e)(1) of the Act, as amended by section 6401(c) of the Affordable Care Act, which makes the requirements of section 1902(kk) of the Act, including the disclosure requirements, applicable to CHIP.

2. Proposed Medicare Enrollment Provisions

a. Expansion of Authority To Deny or Revoke Based on OIG Exclusion and Associated Definitions

i. OIG Exclusions

Under §§ 424.530(a)(2) and 424.535(a)(2), respectively, CMS denies or revokes a provider's or supplier's enrollment if the provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, of the provider or

³²⁷ Because section 6401(b) of the Affordable Care Act erroneously added a duplicate section 1902(ii) of the Act, the Congress enacted a technical correction in the Medicare and Medicaid Extenders Act of 2010 (MMEA) (Pub. L. 111–309) to redesignate section 1902(ii) of the Act as section 1902(kk) of the Act, a designation we will use in this final rule with comment period.

³²⁸ Section 1304 of the Health Care and Education Reconciliation Act (Pub. L. 111–152) added a new paragraph (j)(4) to section 1866 of the Act, thus redesignating the subsequent paragraphs. Accordingly, we are interpreting the reference in section 1902(kk)(3) of the Act to “disclosure requirements established by the Secretary under section 1866(j)(4)” of the Act to mean the disclosure requirements described in section 1866(j)(5) of the Act.

supplier is excluded by the OIG. We propose several changes related to these authorities.

First, we would expand the categories of parties listed within these denial and revocation provisions to include: (1) managing organizations; and (2) officers and directors of the provider or supplier if the provider or supplier is a corporation. Consistent with sections 1124 and 1124A of the Act (and depending upon the specific enrollment transaction and provider type involved), these parties must be reported on the provider's or supplier's Form CMS-855 or, for Medicare diabetes prevention program (MDPP) suppliers, the Form CMS-20134. Although they are not explicitly listed in §§ 424.530(a)(2) and 424.535(a)(2), we have generally considered these individuals and entities to be parties that exercise managing control over the provider or supplier in a vein similar to managing employees. Section 1124(a)(3) of the Act specifically includes officers and directors within its definition of persons with an ownership or *control* interest. (Emphasis added.). To clarify our longstanding position via rulemaking and to help prevent excluded managing organizations, officers, and directors from posing a program integrity threat to Medicare, we propose to incorporate these persons and organizations within the two aforementioned regulatory paragraphs.

ii. Definitions

In light of our addition of “managing organization,” “officer,” and “director” to §§ 424.530(a)(2) and 424.535(a)(2), as well as some uncertainty in the provider community regarding the scope of these terms, we propose to define them in § 424.502.

“Managing organization” would mean an entity that exercises operational or managerial control over, or who directly or indirectly conducts, the day-to-day operations of the provider or supplier, either under contract or through some other arrangement. This definition mirrors the definition of “managing employees” in § 424.502, with the exception of the latter's references to individuals. To maintain consistency with the “managing employee” definition and to ensure that all parties exercising any degree of operational control over the provider or supplier are reported on the Form CMS-855 and Form CMS-20134 applications, we believe our proposed definition is appropriate.

We would define “officer” as an officer of a corporation, regardless of whether the provider or supplier is a non-profit entity. Section 1124(a) of the

Act requires the disclosure of officers if the entity is a corporation; we propose to include the same reference to corporations to align with this statutory provision. In addition, providers have sometimes inquired as to whether officers of a non-profit corporation must be reported. While section 1124(a) of the Act does not mention the for-profit or non-profit status of the corporation, we have always required non-profit corporation officers to be disclosed. In our view, the particular proprietary status of the corporation is less important from a program integrity standpoint than ensuring that persons who exercise control over the provider or supplier do not present payment safeguard risks. We believe this warrants the inclusion of non-profit corporations within our proposed definition.

In a similar context, we propose to define “director” as a director of a corporation, regardless of whether the provider or supplier is a non-profit entity. To further clarify the definition, however, we propose that “director” includes any member of the corporation's governing body irrespective of the precise title of either the board or the member; said body could be a board of directors, board of trustees, or similar body. We have received questions over the years from non-profit corporations regarding the need to disclose information on the application about volunteer or ceremonial board members. We have long required such persons to be reported for two reasons. First, we believe section 1124(a) of the Act is clear that all directors must be listed. Again, it does not distinguish between for-profit and non-profit entities, nor, for that matter, between paid and voluntary board members. Therefore, we have concluded that our interpretation of section 1124(a) of the Act is fully consistent with the language therein. Second, the corporate governing body of a provider or supplier usually exercises clear control over the latter. Even if certain members, such as volunteers, have less day-to-day control of the provider or supplier than other members, they can still (depending on the board's specific powers) influence the entity's operations and oversight, perhaps more so than certain individuals currently included within §§ 424.530(a)(2) and 424.535(a)(2), such as administrative personnel. Consequently, we believe that our proposed definition of “director” aligns with both the Act and our existing policy.

iii. Contracted Personnel

We also propose to add a new paragraph to §§ 424.530(a)(2) and 424.535(a)(2) to clarify that the persons and entities listed in those two regulatory provisions include, but are not limited to, W-2 employees and contracted parties of the provider or supplier. We have traditionally applied §§ 424.530(a)(2) and 424.535(a)(2) to affected parties (such as supervising physicians) regardless of their W-2 status; this is consistent with the definition of “managing employee” in § 424.502, which does not exclude contracted personnel from its purview. We believe, and it has been our experience, that parties with whom the provider or supplier contracts are often as involved with the provider's or supplier's operations as W-2 employees; for instance, a provider may contract with medical personnel to furnish the majority of the health care services it furnishes. Given our stance that the specific employment status of the party is less crucial from a payment safeguard perspective than the fact that the person or entity is acting on the provider's or supplier's behalf, we believe that this regulatory clarification is needed.

Under this change, we would redesignate the introductory paragraph of existing § 424.530(a)(2) as § 424.530(a)(2)(i). Current §§ 424.530(a)(2)(i) and (ii) would be redesignated as § 424.530(a)(2)(i)(A) and (B), respectively. Our new paragraph concerning contracted personnel would be new § 424.530(a)(2)(ii). Similar structural revisions would be made to § 424.535(a)(2).

b. Expansion of Authority To Deny or Revoke Based on a Felony Conviction

Under §§ 424.530(a)(3) and 424.535(a)(3), respectively, CMS may deny or revoke enrollment if the provider or supplier, or any owner or managing employee of the provider or supplier was, within the preceding 10 years, convicted of a Federal or State felony offense that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries. We propose to expand these two regulatory provisions to include therein managing organizations, officers, and directors (as we proposed to define those terms in § 424.502.) As previously explained, we are obligated to protect the Medicare program, the Trust Funds, and beneficiaries. Similar to exclusions, we are concerned that persons and entities that have engaged in felonious behavior could, through their association with the provider or

supplier, present program integrity risks. We again acknowledge that, for instance, certain directors (in their individual capacity) might not have as much daily oversight of the provider's or supplier's operations as other persons within the organization. Yet we maintain that membership on a governing body involves the exercise of at least a minimum degree of control. Accordingly, we believe that our proposed expansion of §§ 424.530(a)(3) and 424.535(a)(3) is warranted.

For reasons similar to those behind proposed §§ 424.530(a)(2)(ii) and 424.535(a)(2)(ii), we would add new paragraphs at §§ 424.530(a)(3)(iii) and 424.535(a)(3)(iv) clarifying that these two provisions also apply to contracted parties.

c. Reversal of Revocation or Denial

Sections 424.535(e) and 424.530(c) state that if a revocation or denial, respectively, was due to a prior adverse action (such as a sanction, exclusion, or felony) against a provider's or supplier's owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation or denial may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that party within 30 days of the revocation or denial notification. To maintain consistency with our aforementioned changes to §§ 424.530(a) and 424.535(a), we propose to add managing organizations, officers, and directors to §§ 424.535(e) and 424.530(c).

d. Medicare Revocation Based on Other Program Termination

Sections 424.535(a)(12)(i) states, in part, that CMS can revoke enrollment if the provider or supplier is terminated, revoked, or otherwise barred from participation in a State Medicaid program or any Federal health care program. However, under § 424.535(a)(12)(ii) revocation cannot occur unless and until the provider or supplier has exhausted all applicable appeal rights. The meaning of the latter language has caused uncertainty regarding situations where the provider or supplier does not appeal the program termination at all. Our position has always been that, in such cases, revocation under § 424.535(a)(12)(i) can ensue once the initial period to file an appeal has ended; that is, CMS need not wait until the expiration of every subsequent appellate period that would

have applied had the provider or supplier appealed. To clarify this via rulemaking, we propose to add the language "or the timeframe for filing an appeal has expired without the provider or supplier filing an appeal" to the end of § 424.535(a)(12)(ii).

e. Categorical Risk Designation—Ownership Changes and Adverse Actions

i. Background

Under the authority granted to us by section 6401(a) of the Affordable Care Act (which amended section 1866(j) to the Act), § 424.518 outlines levels of screening by which CMS and its MACs review initial applications, revalidation applications, and applications to add a practice location. These screening categories and requirements are based on a CMS assessment of the level of risk of fraud, waste, and abuse posed by a particular type of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type poses, the greater the level of scrutiny with which CMS will screen and review providers or suppliers within that category.

There are three levels of screening in § 424.518: high, moderate, and limited. Irrespective of which level a provider or supplier type falls within, the MAC performs the following screening functions upon receipt of an initial enrollment application, a revalidation application, or an application to add a new location:

- Verifies that a provider or supplier meets all applicable Federal regulations and State requirements for their provider or supplier type.
- Conducts State license verifications.
- Conducts database checks on a pre- and post-enrollment basis to ensure that providers and suppliers continue to meet the enrollment criteria for their provider or supplier type.

Providers and suppliers at the moderate and high categorical risk levels must also undergo a site visit. Furthermore, for those at the high screening level, the MAC performs two additional functions under § 424.518(c)(2). First, the MAC requires the submission of a set of fingerprints for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. Second, it conducts a fingerprint-based criminal history record check of the Federal Bureau of Investigation's Integrated Automated Fingerprint Identification System on all individuals who maintain a 5 percent or greater direct or indirect ownership interest in

the provider or supplier. These additional verification activities are meant to correspond to the heightened risk involved.

There currently are only four provider or supplier types that fall within the high categorical risk level under § 424.518(c)(1): newly/initially enrolling home health agencies (HHAs); newly/initially enrolling DMEPOS suppliers; newly/initially enrolling Medicare Diabetes Prevention Program (MDPP) suppliers; and newly/initially enrolling opioid treatment programs (OTPs).

ii. Current Grounds for Risk Level Increase (or "Bump Up")

Under § 424.518(c)(3)(i) and (ii), CMS adjusts a particular provider's or supplier's screening level from "limited" or "moderate" to "high" if the provider or supplier:

- Has had a payment suspension within the previous 10 years;
- Has been excluded by the OIG;
- Has had its Medicare billing privileges revoked within the previous 10 years and is attempting to establish additional Medicare billing privileges by (i) enrolling as a new provider or supplier or (ii) adding a new practice location;
- Has been terminated or is otherwise precluded from billing Medicaid;
- Has been excluded from any Federal health care program; or
- Has been subject to any final adverse action (as defined at § 424.502) within the previous 10 years.

The screening level will also be raised to "high" under § 424.518(c)(3)(iii) if: (1) CMS lifts a temporary moratorium (per § 424.570) for a particular provider or supplier type; and (2) a provider or supplier that was prevented from enrolling (based on the moratorium) applies for Medicare enrollment within 6 months after the moratorium was lifted.

The general purpose of § 424.518(c)(3) is to ensure that providers and suppliers that have certain adverse actions imposed against them are reviewed with a concomitant level of scrutiny.

iii. Analysis

Section 424.518 was implemented in 2011, and we have been screening providers and suppliers in accordance therewith since then. However, we have been concerned that § 424.518 lacks clarity on two critical matters.

First, and as alluded to previously, § 424.518 outlines screening requirements for initial enrollment applications, revalidation applications, and practice location additions. Yet it does not specifically address:

- Change of ownership (CHOW) applications under § 489.18; or

• The reporting of a new owner when a formal § 489.18 CHOW is not involved (such as disclosing a new 10 percent owner per § 424.516(e)(1)).

Section 424.518's current dearth of clear applicability to these two situations effectively means that a high-risk level provider or supplier can have a new owner without the latter having to undergo the important scrutiny that fingerprint-based criminal background checks furnish. That is, in promulgating § 424.518 in 2011, we recognized the uniquely critical role that owners often play in the provider's or supplier's operations by restricting our fingerprinting requirement to such persons. To mandate the fingerprinting of owners with initial applications, revalidations, and new practice locations but not with the aforementioned two transactions that specifically focus on the disclosure of new owners would be both an inconsistency and a program integrity risk.

The second issue involves the risk-level elevation criteria in § 424.518(c)(3). There are numerous health care entities that have multiple enrollments under their organizational umbrella. (To illustrate, Health Care System X, Inc. may have within its corporate structure a small hospital, four physician groups, two skilled nursing facilities, a DMEPOS supplier, and an OTP provider, all of which are separately enrolled in Medicare but with Health Care System X, Inc. identified as their legal business name.) Situations can arise where an organization with multiple enrollments has had an action described in § 424.518(c)(3) imposed against it or against one of its enrollments. Consider the following examples:

• Example 1—Entity Y has three separately enrolled physician groups (A, B, and C), each at the limited-risk level of categorical screening. Group C has just been revoked under § 424.535(a)(1) for non-compliance with enrollment requirements.

• Example 2—Organization Z has within its structure an enrolled HHA, an enrolled nurse practitioner group, and an enrolled independent diagnostic testing facility (IDTF). The organization itself has recently been convicted of a felony (which is identified as a final adverse action under § 424.502). All three of its enrollments are accordingly revoked.

The adverse actions described in these two examples fall within the scope of events that would trigger an increase in risk level under § 424.518 to "high." There has been uncertainty among interested parties, particularly

provider organizations with multiple enrollments, as to the extent of the risk-level elevation in these cases. That is, the issue is whether an adverse action imposed with respect to a particular enrollment applies strictly to said enrollment or also applies to all of the provider's or supplier's other enrollments, meaning that the screening level for these additional enrollments would, too, be raised to "high." Under this latter approach, which has generally been our policy, the following would occur under aforementioned Examples 1 and 2:

• Example 1—All initial enrollment applications, revalidations, and additions of practice locations involving Group Practice A, B, or C (for instance, Group C sought to re-enroll in Medicare after the expiration of its reenrollment bar under § 424.535(c)) would be processed at the "high" level of categorical screening. In addition, if Entity Y sought to enroll new Group Practice D, the latter's initial application would be subject to the "high" screening category.

• Example 2—As with Example 1, all of Organization Z's enrollments would be elevated to "high" under § 424.518(c)(3). If any of the revoked providers and suppliers sought to reenroll in Medicare after their reenrollment bars expire, their enrollments would be processed at the high-risk level.

We believe the foregoing approach is warranted because we have historically viewed § 424.518(c)(3) in the broad context of applying to the controlling provider or supplier at large and not necessarily being confined to one of its enrollments. The central consideration, in our view, is the risk that the behavior at issue poses to the Trust Funds and to the safety of our beneficiaries. Even if, for instance, a Medicaid termination occurred with only one of the entity's enrollments, this raises serious questions about the organization's oversight of the enrolled providers and suppliers under its control. We believe that the overriding need to protect the Medicare program justifies heightened examination of the other enrollments within the organization's domain.

iv. Specific Regulatory Revisions

Given the prior discussion and for reasons already outlined, we propose the following changes to § 424.518.

First, the opening paragraph of § 424.518 references initial applications, revalidation applications, and practice location additions as falling within § 424.518's purview. We propose to add to this paragraph the following transactions:

• Change of ownership applications under § 489.18.

The reporting of any new owner (regardless of ownership percentage) via a change of information or other enrollment transaction (such as a full or partial certified supplier ownership change) under Title 42.

Second, we propose to clarify in § 424.518(c)(1) that the provider and supplier types included therein—once enrolled—are subject to high-risk screening if they are submitting a § 489.18 change of ownership application or an application to report a new owner (as described in the previous paragraph). As a technical elucidation, we would also change the language in paragraph (c)(1) that reads, CMS has designated the following home health agencies and suppliers of DMEPOS as "high" categorical risk to CMS has designated the following provider and supplier types as "high" categorical risk. This would merely clarify that certain providers and suppliers other than HHAs and DMEPOS suppliers (such as OTPs) fall within the purview of paragraph (c)(1).

Third, the introductory language in § 424.518(c)(3) states that CMS adjusts the screening level from limited or moderate to high if any of the previously cited adverse actions against the provider or supplier occur. To clarify the extent of such adjustments, we propose to add a new paragraph (c)(4). We would state therein that any adjustment under paragraph (c)(3) would also apply to all other enrolled and prospective providers and suppliers that have the same legal business name (LBN) and tax identification (TIN) number as the provider or supplier for which the risk level under (c)(3) was originally raised. We believe using an LBN-TIN combination as the barometer for application of (c)(3) to other providers and suppliers is proper for two reasons. First, providers and suppliers with the same LBN and TIN are generally closely related in certain legal and operational aspects (for instance, similar ownership or management). Such alignment between these parties, in our view, warrants a concomitant level of review in the event paragraph (c)(3) is invoked. Second, utilizing an LBN-TIN standard in paragraph (c)(4) would likely offer more clarity and definiteness for interested parties regarding paragraph (c)(3)'s applicability than a potentially more nebulous standard, such as "within a common business structure."

f. Categorical Risk Designation—Skilled Nursing Facilities (SNFs)

SNFs are currently in the limited-risk screening category under § 424.518. However, CMS in recent years has become increasingly concerned about certain problems within the SNF community, particularly potential and actual criminal behavior. Indeed, a specific concern raised in several government reports involves patient abuse. For instance, the United States Government Accountability Office (GAO) published an analysis on January 14, 2022 titled “Health Care Capsule: Improving Nursing Home Quality and Information” (GAO–22–105422). In this report, the GAO identified gaps in CMS’ prior oversight of nursing homes that make it more difficult to prevent patient abuse. Another GAO report, titled “Nursing Homes: Better Oversight Needed to Protect Residents from Abuse” (GAO–19–433), was published in June 2019.³²⁹ The study aimed to: (1) determine the trends and types of nursing home patient abuse in recent years; and (2) evaluate CMS’ oversight that is intended to ensure residents are free from abuse. The report concluded, among other things, that patient abuse deficiencies found on State surveys more than doubled between 2013 and 2017.³³⁰ It also noted inconsistencies as to when State survey abuse findings or allegations of abuse are referred to law enforcement.³³¹ The subject of background checks was also addressed. The GAO interviewed various interested parties and determined that nursing homes without adequate staff screening mechanisms (such as background checks) could result in hiring staff with histories of abuse.³³² It added that because “staff screening through background checks and the nurse aide registry is not coordinated across the country, there are gaps that could enable individuals who committed crimes in one state to obtain employment at a nursing home in another state. . . . Staff from a nursing home we visited said the prevention of abuse ‘starts with hiring the right staff’ and noted the importance of conducting background checks and checking references for prospective employees.”³³³

The OIG, too, has opined on this matter. In a September 2020 report titled, “National Background Check Program for Long-Term Care Providers: Assessment of State Programs Concluded in 2019” (OEI–07–20–

00180), the OIG noted that patient abuse, patient neglect, and misappropriation of property have been detected as problems harmful to beneficiaries receiving long-term care. Somewhat akin to the previously mentioned June 2019 GAO report, the OIG stated that, per various studies, some nurse aides who were convicted of abuse, neglect, or theft had previous criminal convictions that could have been found through background checks of prospective employees.³³⁴ The OIG added that such employee background checks can help protect long-term care beneficiaries.³³⁵

Our aforementioned concerns regarding problematic activity in the nursing home arena are not limited to patient abuse. Numerous recent cases have highlighted issues regarding fraud or improper billing among nursing home owners or operators. For instance:

- In April 2019, a jury found an owner of nursing homes and assisted living facilities in Florida guilty of 20 charges related to health care fraud. The United States Department of Justice (DOJ) noted that the owner’s actions were part of the largest health care fraud scheme ever charged by the DOJ. It involved over \$1.3 billion in fraudulent claims to Medicare and Medicaid for services that were not provided, were not medically necessary, or were procured through the payment of kickbacks.³³⁶

- In July 2021, a Virginia nursing home operator was sentenced to 2 years in prison for defrauding Medicaid after submitting more than \$188,000 in false claims.³³⁷

- In March 2022, the DOJ settled a False Claims Act case with a Georgia nursing home for \$400,000. The matter involved allegations that the nursing home deliberately billed Medicare for services that were not reasonable, necessary, and skilled.³³⁸

- A nursing home entity based in Georgia (which operates nursing homes across the country) agreed in May 2021 to pay \$11.2 million to resolve allegations that it: (1) violated the False

Claims Act by causing its nursing homes to bill the Medicare program for rehabilitation therapy services that were not reasonable, necessary or skilled; and (2) billed Medicare and Medicaid for substandard skilled nursing services.³³⁹

- In January 2020, a New York man pled guilty in federal court to embezzlement and tax offenses related to his operation of nursing homes in Connecticut.³⁴⁰

- Also in 2020, a Pennsylvania nursing home chain and its related companies agreed to pay more than \$15 million to settle claims that the chain provided medically unnecessary rehabilitation therapy to residents in order to meet revenue goals, instead of clinical needs.³⁴¹

- A California corporation and 27 affiliated nursing homes in the State agreed in July 2020 to resolve allegations that they violated the False Claims Act by submitting false claims to Medicare for rehabilitation therapy services that were not reasonable or necessary.³⁴²

- In June 2019, four Illinois nursing facilities and a physical therapy center agreed to pay \$9.7 million to resolve civil allegations that they violated the False Claims Act by providing unnecessary services to increase Medicare payments.³⁴³

- A Tennessee-based nursing home chain agreed in February 2018 to pay more than \$18 million in allowed claims to resolve a lawsuit brought by the DOJ and the State of Tennessee against them for billing the Medicare and Medicaid programs for substandard nursing home services.³⁴⁴

The disconcerting number of recent cases involving fraud and improper billing by nursing home owners and operators, as well as the OIG and GAO reports concerning patient abuse at the nursing homes these individuals oversee, requires, in our view, strengthened protections of the Medicare program and its nursing home beneficiaries. Indeed, CMS has an obligation to safeguard the integrity of

both the Trust Funds and the services that nursing home patients receive. Financial malfeasance and beneficiary abuse are unacceptable, and we believe that more closely scrutinizing the owners of nursing homes through our existing criminal background checks under § 424.518 can help detect potential criminal or abusive behavior at the nursing home before it begins. To illustrate, if a SNF owner is found through a fingerprint-based background review to have been convicted of battery, sexual assault, or other serious crime, this could raise significant concerns as to whether this conduct will be repeated during the owner's oversight or management of the facility. A SNF owner with an embezzlement conviction might be more inclined to divert the SNF's funds to his personal use (and away from monies otherwise intended for beneficiary care) than a different owner; he or she might also be more willing to tolerate malfeasance in the nursing home or to hire persons with criminal records. As two of the aforementioned OIG and GAO reports indicated with respect to nursing home employees, background reviews can prove helpful in screening individuals for possible problematic behavior. We, too, have found our fingerprint-based criminal background checks of great assistance in detecting felonious behavior by the owners of high-risk providers and suppliers.

Given the prevalence of recent unacceptable behavior by nursing home overseers and the OIG and GAO-documented instances of nursing home beneficiary abuse, we propose to revise § 424.518 to move initially enrolling SNFs into the high-level of categorical screening; revalidating SNFs would be subject to moderate risk-level screening. Requiring all SNF owners with 5 percent or greater ownership to submit fingerprints for a criminal background check would help us detect parties potentially posing a risk of fraud, waste, or abuse and, with this, the threat of patient abuse. In addition, our proposal, which we believe would assist in protecting Medicare Trust Fund dollars and beneficiaries, aligns with the Biden-Harris Administration's initiative to improve nursing home accountability.³⁴⁵

Previously, we referenced our authority under §§ 424.530(a)(3) and 424.535(a)(3) to deny or revoke enrollment based on a felony conviction within the previous 10 years; this

includes a felony conviction against an owner of the provider or supplier. Notwithstanding our foregoing concerns about felonious activity by nursing home owners, we emphasize that our authority under §§ 424.530(a)(3) and 424.535(a)(3) is discretionary, meaning that we are not required to exercise it in every case.

g. DMEPOS Payment Denial Based on Violation of Supplier Standard

In comparison to most other provider and supplier types, DMEPOS suppliers have long presented to the Medicare program an elevated risk of fraud, waste, and abuse. In recognizing this threat, CMS over the years has established particularly stringent requirements that DMEPOS suppliers must meet in order to enroll and maintain enrollment in Medicare. These include, but are not limited to, requiring:

- The highest possible level of screening for initially enrolling DMEPOS suppliers, which includes site visits and the submission of fingerprints by each of the DMEPOS supplier's 5 percent or greater owners (§ 424.518(c)).
- The DMEPOS supplier's accreditation under § 424.58.
- Acquisition and maintenance of a surety bond under § 424.57(d).

The foregoing policies are meant to help ensure that Medicare enrolls and pays only those DMEPOS suppliers that are legitimate businesses capable of serving as reliable partners of the Medicare program. In furtherance of this aim, § 424.57(b) contains five separate conditions of payment that DMEPOS suppliers must meet to receive payment. These include, for example: (1) submission of a completed application to enroll in Medicare; and (2) furnishing a DMEPOS item only on or after the date CMS issued the supplier a billing number. Noncompliance with any DMEPOS condition of payment in § 424.57(b) can result in a revocation under § 424.57(e)(1). In addition, § 424.57(c) lists a number of enrollment standards with which DMEPOS suppliers must comply at all times. Should the supplier fail to meet any of the 30 standards, revocation under § 424.57(e)(1) is warranted.

One such enrollment standard, codified in § 424.57(c)(1)(ii)(A), provides that if the State requires licensure to furnish certain items or services, the DMEPOS supplier must be licensed to provide the item or service. We have encountered situations where an unlicensed DMEPOS supplier furnishes items for an extended period. The supplier then terminates its enrollment or CMS revokes the supplier's enrollment under

§ 424.57(e)(1) effective 30 days after the DMEPOS supplier is sent notice of the revocation per § 405.874. Tens of thousands of Medicare dollars were placed at great risk because the supplier was furnishing items and services while unlicensed up to the point of its termination of enrollment.

We see this as a potential vulnerability. Notwithstanding the aforementioned guardrails to stop DMEPOS fraud, initially enrolling DMEPOS suppliers remain at a high-risk screening designation, which we believe warrants heightened scrutiny to help ensure that all DMEPOS requirements are met. It would be inconsistent with our obligation to protect the Medicare Trust Funds to permit payment for items and services furnished while the supplier was non-compliant with the licensure requirements of § 424.57(c)(1)(ii)(A). Indeed, State licensure is a uniquely important program integrity protection because it helps ensure that the supplier meets certain minimum requirements of competency under State law to perform the services or furnish the items in question. Further, DMEPOS licensure, more than perhaps any other supplier standard in § 425.57(c), constitutes an additional level of vetting (that is, at the State level) that, in conjunction with our provider enrollment screening under 42 CFR part 424, subpart P and the provisions of § 424.57, is not necessarily duplicated with respect to requirements existing only at the Federal level. To illustrate, if a particular requirement in § 424.57(c) is also a prerequisite for State licensure, two reviews of the supplier's compliance will be performed: once at the State level and once at the Medicare enrollment level. Such multiple levels of verification that State licensure combined with Federal requirements can help ensure that the supplier is a bonafide and legitimate business.

Given the foregoing, we propose to add a new condition of payment in paragraph (b)(6) in § 424.57. Said condition would state that in order to receive payment for a furnished DMEPOS item, the supplier must have been in compliance with all conditions of payment in 424.57(b) as well as with § 424.57(c)(1)(ii)(A) at the time the item or service was provided. We note that section 1834(j)(1)(B)(ii)(I) of the Act requires, as a condition for obtaining a supplier number, that the DMEPOS supplier comply with all applicable State and Federal licensure and regulatory requirements. A DMEPOS supplier cannot receive payment unless it is enrolled and, as part of that, has a supplier number. Since compliance

³⁴⁵ See <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/28/fact-sheet-protecting-seniors-and-people-with-disabilities-by-improving-safety-and-quality-of-care-in-the-nations-nursing-homes/>.

with licensure requirements is a specific statutory prerequisite for a DMEPOS supplier to be enrolled and because payment cannot occur without enrollment, we believe it logically follows that section 1834(j)(1)(B)(ii)(I) of the Act constitutes sufficient legal authority for our proposal.

K. State Options for Implementing Medicaid Provider Enrollment Affiliation Provision

On September 10, 2019, we published a final rule with comment period in the **Federal Register** titled “Program Integrity Enhancements to the Provider Enrollment Process” (84 FR 47794). Several provisions therein implemented section 1866(j)(5) of the Act. Section 1866(j)(5)(A) of the Act requires Medicare, Medicaid, and Children’s Health Insurance Program (CHIP) providers and suppliers to disclose any current or previous direct or indirect affiliation with a provider or supplier that—(1) has uncollected debt; (2) has been or is subject to a payment suspension under a Federal health care program; (3) has been or is excluded by the OIG from Medicare, Medicaid, and CHIP; or (4) has had its Medicare, Medicaid, or CHIP billing privileges denied or revoked. Under section 1866(j)(5)(B) of the Act, the Secretary may deny enrollment based on such an affiliation if the Secretary determines that the affiliation poses an undue risk of fraud, waste, or abuse.

The above-mentioned statutory requirements were implemented in §§ 424.502 and 424.519 with respect to Medicare enrollment and 42 CFR 455.101 and 455.107 for Medicaid and CHIP enrollment. The general purpose of the affiliation disclosure requirement is to help combat fraud, waste, and abuse by enabling CMS and the States to: (1) better track certain current and past relationships between and among different providers and suppliers; and (2) identify and take action on affiliations among providers and suppliers that pose an undue risk to Medicare, Medicaid, or CHIP.

In terms of the scope and timing of the disclosure requirement, section 1866(j)(5)(A) of the Act states that providers and suppliers submitting an application for enrollment or revalidation of enrollment in Medicare, Medicaid, or CHIP must make the disclosures in a form and manner and at such time as determined by the Secretary. Based in part on concerns about the potential burden on the provider community in disclosing affiliations on every initial and revalidation application (and pursuant to the aforementioned statutory

authorization regarding the form, manner, and timing for submitting disclosures), current regulations outline a “phased in” approach to implementing the disclosure requirements, pending further rulemaking. For Medicare enrollment, § 424.519(b) states that providers and suppliers must submit affiliation disclosures upon a CMS request. CMS will make these requests when it determines that an initially enrolling or revalidating provider or supplier may have at least one affiliation meeting certain criteria specified in the regulation. For Medicaid and CHIP enrollments, § 455.107(b) requires each State, in consultation with CMS, to select one of the following two options for implementing the disclosure requirement:

- Under Option #1, all providers that are not enrolled in Medicare but are initially enrolling in Medicaid or CHIP or revalidating their Medicaid or CHIP enrollment information must disclose their affiliations.
- Under Option #2, providers that are not enrolled in Medicare but are initially enrolling in Medicaid or CHIP or revalidating their Medicaid or CHIP enrollment information must disclose their affiliations only upon request from the State. (The State will make the request when, in consultation with CMS, it has determined that the initially enrolling or revalidating provider may have at least one affiliation meeting certain criteria specified in the regulation.)

The central operational difference between these two Medicaid and CHIP options is that the first requires disclosures with every initial and revalidation application (assuming the provider is not Medicare-enrolled) while the second requires disclosures with the applications only upon the State’s request. On a broader level, the second option permits the State to undertake a slower, phased-in implementation. That is, rather than require all initially and revalidating non-Medicare-enrolled providers to report their affiliations, the State may, in consultation with CMS, adopt the more targeted approach of requiring disclosures upon request, mirroring the approach adopted in § 424.519(b) for Medicare. We believe that affording options gives States greater flexibility in implementing the affiliation disclosure requirements.

Despite this goal, existing § 455.107(b)(1)(ii) holds that the State cannot change options once its selection has been made. Our concern at the time of promulgating § 455.107(b) was that switching options after one of them is

implemented could lead to logistical and administrative complications and, perhaps, confusion in the provider community as to what the State requires. However, after consultations with the States and after analyzing data regarding the submission of affiliation disclosures to date, we do not believe § 455.107(b)(1)(ii) needs be so restrictive. A number of States are seeking greater discretion in their operationalization of § 455.107(b). They believe that requiring the State to continue implementing its selected option without change could hinder its operations and/or its program integrity efforts if that option is proving impracticable or inefficient for that particular State.

We share these States’ concerns and agree that increased flexibility is warranted. To this end, we are proposing to revise § 455.107(b)(1)(ii) to read that a State may, in consultation with CMS, change its selection under § 455.107(b) (after it has been made) from § 455.107(b)(2)(ii) to § 455.107(b)(2)(i). However, we would not permit a change from § 455.107(b)(2)(i) to § 455.107(b)(2)(ii). This is because the former option more thoroughly implements section 1866(j)(5)(A) of the Act, and thus, furnishes greater program integrity protections by requiring all enrolling or revalidating providers to disclose affiliations while § 455.107(b)(2)(ii) requires disclosure in more limited circumstances. As noted in the previously mentioned September 10, 2019 final rule with comment period: “Section 1866(j)(5) of the Act requires every provider and supplier (regardless of the relative risk they may pose) to disclose affiliations upon initial enrollment and revalidation. All States that choose the second option will therefore eventually be required to collect affiliation disclosures from their providers upon the submission of each initial and revalidation application” (84 FR 47816). Consistent with the phased-in approach adopted in that rule and in the interest of protecting the Medicaid program and CHIP from fraud, waste, and abuse, we believe it is appropriate to allow States the flexibility to move from the second, more limited implementation option to the first, more robust option. Conversely, we do not believe that States that chose the full implementation option in § 455.107(b)(2)(ii) should be permitted to scale back their approach by changing their selection to the more limited “upon request” option.

L. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan

1. Previous Regulatory Action

In the CY 2021 PFS final rule and CY 2022 PFS final rule, we finalized policies for the EPCS requirement specified in section 2003 of the SUPPORT Act (Pub. L. 115–271, October 24, 2018). We refer readers to 86 FR 65361 through 65370 for the complete details of the statutory requirements and those finalized policies. Specifically, in the CY 2022 PFS final rule, we finalized multiple proposals related to EPCS. First, we finalized our proposal to extend the date of compliance actions to no earlier than January 1, 2023, and for prescribers writing Part D controlled substances prescriptions for beneficiaries in long-term care (LTC) facilities, we extended the date on or after which we will pursue compliance actions from January 1, 2022 to January 1, 2025 (86 FR 65364 and 65365). Second, we finalized our proposal to require prescribers to electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs, except in cases where an exception or waiver applies (86 FR 65366). Third, we finalized multiple proposals related to the classes of exceptions specified by section 2003 of the SUPPORT Act (86 FR 65366 through 65369): (1) we amended § 423.160(a)(5) by adding paragraph (a)(5)(i), which is the exception listed in section 1860D–4(e)(7)(B)(i) of the Act, for prescriptions issued where the prescriber and dispensing pharmacy are the same entity; (2) we amended § 423.160(a)(5) by adding paragraph (a)(5)(ii), which created an exception for prescribers who issue 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using prescription drug event (PDE) claims data as of December 31st of the preceding year; (3) we amended § 423.160(a)(5) by adding paragraph (a)(5)(iii) to create an exception for prescribers located in the geographic area of an emergency or disaster declared by a Federal, State or local government entity; and (4) we amended § 423.160(a)(5) by adding paragraph (a)(5)(iv) to create an exception for prescribers who have received a CMS-approved waiver because the prescriber is unable to conduct EPCS due to circumstances beyond the prescriber's control, respectively. We did not adopt exemptions for prescribers issuing prescriptions for individuals who are

residents of a nursing facility and eligible for Medicare and Medicaid benefits, or for prescribers issuing prescriptions for individuals enrolled in hospice. Finally, we finalized our proposal to limit compliance actions with respect to compliance from January 1, 2023 through December 31, 2023, to a non-compliance letter sent to prescribers that we believe are violating the EPCS requirement (86 FR 65370).

2. Evaluation of Compliance

In the CY 2022 PFS final rule, we discussed the EPCS policy, exceptions, and a compliance threshold. Specifically, we stated that starting in CY 2023, CMS would begin initial EPCS compliance actions (86 FR 65363). We believe it is important to provide a general timeline that describes the general process by which prescriber compliance will be evaluated. Previously, we stated that some exceptions would be evaluated on the basis of Prescription Drug Event (PDE) data from the preceding year as opposed to the evaluated year. We recognize that prescriber practices may change from year to year and believe it is inconsistent to evaluate exceptions and compliance on the basis of PDE data from the preceding year as opposed to the year under evaluation. To that end, we aim to use PDE data from the evaluated year (that is, the current year) as soon as it becomes available to ensure that the data is relevant to the prescriber's practices in the evaluated year. For example, evaluation of CY 2023 prescriber practices will be based on CY 2023 PDE data, though the evaluation will not begin until late CY 2024 and will be based on the PDE data used in the Part D Payment Reconciliation for CY 2023. Following the PDE availability and our evaluation for exceptions and compliance, CMS will begin addressing prescriber noncompliance by issuing non-compliance letters as previously described in the CY 2022 PFS final rule (86 FR 65370).

Additionally, in this proposed rule, we propose to extend the existing non-compliance action of sending letters to non-compliant prescribers for the EPCS program implementation year (January 1, 2023 through December 31, 2023) to the following year (January 1, 2024 through December 31, 2024). We are also proposing a change to the data source used to identify the geographic location of prescribers to inform the recognized emergency exception. Starting in CY 2025, CMS plans to begin increasing the severity of penalties for noncompliant prescribers, from issuance of non-compliance letters to

other penalties, using the same timeline established here. Therefore, we are seeking further public comment on potential penalties for noncompliant prescribers in section III.L.4. of this proposed rule.

3. Proposed Changes to Exceptions

a. Cases Where Prescribers Issue Only a Small Number of Part D Prescriptions

In the CY 2022 PFS final rule we finalized our proposal to amend § 423.160(a)(5) by adding § 423.160(a)(5)(ii), which created an exception for prescribers who issue 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using PDE claims data as of December 31st of the preceding year, so that these prescribers are not required to meet the EPCS requirement. We referred to this exception as one for small prescribers. For a complete discussion of this topic please see the CY 2022 PFS final rule (86 FR 65366 and 65367). We note that we intended to implement this proposal by examining PDE claims as of December 31 of the prior year to determine which prescribers fall within this exception. We stated CMS will use the previous year's data to determine whether the prescriber falls under this exception for the year-in-question.

We are now proposing to modify the exception to better align the timeframes of data used to evaluate each exception. We note that, other than the small prescriber exception, every exception described in the CY 2022 PFS final rule is evaluated based on data from the same year to which the exception is applied. For instance, in the case of a recognized emergency, an exception would be granted during the period of time in the year in which the emergency took place, and the emergency would not be considered for an exception in the following year's compliance evaluation, except to the extent that the emergency continued into the following year. Similarly, for purposes of § 423.160(a)(5)(ii), we believe that it is consistent to consider the prescriptions issued during the evaluation period, rather than the previous year, in case there are year-over-year changes. In this manner, we believe this proposal is a more consistent approach than the existing requirement to utilize claims data from the prior year to assess whether a prescriber issues 100 or fewer Part D controlled substance prescriptions.

Therefore, we are proposing to change the year from which PDE data is used from the preceding year to the current evaluated year when CMS determines

whether a prescriber qualifies for an exception based on the number of Part D controlled substance claims. To effect this change, we are proposing to modify the exception at § 423.160(a)(5)(ii), which states, “Prescriber issues 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data as of December 31st of the *preceding year*,” by changing “CMS claims data as of December 31st of the preceding year” to “CMS claims data with dates of service as of December 31st of the current year.” If finalized, this proposal would become effective for CY 2023 and for subsequent years. Thus, for CY 2023 EPCS compliance, the small prescriber exception would be assessed using CY 2023 PDE data based on our proposed change. Additionally, a prescriber’s compliance status would be evaluated based on PDE data with a ‘Date of Service’ within the evaluated calendar year using PDE data, which Part D sponsors must submit by mid-way through the following year. For an example of how we propose this to work in practice, consider the following illustration. Prescriber A had fewer than 100 Medicare Part D controlled substances prescriptions in CY 2022, and therefore, was exempted from EPCS compliance for CY 2022. During the first quarter of CY 2023, she issues 85 Part D controlled substance prescriptions. After Prescriber A crosses the threshold of more than 100 Part D controlled substance prescriptions, she must reach the compliance threshold of electronically prescribing at least 70 percent of all her prescribed Part D Schedule II, III, IV, and V controlled substances in CY 2023. If she does not utilize EPCS for at least 70 percent of Part D controlled substance prescriptions in CY 2023, including those prescribed prior to reaching the 100 Part D controlled substances prescriptions threshold, she would be subject to a compliance action based on failing to meet the requirement at § 423.160(a)(5), unless another exception applied. PDEs with a Date of Service between January 1, 2023 to December 31, 2023 with a submission date on or before the PDE submission deadline for 2023 (that is, June 28, 2024) would be included in the compliance analysis.

If our proposal is finalized, neither CMS nor an individual prescriber will be able to determine until after the evaluation year whether or not the individual prescriber qualifies as a “small prescriber” for purposes of § 423.160(a)(5)(ii), unless the prescriber tracks the number of Medicare Part D

controlled substance prescriptions the prescriber issues during the evaluation year. This is in comparison to our existing policy, where CMS would not determine if prescribers qualify as a “small prescriber” until the middle of the evaluation year when the PDE data from the prior year becomes available. Despite the delay in identifying which prescribers qualify for the small prescriber exception, we believe this proposal will better identify small prescribers for purposes of EPCS compliance and simplify the program by aligning the time periods of the exceptions. We also believe that prescribers will be able to more clearly understand their Medicare Part D controlled substance prescribing patterns throughout the first two years of the EPCS program, where the only action for non-compliance is a letter.

We seek comment on our proposal to modify the exception at § 423.160(a)(5)(ii) and on the possibility that prescribers would avoid prescribing controlled substances to Medicare beneficiaries, particularly where they are approaching the 100 Part D controlled substances prescriptions threshold late in a calendar year, in order to remain a small prescriber.

Additionally, recognizing some prescribers are expecting CMS to use the CY 2022 PDE to assess whether the exception at § 423.160(a)(5)(ii) applies for purposes of CY 2023 EPCS compliance, we seek comment on an alternative for the CY 2023 year only. In the alternative, we would recognize a prescriber as a small prescriber for purposes of the exception at § 423.160(a)(5)(ii) if the prescriber had fewer than 100 Part D controlled substances prescriptions in 2022 or fewer than 100 Part D controlled substances prescriptions in 2023. We did not propose this option because we thought it would be simpler to have a single set of exceptions for the program versus different rules for different years. Additionally, we believed the risk to prescribers who may change their small prescriber status would be low as the action for non-compliance for CY 2023 is a letter.

b. Cases of Recognized Emergencies

In the CY 2022 PFS final rule (86 FR 65367 and 65368), we finalized our proposal to adopt an exception at § 423.160(a)(5)(iii), for prescribers who are prescribing during a recognized emergency, such as a natural disaster, a pandemic, or a similar situation where there is an environmental hazard. We stated that to qualify for this exception, this circumstance will have to arise from an emergency or disaster declared

by a Federal, State, or local government entity. We finalized our proposal to determine whether a prescriber qualifies for this exception based on whether the prescriber’s National Council for Prescription Drug Programs (NCPDP) Pharmacy Database address is located in the geographic area of an emergency or disaster declared by a Federal, State or local government entity, which is reflected in the text of § 423.160(a)(5)(iii). Since, as stated in the CY 2022 PFS proposed and final rules, we had intended this exception to avoid unduly burdening prescribers during difficult situations, CMS would like to again clarify that this exception would be applicable only if the dispensing date of the medication occurs during the time period that the declared disaster is occurring.

We have determined that the NCPDP Pharmacy Database contains pharmacy addresses as opposed to prescriber addresses. Because it is likely that the address of a prescriber differs from that of the pharmacy where a prescription is filled, and the prescriber might be located at an address within an emergency or disaster area when the pharmacy is not, we believe the NCPDP database may not always be an appropriate data source to inform the exception based on emergencies such as natural disasters, pandemics, or similar situations where there is an environmental hazard. It is our intention that the EPCS exception apply to where the prescriber is located, not where the pharmacy is located, to the extent that the locations differ. We believe the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) would have the most current address information for prescribers who are enrolled in Medicare. Additionally, this is the data source that the Quality Payment Program’s Merit-based Incentive Payment System (MIPS) uses to determine if a MIPS eligible clinician is located in an area that has been affected by extreme and uncontrollable circumstances (82 FR 53895 through 53900). Therefore, for prescribers who have an address in PECOS, we propose to use the PECOS address instead of the of the NCPDP Pharmacy Database address to determine whether the exception at § 423.160(a)(5)(iii) is applicable. We are concerned however, that not all prescribers would be enrolled in Medicare and therefore their addresses would not be in PECOS. In situations where prescribers do not have a PECOS address, we propose to use the prescriber address in the National Plan and Provider Enumeration System

(NPPES) data. We propose to revise the text of § 423.160(a)(5)(iii) accordingly. Additionally, we seek public comment on whether using NPPES, NCPDP, or some other database is appropriate when there is no prescriber address in PECOS.

We also seek comment on an alternative of using NPPES as the source of addresses for all prescribers. We believe this data may have information for all prescribers, but that providers may not update their address as often as they do in PECOS. Finally, we seek comment on other potential data sources that could be used to verify a prescriber's address for purposes of § 423.160(a)(5)(iii).

4. Penalties

Section 1860D–4(e)(7)(D) of the Act gives the Secretary the authority to enforce and specify appropriate penalties for non-compliance with the EPCS requirement through rulemaking. In the CY 2022 PFS proposed and final rules, we sought feedback from interested parties on whether CMS should impose penalties and if so, what penalties should be imposed. We are continuing to examine State EPCS requirements and their accompanying penalties. However, because these requirements have only been recently implemented and most States do not have penalties for failing to adopt EPCS, we have not been able to evaluate what type of penalties have been effective to enforce State mandates.

In our ongoing implementation of the EPCS requirement, we continue to seek input to ensure that we do not place too much of a burden on prescribers, as we do not want this requirement to have an unintended consequence of incentivizing prescribers to stop prescribing controlled substances to Part D beneficiaries, where appropriate, should they not have EPCS set-up. We continue to need additional time to gather more feedback from interested parties on the most effective and most appropriate type of penalties. In the CY 2022 PFS final rule, we finalized our proposal to limit CY 2023 compliance actions to a non-compliance letter sent to prescribers that are violating the EPCS requirement.

a. Timing for Issuing Non-Compliance Letters

In this proposed rule, we are proposing to adjust the period of time during which CMS will issue non-compliance letters. With respect to the period of time during which CMS non-compliance actions will consist of sending letters to prescribers that we believe are violating EPCS requirements,

we are proposing to extend the existing compliance action of sending letters to non-compliant prescribers from the CY 2023 EPCS program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 year (January 1, 2024 through December 31, 2024). If adopted, CMS compliance actions will consist of CMS sending letters to prescribers who we believe are violating the EPCS requirement between January 1, 2023 and December 31, 2024. The content of the letters would remain unchanged. These letters would consist of a notification to prescribers that they are violating the EPCS requirement, information about how they can come into compliance, the benefits of EPCS, an information solicitation as to why they are not conducting EPCS, and a link to the CMS portal to request a waiver. We are seeking public comment on this proposal.

b. Request for Information Relating to Potential Future EPCS Penalties

Consistent with the CY 2022 PFS final rule, we continue to be interested in identifying additional meaningful penalties to enforce the EPCS requirement. Therefore, we are seeking public comment on additional penalties that CMS may impose to enforce the EPCS requirement. Such penalties would go into effect no sooner than January 1, 2025 if we extend the timeframe during which we will issue non-compliance letters, as we have proposed. There are a range of options that we are exploring, and we believe feedback from interested parties will help us to develop meaningful and appropriate penalties in the future. We are currently considering the following non-exhaustive list of penalties for non-compliant prescribers:

- *Requiring a non-compliant prescriber to enter into a corrective action plan, which would require the non-compliant prescriber to comply with the EPCS requirement within 2 years prior to applying other potential actions outlined in this section.* Some commenters previously recommended corrective action plans be used prior to applying penalties. CMS seeks comment on what types of elements and actions should be in a corrective action plan that encourages use of EPCS without being overly burdensome. We seek comment on whether a corrective action plan would be perceived as overly burdensome to non-compliant prescribers and whether a 2-year timeframe is reasonable and appropriate. We also seek comment on whether a corrective action plan should be applied prior to other potential actions described in this section or

whether a corrective action plan should be established in parallel with other actions.

- *Posting a non-compliant prescriber's name on the CMS website and identifying the prescriber as non-compliant.* CMS seeks comment on whether this action would be sufficient to persuade prescribers to alter their behavior. We seek comment on whether beneficiaries and interested parties would be able to utilize this information to their benefit.

- *Public reporting of EPCS compliance status, including that a prescriber is non-compliant, on the Care Compare website.* CMS seeks comment on whether this action would be sufficient to persuade prescribers to alter their behavior. We seek comment on whether beneficiaries and interested parties would be able to utilize this information to their benefit.

- *Referral of non-compliant prescribers to the DEA to support potential investigations.* We request comment on an option under which CMS would provide the list of the EPCS non-compliant prescribers to the DEA to supplement current investigations and activities. The DEA would have the sole authority to use the information as permitted under DEA regulations and applicable law. CMS seeks comment on whether interested parties envision this as being an effective option for enforcing EPCS compliance. We seek comment on whether interested parties have any recommendations that increase the effectiveness of this potential option. We seek comment on whether CMS should consider the duration of EPCS non-compliance prior to referring the prescriber to the DEA and whether a corrective action plan should be considered prior to referring the prescriber.

- *Sharing the list of EPCS non-compliant prescribers with the States.* CMS seeks comment on whether interested parties believe sharing the list of EPCS non-compliant prescribers with State level entities would be beneficial to the enforcement of EPCS compliance. We seek comment on how States may use this information to further assist CMS' efforts to enforce the EPCS requirement.

- *Referral for potential fraud, waste and abuse review.* CMS seeks comment on whether it should refer Medicare enrolled prescribers who consistently do not comply with the EPCS requirement for a fraud, waste, and abuse investigation to be undertaken by CMS. Multiple years of non-compliance may be a significant enough issue to consider a review for potential fraud, waste and abuse investigation. We seek

comment on whether we should consider the duration of EPCS non-compliance when considering such a referral and whether other factors should also warrant an internal referral.

- *For penalties involving referral of non-compliant prescribers to the DEA and other entities, our intent is to supplement the current activities of these entities rather than to create new regulatory actions.* We envision that information sent to these entities would be for use at the discretion of the recipient. We are interested to know if interested parties believe there is any utility in referring non-complaint prescribers to the DEA, other CMS internal centers, or the States. If so, we seek comment on in what manner this data can be used to supplement EPCS compliance enforcement.

Any penalty involving the posting of compliance status on CMS websites would be done in a manner consistent with relevant statutory authority. For instance, we note that any potential posting of compliance information on the Care Compare website would have to be done consistent with statutory authority potentially including, but not necessarily limited to, authority in section 10331 of the Patient Protection and Affordable Care Act (ACA), Public Law 111–148 (March 23, 2010); section 1848(q)(9) of the Act; and regulatory authority at 42 CFR 414.1395. Section 10331(a)(2)(G) of the ACA states that to the extent scientifically sound measures that are developed consistent with the requirements of this section are available, such information, to the extent practicable, shall include other information as determined appropriate by the Secretary.

As we stated above and in the CY 2022 PFS final rule, we believe there are multiple advantages to the electronic prescribing of controlled substances: improved workflow efficiencies; deterring and detecting prescription fraud and irregularities by requiring an extra layer of identity proofing, two-factor authentication and digital signature processes; enhanced patient safety through patient identity checks, safety alerts, medication menus, electronic history files, and medication recommendations that lower the risk of errors and potentially harmful interactions; and providing more timely and accurate data than paper prescriptions by avoiding data entry errors and pharmacy calls to a prescriber to clarify written instructions. We also stated that EPCS may reduce the burden on prescribers who need to coordinate and manage paper prescriptions among staff, patients, facilities, other care sites, and

pharmacies. For these and potentially other reasons, we believe the EPCS compliance efforts directly relate to prescriber performance and quality, and related patient experience, as contemplated by section 10331(a)(2) of the ACA. We are seeking comment from interested parties on these and other options they may suggest for penalties to enforce EPCS compliance. We are interested in public comments that address:

- Whether any penalties described above are appropriate as compliance actions without being overly burdensome;
- Whether interested parties believe these penalties will be effective at increasing prescriber compliance;
- Whether penalties should be phased in over time and, if so, after what date CMS should first impose them;
- The utility of posting compliance information to the CMS website or more specifically to the Care Compare website; and
- Whether there are any other penalties not mentioned here which CMS should consider to enforce EPCS compliance.
- How best CMS can enforce EPCS compliance by prescribers who are not billing under Medicare but who prescribe controlled substances to Medicare Part D beneficiaries.

M. Medicare Ground Ambulance Data Collection System (GADCS)

1. Background on Ambulance Services

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services is made under the ambulance fee schedule (AFS), which the Secretary established under section 1834(l) of the Act. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments and three temporary add-on payments to the base rate and/or

mileage rate. The two permanent add-on payments at § 414.610(c)(5)(i) are: (1) a 50 percent increase in the standard mileage rate for ground ambulance transports that originate in rural areas where the travel distance is between 1 and 17 miles; and (2) a 50 percent increase to both the base and mileage rate for rural air ambulance transports. The three temporary add-on payments at sections 1834(l)(12)(A) and (13)(A) of the Act and § 414.610 are: (1) a 3 percent increase to the base and mileage rate for ground ambulance transports that originate in rural areas; (2) a 2 percent increase to the base and mileage rate for ground ambulance transports that originate in urban areas; and (3) a 22.6 percent increase in the base rate for ground ambulance transports that originate in “super rural” areas. Section 50203(a)(1) and (2) of the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115–123, February 9, 2018) includes an extension of the temporary add-on payments through December 31, 2022.

Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Statutory Requirements for the Ground Ambulance Providers and Suppliers To Submit Cost and Other Information Background

Section 50203(b) of the BBA of 2018 added paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers (ground ambulance organizations) to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Section 1834(l)(17)(B)(i) of the Act required the Secretary to specify the data collection system by December 31, 2019, and to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system. Section 1834(l)(17)(D) of the Act required that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not sufficiently submit such information. The term “applicable period” is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for

a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to sufficiently submit information under the data collection system. Section 311 of the Consolidated Appropriations Act, 2022 (Pub. L. 117–103) amended section 1834(l)(17)(F)(i) to delay the deadline for MedPAC to submit its report to Congress on the ground ambulance data collection system study until the second June 15th following the date the Secretary transmits data for the first representative sample of ground ambulance organizations. Section 1834(l)(17)(I) of the Act states that the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*) does not apply to the collection of information required under section 1834(l)(17) of the Act.

In the CY 2020 PFS final rule (84 FR 62864 through 62897), we implemented section 1834(l)(17) of the Act and codified regulations governing data reporting by ground ambulance organizations at §§ 414.601, 414.605, 414.610(c)(9), and 414.626. In the CY 2020 PFS final rule (84 FR 62863 through 62897), we finalized a data collection system that collects detailed information on ground ambulance provider and supplier characteristics including service areas, service volume, costs, and revenue through a data collection instrument, commonly referred to as the Medicare Ground Ambulance Data Collection Instrument,

via a web-based system. This instrument includes the specific questions that will be asked of ground ambulance organizations about the total service volume, costs, and revenue associated with a provider or supplier's entire ground ambulance organization in such a way that MedPAC could use to calculate an average cost per ground ambulance transport. We refer the reader to our CY 2020 PFS final rule (84 FR 62863 through 62897) for more specifics on the establishment of the Medicare Ground Ambulance Data Collection System.

In the CY 2022 PFS final rule (86 FR 65306 through 65317), we finalized a number of updates to the Medicare Ground Ambulance Data Collection System, including: (1) a new data collection period beginning between January 1, 2023, and December 31, 2023, and a new data reporting period beginning between January 1, 2024, and December 31, 2024, for selected ground ambulance organizations in year 3; (2) aligning the timelines for the application of penalties for not reporting data with our new timelines for data collection and reporting and the data collected will be publicly available beginning in 2024; and (3) revisions to the Medicare Ground Ambulance Data Collection Instrument that include better accounting for labor hours across different categories of personnel and better distinguishing between accrual and cost basis accounting methodologies. We refer the reader to our CY 2022 PFS final rule (86 FR 65306–65317) for more specifics on the

revisions to the Medicare Ground Ambulance Data Collection System.

3. Proposed Revisions to the Medicare Ground Ambulance Data Collection Instrument

As described in the CY 2020 PFS final rule (84 FR 62867), the Medicare Ground Ambulance Data Collection Instrument uses screening questions and skip patterns so that it is applicable to all ground ambulance organizations regardless of their size, scope of operations and services offered, and structure. We stated that we believe this approach is easier to navigate and less time consuming to complete than a cost report template or instrument and that it minimizes respondent burden by directing ground ambulance organizations to only view and respond to questions that apply to their specific type of organization, all while still collecting the information required in sections 1834(l)(17)(A) of the Act.

The CY 2020 PFS final rule provided a detailed overview of the elements of the data collection instrument, including questions to collect information on costs, revenues, utilization (which CMS defines for the purposes of the data collection instrument as service volume and service mix), as well as the characteristics of ground ambulance organizations. Table 73 includes a high-level summary of the 13 sections of the Medicare Ground Ambulance Data Collection Instrument.

BILLING CODE 4120–01–P

TABLE 73: Components for the Data Collection Instrument

Component (Data Collection Instrument Section)	Broad Description
General Survey Instructions (1)	Information on background and motivation for data collection, instructions for navigating the instrument, and links for questions and other resources.
Ground Ambulance Organization Characteristics (2-4)	Information regarding the identity of the organization and respondent(s), service area, ownership, response time, and other characteristics; broad questions about offered services to serve as screening questions.
Utilization: Ground Ambulance Service Volume (5) and Service Mix (6)	Number of responses and transports, level of services reported by HCPCS code.
Costs (7-12)	Information on all costs partially or entirely related to ground ambulance services.
• Staffing and Labor Costs (7)	Hours and costs associated with EMTs, administrative staff, and facilities staff; separate reporting of volunteer staff and associated costs.
• Facilities Costs (8)	Number of facilities; annual cost of ownership, insurance, maintenance, and utilities.
• Vehicle Costs (9)	Number of ground ambulances; number of other vehicles used in ground ambulance responses; annual cost of ownership; total fuel, maintenance, and insurance costs.
• Equipment & Supply Costs (10)	Capital medical and non-medical equipment; medical and non-medical supplies and other equipment.
• Other Costs (11)	All other costs not reported elsewhere.
• Total Cost (12)	Total costs for the ground ambulance organization included as a way to cross-check costs reported in the data collection instrument.
Revenue (13)	Revenue from health insurers (including Medicare); revenue from all other sources including communities served.

BILLING CODE 4120-01-C

As described in the CY 2022 PFS final rule (86 FR 65307), we made several changes to the instrument instructions and questions to improve clarity and reduce burden for respondents. A printable version of the current instrument instructions and questions is available in English and Spanish on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>.

We continue to receive ad hoc questions and feedback related to the Medicare Ground Ambulance Data Collection System and the Medicare Ground Ambulance Data Collection Instrument via four primary channels. First, we receive email and other written communication from ground ambulance organizations via the CMS Ambulance Data Collection email inbox (AmbulanceDataCollection@cms.hhs.gov) and through other channels (for example, inquiries sent by organizations to Medicare Administrative Contractors (MACs) and then forwarded to CMS). These emails and other communications often include questions seeking clarification of instrument questions and their

applicability to specific ground ambulance organization scenarios and context. We continue to update a Medicare Ground Ambulance Data Collection System Frequently Asked Questions (FAQ) document with answers to commonly asked questions. This document is available on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>. Through review of questions and feedback, we have identified some instances where a clarification to the instrument language itself will likely be more useful and less burdensome to respondents than having to respond with reference to the FAQ document. Second, we answer questions live from interested parties during webinars, dedicated question and answer sessions, and other educational sessions. As with the emailed questions described above, live question and answer exchanges sometimes identify opportunities for clarifying instrument language. Third, our contractor asked a small number of ground ambulance organizations to test the most recent version of the Medicare Ground Ambulance Data Collection Instrument. Feedback from this preliminary testing

effort was helpful to identify some additional opportunities for clarification. Fourth, we continue to identify opportunities to clarify instructions and correct a small number of typos as we work to develop the web-based, programmed version of the Medicare Ground Ambulance Data Collection Instrument.

Based on information that we received via the four sources described above, we are proposing the following further changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both. We group our proposed changes and clarifications into four broad categories:

- Editorial changes for clarity and consistency.
- Updates to reflect the web-based system.
- Clarifications responding to feedback from questions from interested parties and testing.
- Typos and Technical Corrections.

A draft of the updated instrument that includes all of the CY 2023 proposed changes to review and provide

comments on is posted on the CMS website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>.

a. Editorial Changes for Clarity and Consistency

We are proposing 14 editorial changes to improve the clarity of instrument instructions and questions. We do not believe these changes substantively affect the meaning of any instruction or question.

The first three proposed changes would apply throughout the entire Medicare Ground Ambulance Data Collection Instrument. Specifically, we are proposing to:

- Use the past tense to refer to data collected during selected ground ambulance organizations' continuous 12-month data collection periods throughout the instrument. All organizations are currently required to complete their data collection prior to reporting the data. Using the present tense may be confusion by implying organizations should report data beyond their 12-month data collection period.

- Consistently refer to "ground ambulance" rather than only "ambulance" throughout the instrument to clarify that the scope of the Medicare Ground Ambulance Data Collection System (GADCS) is limited to ground ambulance operations and not air ambulance operations.

- Edit sentences written in the passive voice to the active voice for editorial consistency.

The fourth and fifth proposed changes focus on Section 1 (General Survey Instructions) in the instrument as we are proposing to:

- Refer to organizations' "continuous 12-month data collection period" rather than just "12-month data collection period" throughout the instrument. We believe this will help remind organizations that their data collection period must cover a continuous, 12-month period.

- Align the description of how organizations must provide their data collection start date prior to data reporting in Section 1 (General Survey Instructions) with the process codified at § 414.626(b)(1).

The remainder of proposed changes in this category focus on editorial changes to specific instrument questions or instructions in Sections 2 (Organizational Characteristics) through Section 6 (Service Mix). Specifically, we are proposing to:

- Edit response Option d in Section 2, Question 9 from "Another health care organization (excluding hospitals, skilled nursing facilities, or other

Medicare provider of services)," to "Other health care delivery operations such as a clinic or urgent care center (excluding hospitals, skilled nursing facilities, or other Medicare provider of services in Option c)." In a previous clarification, we reworded Section 2, Question 9 from "Does your ground ambulance operation share any operational costs, such as building space or personnel, with one of the following?" to "Does your organization provide any of the following services or operations (select all that apply)?" Given the change in the structure of the question asking about types of services/operations as opposed to types of organizations, we are proposing to reword one answer option to better reflect the question.

- Clarify Section 4 (Emergency Response Time), Question 4b, which asks whether the organization is penalized if it exceeds response time targets, to focus specifically on monetary penalties. We are concerned that the current phrasing is too subjective and will be difficult for respondents to answer.

- Clarify that the definition of "total response" in the Section 5 (Ground Ambulance Service Volume) instructions and Section 5, Question 1 applies to "emergency responses" rather than "EMS responses." In some organizations, the initial responders to a call for service may not be EMS responders.

- Clarify that estimates of the share of responses that are joint with another organization are acceptable in Section 5, Question 3c, to better align with Section 5, Question 3a where estimates are explicitly permitted.

- Specify in Sections 5 and 6 (Service Mix) and elsewhere in the Medicare Ground Ambulance Data Collection Instrument when questions ask for information on "ground ambulance transports" rather than just "transports" to avoid confusion with services that may colloquially be referred to as transports but that do not meet the definition of a "ground ambulance transport" in the instrument, which is defined as "the use of a fully staffed and equipped ground ambulance responding to a request for service to provide a medically necessary transport (based on the rules relevant to the applicable payer)."

The 11th and 12th proposed changes apply to Section 7 (Labor Costs) where we are proposing to:

- Standardize the example staff categories listed under "other medical staff" across all Section 7 tables. Currently, the first table in Section 7 lists "respiratory therapist" among

example staff categories while none of the subsequent tables do. We are proposing to remove "respiratory therapist" as an example from the first table in Section 7 for consistency and brevity. However, respiratory therapists should continue to be included in this category, along with all other medical staff, even if they are not specifically cited as an example.

- Add a reminder ("do not include medical directors") in Section 7.3 (Volunteer Labor), Question 3 on administrative/facility volunteer hours to ensure respondents do not include medical directors in this category (medical director hours are reported separately).

The 13th proposed change applies to Section 9 (Vehicle Costs) as we are proposing to:

- Define "Quick Response Vehicle" alongside the acronym (QRV) throughout the instrument and particular in Section 9 (Vehicle Costs). The current Section 9 instructions sometimes refer to "QVR" without elaboration. We believe this may be confusing to some ground ambulance organizations.

The 14th and final proposed change in this category relates to Section 13 (Revenue). Specifically, we are proposing to:

- Edit the warning that applies to organizations operating both ground and air ambulances in Section 13 to clarify that air ambulance revenue should not be included in Section 13 except in the organization's response to Section 13, Question 1. This question explicitly asks organizations to report on revenue across their entire organization, including revenue related to services other than ground ambulance services, and so the current warning may seem to be contradictory.

We invite comments on these 14 proposed editorial changes for clarity and consistency.

b. Updates To Reflect the Web-Based System

We are in the process of developing the web-based GADCS portal and programmed instrument that ground ambulance organizations will use to report data. The printable instrument noted several cases where the ultimate instrument functionality and wording hinges on the specifications and implementation of the GADCS portal and programmed instrument, for example around account creation, programmed skip logic, and pop-up warnings.

We are proposing 13 changes to the printable instrument so that it better matches our current plans and

expectations for the programmed instrument. We believe these changes will help ground ambulance organizations referencing the printable instrument understand how the data they have collected should be entered in the programmed instrument on the GADCS portal. We are proposing to:

- Update the brief description of the programmed instrument's functionality in Section 1.

We propose the specific text: "Your organization must report the required information prior to [INSERT DATE], which is 5 months after the end of its data collection period. You can enter the required information over multiple sittings. The system will save your responses after every screen, or whenever you hit the "Save" button at the bottom of your screen. When you log in again later, you can pick up where you left off. After you enter all required information, a Certifier at your organization will review the entire response and either request changes or certify the information. [Note: This instruction will be updated to reflect the capabilities of the programmed instrument.]" This description provides readers of the printable instrument a clearer sense of the functionality they should expect from the programmed instrument.

- Add specific pop-up window text from Section 2, Question 1 in the programmed instrument to the printable instrument. Section 2, Question 1 confirms that the ground ambulance organization billed Medicare for ground ambulance services during its continuous, 12-month data collection period. A response of "no" effectively ends the organization's reporting requirement under GADCS. As a result, the programmed instrument includes pop-up warnings asking the respondent to confirm that they did not bill Medicare for ground ambulance services. We believe describing the pop-up boxes as programming notes in the printable instrument will help organizations no longer providing ground ambulance organizations understand how they will progress through the GADCS.

- Edit the printable instrument to refer to "your organization's data collection period" in rather than "calendar year 202X [or fill fiscal year as appropriate]" throughout the document. Given CMS' approach to collecting data collection period start dates and contact information from organizations within 30 days of notification, we expect to know the data collection period start date ahead of the organization entering the web-based GADCS. We believe it will be clearer for

organizations if the question text refers consistently to the organization's data collection period.

- Move Section 7.2, Question 4 ("Does your organization contract with a medical director, rather than employing them directly?") to earlier in Section 7, immediately following Section 7, Question 1, to become Section 7, Question 2. The existing Section 7, Question 2 item (asking about staff categories not used by the organization) would be renumbered as Section 7, Question 3. With the current flow of Section 7 in the printable instrument, organizations contracting with a medical director must confusingly answer a question on why they do not employ a medical director *before* they report that they contract with one. Asking whether the organization contracts with a medical director earlier in Section 7 enables the programmed instrument to better adapt later questions in Section 7 related to medical directors. For example, organizations indicating earlier in Section 7 that they contract with a medical director will not need to be asked why they do not employ a medical director.

- Clarify the instructions for Section 8.1 (Facility Information) Question 1, Section 9.1 (Ground Ambulance Vehicle Costs), Questions 1 and 2, and Section 9.2 (Other Vehicle Costs (Non-Ambulance)), Questions 1 and 2 so that they note the number of facilities and vehicles that users report as answers to these questions will adjust the number of rows that they subsequently see in Section 8.2 (Annual Lease, Mortgage, and Other Costs of Ownership for Facilities), Section 9.1, and Section 9.2 tables, respectively. We believe this clarification will help users understand the linkages between these initial questions and the later tables that they need to fill out. This clarification may also help users appreciate that changing earlier answers to these initial questions will have ramifications for the tables that follow, including the potential addition or deletion of rows.

- Allow organizations to enter information by hand or via an uploaded file for the facility-level tables in Section 8.1 and for the vehicle-level tables in Section 9.1 and Section 9.2. These tables require organizations to report on the characteristics and expenses related to individual facilities and vehicles. Ground ambulance organizations with many facilities and/or vehicles may find it burdensome to enter information on each facility and vehicle individually in the web-based GADCS. Other organizations may find it easier or preferable to enter information

by hand. Organizations choosing to import responses for these three tables would use Microsoft Excel templates with the same structure as the tables in the web-based instrument.

Organizations would download these templates prior to or while reporting information to the GADCS, complete the template, and then import the completed template into the GADCS. The GADCS would validate completed templates and request modifications (if necessary) prior to accepting completed templates. Organizations importing responses for these tables would have an opportunity to review their responses before continuing to later Section 8 and/or Section 9 questions. This proposed change would require clarification in the Section 8 and Section 9 instructions to describe the two alternative data entry approaches. The revised instructions would stress that the use of the import templates is optional and that the exact same information is required regardless of whether information is entered by hand or via the template. We believe offering the option to import responses to these tables will substantially reduce response burden particularly for larger ground ambulance organizations with many facilities and/or vehicles.

The remaining proposed changes in this category (changes 6–12) aim to harmonize and clarify programming notes throughout the instrument related to ground ambulance organizations that also provide other services (for example, fire departments, or "shared services" as we describe them in the instrument). The programming notes in the printable instrument are meant to provide context to readers on the ultimate functionality of the programmed instrument within the constraints of a static document. Some of these programming notes have been broadened and updated since the initial version of the printable instrument while others have not. We believe some ground ambulance organizations may want to respond to questions as if they were shared services, even if they do not meet the specific programming notes laid out in the printable instrument. Broadly, we are proposing to expand or remove programming notes restricting certain responses for follow-up questions for shared services. We believe this will provide respondents with more flexibility to respond to questions in a way that best matches their characteristics, services, and organizational structure.

Specifically, for changes to programming notes, we are proposing to:

- Edit the Section 2, Question 9 note to read: “[Note: For the remainder of the data collection instrument, instructions and items related to fire, police, or other public safety department-based ground ambulance organizations are shown to organizations that answer Section 2, Question 7 = “a” or “b” AND Question 8 = Yes (1) OR answer Question 9 = Yes (1) to one or both of a and b. To streamline the skip logic, the answers to these questions are referred to as “Public Safety = Yes” for the remainder of the document.]”

- Clarify the definition of “total responses” in the Section 5 (Service Volume) instructions and Question 1 which currently reads: “[If Section 2, Question 7 is “a” also display] “Include emergency responses that did not involve a ground ambulance, such as those involving only fire trucks and/or other fire/rescue vehicles;” [if “b”] “Include emergency responses that did not involve a ground ambulance, such as those involving only police cars and/or other public safety vehicles.”” These instructions do not account for those who indicated public safety services in Section 2, Question 9. We propose to use the new “public safety” definition and to decrease repetitiveness for those with both fire and other public safety services: “[If Public Safety=Yes] Include emergency responses that did not involve a ground ambulance, such as those involving only fire trucks, other fire/rescue vehicles, police cars and/or other public safety vehicles.”

- Edit programming notes throughout Section 7 (Labor Costs) instructions to refer to “If Public Safety=Yes” rather than “if appropriate for shared services.”

- Make the skip logic more precise and consistent throughout Section 7.1 by changing “[Include only if relevant based on responses to Section 7, Question 1] Total hours worked annually related to fire, police, and/or other public safety operations” and “[Include only if Section 2, Question 7 = “a” or “b.”]” to “[Include if any paid EMT/response staff with fire, police, and/or other public safety role was indicated in Section 7, Question 1].”

- Change “[Include only if Section 2, Question 7 = “a” or “b.”]” to “[Include if any paid Administration/Facilities or medical director staff with fire, police, and/or other public safety role were indicated in Section 7, Question 1]” in Section 7.2.

- Change “[Include only if Section 2, Question 7 = “a” or “b.”]” to “[Include if any volunteer EMT/response staff with fire, police, and/or other public safety role were indicated in Section 7, Question 1]” in Section 7.3, Question 2.

- Change “[Include only if relevant based on responses to Section 7, Question 1 and populate with “fire,” “police,” and/or “other public safety” as appropriate]” to “[Include if any volunteer administrative/facilities staff with fire, police, and/or other public safety role were indicated in Section 7, Question 1]” in Section 7.3, Question 4.

We invite comments on these proposals aiming to better align the printable instrument with the functionality of the programmed instrument and system.

c. Clarifications Responding to Feedback From Interested Parties Questions and Testing

We are proposing 12 instrument changes stemming from feedback we received from emailed questions, during live question and answer and other educational sessions, and via preliminary testing. Specifically, we are proposing to:

- Clarify when and how to report expenses paid for by a local municipality in the Section 1 General Survey Instructions. Several organizations have asked CMS for guidance on how to collect and report data in this scenario. The GADCS FAQ includes several entries related to this question. In brief, whether or not municipal expenses for dispatch services, fuel, facility space, employee benefits, or in any other category must be reported under GADCS depends on the relationship between the ground ambulance organization and the municipality. If the ground ambulance organization is owned and operated by the same municipality paying for the expense, then the expense is in-scope and must be reported. If not, for example in cases where a municipality provides dispatch services to local ground ambulance organizations free of charge, then the expense should not be included. In many cases, ground ambulance organizations can report when a particular input or resource is donated, which likely applies in these cases. To help resolve any ambiguity, we propose to replace the Section 1 text starting with “If your organization is part of a local government . . .” with the following text adapted from existing FAQ entries: “If your organization was part of a municipal government or larger entity that paid for certain ground ambulance expenses (for example, if your municipality pays for rent, benefits, fuel, or dispatch), you must report information on these expenses. This applies only in cases where you are owned or operated by or have a partnership or joint venture with the entity that covers expenses for your

ground ambulance operation. In other cases, do not estimate or report the value of donated vehicles, supplies, equipment, or other resources or labor used in your ground ambulance operation. For example, if your local hospital provided drugs at no cost, but you are not a hospital-based ground ambulance organization, then do not report the expense associated with the donated drugs.”

- Remove the text “in your primary service area (the area in which you usually provide service and where the majority of your transport pickups occur)” from Section 4 (Emergency Response Time), Question 1, which asks the organization to describe its approach to measuring response times. The intent is for this question to ask about how the organization measures response times across all responses, not just those in their primary service area. Some interested parties shared that they expected to see a corresponding question for their secondary service area. We think this clarification should resolve any ambiguity.

- Add programming notes to the printable instrument noting that a response to Section 4 (Emergency Response Time) questions related to their primary and secondary service areas should be answered only when the organization provided emergency responses in such areas. For example, an organization with both primary and secondary service areas that provided emergency responses in their primary service area but not in their secondary service area should report response time information for their primary but not secondary area. Several organizations have asked how to report information in Section 4 in this case.

- Clarify that the scope of GADCS is limited to ground ambulance operations. For the many ground ambulance organizations that are fire department-based, a Medicare provider, or provide other services beyond ground ambulance services, only a portion of total expenses and revenue are associated with ground ambulance operations. As a result, with the exception of two specific questions (Section 12, Question 1, and Section 13, Question 1), information on expenses and revenue must be reported to GADCS in such a way that CMS can identify an amount associated with or allocated to ground ambulance operations.

- Add guidance throughout Sections 7 through 13 related to allocating a share of expenses and revenue attributable to ground ambulance operations versus other operations (for example, fire, police, or hospital operations). Several ground ambulance

organizations and other interested parties have posed questions to CMS asking for clarification on the specific methods they should use to allocate certain amounts prior to reporting information to GADCS. Allocating expenses is crucial for ground ambulance organizations that also provide other services or functions. If amounts are not allocated appropriately, the expenses and revenue reported to GADCS may be higher or lower than the actual expenses and revenue related to organizations' ground ambulance operations. The current instrument instructions allow ground ambulance organizations to use their current allocation approach or any reasonable alternative. The additional guidance in the instrument would provide an example allocation approach relevant to each section. For example, in fire department-based organizations, respondents can allocate dispatch, fire truck, and firefighter/EMT labor expenses using the share of total responses that are medical calls for service and/or involve a fully staffed and equipped ambulance. As another example relevant to fire department-based organizations, Medicare providers, and some other organizations, respondents can allocate facility expenses based on the share of square footage used by ground ambulance operations. While organizations looking for guidance on an approach could adopt these allocation methods, all organizations would remain free to use alternative allocation methods.

- Add a new screening question asking whether the ground ambulance organization broadly contracts out their ground ambulance organization. We have heard that in some cases a Medicare provider or supplier billing for ground ambulance services and selected to participate in GADCS will pay another organization to provide the entirety of the selected organization's emergency medical services capability, including ambulances, facilities, and EMT/response staff. In other cases, a selected organization may provide ambulances and facilities while some or all EMT/response labor is contracted out to another company. The current instrument instructions ask respondents to report the expenses associated with these broad contracts in Section 11, Question 1. However, the instrument instructions in Sections 7 through 11 do not specify whether the sampled organization should report on staff, facilities, and vehicles that are not owned or leased by the organization itself but instead are provided by the

organization with which the sample organization contracts to provide ground ambulance services. If selected organizations that broadly contract out staffing or ground ambulance capabilities report the total contract expenses in Section 11 but do not report on the staff, facilities, and vehicles that their contractor used to provide services in Sections 7 through 9, then the selected organization's expenses will appear very high relative to the inputs they report as necessary to run their ground ambulance operation.

- Add a new screening question in Section 2 that will ask whether organizations contract out some or all of their labor, facilities, vehicles, or other key inputs used to furnish ground ambulance services. We propose that organizations answering "yes" to this initial screening question will see new instructions in Sections 7 through 13 asking them to report only select information on inputs provided by their contractors, including staff hours in Section 7, the number of facilities in Section 8, and counts of vehicles in Section 9. Importantly, the additional instruction will stress that organizations should not report on expenses for these contracted inputs in these sections. Organizations should continue to report the total expense for the broadly contracted service in Section 11, Question 1, following the existing instrument instructions. We believe this change will allow those analyzing data collected via GADCS to better align expenses for organizations that broadly contract out their ground ambulance services with the inputs reported via GADCS.

- Clarify (in Chapter 7 (Labor Costs)) for interested parties how to report labor hours and costs for staff categories not explicitly listed in the instrument. The Section 7 instructions already include a note that respondents should include Advanced-EMTs in the EMT-Intermediate category. To more prominently note how to collect and report data on Advanced-EMTs, and to provide more general guidance for other EMT/response labor categories that are State or locality-specific, we propose to add the following instruction in Section 7: "If your State uses levels of certification and licensure that differ from these categories, use your best judgement to assign staff to the CMS categories available."

- Revise Section 7 labor category definitions from ". . . with Fire/Police/Public Safety role" to read ". . . with role supporting fire, police, and/or other public safety operations." The Section 7 instructions require that staff with fire, police, or other public safety roles be

included in separate "with Fire/Police/Public Safety roles" categories, regardless of whether they respond to calls for service (for example, as firefighter/EMTs); have a fire, police, or other public safety administrative or management role; or a combination of response and administrative roles. We learned that some ground ambulance organizations interpreted "with Fire/Police/Public Safety roles" in Section 7 labor categories to refer only to public safety responses role (that is, responding to calls for service) and not to other fire, police, or other public safety roles (for example, administrative or management roles). We believe this should clarify that our intent is not to limit the question to just fire, police, and other public safety response roles.

The remaining proposed changes in this category relate to clarifying skip logic and response categories. Specifically, we are proposing to:

- Remove the shared service programming note from that question so that all organizations are able to provide a response. When speaking to ambulance organizations, we noted that some organizations that do not meet our definition of shared services (that is, share services with public safety, hospital, or other medical organization) may nonetheless have shared costs with other types of operations. For example, a government-based ground ambulance organization may have computers and printers which are shared by other municipal services. The shared service skip logic programming note was inadvertently included Section 9.2, Question 4. Even without the skip logic, respondents will still be able to report that 100 percent of expenses are related to their ground ambulance operation.

- Streamline the categories and examples presented in the Section 11, Question 3 question on ground ambulance expenses not otherwise reported. We received many questions on how to report certain specific expenses in the provided categories and whether it was appropriate to include a specific expense the "Other" category. Specifically, we are proposing to:

- ++ Change the note in this question that reads "(excluding labor for medical director if accounted for in Question 1 above or in the labor section)" to read "(excluding labor for medical director which must be included in Section 11 Question 1 or in the labor section)" because expenses associated with Medical Directors may be reported either in Section 7 (Labor Costs) or in Section 11, Question 1.

- ++ Delete the cost category "Overhead allocation from parent organization/central office" as we already provide

places to report these costs throughout relevant sections of the instrument.

++ Move the “Miscellaneous administrative fees/costs . . .” category to the end of the “Administrative and General Expenses” section to improve flow.

++ Clarify that fees for “Licenses” should “(Include professional or any other license fees not reported elsewhere in the instrument. Do not include any vehicle license fees previously reported in the Vehicles Section.)”

We invite comments on these proposals focusing on improving instrument clarity and consistency in response to feedback from interested parties.

d. Typos and Technical Corrections

The final category of our proposed changes to the instrument address technical corrections and typos. We propose 10 corrections to the data collection instrument. Specifically, we propose to:

- Clarify that Section 4, Question 3 refers to twice the average as intended and as respondents will infer given the flow of questions. The Section 4, Question 3, item refers to the “90th percentile” rather than “twice the average.” When we removed the question referring to the 90th percentile response time and replaced it with a question asking about the share of responses longer than twice the average response time, as finalized in the CY 2022 PFS final rule (86 FR 65310), we should have but did not also adjust the text in this question.

- Update the Section 7.2 definition to read “total hours worked by paid administrative/facilities and medical director staff.” The Section 7.2 instructions define total hours worked as “total hours worked by paid administrative staff.” While medical directors are also included in Section 7.2, the current definition inadvertently excludes medical directors.

- Address in the same instrument section, an inadvertent omission in Question 3. This question refers to “administrative labor costs” which excludes facility labor costs as is specified throughout the remainder of the section. We would correct this inadvertent omission by replacing “administrative labor costs” with “administrative/facilities costs.”

- Implement a technical correction in Section 8.1, Question 3 which states “for each of the following types of facilities” when it should read “for each of the following facilities.” The question asks for information at the facility level (not by type of facilities).

- Insert “rent,” which was inadvertently omitted, into the Section 8.2, Question 3 text so that it reads “Please report the allocated portion of rent, lease, or ownership facilities costs. . .”.

- Remove the skip logic and programming note in Section 9.2, Question 4 which erroneously specifies that the total number of statute miles traveled by non-ambulance water vehicles only be asked of organizations that noted in Section 2 that they operated water ambulances. Because organizations may have water rescue vehicles, but no water ambulances, we believe this correction is warranted.

- Remove an extraneous “ground ambulance” term in the middle of Section 9.3, Question 4. As a result, the question would read “What was the total maintenance cost of all vehicles (ground ambulance and non-ambulance) used to respond to ground ambulance calls or support ground ambulance operations ground ambulances during your organization’s data collection period?”

- Revise the Section 11 instructions asking for information on allocated central office expenses. The revised question would read “(Questions 2 and 5)” instead of just “(Question 2)” to align with prior changes in the CY 2022 PFS final rule (86 FR 65313) to ensure respondents can report allocated central office costs throughout the instrument.

- Edit a comma splice in the first sentence of the Section 11 instructions so they begin “This section asks about . . .”

- Remove the word “approximate” as it was erroneously included in Section 13, Question 2b and does not align with any of the other questions in this section.

We invite comments on these proposals to address typos and technical clarifications.

4. Proposed Automation Process for Submitting a Hardship Exemption Request and Informal Review Request

In the CY 2020 PFS final rule (84 FR 62895), we codified the hardship exemption requirement at § 414.626(d). We stated that a ground ambulance organization can apply for a hardship exemption request based on a significant hardship, such as a natural disaster, bankruptcy, or other similar situation, that the Secretary determines interfered with the ability of the ground ambulance organization to submit such information in a timely manner for the data collection period selected by the ground ambulance organization.

Specifically, § 414.626(d)(1) states that to request a hardship exemption,

the ground ambulance organization must submit a request form (accessed on the Ambulances Services Center website (<https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>)) to CMS within 90 calendar days of the date that CMS notified the ground ambulance organization that it would receive a 10 percent payment reduction as a result of not submitting sufficient information under the data collection system. The request form must include all of the following: Ground ambulance organization name; NPI number; Ground ambulance organization address; Chief executive officer and any other designated personnel contact information, including name, email address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable); Reason for requesting a hardship exemption; Evidence of the impact of the hardship (such as photographs, newspaper or other media articles, financial data, bankruptcy filing, etc.); Date when the ground ambulance organization would be able to begin collecting data under paragraph (b) of this section; and Date and signature of the chief executive officer or other designated personnel of the ground ambulance organization. Section 414.626 (d)(2) states that CMS will provide a written response to the hardship exemption request within 30 days of its receipt of the hardship exemption form.

In the CY 2020 PFS final rule (84 FR 62896), we also codified the process to request an informal review process under which a sampled ground ambulance organization may seek an informal review of a determination that is subject to the 10 percent reduction in payment at § 414.626(e). Section 414.626(e) outlines the notification of non-compliance and informal review. First, for notification of non-compliance, a ground ambulance organization selected under § 414.626 (c) for a year that does not sufficiently report data under paragraph (b) of this section will receive written notification from CMS that it will receive a payment reduction under § 414.610(c)(9). Second, with respect to informal review, a ground ambulance organization that receives a written notification under § 414.610 (e)(1) of a payment reduction under § 414.610(c)(9) may submit a request for an informal review within 90 days of the date it received the notification by submitting all of the following information: ground ambulance organization name; NPI number; chief executive officer and any other designated personnel contact

information, including name, email address, telephone number and mailing address with the street location of the ground ambulance organization; ground ambulance organization's selected data collection period and data reporting period; and a statement of the reasons why the ground ambulance organization does not agree with CMS' determination and any supporting documentation.

In the CY 2020 PFS final rule (84 FR 62897), we stated that the hardship exemption and informal review requests should be submitted to the Ambulance ODF mailbox (AMBULANCEODF@cms.hhs.gov). We have been looking for ways to streamline both the hardship exemption request and informal review request and have determined that the most efficient method would be to require that the ground ambulance organizations submit a web-based form via the Medicare Ground Ambulance Data Collection System instead of submitting the requests via our Ambulance ODF mailbox. This method would be simpler, less burdensome, and less prone to error to track and process all incoming hardship exemption requests and informal review requests. We intend to launch the web-based portal that ground ambulance organizations can use to submit their hardship exemption and informal review requests in late 2022. We will share more information about the web-based portal when available.

We are also proposing in this proposed rule to update our regulations to give us the necessary flexibility to specify how ground ambulance organizations should submit these requests, including to our web-based portal once that portal is operational. Specifically, we are proposing to revise § 414.626(d)(1) and (e)(2) to state that these requests must be submitted in the form and manner specified by CMS.

As we stated in the CY 2020 PFS final rule (84 FR 62895) and in § 414.626(d)(1), the hardship exemption request form may be accessed on the Ambulances Services Center website for reference.

We invite comments on this proposal.

N. Proposal To Revise HCPCS Level II Coding Procedures for Wound Care Management Products

1. Background

a. Healthcare Common Procedure Coding System (HCPCS) Level II Coding Procedures

Section 1833(e) of the Act provides that no payment shall be made to any provider of services or other person under Medicare Part B unless there has been furnished such information as may

be necessary in order to determine the amounts due such provider or other person under that part. In order to process claims and determine payment for items and services under Medicare, CMS needs a way to appropriately identify the items and services billed. CMS has established certain codes for providers and suppliers to use to identify items and services on claims. Medicare receives over 1 billion electronic claims per year.

The HCPCS is a standardized coding system used to identify particular items and services on claims submitted to Medicare, Medicaid, and other health insurance programs in a consistent and orderly manner. The HCPCS is divided into two principal subsystems, referred to as HCPCS Level I and HCPCS Level II. The HCPCS Level I code set is comprised of Current Procedural Terminology (CPT®) codes³⁴⁶ and the HCPCS Level II code set is used primarily to identify items, services, supplies, and equipment that are not identified by CPT® codes.

HCPCS Level II codes were originally created for use by government insurers including Medicare. On August 17, 2000, HHS published a final rule (65 FR 50312) in which it adopted HCPCS Level II codes as the standard code set to be used by all payers for, among other things, health care equipment and supplies not described by CPT® codes, for use in Health Insurance Portability and Accountability Act of 1996 (HIPAA) transactions (45 CFR 162.1002). The HCPCS Level II coding system was selected as the standard code set, in part, because of its wide acceptance among both public and private insurers. With few exceptions,³⁴⁷ HCPCS Level II codes are maintained by CMS, which is responsible for making decisions about additions, revisions, and discontinuations of the codes. CMS maintains the code set for Medicare but, because HCPCS Level II is a standard code set designated for use under

HIPAA by all payers, CMS also considers the needs of other payers, including both government and private insurers, in establishing and maintaining codes.

HCPCS Level II codes are alpha-numeric codes that begin with an alphabetical letter followed by four numeric digits. Currently, there are almost 8,000 HCPCS Level II codes that represent categories of like items and services. Each code includes a text descriptor (code text) that identifies the category of items and services encompassed in the code. HCPCS Level II codes are generally organized into lettered categories that loosely describe the types of codes under that letter;³⁴⁸ however, the lettered categories are not dispositive, meaning that they are not all inclusive of the types of items and services described in the heading for each lettered category.

Anyone may submit a request to CMS for modifying the HCPCS Level II code set. Three types of coding revisions to the HCPCS may be requested: (1) that a new code be added (this may include requests to split an existing code category into its components or into subcategories); (2) that the language used to describe an existing code be changed; and (3) that an existing code be discontinued. Applicants that choose to submit a HCPCS Level II code application must submit their application using the online application portal known as the Medicare Electronic Application Request Information System™ (MEARIS™).³⁴⁹

The procedures by which the public submits and CMS evaluates code applications to modify the HCPCS Level II code set have been primarily included in guidance documents released on the CMS website at <https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo>. We update and release the HCPCS Level II dataset files to our contractors and the public via our website on a quarterly basis.

³⁴⁶ The CPT® is a uniform coding system consisting of descriptive terms and identifying codes that are used primarily to identify medical services and procedures furnished by physicians and other health care professionals. Decisions regarding the addition, deletion, or revisions of the CPT® codes are made and published by the American Medical Association (AMA) through the CPT® Editorial Panel. More information on CPT® codes can be found at www.ama-assn.org/about/cpt-editorial-panel/cpt-code-process.

³⁴⁷ The Code on Dental Procedures and Nomenclature (CDT® code) represents a separate medical code set adopted under HIPAA. See 45 CFR 162.1002. Based on alpha-numeric format, they are considered HCPCS Level II series D-codes but are maintained, copyrighted, licensed and published separately by the American Dental Association. More information on CDT® codes can be found at <https://www.ada.org/en/publications/cdt>.

³⁴⁸ A-codes: Transportation Services, Medical and Surgical Supplies, Miscellaneous; B-codes: Enteral and Parenteral Therapy; C-codes: Hospital Outpatient Prospective Payment System; D-codes: Dental Procedures; E-codes: Durable Medical Equipment; G-codes: Temporary Codes for Procedures and Professional Services; H-codes: Rehabilitative Services; J-codes: Drugs Administered Other Than Oral Method, Chemotherapy Drugs; K-codes: Medicare National Codes for DMEPOS; L-codes: Orthotics, and Prosthetics; M-codes: Medical Services; P-codes: Pathology and Laboratory Services; Q-codes: Medicare National Codes; R-codes: Diagnostic Radiology Services; S-codes: Non-Medicare National Codes; T-codes: State Medicaid Agency Codes; U-codes: Clinical Laboratory Tests; and V-codes: Vision and Hearing Services. 85 FR 70374.

³⁴⁹ OMB control number 0938–1042. Expiration Date: 07/31/2023.

Prior to 2020, CMS received and reviewed HCPCS Level II code applications and typically made related coding changes annually, including releasing updated coding files. However, in November 2019, we announced updates to our HCPCS Level II coding procedures to enable shorter and more frequent HCPCS Level II code application cycles beginning in January 2020, as part of our initiative to facilitate launching new products into the marketplace for providers and patients. Specifically, we implemented a process under which HCPCS Level II code applications for drugs and biological products may be submitted and are reviewed quarterly and HCPCS Level II code applications for non-drugs and non-biological products may be submitted and are reviewed biannually.

The current coding procedures provide an opportunity for applicants who are dissatisfied with our coding decisions in a quarterly or biannual cycle an opportunity to reapply in a subsequent quarterly or biannual cycle. We release decisions on coding actions on both a quarterly and biannual basis for the respective coding cycle in the same format we used prior to 2020 to announce annual decisions. Additional information pertaining to CMS' HCPCS Level II coding decisions and procedures is available on the CMS website at <https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo>.

b. Food and Drug Administration (FDA) Regulation of Wound Care Management Products

The FDA regulates wound care management products based on a variety of factors, including intended use. Certain wound care management products are considered Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps) that are regulated by the FDA solely under section 361 of the Public Health Service (PHS) Act and the regulations in 21 CFR part 1271 ("361 HCT/Ps"). To be regulated as a 361 HCT/P, the product must meet the four criteria set forth in 21 CFR 1271.10(a):

- The HCT/P is minimally manipulated;
- The HCT/P is intended for homologous use only, as reflected by the labeling, advertising, or other indications of the manufacturer's objective intent;
- The manufacture of the HCT/P does not involve the combination of the cells or tissues with another article, except for water, crystalloids, or a sterilizing, preserving, or storage agent, provided that the addition of water, crystalloids, or the sterilizing, preserving, or storage

agent does not raise new clinical safety concerns with respect to the HCT/P; and

- Either, the HCT/P does not have a systemic effect and is not dependent upon the metabolic activity of living cells for its primary function or the HCT/P has a systemic effect or is dependent upon the metabolic activity of living cells for its primary function, and: (1) Is for autologous use; (2) Is for allogeneic use in a first-degree or second-degree blood relative; or (3) Is for reproductive use.

For 361 HCT/Ps, establishments that perform one or more steps in the manufacture of the HCT/Ps must register and list their HCT/Ps annually in FDA's electronic Human Cell and Tissue Establishment Registration System (eHCTERS), but premarket review and approval are not needed. FDA acceptance of an establishment registration and HCT/P listing form does not constitute a determination that an establishment is in compliance with applicable FDA rules and regulations or that the HCT/P is licensed or approved by FDA (21 CFR 1271.27(b)). Consistent with our proposal in section II.J. of this proposed rule to replace the term "skin substitutes" with "wound care management products," we will use the term "wound care management products" in our description of the products and related to our proposals below.

Other wound care management products that are regulated by the FDA as devices may be subject to premarket review through a 510(k) premarket notification submission in accordance with section 510(k) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) and implementing regulations in subpart E of 21 CFR part 807, through the premarket approval (PMA) application process under section 515 of the FD&C Act and regulations in 21 CFR part 814, through a De Novo classification request (De Novo request) under the section 513(f)(2) of the FD&C Act, or are exempt from premarket notification requirements. A 510(k) is a premarket submission made to the FDA to demonstrate that the device to be marketed is as substantially equivalent to a legally marketed device that is not subject to PMA (section 510(k), 510(n), 513(f)(1), or 513(i) of the FD&C Act).³⁵⁰ A PMA is the most stringent type of premarket device submission and is

³⁵⁰ [https://www.fda.gov/medical-devices/premarket-submissions-selecting-and-preparing-correct-submission/premarket-notification-510k#:~:text=A%20510\(k\)%20requires%20demonstration,and%20effective%20as%20the%20predicate.&text=the%20information%20submitted%20to%20FDA,as%20the%20legally%20marketed%20device.](https://www.fda.gov/medical-devices/premarket-submissions-selecting-and-preparing-correct-submission/premarket-notification-510k#:~:text=A%20510(k)%20requires%20demonstration,and%20effective%20as%20the%20predicate.&text=the%20information%20submitted%20to%20FDA,as%20the%20legally%20marketed%20device.)

required for approval of Class III medical devices.³⁵¹ The De Novo request provides a marketing pathway to classify novel medical devices for which general controls alone, or general and special controls, provide reasonable assurance of safety and effectiveness for the intended use, but for which there is no legally marketed predicate device. Devices that are classified into class I or class II through a De Novo request may be marketed and used as predicates for future premarket notification [510(k)] submissions, when applicable.³⁵²

2. Proposal To Revise the Requirements Necessary To Obtain a HCPCS Level II Code for Wound Care Management Products

As of May 2022, there are approximately 150 unique HCPCS Level II codes that describe wound care management products. Prior to 2021, all of these products, including those regulated by the FDA as devices, were assigned a Q code as they were generally considered to be biological products and in the office-setting, these products were paid using the methodology under section 1847A of the Act, which, in many cases, is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on.

In addition, as part of the HCPCS Level II application, CMS required proof of how the product was regulated by the FDA to assist in verification that the product was medical and legally on the market. For example, we required the 510(k) clearance letter or the PMA approval letter for wound care management products that were regulated by the FDA as devices.³⁵³ For 361 HCT/Ps, we required proof that the manufacturer registered and listed their HCT/P with the FDA pursuant to 21 CFR part 1271, for products regulated as 361 HCT/Ps.

Beginning in 2020, in accordance with section 1833(e) of the Act, CMS concluded that each application requesting a HCPCS Level II code for a wound care management product described in the application as a 361 HCT/P include a letter from the FDA's Tissue Reference Group (TRG) recommending that the product appears

³⁵¹ <https://www.fda.gov/medical-devices/premarket-submissions-selecting-and-preparing-correct-submission/premarket-approval-pma>.

³⁵² <https://www.fda.gov/medical-devices/premarket-submissions-selecting-and-preparing-correct-submission/de-novo-classification-request>.

³⁵³ To date, CMS has not received a HCPCS Level II application for any wound care management product regulated by the FDA as a device through a De Novo request, but a De Novo request approval letter would have been required as part of the application to assist in verification that the product was medical and legally on the market.

to meet the criteria for regulation solely under section 361 of the PHS Act and the regulation in 21 CFR part 1271. This information is necessary for CMS to determine, for coding purposes, how the product should be classified. For example, such information may be necessary to determine whether the product should be coded as a different type of single source biological product rather than as a 361 HCT/P wound care management product.³⁵⁴ The collection of this additional information was intended to assist us in appropriately classifying for purposes of assigning a HCPCS Level II code when these medical products are 361 HCT/P wound care management products, biological products, drugs, or other.³⁵⁵

In the CY 2022 PFS final rule (86 FR 65121), we also finalized that ten specific 510(k)-cleared wound care management products for which we received a HCPCS Level II code application would be payable in the physician office setting as contractor priced products that are billed separately from the procedure to apply them. In the latter part of 2021, we published final decisions that assigned an A code to each of these ten 510(k)-cleared wound care management products, with an effective date of January 1, 2022. These final decisions are located on the CMS website at <https://www.cms.gov/files/document/2021-hcpcs-application-summary-supplemental-coding-cycle-updated-04062022.pdf>.

We subsequently discovered that we had inadvertently assigned an A code to one product (bio-ConneKt Wound Matrix) for which a Q code, Q4161, had already been assigned. As such, we updated the Supplemental Coding Cycle decision document in December 2021 to remove the A code assignment for bio-

ConneKt Wound Matrix while retaining A code assignments for the other nine 510(k)-cleared wound care management products. Following the Supplemental Coding Cycle, we assigned additional A codes for three 510(k)-cleared wound care products with an effective date of April 1, 2022 for which we received a first-time HCPCS Level II application in the Second Biannual, 2021 HCPCS Coding Cycle.³⁵⁶

a. General Coding Proposal for All Wound Care Management Products

In this proposed rule, we are proposing to uniformly classify wound care management products (that are not regulated by FDA as drugs or biological products that would otherwise be eligible for separate payment under section 1847A of the Act) consistently in the HCPCS Level II code set based on information presented to CMS as described in additional detail below, effective January 1, 2024. That is, we propose that the assignment of A codes to all wound care management products that are not drugs or biological products would continue with respect to products for which a HCPCS Level II code is requested for the first time, as well as for wound care management products to which we previously assigned a Q code. See below for further details, as we propose that certain wound care management products will need to submit additional information to CMS prior to the assignment of an A code. This proposal aligns with our proposal in section II.J. of this proposed rule that all wound care management products would be eligible for coverage under section 1861(s)(2)(A) of the Act as incident to supplies that are commonly furnished in the physician office setting.

As stated in the CY 2021 Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) Policy Issues and HCPCS Level II Proposed Rule (85 FR 70374), HCPCS Level II codes are generally organized into lettered categories that loosely describe the types of codes under that letter. Q codes are used to identify products separately payable as drugs and biologicals under Medicare Part B; such products are priced using methodology in section 1847A of the Act, and in many cases, payment is based on the ASP plus a statutorily mandated 6 percent add-on. A codes are used to identify transportation services and medical and surgical supplies. We believe that the assignment of an A code to all wound care management products

that are not drugs or biological products³⁵⁷ that would otherwise be eligible for separate payment under section 1847A of the Act would better reflect what the product is for purposes of assigning a code as this approach aligns with the payment proposal in section II.J. of this proposed rule that would establish a consistent pricing methodology by pricing all wound care management products as incident to supplies. We also believe this proposed policy would provide a more consistent and transparent approach to coding for wound care management products.

b. Further Detail on 361 HCT/P Proposals

With respect to 361 HCT/P wound care management products, we propose to no longer evaluate HCPCS Level II coding applications for such products on a quarterly basis beginning January 1, 2024,³⁵⁸ and to instead evaluate them through our biannual coding cycles for non-drugs and non-biological products. We believe our proposal to assign A codes to all wound care management products that are not drugs or biological products and to review these products in the same biannual coding cycle aligns with the payment proposal in section II.J. of this proposed rule, as CMS uses the biannual cycles to review code applications for non-drugs and non-biological products and section II.J is proposing to price these products as incident to supplies. We note that the biannual coding cycle includes preliminary coding determinations and an opportunity for written and public comment, which may assist manufacturers and CMS in reconciling any discrepancies with information submitted to us or addressing questions about a product that we may raise; we believe this dialogue will be productive for all involved.

Manufacturers of products described as 361 HCT/Ps that have already been assigned a Q code must also provide documentation from the FDA (that is, the TRG recommendation letter) that indicates how the product is or appears to be regulated by the FDA.³⁵⁹ This

³⁵⁴ Under a final rule promulgated by the FDA on August 31, 2016, manufacturers of HCT/Ps that are regulated as drugs, devices, and/or biological products under section 351 of the PHS Act and/or the Federal Food, Drug, and Cosmetic Act, must register and list their HCT/Ps following the procedures in 21 CFR part 207 or 807, as applicable, rather than 21 CFR part 1271. FDA also maintains Frequently Asked Questions on this topic at <https://www.fda.gov/vaccines-blood-biologics/cellular-gene-therapy-products/questions-and-answers-regarding-end-compliance-and-enforcement-policy-certain-human-cells-tissues-or>.

³⁵⁵ When a medical product is improperly grouped or described by CMS in the HCPCS Level II code set relative to our established conventions, payers may unintentionally apply inaccurate coverage and/or payment to the provider or supplier submitting a claim, and in that way, the beneficiary or enrollee may be subject to inaccurate cost-sharing. Each payer establishes its own methodology for coverage and payment but often rely on the HCPCS Level II groupings of similar types of medical products to accelerate the adoption process of new technologies.

³⁵⁷ Drug and biological products would generally be coded as J or Q codes.

³⁵⁸ Manufacturers of wound care management products that received a 510(k) clearance, PMA approval, or a granted De Novo request are currently reviewed in the non-drugs and non-biologicals biannual coding cycle and will continue in that cycle.

³⁵⁹ Manufacturers of wound care management products that received a 510(k) clearance, PMA approval, or a granted De Novo request do not need to resubmit documentation. These products will be reclassified to an A code at the same time as the established 361 HCT/P products with Q codes are reclassified to an A code (that is, October 1, 2024).

³⁵⁶ <https://www.cms.gov/files/document/2021-hcpcs-application-summary-biannual-2-2021-non-drug-and-non-biological-items-and-services.pdf>.

information would be part of a HCPCS Level II re-application submitted via MEARIS™ and would be part of a public meeting for consideration. We are proposing to allow a 12-month period from the effective date of the CY 2023 final rule (that is, January 1, 2024) to allow for re-application submissions. We believe this proposed deadline for re-application submission would provide sufficient time for applicants to communicate with the FDA in regard to the TRG recommendation letter, as applicable. Manufacturers with an existing Q code for products described as 361 HCT/Ps who would need to re-apply for an A code are encouraged to submit their request for a TRG recommendation to the FDA as soon as feasible to ensure that they receive the recommendation in time to include it with the re-application. After a public meeting and appropriate review by CMS, we propose to discontinue all existing Q codes for wound care management products and to establish new A codes for such products that have submitted the appropriate documentation. We propose to make the effective date of the new A codes to coincide with the discontinuation date of the corresponding Q codes such that there would be no gap between the effective dates of the discontinued codes and the newly established codes. Based on our biannual coding process for non-drugs and non-biological products, we anticipate the new A codes would take effect on October 1, 2024. If a re-application is *not* submitted, CMS proposes to discontinue the Q code in the quarterly update cycle following the proposed deadline for re-application submission (that is, January 1, 2024), which we anticipate would take effect on April 1, 2024.

We are also proposing to collect additional information in support of HCPCS Level II code applications for these products. Under our proposal, all first-time applications for 361 HCT/Ps would need to continue to be supported,

as we started in 2020, with documentation from the FDA (that is, the TRG recommendation letter) that indicates how the product is or appears to be regulated by the FDA. That is, for a product that is described by the applicant as a 361 HCT/P, we are proposing that the first-time application or re-application would need to provide a recommendation letter from the FDA's TRG which would aid in our determination of how the product should be classified for coding purposes. The FDA TRG recommendation letter assists us in recognizing whether a product is a wound care management product, separately payable drug or biological product, or otherwise and aids us in issuing an appropriate code consistent with our coding conventions.³⁶⁰ We note that a recommendation letter from FDA's TRG would be necessary in other circumstances, such as when a product manufacturer seeks a change to a current code descriptor or presents other information to us in which a product's market status or other event has changed and the manufacturer believes a code should be revised.

CMS will notify the public of all future coding decisions for wound care management products through its standard process of posting decisions for each coding cycle on the HCPCS web page on *CMS.gov* (<https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/Prior-Years-CMS-HCPCS-LevelIII-Coding-Decisions-Narrative-Summary>).

³⁶⁰ Based on prior experience, CMS notes that we may identify discrepancies between the FDA TRG recommendation letter and the application presented to CMS, particularly in regard to indications of use and clinical claims. In cases of discrepancies, we may ask for clarification, encourage the applicant to consult further with the FDA, consult further with the FDA ourselves, and/or engage with the applicant through the public meeting process. In doing so, we are working to ascertain that the product is a wound care management product rather than another product, which may be more appropriately classified elsewhere in the HCPCS Level II code set.

c. Summary

In summary, we are proposing: (1) that the assignment of A codes to all wound care management products (that are not regulated by FDA as drugs or biological products that would otherwise be eligible for separate payment under section 1847A of the Act) would continue with respect to products for which a HCPCS Level II code is requested for the first time, as well as for wound care management products to which we previously assigned a Q code; (2) to discontinue all existing Q codes for wound care management products; (3) to, prior to the assignment of an A code, require products with an existing Q code that were described by the applicant as a 361 HCT/P to submit a HCPCS Level II re-application within 12 months of the effective date of the final rule (that is, January 1, 2024); (4) to require a recommendation letter from the FDA's TRG to be submitted as part of the HCPCS Level II application for all wound care management products described by the applicant as a 361 HCT/P, regardless if it is a first time application or re-application for a product with an existing Q code; and (5) to evaluate HCPCS Level II coding applications for all 361 HCT/P wound care management products through our biannual coding cycles for non-drugs and non-biological products, rather than on a quarterly basis, beginning January 1, 2024.

We are seeking comments on these proposals. We also seek comment on whether any codes have been unintentionally omitted from the list of wound care management products for which new code applications would need to be submitted or new A-codes would be issued for devices that are 510(k)-cleared, PMA-approved, or classified into class I or class II through a De Novo request (Table 74) and should similarly be subject to this proposal.

BILLING CODE 4120-01-P

TABLE 74: Wound Care Management Products For Which New A-Codes Will Be Issued for 510(k)-cleared/PMA/De Novo Wound Care Management Products or New Code Applications Would Need to Be Submitted Within 12 Months of the Effective Date of the CY 2023 PFS Final Rule

For all 361 HCT/Ps for which CMS has issued a Q code with an effective date on or after October 1, 2021, as shown in Table 75, we propose to discontinue the Q code and issue an A code, effective on the same date as the

other products discussed in this proposal (that is, October 1, 2024). We are not proposing to require resubmission of a HCPCS Level II coding application for these HCT/P wound care management products

because the applications already included a TRG recommendation letter from the FDA. We propose to take a similar approach for all new 361 HCT/Ps in which Q codes are issued before January 1, 2024.

We welcome comment on all of these proposals.

IV. Updates to the Quality Payment Program**A. CY 2023 Modifications to the Quality Payment Program****1. Executive Summary****a. Overview**

This section of the proposed rule sets forth changes to the Quality Payment Program starting January 1, 2023, except as otherwise noted for specific provisions. The CY 2023 performance period/2025 MIPS payment year continues to move the Quality Payment Program forward to focus more on our measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and encourage participation in Advanced Alternative Payment Models (APMs).

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. The weights of those four performance categories are specified in statute. For CY 2023, those weights are as follows: 30 percent for the quality performance category, 30 percent for the cost performance category, 15 percent for the

improvement activities performance category, and 25 percent for the Promoting Interoperability performance category. If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) status, they are excluded from the MIPS reporting requirements and payment adjustment. Those that are qualifying APM participants (QPs) for the year are eligible to receive a 5 percent lump sum incentive payment during the corresponding payment year through CY 2024, or a differential payment update under the PFS for payment years beginning in 2026.

We plan to continue developing Quality Payment Program policies that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with MVPs to allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we make long-term improvements, continue evolving MIPS policies, and plan to begin implementing MVPs in 2023, we remain committed to our program goals. We are aligning with broader CMS initiatives, such as the CMS National Quality Strategy (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/Legacy-Quality-Strategy>), to unify strategic efforts to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures. The vision for the CMS National Quality

Strategy is to shape a resilient, high-value American health care system to achieve high-quality, safe, equitable, and accessible care for all. This strategy aims to promote the highest quality outcomes and safest care for all individuals. It also focuses on a person-centric approach as individuals journey across the continuum of care and across payer type. The goals of the strategy incorporate lessons learned from the PHE for COVID-19 to inform both short and long-term direction for our health care system as well as support the creation of a more equitable, safe, and outcomes-based health care system for all individuals. The planned implementation of MVPs aligns with many of the objectives and goals the CMS National Quality Strategy will strive to achieve.

Through the proposals we describe below, we intend to continue improving the MIPS program through MVPs, promote the use of connected measures and activities, reward clinicians for providing high value care, and help all clinicians improve care and engage patients. We also intend to gather information from interested parties to help guide efforts to advance health equity throughout CMS quality programs. We previously finalized an MVP development process involving the submission of MVPs by interested parties for our consideration (85 FR 84849 through 84850). We believe the MVP development process should also consider feedback from the general public outside of the notice and comment rulemaking process through which MVPs are adopted. Therefore, we are proposing to modify the MVP development process such that were

CMS to receive a new candidate MVP, evaluate it through the MVP development process and determine it “ready” for feedback, CMS would post a draft version of the MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback from interested parties as well as the general public for a 30-day period.

In addition, we previously established a process for soliciting interested party recommendations for potential updates to established MVPs. On an annual basis, beginning in January, interested parties may submit their recommendations for the revision of an established MVP, and that input is accepted on a rolling basis throughout the year. We believe the MVP maintenance process should also consider feedback from the general public outside of the notice and comment rulemaking process through which MVPs are revised. Therefore, we are proposing that after we review the submitted recommendations to revise established MVPs, and identify any feasible and appropriate revisions to established MVPs, we would host an annual public facing webinar, open to interested parties and the general public through which they may offer their feedback on potential revisions to the MVPs.

Moreover, in the CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized seven MVPs that will be available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year.

We are proposing revisions to these seven MVPs based on the proposed removals of certain activities from the improvement activities inventory and the addition of other relevant existing quality measures for MVP participants to select from. Through this rulemaking cycle, we are proposing five additional new MVPs:

- Advancing Cancer Care;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Supportive Care for Cognitive-Based Neurological Conditions; and
- Promoting Wellness.

The MVP framework aims to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care. We are continuing to explore opportunities to advance health equity in accordance with the CMS Framework for Health Equity 2022–2023,³⁶¹ across

all CMS programs and policies, including the MVP framework. We are considering how MVPs should evolve to better promote higher value care and APM participation by both primary care and specialist clinicians. We are seeking public comment, through a request for information (see section IV.A.7.b of this proposed rule), on ways to integrate MVPs into APP reporting and how to best facilitate specialty clinician reporting of quality performance measures (in addition to the APP) that reflect the specialty services provided.

b. Subgroup Reporting

To support clinicians in their transition to subgroup reporting, subgroup reporting will be voluntary for the CY 2023, 2024, and 2025 performance periods/2025, 2026, and 2027 MIPS payment years. Multispecialty groups that choose to report through an MVP will be required to participate as subgroups beginning with CY 2026 performance period/2028 MIPS payment year. As discussed in section IV.A.8.e. of this proposed rule, we are proposing the following policies for subgroups:

- *Subgroup description requirement:* To allow flexibility for groups to explore the different ways they could utilize subgroups, we are not proposing any restrictions related to the composition of a subgroup. Instead, we are proposing that a group must submit a description of each subgroup at the time of registration. We believe that the subgroup description would help us understand the underlying rationale for how groups placed clinicians in a subgroup and help us utilize these characteristics to shape subgroup criteria in the future.

- *Limitation of one subgroup per TIN–NPI combination:* A TIN could choose to form more than one subgroup for reporting MVPs. However, due to operational complexity, we are proposing that an individual eligible clinician, as represented by a TIN/NPI combination may register for no more than one subgroup within a group’s TIN.

- *Subgroup determination period:* We are proposing that CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the first segment of the applicable MIPS determination period.

- *Subgroup scores for administrative claims measures and cost measures:* We are proposing that subgroups are scored on each selected population health measure based on their affiliated group score, if available and that if the subgroup’s affiliated group score is not available, each such measure is

excluded from the subgroup’s total measure achievement points and total available measure achievement points. We are also proposing that subgroups are scored on the cost measures included in the MVP that they select, based on their affiliated group score, if available. If the affiliated group score is not available, the measure is excluded from the subgroup’s total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v). We believe that these policies would help address the issues identified with assessing performance of the administrative claims measures at the subgroup level.

- *Scoring for subgroups that register but do not report:* We are proposing that we will not assign a score for subgroups that register but do not submit data for an applicable performance period.

2. Major APM Provisions

(a) APM Entity Reporting

We are proposing to introduce the option for APM Entities to report the Promoting Interoperability performance category at that APM Entity level.

(b) APM Entity Level Reporting of Promoting Interoperability Performance Category

We are proposing to introduce a voluntary reporting option for APM Entities to report the promoting interoperability performance category at the APM Entity level beginning with the 2023 performance period.

(c) Request for Information Regarding QP Determination Calculations at the Individual Eligible Clinician Level

We are including a comment solicitation regarding sunsetting the use of APM Entity level QP determinations and instead making QP determinations at the individual eligible clinician level only.

(d) Payment Based on Quality Measures

We propose revisions to the regulations to clarify that the criterion for Advanced APMs that payment must be based on quality measures can be met through the use of a single quality measure that meets the criteria specified at § 414.1415(b)(2) and (b)(3). We are also proposing conforming changes in the Other Payer Advanced APM regulations.

(e) Generally Applicable Nominal Amount Standard

We are proposing to permanently establish the generally applicable revenue-based nominal amount standard at 8 percent of the average

³⁶¹ Centers for Medicare & Medicaid Services. CMS Framework for Health Equity 2022–2023. Available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for the applicable QP Performance Period, beginning with the 2023 QP Performance Period. We are also proposing conforming changes in the Other Payer Advanced APM regulations.

(f) Medical Home Model 50 Eligible Clinician Limit

We propose to apply the 50 eligible clinician limit directly to the APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity. We would identify the eligible clinicians in the APM Entity on each of the three QP determination dates (March 31, June 30, and August 31). This policy would become effective in Performance Year 2023. We are also proposing conforming changes in the Other Payer Advanced APM regulations which will require that the eligible clinician pursuing the option provide the relevant information.

(g) Request for Information Regarding the Transition From APM Incentive Payments to the Enhanced PFS Conversion Factor Update for QPs

We are including a comment solicitation regarding the gap in statutory financial incentives for QPs in the 2025 payment year, and the difference in potential financial incentives between QPs and MIPS eligible clinicians in payment years beginning in 2026.

3. Other MIPS and APM Policies

(a) Quality Performance Category

In section IV.A.10.c.(1)(b) of this proposed rule, we are proposing the following: expand the definition of the term high priority measure to include health equity quality measures; change the CAHPS for MIPS case-mix adjuster for “Asian language survey completion” to use instead the “language other than English spoken at home” variable; increase the data completeness criteria threshold from 70 percent to 75 percent for the CY 2024 and 2025 performance periods/2026 and 2027 MIPS payment years; and establish a set of 195 quality measures. In section IV.A.10.c.(1)(d) of this proposed rule, we are seeking public comment regarding each of the following topics: the addition of questions related to health disparities and price transparency to the CAHPS for MIPS Survey; the development and implementation of health equity quality measures; and the development and implementation of quality measures that address amputation avoidance in diabetic patients.

(b) Cost Performance Category

In section IV.A.3.b. of this proposed rule, we are proposing to update the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as a care episode group.

(c) Improvement Activities Performance Category

We are proposing to add four new, modify five existing, and remove five existing improvement activities from the Inventory. The new and modified activities help fill gaps we have identified in the Inventory as well as seek to ensure that activities reflect current clinical practice across the category. All four of the new activities being proposed relate to CMS Six Health Equity Priorities for Reducing Disparities in Health. We are also recommending the removal of five activities, both to align with current clinical guidelines and practice as well as to eliminate duplication, so that the Inventory offers flexibility and choice without a potentially burdensome number of activities available.

(d) Promoting Interoperability Performance Category

We are proposing several changes to the Promoting Interoperability performance category. Specifically, we are proposing: (1) to require and modify the Electronic Prescribing Objective's Query of Prescription Drug Monitoring Program (PDMP) measure while maintaining the associated points at 10 points; (2) to expand the Query of PDMP measure to include not only Schedule II opioids, but also Schedule III, and IV drugs; (3) to add a new Health Information Exchange (HIE) Objective option, the Enabling Exchange under the Trusted Exchange Framework and Common Agreement (TEFCA) measure (requiring a yes/no response), as an optional alternative to fulfill the objective; (4) to consolidate the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective and to require the reporting of active engagement for the measures under the objective; (5) to modify the scoring methodology for the Promoting Interoperability performance category; and (6) to continue to reweight the Promoting Interoperability performance category for certain types of non-physician practitioner MIPS eligible clinicians.

(e) Payment Adjustment

We are proposing to use the CY 2019 MIPS payment year as the prior period

and the rounded mean final score of 75 points from that prior period as the performance threshold for the CY 2025 MIPS payment year.

(f) Scoring

For scoring of the quality performance category, we are proposing to score administrative claims measures using benchmarks calculate from data collected during the performance period and clarifying the topped-out measure lifecycle in instances where a measure is suppressed or otherwise has a benchmark removed. We also include a request for information on which additional risk indicators and data sources we should consider for the complex patient bonus to better assess the social and medical complexity for the patients of MIPS eligible clinicians. Lastly, we are proposing to establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year.

(g) Third Party Intermediaries

We are proposing to update the definition of third party intermediary consistent with existing policies and to make other minor technical edits to the regulation text governing third party intermediaries accordingly. We are also proposing to revise QCDR measure self-nomination and measure approval requirements, including proposing to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year. We are proposing to continue delaying this requirement based on our recognition of the continuing impact of the COVID-19 public health emergency on the ability of QCDRs to test measures. We are also proposing to revise remedial action and termination policies. Finally, we have included two requests for information on third party intermediary support of MVPs and national Continuing Medical Education (CME) organizations becoming a new type of third-party intermediary.

(h) Public Reporting/Physician Compare

In an effort to expand the information available to patients and caregivers when choosing a doctor or clinician, we propose publicly reporting on individual clinician and group profile pages:

- A telehealth indicator, as applicable, and technically feasible, for those clinicians furnishing covered telehealth services.

- Utilization data related to applicable conditions treated and procedures performed by each clinician or group respectively.

Additionally, we would like interested party feedback, through a request for information, on ways to incorporate health equity into public reporting on Care Compare.

c. Continuing To Advance to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR) in Physician Quality Programs—Request for Information

In the CY 2022 PFS final rule, we stated our aim to move fully to digital quality measurement in CMS quality reporting and value-based purchasing programs (86 FR 65377 through 65382). As part of this modernization of our quality measurement enterprise, we are issuing this request for information to gather additional public input on the transition to digital quality measurement. Any updates to specific program requirements related to providing data for quality measurement and reporting provisions would be addressed through future notice-and-comment rulemaking. This request for information contains five parts:

- *Background.* This part provides an overview of our goals and strategies to achieve digital quality measurement, and notes input and learnings relevant to these goals and strategies.

- *Potential Refined definition of Digital Quality Measures (dQMs).* This part outlines potential revisions for a future definition for dQMs.

- *Data Standardization Activities to Leverage and Advance Standards for Digital Data.* This part discusses data standardization strategies and potential venues for advancing data standardization.

- *Approaches to Achieve FHIR® eCQM Reporting.* This part describes activities we are undertaking and considering to achieve FHIR-based electronic clinical quality measure (eCQM) reporting (for example, via FHIR Application Programming Interfaces or APIs) as our initial implementation of dQMs.

- *Solicitation of Comments.* This part lists all requests for input included in the sections of this request for information.

(1) Background

In the CY 2022 PFS final rule, we noted the continued focus on use of digital data and advancements in technology and technical standards to improve interoperability of healthcare data which creates opportunity to significantly improve our quality

measurement systems (86 FR 65377 through 65382). In a learning health system, standardized and interoperable digital data from a single point of collection can support multiple use cases, including quality measurement, quality improvement efforts, clinical decision support, research, and public health. We believe data used for quality measurement, as well as these other use cases, should be a seamless outgrowth of data generation from routine workflows. Data sharing should be standards-based to maximize interoperability, minimize burden, and facilitate the development and use of common tooling across use cases. This approach supports data analysis, rapid-cycle feedback, and quality measurement that are aligned for continuous improvement in patient-centered care.

We are continuing to define how we can leverage existing policy to transform all CMS quality measurement to digital reporting, such as policy finalized in the Office of the National Coordinator for Health Information Technology's (ONC) 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule, hereinafter referred to as the ONC 21st Century Cures Act final rule (85 FR 25642). In that rule, ONC finalized a "Standardized API for patient and population services" certification criterion (45 CFR 170.315(g)(10)) for certified health information technology (IT) requiring the use of FHIR Release 4.0.1 and several other implementation specifications, for health IT modules certified to that criterion. Health IT certified to this criterion will offer single patient and multiple patient services that can be accessed by third party applications (85 FR 25742). The ONC 21st Century Cures Act final rule (85 FR 25670) also required health IT developers to update their certified health IT to support the United States Core Data for Interoperability (USCDI) standard, Version 1 for all certification criteria that reference it.³⁶² By aligning technology requirements for payers, healthcare providers, and health IT developers, HHS can advance an interoperable health IT infrastructure that ensures providers and patients have access to health data when and where it is needed.

In the CY 2022 PFS final rule, we outlined actions in four areas to transition to digital quality measures: (1) leverage and advance standards for digital data and obtain all electronic health record (EHR) data required for

quality measures via provider FHIR-based application programming interfaces (APIs); (2) redesign our quality measures to be self-contained tools; (3) better support data aggregation; and (4) work to align measure requirements across our reporting programs, other Federal programs and agencies, and the private sector where appropriate (86 FR 65377 through 65382). The actions are further described in CMS' Digital Quality Measurement Strategic Roadmap available at <https://ecqi.healthit.gov/dQM>. In this request for information, we focus on data standardization activities related to leveraging and advancing standards for digital data and approaches to transition to FHIR eCQM reporting in the future, as initial steps in our transition to digital quality measurement.

In the CY 2022 PFS final rule, we also stated our goal of moving to digital quality measurement for all CMS quality reporting and value-based purchasing programs (86 FR 65377 through 65382). We further clarify that we plan to transition incrementally, beginning with the adoption of FHIR API technology and shifting to eCQM reporting using FHIR standards as described in section IV.A.4.d. of this proposed rule. We aim to achieve a quality measurement system fully based on digital measures. The goals of a fully digital measurement system include: reduced burden of reporting; provision of multi-dimensional data in a timely fashion, rapid feedback, and transparent reporting of quality measures; digital measures leveraged for advanced analytics to define, measure, and predict key quality issues; and quality measures that support development of a learning health system, which uses key data that are also used for care, quality improvement, public health, research, etc.

(2) Potential Future Definition of Digital Quality Measures (dQMs)

In the CY 2022 PFS final rule (86 FR 65379), we suggested a potential future definition of dQM for advanced feedback. Based on comments received on the RFI that the term "software" is confusing, we are now further revising our potential future definition such that a dQM is a quality measure, organized as self-contained measure specification and code package, that uses one or more sources of health information that is captured and can be transmitted electronically via interoperable systems. We continue to note potential data sources for dQMs may include administrative systems, electronically submitted clinical assessment data, case

³⁶² <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi>.

management systems, EHRs, laboratory systems, prescription drug monitoring programs (PDMPs), instruments (for example, medical devices and wearable devices), patient portals or applications (for example, for collection of patient-generated data such as a home blood pressure monitor, or patient-reported health data), health information exchanges (HIEs) or registries, and other sources. We are currently considering how eCQMs, which use EHR data, can be refined or repackaged to fit within the potential future dQM definition. While eCQMs meet the definition for dQMs in many respects, limitations in data standards, requirements, and technology have limited their interoperability. In the current state, there are multiple standards that must be supported (for example, Health Quality Measurement Format (HQMF)³⁶³ and Quality Reporting Document Architecture (QRDA)³⁶⁴) for eCQM data collection and reporting. Mapping EHR data can be challenging and burdensome for providers as there is often novel data collection occurring to support quality measurement. For example, eCQMs require steps to map data elements from the EHR to the appropriate format. Future dQMs would leverage interoperability standards to decrease mapping burden and align standards for quality measurement with interoperability standards used in other healthcare exchange methods.

We seek comment on this potential future refined definition of dQM and feedback on potential considerations or challenges related to non-EHR data sources.

(3) Data Standardization Activities To Leverage and Advance Standards for Digital Data

As noted in the CY 2022 PFS final rule (86 FR 65379), we are considering implementing eCQM quality reporting via FHIR-based APIs based on standardized, interoperable data. Advancing data standardization is a critical step for this implementation, and for long-term digital measurement strategies. Utilizing standardized data for EHR-based measurement (based on the FHIR standard) and aligning where possible with other interoperability requirements can reduce the data collection burden incurred by providers for the purpose of reporting quality measures. Utilizing standardized data also supports achieving the goals of transitioning to a fully digital quality measurement system identified in

section IV.A.4.a. of this proposed rule, including provision of timely feedback, leveraging the same data for multiple use cases, and contributing to a learning health system.

We intend to utilize standardized data for quality measurement as one use case of digital data in a learning health system. In a learning health system, standardized digital data can support multiple use cases, including quality measurement, quality improvement efforts, clinical decision support, research, and public health. We believe that standardization across data elements and data models is necessary to ensure data are accessible across use cases and enable the transmission of data through each stage of the health system's learning process. Standardized data and FHIR APIs are important for advancing interoperability; the goal is for data to be sent and received via trusted exchanges, and for patients to have access to their data. Operations activities (for example, prior authorization) are also dependent on standardized, interoperable data. Additionally, standardization is necessary across implementation guides, or rules for how a particular interoperability standard should be used,³⁶⁵ and across value sets that organize the specific terminologies and codes that define clinical concepts.³⁶⁶

Commenters on the request for information in the CY 2022 PFS proposed rule encouraged the use of data elements for quality measurement that are consistent with ONC's USCDI standard (45 CFR 170.213),³⁶⁷ where possible. We agree with this approach. To advance the use of standardized data, models, implementation guides, and value sets in quality measurement, we continue to focus on leveraging the interoperability data requirements for standardized APIs in certified health IT certified to certain certification criteria, set by the ONC 21st Century Cures Act final rule and any future updates made in rulemaking, as a vehicle to support modernization of CMS quality measure reporting. These API requirements are being implemented as part of a series of updates to certified health IT (85 FR 84825), and include availability of data included in the USCDI via standards-based APIs. In the CY 2021 PFS final rule, we finalized that eligible clinicians and eligible hospitals and CAHs

participating in MIPS and the Medicare Promoting Interoperability Program, respectively, must transition to use of certified technology updated consistent with the 2015 Edition Cures Update by 2023 (85 FR 84825). We aim to align with these standardized data requirements as the basis for data used in quality measurement.

We are collaborating with Federal agencies to define and prioritize additional data standardization needs and develop consensus with federal partners on recommendations for future versions of the USCDI. We are also directly collaborating with ONC to build requirements to support data standardization and alignment with requirements for quality measurement. ONC recently launched the USCDI+ initiative focused on supporting identification and establishment of domain specific datasets that build on the core USCDI foundation.³⁶⁸ A USCDI+ quality measurement domain currently being explored would support defining additional data specifications for quality measurement that harmonize, where possible, with other Federal agency data needs and inform supplemental standards necessary to support quality measurement.

We also received feedback on the request for information in the CY 2022 PFS proposed rule that the use of Health Level Seven (HL7®) Implementation Guides should be foundational to FHIR measure reporting. To advance implementation of standardized data, we continue to collaborate with consensus standards-setting bodies such as HL7. We are considering how best to leverage existing implementation guides that are routinely updated and maintained by HL7 to define data standards and exchange mechanisms for FHIR-based dQMs, in a fashion that supports the learning health system and alignment across use cases, including the following existing HL7 Implementation Guides:

- U.S. Core Implementation Guide;³⁶⁹
- Quality Improvement Core (QI Core) Implementation Guide;³⁷⁰
- Data Exchange for Quality Measures (DEQM) Implementation Guide;³⁷¹ and
- Quality Measure (QM) Implementation Guide.³⁷²

³⁶⁸ USCDI+. Available at <https://www.healthit.gov/topic/interoperability/uscdi-plus>.

³⁶⁹ HL7 FHIR US Core Implementation Guide. Available at <http://hl7.org/fhir/us/core/>.

³⁷¹ HL7 Data Exchange For Quality Measures. Available at <http://hl7.org/fhir/us/davinci-deqm/>.

³⁷² HL7 Quality Measure Implementation Guide. Available at <http://hl7.org/fhir/us/cqfmeasures/>.

³⁶³ https://www.hl7.org/implement/standards/product_brief.cfm?product_id=97.

³⁶⁴ <https://ecqi.healthit.gov/qrda>.

³⁶⁵ Resource Implementation Guide—Content. Available at <https://www.hl7.org/fhir/implementationguide.html>.

³⁶⁶ National Library of Medicine, Value Set Authority Center. Available at <https://vsac.nlm.nih.gov/>.

³⁶⁷ <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi>.

We are also considering what, if any, additional CMS-specific implementation guides may be necessary to support future digital quality measurement such as guidance on aggregation mechanisms for reporting.

We recognize the importance of considering how implementation guides used across quality measurement and other use cases (for example, public health reporting, clinical decision support) work together to support a learning health system. For example, the Clinical Guidelines (CPG) Implementation Guide³⁷³ connects computable guidelines, clinical decision support, quality reporting, and case reporting. The mechanisms for reporting across use cases are also critical to consider, as each time a different mechanism for reporting is needed across different use cases, it creates more burden. We are collaborating closely with federal partners, such as the Centers for Disease Control and Prevention (CDC), to align where possible.

We believe developing appropriately defined implementation guides will be a key component of supporting standardized FHIR APIs that enable access to standardized data elements for particular use cases, such as quality measurement.

We seek comment on the specific Implementation Guides noted previously, additional Implementation Guides we should consider, and other data and reporting components (for example, data vocabulary/terminology, alignment with other types of reporting) where standardization should be considered to advance data standardization for a learning health system.

(4) Approaches To Achieve FHIR eCQM Reporting

We previously noted in the CY 2022 PFS final rule (86 FR 65379) the activities we are conducting to begin structuring and reporting eCQMs using FHIR. eCQMs are a subset of dQMs. We consider the transition to FHIR-based eCQM reporting the first step to dQM reporting, and a potential model for how future digital reporting can occur.

To support the transition, we continue to undertake and consider activities necessary for reporting of FHIR-based eCQMs and future dQMs:

- In the near term, we plan to continue to convert current Quality Data Model (QDM)-based eCQMs to the FHIR standard and test the implementation of

measures re-specified to FHIR and submission of data elements represented in FHIR through ongoing HL7 Connectathons.

- In the near term, we also plan to develop a unified CMS FHIR receiving system. This system would allow for a singular point of data receipt to be used for quality reporting requirements, and modernization of programmatic data receiving systems to leverage opportunities related to digital data.

- We are committed to working with implementers and partners to optimize interoperable data exchange to support FHIR-based eCQM reporting (for example, via FHIR APIs) and eventually other digital quality measures, while ensuring solutions and implementation that require patients to engage with technology also support health equity.

- In the near term, we plan to identify opportunities for the public to provide feedback on FHIR-based measure specifications prior to implementation, such as during measure development/conversion activities.

- We also plan to identify opportunities for collaboration with vendors and implementers via systems testing of FHIR-based eCQM reporting to ensure involvement in systems development.

- Finally, we are exploring venues for continued feedback on CMS future measurement direction and data aggregation approaches in anticipation of FHIR-based API reporting of eCQMs.

- To support both near term FHIR-based eCQMs and other future dQMs, as noted in section IV.A.4.a. of this proposed rule, we intend to continue engaging with standards development organizations to advance and maintain implementation guides to support the FHIR standard and API reporting of quality measures.

- We also anticipate that prior to the implementation of any mandatory FHIR-based eCQM reporting requirements within our quality programs, it would be necessary to undertake voluntary reporting of FHIR-based eCQMs to allow time to learn and enhance systems and processes, both internally and among providers and vendors.

We also continue to consider how best to leverage the ONC interoperability certification criteria related to implementing FHIR API technology to access and electronically transmit interoperable data for quality measurement. Based on feedback on the CY 2022 PFS proposed rule request for information, many supported the use of FHIR APIs, while others expressed concern around infrastructure readiness. We continue to explore how to leverage FHIR APIs to decrease reporting burden

and support implementor readiness. We seek comment on approaches to optimize data flows for quality measurement to retrieve data from EHRs via FHIR APIs, and to combine data needed for measure score calculation for measures that require aggregating data across multiple providers (for example, risk-adjusted outcome measures) and multiple data sources (for example, hybrid claims-EHR measures). We are interested in data flows that support using the same data for measurement and to provide feedback to providers at multiple levels of accountability, such as at the individual clinician, group, accountable care organization and health plan levels, as are used for patient care and other use cases (for example, public health reporting).

We seek comment on additional venues to engage with implementors during the transition to digital quality measurement, and other critical considerations during the transition. We also seek comment on data flow options to support FHIR-based eCQM reporting.

(5) Solicitation of Comments

As noted previously, we seek input on the following:

- Refined potential future Definition of dQMs. We are seeking feedback on the following as described in section IV.A.4.b. of this proposed rule:

++ Do you have feedback on the potential refined definition of digital quality measures (dQMs)?

++ Do you have feedback on potential considerations or challenges related to non-EHR data sources?

- Data Standardization Activities to Leverage and Advance Standards for Digital Data. We are seeking feedback on the following as described in section IV.A.4.c. of this proposed rule:

++ Do you have feedback on the specific implementation guides we are considering, additional FHIR implementation guides we should consider, or other data and reporting components where standardization should be considered to advance data standardization for a learning health system?

- Approaches to Achieve FHIR eCQM Reporting. We are seeking feedback on the following as described in section IV.A.4.d. of this proposed rule:

++ Are there additional venues to engage with implementors during the transition to digital quality measurement?

++ What data flow options should we consider for FHIR-based eCQM reporting, including retrieving data from EHRs via FHIR APIs and other mechanisms?

³⁷³ HL7 FHIR Clinical Guidelines Implementation Guide. Available at <http://hl7.org/fhir/uv/cpg/>.

++ Are there other critical considerations during the transition?

B. Advancing the Trusted Exchange Framework and Common Agreement (TEFCA)—Request for Information

Section 4003(b) of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255, enacted on December 13, 2016), amended section 3001(c) of the Public Health Service Act (42 U.S.C. 300jj–11(c)), and required HHS to take steps to advance interoperability for the purposes of ensuring full network-to-network exchange of health information. Specifically, Congress directed the National Coordinator to “develop or support a trusted exchange framework, including a common agreement among health information networks nationally.” Since the enactment of the Cures Act, HHS has pursued development of a Trusted Exchange Framework and Common Agreement (TEFCA). ONC’s goals for TEFCA are as follows:

Goal 1: Establish a universal policy and technical floor for nationwide interoperability.

Goal 2: Simplify connectivity for organizations to securely exchange information to improve patient care, enhance the welfare of populations, and generate health care value.

Goal 3: Enable individuals to gather their health care information.³⁷⁴

On January 18, 2022, ONC announced a significant TEFCA milestone by releasing the Trusted Exchange Framework³⁷⁵ and Common Agreement Version 1.³⁷⁶ The Trusted Exchange Framework is a set of non-binding principles for health information exchange, and the Common Agreement for Nationwide Health Information Interoperability Version 1 (also referred to as Common Agreement) is a contract that advances those principles. The Common Agreement and the incorporated by reference Qualified Health Information Network (QHIN) Technical Framework Version 1 (QTF)³⁷⁷ establish the technical infrastructure model and governing approach for different health information networks and their users to

securely share clinical information with each other, all under commonly agreed to terms. The Common Agreement is a legal contract that QHINs³⁷⁸ sign with the ONC Recognized Coordinating Entity (RCE),³⁷⁹ a private-sector entity that implements the Common Agreement and ensures QHINs comply with its terms.

The technical and policy architecture of how exchange occurs under TEFCA follows a network-of-networks structure, which allows for connections at different levels and is inclusive of many different types of entities at those different levels, such as health information networks, care practices, hospitals, public health agencies, and Individual Access Services (IAS)³⁸⁰ Providers.³⁸¹ QHINs connect directly to each other to facilitate nationwide interoperability, and each QHIN can connect Participants, which can connect Subparticipants.³⁸² Compared to most

³⁷⁴ The Common Agreement defines a QHIN as “to the extent permitted by applicable SOP(s), a Health Information Network that is a U.S. Entity that has been Designated by the RCE and is a party to the Common Agreement countersigned by the RCE.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 10 (Jan. 2022), <https://www.healthit.gov/sites/default/files/page/2022->

³⁷⁵ In August 2019, ONC awarded a cooperative agreement to The Sequoia Project to serve as the initial RCE. The RCE will operationalize and enforce the Common Agreement, oversee QHIN-facilitated network operations, and ensure compliance by participating QHINs. The RCE will also engage interested parties to create a roadmap for expanding interoperability over time. See ONC Awards The Sequoia Project a Cooperative Agreement for the Trusted Exchange Framework and Common Agreement to Support Advancing Nationwide Interoperability of Electronic Health Information (September 3, 2019), <https://sequoiaproject.org/onc-awards-the-sequoia-project-a-cooperative-agreement-for-the-trusted-exchange-framework-and-common-agreement-to-support-advancing-nationwide-interoperability-of-electronic-health-information>.

³⁸⁰ The Common Agreement defines Individual Access Services (IAS) as “with respect to the Exchange Purposes definition, the services provided utilizing the Connectivity Services, to the extent consistent with Applicable Law, to an Individual with whom the QHIN, Participant, or Subparticipant has a Direct Relationship to satisfy that Individual’s ability to access, inspect, or obtain a copy of that Individual’s Required Information that is then maintained by or for any QHIN, Participant, or Subparticipant.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

³⁸¹ The Common Agreement defines “IAS Provider” as: “Each QHIN, Participant, and Subparticipant that offers Individual Access Services.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

³⁸² For the Common Agreement definitions of QHIN, Participant, and Subparticipant, see

nationwide exchange today, the Common Agreement includes an expanded set of Exchange Purposes beyond Treatment to include Individual Access Services, Payment, Health Care Operations, Public Health, and Government Benefits Determination³⁸³—all built upon common technical and policy requirements to meet key needs of the U.S. health care system. This flexible structure allows interested parties to participate in the way that makes most sense for them, while supporting simplified, seamless exchange.

The QTF,³⁸⁴ which was developed and released by the RCE, describes the functional and technical requirements that a Health Information Network (HIN)³⁸⁵ must fulfill to serve as a QHIN under the Common Agreement. The QTF specifies the technical underpinnings for QHIN-to-QHIN exchange and certain other responsibilities described in the Common Agreement. The technical and functional requirements described in the QTF enable different types of information exchange, including querying and message delivery across participating entities.

In 2022, prospective QHINs are anticipated to begin signing the Common Agreement and applying for designation. The RCE will then begin onboarding and designating QHINs to share information. In 2023, HHS expects interested parties across the care continuum to have increasing opportunities to enable exchange under TEFCA. Specifically, this would mean such interested parties would be: (1) signatories to either the Common Agreement or an agreement that meets the flow-down requirements of the Common Agreement (called a Framework Agreement³⁸⁶ under the

Common Agreement for Nationwide Health Information Interoperability Version 1, at 8–12 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

³⁸³ For the Common Agreement definitions of Payment, Health Care Operations, Public Health, and Government Benefits Determination, see Common Agreement for Nationwide Health Information Interoperability Version 1, at 6–10 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

³⁸⁴ Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022), https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf.

³⁸⁵ “Health Information Network” under TEFCA has the meaning assigned to the term “Health Information Network or Health Information Exchange” in the information blocking regulations at 45 CFR 171.102.

³⁸⁶ The Common Agreement defines “Framework Agreement(s)” as: “any one or combination of the

³⁷⁴ See <https://www.healthit.gov/buzz-blog/interoperability/321tefca-is-go-for-launch>.

³⁷⁵ Trusted Exchange Framework (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Trusted_Exchange_Framework_0122.pdf.

³⁷⁶ Common Agreement for Nationwide Health Information Interoperability Version 1 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

³⁷⁷ Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022), https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf.

Common Agreement), (2) in good standing (that is, not suspended) under that agreement, and (3) enabling secure, bi-directional exchange of information to occur, in production. TEFCA is expected to give individuals and entities easier, more efficient, access to more health information while requiring strong privacy and security protections.

We believe that exchange of health information enabled by the Common Agreement can advance CMS policy and program objectives related to care coordination, cost efficiency, and patient-centeredness in a variety of ways. We also believe that CMS policy and programs can help to accelerate nationwide connectivity through TEFCA by health care providers as well as other interested parties.

As discussed in section IV.A.10.c.(4)(e) of this proposed rule, we are proposing to add a new Enabling Exchange Under TEFCA measure in the Promoting Interoperability performance category. This proposed measure would provide eligible clinicians with the opportunity to earn credit for the Health Information Exchange objective if they: are a signatory to a “Framework Agreement” as that term is defined in the Common Agreement; enable secure, bi-directional exchange of information to occur for all unique patients of eligible clinicians, and all unique patient records stored or maintained in the EHR; and use the functions of CEHRT to support bi-directional exchange.

In addition to this proposal, we are considering other ways that available CMS policy and program levers can advance information exchange under TEFCA. For instance, similar to the proposal in the current rule, there may be opportunities for CMS to incentivize exchange under TEFCA through other programs that incentivize high quality care, or through program features in value-based payment models that encourage certain activities that can improve care delivery.

In addition to programs focused on health care providers, we are interested in opportunities to encourage exchange under TEFCA through CMS regulations for certain health care payers, including Medicare Advantage, Medicaid Managed Care, and CHIP issuers. For instance, we believe there may be

opportunities to encourage information exchange under TEFCA to support recently finalized requirements for these payers to make information available to patients and to make patient information available to other payers as beneficiaries transition between plans in the “Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans on the Federally-Facilitated Exchanges, and Health Care Providers” final rule (85 FR 25510). Finally, we are considering future opportunities to encourage information exchange under TEFCA for payment and operations activities such as submission of clinical documentation to support claims adjudication and prior authorization processes.

We are requesting input from the public on the ideas described previously and related concepts for future exploration, as well as the following questions:

- What are the most important use cases for different groups that could be enabled through widespread information exchange under TEFCA? What key benefits would be associated with effectively implementing these use cases, such as improved care coordination, reduced burden, or greater efficiency in care delivery?
- What are key ways that the capabilities of TEFCA can help to advance the goals of CMS programs? Should CMS explore policy and program mechanisms to encourage exchange between different interested parties, including those in rural areas, under TEFCA? In addition to the ideas discussed previously, are there other programs CMS should consider in order to advance exchange under TEFCA?
- How should CMS approach incentivizing or encouraging information exchange under TEFCA through CMS programs? Under what conditions would it be appropriate to require information exchange under TEFCA by interested parties for specific use cases?

• What concerns do commenters have about enabling exchange under TEFCA? Could enabling exchange under TEFCA increase burden for some interested parties? Are there other financial or technical barriers to enabling exchange under TEFCA? If so, what could CMS do to reduce these barriers?

C. Definitions

At § 414.1305, we are proposing revisions to the definitions of the following terms:

- Multispecialty group;
- Single specialty group;
- Facility-based group;
- Facility-based MIPS eligible clinician
- High priority measure; and
- Third party intermediary.

These terms and definitions are discussed in detail in the relevant sections of this proposed rule.

7. Transforming MIPS: MVP Strategy

a. MVP Vision Overview

We are moving to MIPS Value Pathways (MVPs) to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to participation in Alternative Payment Models (APMs). We intend to promote high value care by connecting performance on cost, quality, and patient experience of care to payment. We believe the MVP framework will move MIPS forward on the path to value by connecting the MIPS performance categories, better informing and empowering patients to make decisions about their healthcare, and by helping clinicians to achieve better outcomes using robust and accessible healthcare data and interoperability. The MVP framework aims to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care. We intend for MVPs to drive value and help clinicians and practices prepare to take on and manage financial risk, for example, through Advanced APMs, as they build out their quality infrastructure components and gain experience with cost measurement. We envision that MVPs, in which there is aligned measurement of quality of care and cost, continuous improvement and innovation within the practice, and efficient management and transfers of information, will help clinicians deliver higher value care and remove barriers to APM participation. Combining linked performance measures and activities with more standardization and focused reporting of meaningful measures in MVPs will, we believe, produce data that can better assist patients in comparing clinician performance and in selecting clinicians. Such data can also assist clinicians in making care improvements and making appropriate specialist referrals. As more clinicians have applicable MVPs available, the performance data available to patients will expand, and in the future, information on specialists in

Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022) https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

multispecialty groups will increase on our Compare Tools, enabling patients to make more informed choices for their care. MVPs will be available for voluntary reporting beginning with the CY 2023 MIPS performance period, and we intend for MVPs to become the only method to participate in MIPS in future years, although we have not yet finalized the timing for the sunset of traditional MIPS.³⁸⁷

We are continuing to explore opportunities to advance health equity across all CMS programs and policies. The CMS Office of Minority Health released *Paving the Way to Equity: A Progress Report* in 2021, which describes the CMS Equity Plan for Medicare and progress from 2015 to 2021.³⁸⁸ The progress report considers emerging opportunities to build on progress with a focus on CMS current strategic initiatives, HHS priorities, and areas in which CMS quality improvement efforts will move forward.³⁸⁹ MIPS improvement activities that support and recognize impactful disparities reduction efforts are acknowledged in the CMS *Equity Progress Report*.³⁹⁰ More recently, on April 22, 2022, the CMS Office of Minority Health released the *CMS Framework for Health Equity*,³⁹¹ which updates the CMS Equity Plan with an enhanced and more comprehensive 10-year approach to further embed health equity across CMS programs including Medicare, Medicaid, CHIP, and the Health Insurance Marketplaces. This CMS Framework for Health Equity outlines five priorities: (1) Expand the collection, reporting and analysis of standardized data; (2) Assess causes of disparities within CMS programs, and address inequities in policies and operations to close gaps; (3) Build capacity of health care organizations and the workforce to reduce health and health care disparities; (4) Advance language access, health literacy, and the provision of culturally tailored services; and (5) Increase all forms of

accessibility to health care services and coverage.³⁹² We intend to use this health equity framework across CMS to design, implement, and operationalize policies to support health for all people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our beneficiaries need to thrive.

We are considering ways that we can advance health equity via the Quality Payment Program. As we implement MVPs, we are considering how best to further the five priorities of the CMS Framework for Health Equity. We intend for both MVPs and APMs to advance health equity and increase the value of health care for all as we leverage improvement activities, quality measure performance data, and public reporting. We anticipate that MVPs and APMs will have greater impact on health equity as participation grows. The CMS Center for Medicare & Medicaid Innovation's (CMMI) strategy refresh white paper³⁹³ includes advancing health equity as one of five objectives that guide CMMI's models, priorities, and assessment of impact.³⁹⁴ In this CY 2023 PFS proposed rule we consider approaches for advancing health equity in MIPS in section IV.A.10.c.(1)(b) through IV.A.10.c.(1)(d) of this proposed rule. See section IV.A.10.c.(1)(c)(i) of this proposed rule regarding potential next steps related to a proposed social determinants of health quality measure. See sections IV.A.10.c.(1)(d) and IV.A.10.h.(3) for our request for comment on the inclusion of a health equity measure in MIPS and MIPS Compare Tool public reporting in the future.

We presented our MVP vision and guiding principles in the CY 2021 PFS final rule (85 FR 84844 through 84845). We intend for MVP implementation to drive value, obtain comparative performance data, and elevate the patient voice while reducing clinician burden. We strive to achieve meaningful performance measurement, burden reduction, scoring equity, and increased value. The MVP framework was discussed in the CY 2020 and the CY 2021 PFS proposed rules (84 FR 40732 through 40734, and 85 FR 50279, respectively) and CY 2021 PFS final rule (85 FR 84844 through 84845). Our MVP framework calls for linking the quality, cost, and improvement activities

performance categories, as well as a foundation of required reporting for the Promoting Interoperability performance category and population health claims-based quality performance category measures. We continue to consider how to best implement an MVP portfolio that balances our MVP goals for transformative change and our five MVP guiding principles as discussed in the CY 2021 PFS final rule (85 FR 84845 through 84846) within current CMS and clinician practice capabilities. We previously described in the CY 2022 PFS proposed rule (86 FR 39354) how we are beginning to implement the MVP guiding principles, and in the CY 2019 PFS proposed rule (83 FR 40732 through 40733) we discussed how MVPs can help ready clinicians for APM participation. We finalized policies around MVP reporting by subgroups (CY 2022 PFS final rule, 86 FR 654398 through 65401) that allow specialty clinicians to report meaningful performance information to MIPS and that better represents the non-primary care, specialty services provided. We also continue to develop MVP subgroup reporting policies and propose a modification of the definition of single specialty and multispecialty group to include claims as the data source used in the specialty determination (see section IV.A.8.e.(2) of this proposed rule). We continue to contemplate how to support specialty clinician reporting for APM participants who report to MIPS through the APM Performance Pathway (APP) and potentially MVPs. See CY 2021 PFS final rule (85 FR 84860) and section IV.A.9.b. of this proposed rule for details on the APP. We are also considering how MVPs should evolve to better promote higher value care and APM participation by both primary care and specialist clinicians.

b. MVPs and APM Participant Reporting Request for Information

(1) Overview

MVPs and APMs share a goal of meaningful performance measurement and burden reduction, along with objectives of scoring equity and advancing value. Interested parties have requested more options for meaningful specialty clinician participation within both the MVP framework and APMs (85 FR 84845 and 86 FR 65391). We have developed MVP and subgroup reporting policies to provide meaningful MIPS performance measurement for both primary care and specialist clinicians (86 FR 65414). We received requests from interested parties to further define the relationship between MVPs and

³⁸⁷ 42 CFR 414.1365(a)(1).

³⁹⁴ *Ibid.*, at 18–21.

APMs and previously requested public feedback on this topic (86 FR 39354 and 39355). We sought public feedback via a request for comment in the CY 2022 PFS proposed rule on innovative approaches to achieving our desired MVP goals to improve value, reduce burden, help patients compare clinician performance, and reduce barriers to joining APMs (86 FR 39353 and 39354). We discussed how to best coordinate and align MVPs and APMs and noted we would continue to explore the ideal MVP relationship with APMs to drive value (86 FR 39354). While we did not summarize the responses to this request for comment in the CY 2022 PFS final rule, several commenters requested to see close alignment between MVPs and APMs. Some commenters specifically suggested using APM measures in MVPs and others suggested we adopt a flexible MVP framework similar to APMs in that it centers on quality improvement, efficient resource use, patient reported outcomes and satisfaction, and enhanced technology to care for patients with specific medical conditions. A few commenters referred to challenges for specialists in reporting quality performance data under MIPS and their respective APM separately, resulting in additional reporting burden. We are considering what close alignment between MVPs and APMs would mean and welcome additional feedback as more MVPs are developed. We seek public comments on addressing the challenges commenters noted regarding specialist reporting of quality performance data and outline concepts in this section of this proposed rule.

We recognize a gap in the availability of specialty clinician performance data for APM participants to inform patient selection of clinicians based on clinician quality and value improvement data. Of the 933,547 MIPS eligible clinicians receiving a MIPS payment adjustment for the 2020 performance year, 398,719 participated in MIPS as APM participants, a significant 42.7 percent (qpp.cms.gov).³⁹⁵

We acknowledge the 2022–2024 APM Performance Pathway (APP) measure set (86 FR 65431) may not fully represent the services provided and the patients treated by all clinician types in a group, for example, when a group includes multiple specialties, such as emergency medicine, orthopedic surgery, and neurology in the Medicare program. We

expect many clinicians who are part of APMs and do not attain QP status will report for MIPS using the APP. We seek ideas for how we could obtain more robust reporting of both primary care and specialty care performance measurement information from APM participants. We would like to consider policy ideas that would encourage the reporting of specialty services performance information in addition to the APP, for example and to the extent feasible, by extending APP scoring policies for the cost and improvement activities performance categories outside the APP, finding a way to roll MVP quality measure performance data into the APP, or by some other method. These policy options should be considered in conjunction with the proposals in sections IV.A.8.e.(3) and IV.A.9.b. of this proposed rule where we request input on policies to formalize subgroup registration and reporting of the APP.

As we move forward with MVP implementation, we continue to seek feedback on ways to better align clinician experience between MVPs and APMs, and to ensure that MVP reporting serves as a bridge to APM participation. While we believe that MVPs will serve an important role in furthering specialty measurement, we also believe that primary care measurement will be integral to MIPS. We envision MVP reporting to complement APP reporting such that it will enhance performance measurement and available information while minimizing additional burden. We look for feedback on the benefits and disadvantages of various approaches, keeping in mind our goals of enhancing specialty specific performance measurement and available information for patients while also minimizing complexity where possible.

We continue to solicit input as we consider solutions, the direction of our MVP framework, and its intersection with APMs.

(2) Solicitation of Comments

We are seeking feedback on the following as described in section IV.A.7.b.(1) of this proposed rule:

- How should we use MVPs to obtain more meaningful performance data from both primary care and specialty clinicians and drive improvements for APP reporters and APM participants? What are the associated pros and cons for the suggested solution(s)?
- How should we better align clinician experience with MVPs and APMs, and ensure that MVP reporting serves as a bridge to APM participation?
- How should we best limit burden and develop scoring policies for APM

participants in multispecialty groups who choose to participate in MVPs and report specialty care performance data? Should we require APP participants to focus on those clinicians who work in the associated quality measurement clinical area and require subgroup reporting of relevant MVPs for others? Should we develop a process for a composite score that incorporates both APP measures and other MVP specialty measures?

- What other policy options for MIPS specialty clinician performance data reporting should we consider?

8. MVP Development and Reporting Requirements

a. MVP Development

(1) Development of New MVPs

We intend to develop MVPs, to the extent feasible and appropriate, by including interested parties in the process (85 FR 84849 and 84850). For a description of the current process for developing new MVPs, we refer readers to the CY 2021 PFS final rule (85 FR 84849 through 84856). Commenters suggested that we work in tandem with clinicians and specialty societies to develop MVPs (84 FR 62948) and have supported the development of MVPs with robust input from interested parties and feedback opportunities. While this process has provided value in the development of meaningful MVPs for the program, we agree and believe that we should also consider feedback during the MVP development process from a wide range of interested parties and the general public before the notice and comment rulemaking process. By creating the opportunity for feedback earlier in the MVP development process, we hope to receive a broader set of perspectives on a draft MVP, including the perspectives of: patients, patient advocates, practices that serve underserved and rural areas, specialty organizations, health systems, and the general public. We believe it is important to receive feedback from interested parties and the general public early in the MVP development process to ensure the MVPs that are developed are meaningful and resonate with clinicians- including those who serve patients in small practices, or in rural or underserved areas where patient populations may face health equity barriers. Clinicians may use the results of MVP reporting results to determine areas of practice improvement, and identify gaps in clinical outcomes. In addition, patients may leverage the granular data ascertained through MVP reporting to make informed decisions

³⁹⁵ QUALITY PAYMENT PROGRAM PARTICIPATION IN 2020: RESULTS AT-A-GLANCE, available at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1783/QPP%202020%20Participation%20Results%20Infographic.pdf>.

when selecting a clinician or specialist to participate in their care.

Therefore, we propose to modify the MVP development process such that we would evaluate a submitted candidate MVP through the MVP development process, and if we determine it is “ready” for feedback, we would post a draft version of the submitted candidate MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback for a 30-day period. Interested parties and the general public would have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We would review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determine changes should be made to the candidate MVP, we would not notify the interested parties who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process. We request comments on this proposal.

(2) MVP Maintenance Process and Engagement With Interested Parties

In the CY 2022 PFS final rule (86 FR 65410), we finalized an annual maintenance process for MVPs that were previously finalized through notice and comment rulemaking. We established a process for soliciting recommendations from interested parties for potential updates to finalized MVPs. As part of this process, beginning in January of the year prior to the performance period, interested parties may submit recommendations to revise an MVP that was previously finalized through rulemaking. Recommendations from interested parties will be accepted on a rolling basis throughout the year. We stated that we would be unable to communicate with interested parties as to whether their recommendations were accepted ahead of rulemaking, and that we would ultimately determine whether updates to the established MVPs should be made (86 FR 65410). We stated that we would consult with the interested parties who originally nominated the MVP about any publicly recommended changes to the MVP (86 FR 65410).

Similar to the proposed updates to the process for developing new MVPs, discussed in section IV.A.8.a.(1) of this proposed rule, and for the same reasons, we believe that we should also consider feedback during the MVP maintenance process, from a wide range of interested parties and the general public, prior to proposing changes to an existing MVP through the notice and comment rulemaking process. Therefore, we

propose to modify the MVP maintenance process such that interested parties and the general public would be able to submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We would then review the submitted recommendations and determine whether any are potentially feasible and appropriate. If we identify any submitted recommendations that are potentially feasible and appropriate, we would host a public facing webinar, open to interested parties and the general public through which they may offer their feedback on the potential revisions we have identified. We would publish details related to the timing and registration process for the webinar through our Quality Payment Program Listserv. These proposed changes to the MVP maintenance process would enable us to receive a wide range of perspectives on potential revisions to MVPs earlier in the maintenance process, which we believe is important in developing MVPs that are meaningful to clinicians, patients, and the general public. If we decide to make any revisions to an established MVP based on the recommendations submitted, we would adopt such revisions through notice and comment rulemaking. We request comments on this proposal.

(3) Proposed Revisions to Previously Finalized MVPs

In the CY 2022 PFS final rule (86 FR 65998 through 66031), we finalized seven MVPs that will be available for reporting beginning with the CY 2023 performance period/CY 2025 MIPS payment year. The seven MVPs are as follows: *Advancing Rheumatology Patient Care*; *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes*; *Advancing Care for Heart Disease*; *Optimizing Chronic Disease Management*; *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine*; *Improving Care for Lower Extremity Joint Repair*; and *Patient Safety and Support of Positive Experiences with Anesthesia*. We are proposing revisions to these seven MVPs based on the proposed removals of certain activities from the improvement activities inventory and the addition of other relevant existing quality measures for MVP participants to select from. We refer readers to Appendix 3: MVP Inventory of this proposed rule for these proposed revisions and our explanation of why we believe these changes are appropriate.

(4) Proposed New MVPs

Through our established development processes for new MVPs (85 FR 84849 through 84856) we aim to gradually develop MVPs that are relevant and meaningful for all clinicians who participate in MIPS. We are proposing five new MVPs:

- Advancing Cancer Care;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Supportive Care for Cognitive-Based Neurological Conditions; and
- Promoting Wellness.

We continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document at [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip). The identification of priorities includes consideration of the various specialties and subspecialties that currently participate in MIPS, and identification of priorities of the Biden-Harris Administration, Department, and Agency. For example, in support of the Biden-Harris Administration’s Cancer Moonshot Mission³⁹⁶ and the importance of cancer screening and care, we are proposing a new MVP related to cancer care.

We refer readers to Appendix 3: MVP Inventory of this proposed rule where we discuss each proposed new MVP, including which specific measures and activities would be included, and the clinician types for which a proposed new MVP may be relevant.

b. MVP Reporting Requirements

(1) Promoting Interoperability

In the CY 2021 PFS final rule (85 FR 84849 through 84854), we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b). We refer readers to

³⁹⁶ White House, Fact Sheet: President Biden Reignites Cancer Moonshot to End Cancer as We Knot It (Feb. 2, 2022), available at <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/02/fact-sheet-president-biden-reignites-cancer-moonshot-to-end-cancer-as-we-know-it>.

section IV.A.10.c.(4) of this proposed rule for proposed modifications to the Query of Prescription Drug Monitoring Program (PDMP) measure, the Public Health and Clinical Data Exchange Objective, and the Health Information Exchange Objective. In addition, section IV.A.10.c.(4) of this proposed rule includes proposals related to reweighting the Promoting Interoperability performance category for non-physician clinician types, and modifying the Promoting Interoperability scoring methodology beginning with the CY 2023 performance period/CY 2025 MIPS payment year. We intend for any changes that are finalized for the Promoting Interoperability performance category under traditional MIPS to apply to MVPs.

c. Reporting MVPs and Team-Based Care

In the CY 2022 PFS final rule (86 FR 65406), we discussed that MVPs may be constructed to reflect the team-based healthcare model. This approach considers the patient's care from a holistic perspective, involving several clinician types in a manner that captures the patient's experience and outcomes. We have received questions from interested parties asking how a large multispecialty group that practices team-based care can report MVPs, and if subgroup reporting would mean that each individual specialty within the practice would have to report its own MVP. In this proposed rule, we are providing some clarification on a few options of how multispecialty groups who practice in a team-based care manner can report MVPs.

In the CY 2022 PFS final rule (86 FR 65392 through 65394), we finalized that for the CY 2023, 2024, and 2025 performance periods, individual MIPS eligible clinicians, single specialty groups, multispecialty groups, subgroups and APM entities may report MVPs. We also finalized that beginning with the CY 2026 performance period, multispecialty groups must form subgroups to report MVPs (86 FR 65394). We encourage multispecialty groups to review the inventory of available MVPs that we have implemented to identify whether a relevant MVP is available to them. If a multispecialty group identifies an MVP that is relevant to its practice, the group may register through the MVP registration process to report that single MVP (86 FR 65415 through 65418). We encourage a multispecialty group to choose an MVP that includes measures that are attributable to all clinician types that participate in its group, if it intends

to report as a multispecialty group within the first few years of its MVP reporting. We believe that reporting data that is directly attributed to all clinicians in the group will better drive quality improvement and lead to improved patient outcomes.

We encourage multispecialty groups to consider adopting subgroup reporting before it becomes mandatory in the CY 2026 performance period. Early adoption will allow clinicians within the subgroups to gain familiarity with reporting at the subgroup level before it becomes mandatory. We refer readers to the CY 2022 PFS final rule (86 FR 65398 through 65405) and section IV.A.8.e. of this proposed rule where we discuss our proposals regarding subgroup policies and subgroup composition. In support of team-based care, we have not proposed any criteria which would limit the number of specialties within a subgroup. A multispecialty group should use its discretion in determining the most operationally feasible and appropriate way to report MVPs via subgroup reporting before mandatory subgroup reporting begins in CY 2026. For example, choosing a few clinically relevant specialties from the group to form a subgroup (that is, orthopedic surgeons, physical therapists, nurse practitioners or physician assistants who are specialized in the area of orthopedics) to report on a single MVP related to orthopedic surgery. While we understand there may be an increase to the burden associated with requiring multispecialty groups to report through subgroups beginning with the CY 2026 performance period, we believe MVP reporting will have more value because the data will be directly attributed to the clinicians leading to actionable changes in the care provided to patients.

d. Scoring MVP Performance

In the CY 2022 PFS final rule, we finalized policies for MVP scoring beginning with the CY 2023 performance period/CY 2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those finalized policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d)(2), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we intend to adopt scoring policies from traditional MIPS for MVP participants unless there is a compelling reason to adopt a different policy to further the goals of the MVP framework (86 FR 65419).

We refer readers to section IV.A.10.d.(1)(b)(i) of this proposed rule

for our proposal on the determination of benchmarks for administrative claims quality measures, section IV.A.10.d.(1)(b)(ii) for our proposal on assigning measure achievement points for topped out quality measures, section IV.A.10.d.(1)(c)(i) for our proposal regarding improvement scoring for cost measures, and section IV.A.10.c.(4)(g) for our proposals regarding changes to the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2023. In the event these proposals and any other scoring policies for traditional MIPS are adopted as final policy, they would apply to the measures and activities included in the MVP, unless otherwise indicated.

In the CY 2022 PFS final rule, we finalized the subgroup reporting option for clinicians choosing to report MVPs or the APP (86 FR 65392 through 65394). We refer readers to section V.B.9.e.(7)(a)(ii) of this proposed rule for the discussion on estimated burden associated with subgroup reporting. The relevant burden will be submitted to OMB under control number 0938–1314 (CMS–10621). Subgroup reporting is a new option for clinicians, and, for clarity, we discuss all proposals regarding subgroups, including scoring, in a single section of this proposed rule at section IV.A.8.e. We refer readers to section IV.A.8.e.(4)(b) of this proposed rule for our proposals related to subgroup scoring for administrative claims and cost measures and section IV.A.8.e.(4)(c) of this proposed rule for our proposal related to scoring for subgroups that register but do not report.

e. Subgroup Reporting

(1) Background

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to report through subgroups beginning with the CY 2023 performance period/CY 2025 MIPS payment year (86 FR 65392 through 65394). Additionally, we finalized: (1) A timeline for implementing subgroup reporting (86 FR 65396 and 65397); (2) registration requirements, reporting requirements, and scoring policies for clinicians desiring to report MVPs through subgroups (§ 414.1365; 86 FR 65415 through 65426); (3) definitions of subgroup, single specialty group, multispecialty group, and special status (§ 414.1305; 86 FR 65398 through 65401); (4) subgroup eligibility requirements (§ 414.1318; 86 FR 65401); (5) application of low-volume threshold and special status designations for

subgroups (§ 414.1318(a)(2); 86 FR 65401 and 65402); and (6) subgroup inclusions and exclusions (§ 414.1318; 86 FR 65402 and 65403).

In this section, we propose to: (1) modify the definitions of single specialty group and multispecialty group; (2) add subgroup description requirements to the registration process; (3) limit the number of subgroups a clinician may participate in to one subgroup per TIN; (4) establish the subgroup determination period; (5) apply new policies for scoring administrative claims measures and cost measures for subgroups; and (6) not assign a subgroup final score to registered subgroups that do not submit data.

(2) Definitions of a Single Specialty Group and a Multispecialty Group

We previously finalized at § 414.1305 the definitions of a single specialty group as a group that consists of one specialty type, and a multispecialty group as a group that consists of two or more specialty types. We also finalized at § 414.1305 the definition of an MVP participant for the purpose of MVP reporting. The definition of MVP Participant established in the CY 2022 PFS final rule (86 FR 65392 through 65394) would only allow multispecialty groups to participate as a group for MVP reporting beginning with the CY 2023 performance period/CY 2025 MIPS payment year through the CY 2025 performance period/2027 MIPS payment year. Beginning with the CY 2026 performance period/CY 2028 MIPS payment year, only single specialty groups would be able to participate as a group for MVP reporting, and multispecialty groups will be required to form subgroups for reporting an MVP. We believe that the definitions of single specialty group and multispecialty group would allow groups to distinguish their specialty type or types and assess the requirement to participate as a subgroup in MVP reporting beginning with the CY 2026 performance period/CY 2028 MIPS payment year. In the CY 2022 PFS proposed rule (86 FR 39360), we proposed to identify a group's specialty type or types using data from the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). We received comments expressing concerns that the use of PECOS specialty designations would result in the exclusion of certain clinician types, such as NPs and PAs (86 FR 65398). We adopted definitions of a single specialty group and a multispecialty group in the CY 2022 PFS final rule but did not finalize PECOS as the data source or

specify another data source that we would use to determine a group's specialty type. We noted that we needed additional time to better understand our options to utilize different data sources when making this determination (86 FR 65399).

Having reviewed the available data sources, we believe that Medicare Part B claims data is the appropriate data source for determining a group's specialty type or types for purposes of MVP reporting. Currently, we use PECOS and Medicare Part B claims data to identify clinician specialty for certain purposes. For purposes of public reporting, we rely on PECOS as the primary data source, and for purposes of MIPS eligibility determination, we use both PECOS and claims data. Additionally, we use the information on claims to identify clinician specialty when attributing some of the measures in the cost and quality performance categories.

A clinician's primary specialty designation in PECOS is identified by the clinician in the Medicare enrollment application for physicians and non-physician practitioners. Additionally, there may be instances when a clinician would be allowed to select more than one primary specialty in PECOS.³⁹⁷ For example, a primary specialty designation of cardiothoracic surgery is not available in PECOS, and therefore, a cardiothoracic surgeon would have two primary specialty designations, one for cardiac surgery and another for thoracic surgery. In such instances, it would be difficult for CMS to identify a clinician's primary specialty using their PECOS designation. The specialty codes used on Medicare Part B claims³⁹⁸ are not reported by clinicians but are assigned by the Medicare Administrative Contractors (MACs) and derived from the clinician-reported specialty information in PECOS. In instances where more than one specialty code appears on a claim, we determine primary specialty based on the specialty code used for the plurality of the services billed by the clinician. We analyzed the identification of specialty for clinicians using claims data and PECOS data and found a variance rate of less than 1 percent between the two data sources. Given the strong alignment between the data sources and our historical use of claims data to identify a clinician's specialty, we believe that Medicare Part B claims data would be

the best data source to use to determine a group's specialty type or types for purposes of participation in MVPs.

We note that in response to our proposal to use PECOS data in determining specialty, some commenters recommended that, instead of PECOS, CMS should utilize specialty taxonomy codes which they stated were more detailed than PECOS specialty codes (86 FR 65398). While these commenters were not specific in their request, we understood them to be referring to the provider taxonomy codes used on the application to receive a National Provider Identifier (NPI). We agree with the commenters that in some instances, the health care provider taxonomy code set may include more specificity than the information found in the specialty codes used on Medicare Part B claims. However, currently we do not use this data for other QPP purposes, and we are uncertain of the extent to which it is maintained by clinicians if their circumstances change. While we considered the use of this data as an alternative, we do not believe it is necessary to introduce a new data source at this point, given that subgroup reporting is voluntary at this time.

For these reasons, we propose to modify the definition of a single specialty group at § 414.1305 to state that single specialty group means a group that consists of one specialty type as determined by CMS using Medicare Part B claims. We also propose to modify the definition of a multispecialty group at § 414.1305 to state that multispecialty group means a group that consists of two or more specialty types as determined by CMS using Medicare Part B claims. We seek public comment on these proposals and request comment on additional data sources CMS could use to determine a group's specialty type or types.

(3) Subgroup Registration Requirements

(a) Background

We established at § 414.1365(b) a registration process for clinicians who choose to report MVPs through a subgroup. Under this policy, a subgroup must register between April 1 and November 30 of the applicable calendar year performance period or a later date specified by CMS. A subgroup that elects to report the CAHPS for MIPS Survey³⁹⁹ associated with an MVP must complete their registration by June 30 of the applicable performance period (86 FR 65416). At the time of registration, a subgroup must select an MVP on which it intends to report, and a population

³⁹⁷ <https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/downloads/cms855i.pdf>.

³⁹⁸ <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c26pdf.pdf>.

³⁹⁹ OMB control number 0938–1222; Expiration date 05/31/2022 (pending re-approval).

health measure included in the foundational layer of the MVP (86 FR 65416 and 65417). Additionally, a subgroup may select an outcomes-based administrative claims measure if available in an MVP (86 FR 65417). We finalized that a subgroup must submit a list of TIN/NPIs associated with the subgroup and a plain language name for the subgroup (§ 414.1365(b)(2)(ii)). We note that we are not currently proposing any changes to the subgroup registration timeline. We refer readers to the CY 2022 PFS final rule (86 FR 65415 through 65418) for additional details on subgroup registration requirements.

(b) Subgroup Description Requirement

In the CY 2022 PFS final rule (86 FR 65399), we defined a subgroup as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. We did not propose any criteria for limiting the composition of a subgroup but did solicit comment on criteria that we could consider in the future (86 FR 39362), such as establishing a threshold requiring 75 percent of the eligible clinicians in a group or subgroup to be of the same or a related specialty to form a subgroup. In response to that request, many commenters expressed concern that single specialty subgroups may discourage team-based care and that the primary specialty designation for certain clinicians may not adequately reflect their clinical role (86 FR 65399 and 65400). Several commenters particularly pointed to the challenges associated with NPs and PAs, who are designated as an NP or a PA based on their education credentials as opposed to a clinical specialty relevant to the scope of care provided (86 FR 65399). A few commenters requested further engagement with members of the public before limiting the composition of subgroups so that CMS could better understand how clinicians work together.

We believe the comments we received reflect the reality that clinicians practice in many ways within a group TIN. While we anticipate we may need to establish requirements and/or restrictions on the composition of subgroups through rulemaking in future years, we are not proposing to establish such policies for the CY 2023 performance period/CY 2025 MIPS payment year. We believe that we may need to establish limits on subgroups in order to further our goals of measuring as many clinicians as possible using the measures that are most relevant to their practice. We are concerned that if we do

not establish restrictions or requirements in the future we may not move meaningfully towards that goal. However, given that subgroups will be newly available for the CY 2023 performance period/CY 2025 MIPS payment year and will be voluntary, we do not believe we should yet establish those policies.

To inform our future subgroup policies, we desire to better understand how group TINs form subgroups and how group TINs choose to organize their subgroups. For this reason, we propose that as part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. We would identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text-only field, if the options we provide do not correctly describe the subgroup. We would not evaluate or approve the narrative description, if submitted. Rather, we intend to collect and review the information to better inform our understanding of subgroups and the different ways groups would choose to form subgroups. We believe that receiving the information about the subgroup directly from the group TIN itself would fill a gap in our understanding of the nature of subgroup formation during the transition to MVPs that cannot be filled merely by reviewing PECOS or claims-based group specialty information. We understand requiring such reporting would create some additional burden, but we believe such burden is modest and worth the effort to inform future development of subgroup policies. Furthermore, we are attempting to mitigate this burden by permitting subgroups to select from certain common scenarios for groups to form subgroups, when appropriate, instead of drafting a narrative description. We refer readers to section V.B.9.e.(7)(a) (ii) of this rule for the discussion of estimated burden related to this proposal.

We note that we are not intending for these narratives to be lengthy but expect the narratives to be short descriptions of the nature of practice and appropriately reflect the composition of a subgroup. We offer some illustrative examples for the narrative description:

- *Example 1:* This subgroup represents our cardiovascular service line, which includes cardiologists, cardiothoracic surgeons, and other associated professionals.

- *Example 2:* This subgroup represents our west side practice, which uses one electronic health record (EHR) platform and collaborates on patient care across orthopedic surgeons, physical therapists, NPs, and other associated clinicians.

We also believe that the availability of subgroups will facilitate our efforts to increase health equity. In part, we believe that by creating a smaller group of clinicians to analyze, we can better understand care at the patient and community level. This is important for measuring and improving health equity because subgroup data could be utilized to identify gaps in clinical outcomes, patient characteristics, and specialist care availability on a more targeted level than shown by examining TIN-level data. We also believe that group practices may share this same interest in improving health equity. For example, a group may have clinicians practicing in different locations and may choose to organize their subgroups to focus on certain underserved populations based on geography or income. We hope to better inform our understanding of clinicians supporting this goal through narrative descriptions of subgroup organization.

(c) Limitation of One Subgroup per TIN–NPI Combination

In the CY 2022 PFS final rule (86 FR 65414 and 65415), we finalized at § 414.1318(c)(2) that subgroups will have their performance assessed at the subgroup level across all the MIPS performance categories. Additionally, we did not propose any criteria for the composition of subgroups (86 FR 39362). We must nonetheless place some restrictions on the allocation of a group TIN's clinicians among subgroups to properly score each subgroup. Clinicians in small groups are eligible to register as subgroups and report using Medicare Part B claims. While we establish a subgroup identifier as part of the registration process, this subgroup identifier would not be present on any claims data. If we were to allow a clinician to register under more than one subgroup in a single group TIN, we would be unable to determine to which subgroup a particular claim should be connected. Therefore, we propose at § 414.1318(a)(3) that an individual eligible clinician, as represented by a TIN–NPI combination may register for no more than one subgroup within a group's TIN. We are not proposing any other restrictions or requirements on the composition of subgroups at this time.

We are also proposing to limit a clinician to a single subgroup per group TIN to overcome current limitations in

scoring certain cost and quality measures. In section IV.A.8.e.(4)(b) of this rule, we are proposing to evaluate clinicians in subgroups using measures in the cost performance category, and the population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group's performance. We are making that proposal due to current technical limitations related to attribution and risk adjustment of such measures but are working to potentially overcome those challenges in the future. CMS calculates administrative claims measures using Medicare claims data. This does not require any additional reporting by clinicians. If we were to allow a clinician to be a part of more than one subgroup within a single group TIN, however, we would be unable to identify which subgroup the clinician was part of for the purposes of attributing cost measures, population health measures, and outcomes-based administrative claims measures.

We recognize that our proposal to limit each TIN–NPI combination to a single subgroup per group TIN would limit how a group may establish its subgroups. We believe there may be clinicians who work in different capacities within a single group TIN (for example, a clinician who works in a cardiology clinic on Mondays and the primary care clinic Tuesday–Friday) which could be considered to work in multiple subgroups in a single group TIN. For this reason, we are interested in hearing perspectives from groups on how common this is, and if there are ways that we could match a clinician to a subgroup for measures reported through Medicare Part B claims or calculated using administrative claims.

(d) Subgroup Determination Period

In the CY 2022 PFS final rule, we established the definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI (86 FR 65399). We also codified at § 414.1318(a) that, for a MIPS payment year, low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310. We also established at § 414.1365(b) a process for clinicians to register as a subgroup for the purpose of reporting the measures and activities in an MVP (86 FR 65415 through 65418). Previously, we defined a MIPS determination period—the period of activity we review to identify clinicians

who are eligible to participate in MIPS—to mean, in relevant part, a 24-month assessment period consisting of: (1) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, and that includes a 30-day claims run out; and (2) A second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs (§ 414.1305; 83 FR 59727 through 59730). In order to determine their eligibility to participate in MIPS for the applicable performance year, an individual clinician or a group must meet or exceed the low-volume threshold criteria specified under § 414.1305 during the MIPS determination period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. Additionally, an individual eligible clinician or group for which the unique billing TIN and NPI combination is established during the second 12-month segment of the MIPS determination period will be assessed based solely on the results of such segment.

In the CY 2022 PFS final rule, we did not discuss how CMS would assess the low-volume threshold for individual clinicians and groups for the purpose of subgroup participation. Specifically, we did not discuss whether any special considerations were necessary when applying the MIPS determination period for clinicians participating as subgroups. Currently, we review claims and PECOS data from a MIPS determination period to determine MIPS eligibility for an individual clinician and a group. The initial 12-month segment of the MIPS determination period spans from October 1 of the calendar year 2 years prior to the applicable performance period to September 30 of the calendar year preceding the applicable performance period and includes a 30-day claims run out. Individual clinicians and groups receive their initial eligibility information prior to the applicable performance period but do not know their final eligibility determination until November or December of the applicable performance period.

Using a 2-year MIPS determination period is incompatible with the framework we have established for subgroup participation in MVPs. For example, for the CY 2023 performance period/CY 2025 MIPS payment year, individual clinicians and groups that choose to participate as subgroups would only know their preliminary eligibility at the time of subgroup registration. We believe that by using the preliminary eligibility information, clinicians and groups could assess their ability to participate as subgroups early in the performance period and we do not wish to limit subgroup participation for groups that are otherwise eligible based on an eligibility assessment that is not made until after registration is completed. Therefore, we are proposing to add at § 414.1318(a)(4) that CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the initial 12-month segment of the applicable MIPS determination period. Under this proposal, an individual eligible clinician or group determined to be MIPS eligible based on the low-volume threshold determination under § 414.1305 during the initial 12-month segment of the MIPS determination period would continue to be eligible for an applicable performance period regardless of the results of the second segment of the low-volume threshold determination. Additionally, we propose to make conforming changes at § 414.1318(a)(1) to state that, except as provided under paragraph (a)(2) of this section and subject to (a)(4) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and 414.1310. We note that we are not making any further changes to the application of low-volume threshold and special status as described under § 414.1318(a)(1).

In summary, to form a subgroup, a group would need to be eligible to participate in MIPS as a group and have at least one MIPS eligible clinician in the subgroup who was also a MIPS eligible clinician during the initial 12-month segment of the determination period. Such an individual eligible clinician or group would continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. A subgroup may thus include an individual clinician who does not exceed the low-volume threshold during the first segment of the MIPS determination

period only if the subgroup has at least one MIPS eligible clinician during the first 12-month segment of the MIPS determination period and the affiliated group also meets the low-volume threshold during the first 12-month segment of the MIPS determination period. We believe this would also allow practices to identify and place clinicians in appropriate subgroups, choose the measures and activities relevant to subgroups, make administrative changes to their workflows and EHR systems, and comprehensively capture clinician performance through subgroups. Using the first segment of the determination period would also be consistent with the use of the first segment of the MIPS determination period for Virtual Groups (§ 414.1315(c)(1)(ii); 83 FR 59743 and 59744).

We seek public comment on this proposal.

(4) Subgroup Reporting and Scoring

(a) Subgroups Reporting the APP

We refer readers to section IV.A.9.b of this proposed rule for our proposals with regard to subgroups reporting the APP.

(b) Subgroup Scores for Administrative Claims Measures and Cost Measures

In the CY 2022 PFS final rule, we established at § 414.1318(c)(2) that subgroups will have their performance assessed at the subgroup level across all the MIPS performance categories (86 FR 65414 through 65415). We also established in the quality performance category that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available (86 FR 65421 through 65422). In establishing this policy, we noted our concern about the ability of subgroups to meet the case minimum for an administrative claims measure and our interest in including population health measures in the subgroup's score for the MVP.

In establishing our policies for scoring the cost performance category in MVPs, we received a comment that expressed concern that multi-specialty groups may take advantage of the option to report at the subgroup level to avoid being assessed on cost measures (86 FR 65422). While we intend to monitor subgroup implementation and assess the potential for gaming, we acknowledge the risk of a multi-specialty group forming subgroups in order to avoid being measured in the cost performance category.

Measures in the cost performance category, as well as population health measures (which are part of the foundational layer of MVPs) and outcomes-based administrative claims measures in the quality performance category, are not reported directly by clinicians. Instead, CMS calculates these measures based on Medicare administrative claims data. Each measure includes an attribution and risk adjustment methodology within the specifications, which are available for review at <https://qpp.cms.gov/>. These measures are created and tested for validity and reliability using Medicare administrative claims data, which includes the identification of the TIN and the clinician's NPI. However, because subgroups are established exclusively for the purpose of participation in the Quality Payment Program, we are unable to identify a subgroup using existing or future claims data, and therefore, it may not be possible to test these measures for validity and reliability for subgroups using claims data. While we believe in general that subgroups can be measured in the same manner as we measure groups, there are complications related to the establishment of subgroups. Subgroups differ from groups in a couple of key ways: First, the creation of a subgroup does not change the nature of the group, so a patient could be attributed to both a group and a subgroup. In addition, a group TIN is not required to allocate all clinicians into subgroups. This affects measures in different ways depending on the attribution methodology of a measure. For example, in the total per capita cost measure, months are attributed to a particular group TIN or TIN–NPI based on specific primary care services. In this measure, costs are assigned to a single group TIN for the purpose of measuring the group TIN and a single TIN–NPI for the purpose of measuring the TIN–NPI. We believe we could assign a patient to a single subgroup, as we have also proposed to limit NPIs to a single subgroup per TIN. However, since we do not have an existing data source for subgroup composition, we are unable to examine the data to determine if performance on the measure is reliable and valid at the subgroup level.

For these reasons, we propose to assess subgroups on measures in the cost performance category, and population health measures and outcomes-based administrative claims measures in the quality performance category, based on their affiliated group. We propose to modify § 414.1365(d)(3)(i)(A)(1) to read that a

subgroup is scored on each selected population health measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We also propose to add § 414.1365(d)(3)(i)(B)(1) so that a subgroup is scored on each selected outcomes-based administrative claims measure based on its affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points. We also propose to add § 414.1365(d)(3)(ii)(A) to state that a subgroup is scored on each cost measure included in the MVP that they select and report based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

We are concerned that measuring subgroups based on their affiliated group score for these measures may detract from our efforts to generate more clinically relevant and granular information about clinician performance. For this reason, we intend to pursue potential technical solutions to these issues in the future, to enable us to measure clinicians in subgroups on these measures at the subgroup level. Even if we address these technical issues, we are still concerned that clinicians may use the opportunity to form subgroups to avoid being measured on cost as discussed in the public comment we received (86 FR 65422). If we are able to address the technical limitations in the future and evaluate performance at the subgroup level, we would anticipate developing policies similar to our existing policy for population health measures to use the affiliated group score if we are unable to calculate the measures for the subgroup. This would allow us to focus our measurement at the subgroup level but limit the opportunity of groups to use the formation of subgroups to avoid being measured in the cost performance category. Since we are uncertain if we will be able to address these technical issues, we are not proposing a policy at this time.

We also believe the registration information we receive from subgroups for CY 2023 performance period/CY 2025 MIPS payment year will help us to

learn more about the nature of subgroups and better test our measures.

We seek public comment on these proposals.

(c) Scoring for Subgroups That Register But Do Not Report

As described in the CY 2022 PFS rule (86 FR 65415 through 65418), groups interested in participating as subgroups for reporting the measures and activities in an MVP must adhere to the registration process established at § 414.1365(b). To be assessed on their performance at a subgroup level, clinicians participating as subgroups would need to meet the reporting requirements outlined at § 414.1365(c). We expect subgroups to register with the intent to submit data for the measures and activities in an MVP because they wish to be assessed based on their performance at the subgroup level. We also believe there will be instances where a subgroup would register but not submit data for the applicable performance period or clinicians in a registered subgroup would choose to participate in MIPS via a different reporting option instead of reporting as a subgroup. We considered whether we should assign a score for a subgroup regardless of their submission status. At this point in time, we want to encourage groups to explore the subgroup reporting option and not penalize subgroups that do not submit data. During the voluntary years of subgroup reporting, we do not intend to assign a subgroup score in instances when we do not receive any MVP data for clinicians in registered subgroups. However, we expect that MIPS eligible clinicians in registered subgroups

would participate in MIPS via another available reporting option as they would be subject to the MIPS payment adjustment under the TIN. Under the existing scoring hierarchy established in the CY 2022 PFS final rule (86 FR 65536 and 65537), a clinician is assigned the highest of the available final scores associated with the clinician's TIN/NPI.

For these reasons, we propose at § 414.1318(b)(1) that we will not assign a final score for a subgroup that registers and does not submit data as a subgroup for the applicable performance period. Additionally, we propose to make conforming changes at § 414.1318(b) to state that, except as provided under § 414.1317(b) and paragraph (b)(1) of this section, each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance. We intend to continue monitoring the participation trends for subgroup reporting and reevaluate scoring for registered subgroups that do not submit data as we move towards mandatory subgroup reporting in the future.

(d) Subgroup Examples

In the CY 2022 PFS final rule (86 FR 65400), we stated that during the initial years of subgroup reporting, the affiliated group will continue to include subgroup reporters in their traditional MIPS submission across all four performance categories. Additionally, we updated the scoring hierarchy to include subgroups and to specify that the scoring hierarchy will apply with respect to any available final score that is associated with a TIN/NPI from MVPs, traditional MIPS, and/or the APP (86 FR 65537). We have provided

examples below to illustrate how the final score is applied for a clinician who is part of a TIN where only some of the clinicians in that TIN choose to participate in MIPS through subgroups. The MVPs used in the below examples are for illustrative purposes only and are not intended to be exhaustive of the different ways clinicians could participate in MIPS.

Scenario 1: In this example, we illustrate a TIN that is eligible as a group and includes individual MIPS eligible clinicians. For the purposes of this example, we illustrate scoring for three clinicians who are individually eligible represented by letters for simplicity. A portion of the clinicians under the TIN form one subgroup to report the measures and activities in the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP*. The TIN also forms another subgroup to report the measures and activities in the *Advancing Care for Heart Disease MVP*. The group TIN submits data for the *Optimizing Chronic Disease Management MVP*. The group submission will include the performance of the clinicians in the subgroup. The three individual MIPS eligible clinicians, clinicians A, D, and G, submit data as individuals in traditional MIPS in addition to their submissions as part of a subgroup or the group as a whole. In Table 76, we illustrate the calculated final score for their submissions at the full group, subgroup, and individual level. In Table 77, we illustrate the final scores for the individual TIN/NPI based on the existing scoring hierarchy finalized in the CY 2022 PFS final rule (86 FR 65537).

TABLE 76: Scoring Example for Participation in MIPS: Group, Subgroup, and Individual Reporting (Scenario 1)

Participation Type	What is Being Reported	Final Score
Full group (ABCDEFGG)	Optimizing Chronic Disease Management MVP	90
Subgroup #1 (ABC)	Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP	80
Subgroup #2 (FG)	Advancing Care for Heart Disease MVP	97
Individual reporter (A)	Traditional MIPS	98
Individual reporter (D)	Traditional MIPS	88
Individual reporter (G)	Traditional MIPS	60

TABLE 77: Final Score for MIPS Group, Subgroup, and Individual Reporting (Scenario 1)

TIN-NPI	Full Group Final Score	Subgroup Final Score	Individual Final Score	Final Score Attributed to TIN/NPI	Reason for Final Score Attributed to TIN/NPI
A	90	80	98	98	Individual score is higher than both full group and subgroup score.
B	90	80	N/A	90	Full group score is higher than subgroup score.
C	90	80	N/A	90	Full group score is higher than subgroup score.
D	90	N/A	88	90	Full group score is higher than individual score – no subgroup score.
E	90	N/A	N/A	90	Only full group score is available.
F	90	97	N/A	97	Subgroup score is higher than full group score.
G	90	97	60	97	Subgroup score is higher than full group score and individual score.

Scenario 2: In contrast to scenario 1, in this example, we illustrate final scoring for a TIN when a portion of the clinicians under the TIN form one subgroup for reporting an MVP and the whole TIN participates as a group only for reporting traditional MIPS. Similar to scenario 1, the TIN is eligible as a group and includes individual eligible clinicians. We note that the TIN does not participate as a group for MVP reporting. For the purposes of this

example, we illustrate scoring for three clinicians who are individually eligible represented by letters for simplicity. A portion of the clinicians under the TIN form only one subgroup to report the measures and activities in the *Advancing Care for Heart Disease MVP*. The group TIN submits data for traditional MIPS. *The group submission will include the performance of the clinicians in the subgroup.* The three individual MIPS eligible clinicians,

clinicians A, D, and G, submit data as individuals in traditional MIPS in addition to their submissions as part of the subgroup or the whole group. In Table 78, we illustrate the calculated final score for their submissions at the full group, subgroup, and individual level. In Table 79, we illustrate the final scores for the individual TIN/NPI based on the existing scoring hierarchy finalized in the CY 2022 PFS final rule (86 FR 65537).

TABLE 78: Scoring Example for Participation in MIPS: Group, Subgroup, and Individual Reporting (Scenario 2)

Participation Type	What Is Reported	Final Score
Full group (ABCDEFGG)	Traditional MIPS	90
Subgroup (FG)	Advancing Care for Heart Disease MVP	97
Individual reporter (A)	Traditional MIPS	98
Individual reporter (D)	Traditional MIPS	88
Individual reporter (G)	Traditional MIPS	60

TABLE 79: Final Score for MIPS Group , Subgroup, and Individual Reporting (Scenario 2)

TIN-NPI	Full Group Final Score	Subgroup Final Score	Individual Final Score	Final Score Attributed to TIN/NPI	Reason for Final Score Attributed to TIN/NPI
A	90	N/A	98	98	Individual score is higher than full group score.
B	90	N/A	N/A	90	Full group score, no other scores available.
C	90	N/A	N/A	90	Full group score, no other scores available.
D	90	N/A	88	90	Full group score higher than individual score
E	90	N/A	N/A	90	Full group score, no other scores available
F	90	97	N/A	97	Subgroup score higher than full group score
G	90	97	60	97	Subgroup score higher than full group score and individual score

Scenario 3: In contrast to scenarios 1 and 2, in this scenario, we illustrate final scoring for a TIN that does not participate as group. Similar to scenarios 1 and 2, we have a TIN that is eligible as a group and includes individual eligible clinicians. In this scenario, a portion of the clinicians under the TIN form two subgroups for reporting an MVP and the TIN does not submit data at the group level. For the purposes of this example, we illustrate

scoring for three clinicians who are individually eligible represented by letters for simplicity. A portion of the clinicians under the TIN form one subgroup to report the measures and activities in the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP*. The TIN also forms another subgroup to report the measures and activities in the *Optimizing Chronic Disease Management MVP*. Three individual

MIPS eligible clinicians, clinicians A, D, and G, submit data as individuals in traditional MIPS in addition to their submissions as part of a subgroup. In Table 81, we illustrate the calculated final score for their submissions at the full group, subgroup, and individual level. In Table 81, we illustrate the final scores for the individual TIN/NPI based on the existing scoring hierarchy finalized in the CY 2022 PFS final rule (86 FR 65537).

TABLE 80: Scoring Example for Participation in MIPS: Subgroup and Individual Reporting ; No Group Reporting (Scenario 3)

Participation Type	What is Reported	Final Score
Full group (ABCDEFGF)	No submission	N/A
Subgroup #1 (ABC)	Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP	80
Subgroup #2 (FG)	Optimizing Chronic Disease Management MVP	97
Individual reporter (A)	Traditional MIPS	98
Individual reporter (D)	Traditional MIPS	88
Individual reporter (G)	Traditional MIPS	60

TABLE 81: Final Score for MIPS Subgroup and Individual Reporting; No Group Reporting (Scenario 3)

TIN-NPI	Full Group Final Score	Subgroup Final Score	Individual Final Score	Final Score Attributed to TIN/NPI	Reason for Final Score Attributed to TIN/NPI
A	N/A	80	98	98	Individual score higher than subgroup score
B	N/A	80	N/A	90	Subgroup score
C	N/A	80	N/A	90	Subgroup score
D	N/A	N/A	88	88	Individual score only available
E	N/A	N/A	N/A	N/A	Not eligible as individual and no group submission so does not receive score
F	N/A	97	N/A	97	Subgroup score
G	N/A	97	60	97	Subgroup score higher than individual score

9. APM Performance Pathway

a. Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in performance year 2021, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation.

b. APP Reporting Options

Under the APP, MIPS eligible clinicians in an APM Entity that participates in a MIPS APM may report to MIPS and be scored (subject to certain limitations) at the individual clinician, group, or APM Entity level (85 FR 84859 through 84866).⁴⁰⁰ ⁴⁰¹ In that rule, we excluded Virtual Groups from reporting the APP. At that time, the concept of MIPS Value Pathway (MVP) subgroup reporting, through which a subset of MIPS eligible clinicians within a group TIN may report and be scored as a standalone MVP Participant, had not yet been introduced; however, we note that our subsequent use of the term “subgroup” may have caused confusion in light of its use in MVPs. In the CY 2022 PFS final rule, we codified policies related to subgroups at § 414.1318 (86 FR 65671), by which we meant the reporting of the APP by a subset of MIPS eligible clinicians within an APM Entity. In that rule, we stated that because we already identify the MIPS eligible clinicians who are MIPS APM participants based on Participation Lists for each APM, it is unnecessary to require MIPS APM participants to

register as subgroups for purposes of reporting the APP (86 FR 65397 and 65398). We stated that beginning with performance year 2023, we will use Participation Lists to identify the MIPS eligible clinicians within a group TIN that should be included in the subgroup of APM participants for purposes of reporting the APP (86 FR 65398). We also codified at § 414.1318(c)(2) that subgroups would be scored according to the applicable MVP or APP scoring rules. However, under § 414.1367, which governs APP reporting and scoring, no changes were made to reflect the introduction of subgroup-level reporting of the APP.

Recognizing that there is ambiguity in our current rules, we are proposing to modify the text at § 414.1318(c)(2) to remove the reference to subgroup scoring of the APP, and therefore, disallow reporting of the APP by a subset of a group. This proposed change is not intended as a change in policy; as described previously in this section of the proposed rule, it was not our intent to permit MIPS eligible clinicians within an APM entity to be scored at a level in between a group and the individual clinician.

Notwithstanding the foregoing, we recognize that MIPS eligible clinicians may have an interest in reporting as subgroups in the APP, and as we describe further later in this section of the proposed rule, we are considering as an alternative to our above proposed conforming change whether to permit subgroups as a level of reporting the APP, and to modify § 414.1367 accordingly. We believe there could be scenarios where a group may have an interest in reporting the APP through subgroups. For example, if a large multi-specialty TIN had specialists of different types participating in MIPS APMs, and,

therefore, who are eligible for APP scoring, it would be possible that a subgroup within that TIN—perhaps primary care providers working out of a single EHR or practice site—would be interested in reporting the APP using only the data generated by MIPS eligible clinicians in that subgroup. Additionally, particularly after MVP reporting is more widely performed, we recognize that clinicians using subgroup reporting for MVPs may have an easier time joining APMs and reporting the APP if they are able to maintain their reporting at the same level, thereby strengthening MVPs as a glide path to APM participation.

To permit subgroup reporting of the APP, we would need to enable a subgroup registration option for APP reporters, which would inevitably introduce additional administrative burden for the subgroups that would report. Aside from needing to register in order to be recognized as a subgroup, all other aspects of APP reporting for subgroups under this alternative proposal would be the same as for other reporting levels as established at § 414.1367. We request comments on the proposed conforming change and the alternative we considered. In particular, we are interested in commenters' input from the public on which option would best balance the reporting flexibilities with administrative burdens, with the understanding that it may be necessary to revisit these policies in future rulemaking as MVP and APP policies continue to develop, we seek comment on this proposal.

10. MIPS Performance Category Scoring

a. Quality Performance Category

As discussed in section III.J.4 and elsewhere in this proposed rule, we are

⁴⁰⁰ Paperwork Reduction Act: CMS–10621, OMB 0938–1314.

⁴⁰¹ In that rule, we excluded Virtual Groups from reporting via the APP.

seeking comment on the potential addition of new Consumer Assessment of Healthcare Providers and Systems (CAHPS) for the Merit-based Incentive Payment System (MIPS) Survey Questions.

In this proposed rule, we are seeking feedback on the potential future inclusion of two new measures in the APP measure set: MUC21–136: Screening for Social Drivers of Health and MUC21–134: Screen Positive Rate for Social Drivers of Health. The National Quality Forum (NQF) provided conditional support for these two social determinants of health measures during the 2021–2022 cycle and indicated the measures would be appropriate for consideration in the Shared Savings Program.⁴⁰² The measure MUC21–136: Screening for Social Drivers of Health assesses the percentage at which providers screen their adult patients for health-related social needs, which is consistent with the priorities of the agency and program including Meaningful Measures 2.0 priority areas.⁴⁰³ The measure MUC21–134: Screen Positive Rate for Social Drivers of Health assesses the percentage of patients who screened positive for health-related social needs.

We encourage readers to review the Social Determinants of Health Measure and Future Measure Development—Request for Information (RFI) discussed at section III.J.4. of this proposed rule.

b. Improvement Activities Performance Category

Section 414.1367(c)(3) provides that the improvement activities performance category score for MIPS eligible clinicians, groups, and APM Entities reporting via the APP is calculated in accordance with § 414.1380(b)(3) based on the activities required by the MIPS APM that are included in the MIPS final inventory of improvement activities. We assign scores to each MIPS eligible clinician in the improvement activity performance category for participating in MIPS APMs, and MIPS eligible clinicians must earn 40 points in order to receive full credit in this performance category. On an annual basis, we conduct a review of the governing documentation of all MIPS APMs to determine the Improvement Activities that are required by each such APM, and have in all cases found that each MIPS APM requires participants to engage in such Improvement Activities as would earn participants a

performance category score of no less than 40 points, which as discussed previously in this section of the proposed rule is the maximum score for this performance category (§ 414.1380(a)(1)(iii)). The list of required activities for each MIPS APM is compared to the MIPS list of improvement activities and the MIPS APM's participants that report the APP are scored in accordance with MIPS to determine if the APM meets the requirements for awarding full credit (40 points) for Improvement Activities to the participants in the MIPS APM.

We would like to clarify that, even though § 414.1367(c)(3) permits the reporting of additional improvement activities, such reporting would not supersede the automatic award of the maximum score described previously in this section of the proposed rule. Because the reporting of additional improvement activities does not serve any Improvement Activity scoring purpose, we would not use any Improvement Activity performance category submissions for scoring under the APP where the participants were already entitled to full credit for this performance category. This clarification is particularly relevant in instances where an APM Entity is eligible for reweighting of the two remaining performance categories of quality and promoting interoperability. We understand it is possible that, for example, a data submission from the Application Programming Interface (API) of a TIN or individual within an APM Entity could contain incidental Improvement Activity performance information that was collected automatically, though not for the purpose of a MIPS submission or scoring. We clarify that the submission of Improvement Activity performance information in this type of circumstance would not constitute a submission of data for the purpose of scoring the improvement activities performance category under the APP. Therefore, incidental submissions such as the type in this example would never be the sole basis for an APM Entity to be scored under the APP.

c. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score

for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, and 86 FR 65431 through 65445, respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In this proposed rule, we are proposing to:

- Amend the definition of the term “high priority measure” to include quality measurement pertaining to health equity.
- Replace the “Asian language survey completion” variable with “language other than English spoken at home” variable in the case-mix adjustment model for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey.
- Increase the data completeness criteria threshold to at least 75 percent for CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.
- Modify the MIPS quality measure set as described in Appendix 1 of this final rule, including through the addition of new measures, updates to specialty sets, the removal of existing measures, and substantive changes to existing measures.

(b) Quality Data Submission Criteria

(i) Submission Criteria for Quality Measures, Excluding the CAHPS for MIPS Survey Measure

The Meaningful Measures Initiative provides for the identification of high priority areas for quality measurement and quality improvement, which identifies the core quality of care issues that advances our work to improve patient outcomes (83 FR 59719). In order to further identify priority areas for MIPS quality measurement, we defined the term high priority measure at § 414.1305, for years beginning with the CY 2019 performance period/2021 MIPS payment year, as an outcome (including intermediate-outcome and

⁴⁰² https://www.qualityforum.org/setting_priorities/partnership/map_final_reports.aspx.

⁴⁰³ <https://www.cms.gov/meaningful-measures-20-moving-measure-reduction-modernization>.

patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure (83 FR 59761). Generally, if an applicable outcome measure is not available, a MIPS eligible clinician must report a high priority measure (§ 414.1335(a)(1)). To incentivize the voluntary adoption of high priority measures, a MIPS eligible clinician may earn bonus points for reporting such a measure (§ 414.1380(b)(1)(v)(A)). As significant and persistent inequities in healthcare outcomes exist in the United States, we are committed to developing innovative solutions that support access to high quality care and promote health equity, including the exploration of solutions to measure health equity within MIPS. Health equity is a priority area across CMS programs, including MIPS.

Thus, we are proposing to amend the definition of the term high priority measure to include health equity measures. Specifically, starting with the CY 2023 performance period, we are amending the definition of the term high priority measure at § 414.1305 to mean an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure. We believe that it is imperative to include quality measures pertaining to health equity as high priority measures in order to incentivize the adoption of health equity measures by MIPS eligible clinicians.

We seek public comment on our proposal to amend the definition of the term high priority measure.

(ii) Submission Criteria for the CAHPS for MIPS Survey Measure

The CAHPS for MIPS Survey measures patients' experience of care within a group, virtual group, and APM Entity, including Shared Savings Program ACOs. The survey measures ten dimensions of patient experience of care, known as summary survey measures, for which patients may be the best, if not only source of information. The CAHPS for MIPS Survey is optional for all groups, virtual groups, and APM Entities of 2 or more eligible clinicians reporting via traditional MIPS, and is required for Shared Savings Program ACOs reporting via the APM Performance Pathway (APP).

(A) CAHPS for MIPS Survey Measure Case-Mix Adjustment Model

Under the CAHPS for MIPS Survey measure, we adjust summary survey measure scores for case-mix to promote

meaningful comparison of the performance of MIPS groups despite differences in their patient populations (81 FR 77120). The case-mix adjustment model for CAHPS for MIPS Survey measure includes the following case-mix adjustors as of the CY 2022 performance period: age; education; self-reported general health status; self-reported mental health status; proxy response; Medicaid dual eligibility; eligibility for Medicare's low-income subsidy; and Asian language survey completion (86 FR 65444 and 65445).

Only a small percentage of CAHPS for MIPS Survey participants who report speaking a language other than English at home actually complete the survey in that language. We believe that collecting information on the language spoken by the participant at home as a case-mix adjustor rather than the language used by the respondent to complete the survey is likely to capture language preference more accurately, as well as response patterns of participants with similar experiences, for a more meaningful comparison of performance between MIPS groups. Furthermore, more accurately capturing preferred language aligns with CMS's effort to provide culturally and linguistically appropriate services (CLAS), which are intended to advance health equity, improve quality, and help eliminate health care disparities.⁴⁰⁴ Other CMS-administered CAHPS Surveys, such as the CAHPS for Hospice Survey and the Hospital CAHPS Survey, include preferred language variables rather than survey language variables for case-mix adjustment. Furthermore, analysis of CY 2019 performance period for CAHPS for MIPS Survey measure data found that adding case-mix adjustors for Spanish language spoken at home, Asian language(s) spoken at home, and other language spoken at home has minimal impacts on scoring for most groups, and slightly positively impacts the scores of groups with substantial patient populations who speak a language other than English at home. Therefore, we are proposing to revise the CAHPS for MIPS Survey measure case-mix adjustment model to remove the existing adjustor for Asian language survey completion and to add adjustors for Spanish language spoken at home, Asian language spoken at home, and other language spoken at home.

We seek public comment on our proposal to revise the CAHPS for MIPS

Survey measure case-mix adjustment model.

(aa) Adding Items Related to Health Disparity and Price Transparency to the CAHPS for MIPS Survey Measure

We are interested in gathering information directly from patients related to health disparities and price transparency. In section III.G.4.g. of this proposed rule, we discuss the request for information regarding the future consideration of additional and modified questions related to health disparities and price transparency to the CAHPS for MIPS Survey measure. Specifically, we are seeking public comment on the following items in the request for information as outlined in section III.G.4.g. of this proposed rule: (1) the potential future inclusion of health disparities and price transparency questions and whether there are other questions that should be considered for potential future inclusion in the CAHPS for MIPS Survey measure; and (2) the potential for creating a shortened version of the CAHPS for MIPS Survey measure such that it would be more applicable to specialty groups. Therefore, we refer readers to section III.G.4.g. of this proposed rule for further information regarding this request for information.

(iii) Data Completeness Criteria

In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), the data completeness criteria threshold was established to reflect a threshold of at least 50 percent (81 FR 77125). The data completeness criteria threshold increased from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and was maintained at a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year (82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, the data completeness criteria threshold was increased from at least 60 percent to at least 70 percent (84 FR 62952). The data completeness criteria threshold of at least 70 percent was maintained for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). We continue to believe that it is important to incrementally

⁴⁰⁴ Centers for Medicare & Medicaid Services. Achieving Health Equity. Available at <https://www.cms.gov/Outreach-and-Education/MLN/WBT/MLN1857916-OMH-AHE/OMHAHE/ahe/lesson01/09/index.html>.

increase the data completeness criteria as MIPS eligible clinicians, groups, and virtual groups gain experience with MIPS.

We believe that the incorporation of higher data completeness thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevent selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, and 86 FR 65436). We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632 and 86 FR 65436). The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632 and 86 FR 65436).

We previously noted concerns raised regarding the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinicians' ability to participate and perform well under MIPS (81 FR 77121, 82 FR 53632, and 84 FR 62951). We want to ensure that an appropriate, yet achievable, data completeness threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period (as outlined in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76), we believe that it is feasible for eligible clinicians and groups to achieve a higher data completeness threshold without jeopardizing their ability to participate and perform well under MIPS.

We are now proposing to raise the data completeness criteria from 70 percent to 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years. Specifically, we propose in § 414.1340(a)(4) that, for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, a MIPS eligible clinician or a group submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs must submit data on at least 75 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of

payer. Similarly, we are proposing in § 414.1340(b)(4), for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, that a MIPS eligible clinician or a group submitting quality measures data on Medicare Part B claims measures would need to submit data on at least 75 percent of the MIPS eligible clinician or group's patients seen during the corresponding performance period to which the measure applies. We believe that increasing the data completeness criteria threshold to 75 percent for the CY 2024 performance period/2026 MIPS payment year and the CY 2025 performance period/2027 MIPS payment year provides MIPS eligible clinicians with ample time prepare for a higher standard as most clinicians already meet or exceed this standard.

We seek public comment on our proposal to increase the data completeness criteria threshold from at least 70 percent to at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

(c) Selection of MIPS Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding to the list, as appropriate, new measures; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2022 PFS final rule (86 FR 65687 through 65968); CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set, as described in Appendix 1 of this proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2023 performance period, we are proposing a measure set of 194 MIPS quality measures in the inventory.

The new MIPS quality measures that we are proposing to include in MIPS for

the CY 2023 performance period and future years can be found in Table Group A of Appendix 1 to this proposed rule. For the CY 2023 performance period, we are proposing 9 new MIPS quality measures, which includes 1 administrative claims measure; 1 composite measure; 5 high priority measures, and 2 patient-reported outcome measures).

In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. We are proposing modifications to existing specialty sets and new specialty sets as described in Table Group B of Appendix 1 to this proposed rule. Specialty sets may include: new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 3, 2022, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 7 of MIPS under the Quality Payment Program.⁴⁰⁵ These recommendations were based on the MIPS quality measures finalized in the CY 2021 PFS final rule and the 2021 Measures Under Consideration List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with are being proposed in this proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1 of this proposed rule, we refer readers to Table Group C of Appendix 1 of this proposed rule for a list of quality measures and rationales for measure removal. We have previously specified certain criteria that will be used when

⁴⁰⁵ Message to the Quality Payment Program listserv on January 3, 2022, entitled: "The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2023 Performance Year of the Merit-based Incentive Payment System (MIPS)."

we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959). For the CY 2023 performance period, we are proposing to remove 15 MIPS quality measures and partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs. We refer readers to Table Group DD of Appendix 1 of this proposed rule for further information regarding the proposals to retain such measures for retention for use in relevant MVPs. Of the 15 MIPS quality measures proposed for removal, the following pertains to such measures: 1 MIPS quality measure is duplicative to a proposed new MIPS quality measure; 4 quality measures are duplicative of current measures; 7 MIPS quality measures that do not align with the Meaningful Measure Initiative (that is, measures that are unable to produce a benchmark or have limited adoption, or are a standard of care); 2 MIPS quality measures that are under the topped out lifecycle; and 1 measure is extremely topped out. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (83 FR 59763 through 59765). We noted our belief that our proposal to remove the quality measures outlined in Table Group C of this proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria.

Also, we are proposing substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of this proposed rule. We have previously established criteria that would apply when we are considering making substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 and 65442). We are proposing substantive changes to 75 MIPS quality measures, which includes 2 quality measures proposed to be retained for utilization under MVPs (we refer readers to Table Group DD of Appendix 1 of this proposed rule for such measures that are proposed for retention for use in relevant MVPs). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive.

Lastly, we are proposing substantive changes to CMS Web Interface measures that are available as a collection and

submission type for Medicare Shared Savings Program ACOs meeting reporting requirements under the APP. The substantive changes to the CMS Web Interface measures can be found in Table Group E of Appendix 1 of this proposed rule. Also, in section III.G.4.c.(2) of this proposed rule, the establishment of CMS Web Interface benchmark policies for the APP under Medicare Shared Savings Program are being proposed, in which the establishment of such benchmark policies for the APP (at § 425.512) would be applied retroactively starting with the CY 2022 performance year. The CMS Web Interface benchmark policies previously established at § 425.502(b) under the Medicare Shared Savings Program were revised in the CY 2021 PFS final rule, in which the provisions under § 425.502(b) were sunset with the CY 2020 performance year and not applied to the APP under the Medicare Shared Savings Program. For performance year CY 2021, it was noted in the CY 2021 PFS final rule that the CMS Web Interface measure benchmarks developed for the Medicare Shared Savings Program for performance year CY 2020 would be utilized (85 FR 84724). However, as a result of the inadvertent failure to consider the policies that would apply for purposes of establishing benchmarks for the CMS Web Interface measures applicable to the APP starting with performance year CY 2022, benchmark policies for the CMS Web Interface measures were not established for the APP under the Medicare Shared Savings Program. We note that the absence of benchmark policies for the APP under the Medicare Shared Savings Program impacts MIPS. The CMS Web Interface measure benchmarks established for the Medicare Shared Savings Program are utilized for purposes of MIPS (§ 414.1380(b)(1)(ii)(B)). Due to the absence of benchmark policies for the APP under the Medicare Shared Savings Program, CMS Web Interface measure benchmarks are not able to be established starting with performance year 2022. As outlined in section III.G.4.c.(2) of this proposed rule, the establishment of CMS Web Interface benchmark policies for the APP under Medicare Shared Savings Program are being proposed, in which the retroactive adoption of benchmark policies previously established at § 425.502(b) would be applied for performance year CY 2022 (and future performance years as applicable under the Medicare Shared Savings Program). Thus, for the CY 2022 performance period/2024 MIPS payment year (last year in which the

CMS Web Interface is available as a collection and submission type under traditional MIPS for groups, virtual groups, and APM Entities), the CMS Web Interface benchmarks created for the APP under the Medicare Shared Savings Program would be utilized under MIPS.

We are requesting public comment on our proposals to modify the quality performance category measure set.

(i) Screening for Social Drivers of Health Proposed Measure

Established evidence demonstrates that factors beyond the clinical realm are directly associated with patient health outcomes as well as healthcare utilization, costs, and performance in quality-based payment programs.^{406 407} Specifically, social risk factors account for 50 to 70 percent of health outcomes.^{408 409 410} Indeed, the Physicians Foundation surveyed 8,500 physicians in 2018 and found that almost 90 percent of respondents reported their patients had a serious health problem linked to poverty or other social conditions.⁴¹¹

Health-related social needs (HRSNs), which we have previously defined as individual-level, adverse social conditions that negatively impact a person's health or healthcare, are significant risk factors associated with worse health outcomes as well as increased healthcare utilization.⁴¹² In

⁴¹¹ The Physicians Foundation. (2019). Viewpoints: Social Determinants of Health. Available at <https://physiciansfoundation.org/wp-content/uploads/2019/08/The-Physicians-Foundation-SDOH-Viewpoints.pdf>.

⁴¹² Centers for Medicare & Medicaid Services. (2021). A Guide to Using the Accountable Health Communities Health-Related Social Needs

2017, the CMS Innovation Center launched the Accountable Health Communities (AHC) Model to test the impact of addressing the HRSNs of Medicare and Medicaid beneficiaries.^{413 414 415 416} Although there are other models of care that address HRSNs, the AHC Model is one of the first Federal pilots to test whether systematically identifying and addressing core HRSNs—through screening, referral, and community navigation—improves healthcare costs, utilization, and outcomes.⁴¹⁷ Moreover, as described in the CMS Equity Plan for Improving Quality in Medicare, complex interactions among individual need, clinician practice/behavior, and availability of community resources significantly impact healthcare access, quality, and ultimately costs.^{418 419}

Conceptually, HRSNs exist along a continuum with other equity-related terms—such as “social determinants of health” and “social risk factors”—used to describe upstream factors that can adversely affect the health of individuals and communities. Often conflated and even used interchangeably, the variety of terms has created both confusion as well as concern, prompting leaders in the field to adopt “drivers of health” (DOH)

instead.⁴²⁰ Hereafter, we utilize DOH terminology to more holistically capture aforementioned and related concepts, while minimizing potential misinterpretation and/or negative connotation.

We believe that consistently addressing DOH will have two significant benefit for MIPS. First, because DOH disproportionately impact individuals and communities that are disadvantaged and/or underserved by the healthcare system, the promotion of screening for these factors would support clinician practices and health systems in actualizing an expressed commitment to address disparities in care, implementing associated equity measures to track progress, and improving overall health equity.⁴²¹

Second, patient-level DOH data through screening is essential in the long-term to encourage meaningful collaboration among clinicians and community-based organizations, and implement and evaluate related innovations in healthcare and social service delivery.

As a first step towards addressing DOH to close health equity gaps among patients served by MIPS-eligible clinicians, we propose the adoption of an evidence-based DOH measure (we refer readers to Table Group A.3 of Appendix 1 to this proposed rule for the proposed measure information) that would support identification of specific DOH associated with inadequate healthcare access and adverse health outcomes among patients. We note that the measure would enable systematic collection of DOH data. This standardized measure would enable clinicians to systematically address DOH affecting individual patients; thereby, improving not only early identification of risk and/or need, but also prompt referral to relevant resources as well as stronger clinical-community linkages. Further, collecting DOH data could promote more focused collaboration between clinicians/health systems and appropriate community-based organizations to guide cross-sector resource allocation and ultimately improved patient outcomes.

The “Screening for Social Drivers of Health” measure assesses the percent of patients who are 18 years or older

screened for food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. Under our Meaningful Measures Framework,⁴²² the measure addresses the quality priority of “Work with Communities to Promote Best Practices of Healthy Living” through the Meaningful Measures Area of “Equity of Care.” Additionally, pursuant to Meaningful Measures 2.0, this measure addresses the “healthcare equity” priority area and aligns with our commitment to introduce plans to close equity gaps and promote health equity through quality measures, including to “develop and implement measures that reflect social and economic determinants.”⁴²³ The development and proposal of this measure also aligns with the CMS strategic pillar to advance health equity by addressing the health disparities that underlie our health system⁴²⁴ and the 5 CMS health equity priorities for reducing disparities in health.⁴²⁵

- **Priority 1:** Expand the Collection, Reporting, and Analysis of Standardized Data.

- **Priority 2:** Assess Causes of Disparities Within CMS Programs, and Address Inequities in Policies and Operations to Close Gaps.

- **Priority 3:** Build Capacity of Health Care Organizations and the Workforce to Reduce Health and Health Care Disparities.

- **Priority 4:** Advance Language Access, Health Literacy, and the Provision of Culturally Tailored Services.

- **Priority 5:** Increase All Forms of Accessibility to Health Care Services and Coverage.

ethnic minoritized group; being a member of a religious minority; living with a disability; being a member of lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; living in a rural area; or being near or below the poverty level is often associated with worse health outcomes.^{426 427 428 429 430 431 432 433 434}

One approach being employed to reduce health inequity across CMS programs is the expansion of efforts to report quality measure results stratified by patient social risk factors and demographic variables. In the CY 2023 IPPS/LTCH PPS proposed rule (87 FR 28570 through 28576), there is a Request for Information regarding the Overarching Principles for Measuring Healthcare Quality Disparities Across CMS Quality Programs, which describes key considerations that we believe should be accounted for across all CMS quality programs, including MIPS, when advancing the use of measure stratification to address healthcare disparities and advance health equity across our programs. We refer readers to

the CY 2023 IPPS/LTCH PPS proposed rule for further information regarding this Request for Information).

To facilitate efforts to reduce health inequities, we are considering the development of broadly applicable health equity measures for potential use within traditional MIPS and MVPs. As noted in section IV.A.10.c.(1)(d) of this proposed rule, we are proposing one health equity measure for purposes of MIPS, “Screening for Social Drivers of Health,” while other CMS programs are proposing two health equity measures, “Screening for Social Drivers of Health” and “Screen Positive Rate for Social Drivers of Health,” as proposed in the CY 2023 IPPS/LTCH PPS proposed rule (87 FR 28498 through 28506). As we consider the possible future inclusion of additional health equity measures in MIPS in future years (may include, but not limited to, a measure similar to the MUC2021–134 Screen Positive Rate for Social Drivers of Health measure included on the 2021 Measures Under Consideration (MUC) List),⁴³⁵ we seek public comment on the following questions in order to better understand the type and structure of health equity measures that would be appropriate for the implementation in MIPS.

- How would a measure best capture health equity needs under MIPS in the future?

- How would a measure’s quality action provide actionable information and link to improvement in the quality of care provided to populations with health inequities? Would a measure be meaningful to clinicians in small practices or Federally Qualified Health Centers that may have limited or no access to referral services?

- What, if any, would be the limitations in data interpretation if a future health equity-related measure would not be risk-adjusted?

- Would there be any concerns if a future health equity-related measure did not specify requirements for use of consistent tool(s) for data collection under such a measure? Should such a future measure support flexibility in choice of tools while requiring standardized coding of responses to support interoperability?

Also, we seek public comment on the following two potential approaches for measuring health equity in MIPS and MVPs: assessing the collection and use of self-reported patient characteristics; and assessing patient-clinician communication.

(i) Assessing the Collection and Use of Self-Reported Patient Characteristics

A prerequisite for measuring and reporting quality for patients with social risk factors (that is, stratifying quality measures by patient characteristics) is collecting standardized, complete, and accurate patient data. These data include patient demographics and social drivers of health (referred to as “patient characteristics”), which are not routinely or systematically collected across the health care system.^{436 437} We are considering ways to encourage clinicians to collect social risk information, including through the development of a measure that tracks the completeness of self-reported patient characteristics such as race, ethnicity, preferred language, gender identity, sexual orientation, disability status, income, education, employment, food insecurity, housing instability, transportation problems, utility help needs, and interpersonal safety. Patient-reported data are considered to be the gold standard for evaluating quality of care for patients with social risk factors.⁴³⁸

We seek public comment on the following questions in order to understand the feasibility and usefulness of a measure that promotes the collection of self-reported patient characteristics data to provide potential opportunities for the use of patient characteristics data to understand the status of health and health care equity.

- Which self-reported patient characteristics, including but not limited to those listed above, are important to collect in a standardized format to facilitate future use in quality measures, such as stratification? Which characteristics would you consider lower priority for CMS to collect for use in quality measurement?

- Are there certain characteristics that are important to collect together to more meaningfully categorize patient populations (for example, examining the

PMID: 31688554; PMCID: PMC6904433.

intersection of race and gender identity)?

- How important is it to use a standardized tool with coded questions and data elements to collect self-reported patient characteristics across clinicians and practices and what challenges and limitations present without use of a coded and standardized instrument?

- Would the use of a consistent screening tool(s) to collect social drivers of health information improve our ability to meaningfully compare performance across clinicians, such as performance on a measure assessing referrals for identified social needs or if measures are stratified based on identified needs? How are clinicians collecting and using this type of health information to inform clinical care?

- What is a meaningful approach for monitoring improvement in standardized collection of self-reported patient characteristic data while minimizing reporting burden?

- In addition to quality measures, cost measures, and improvement activities applicable to the clinical aspect of an MVP, each MVP includes a foundational layer of population health and promoting interoperability measures, broadly applicable to most, if not all, clinicians. Is the proposed quality measure, “Screening for Social Drivers of Health,” appropriate for use in the foundational layer of MVPs (we refer readers to section IV.A.10.c.(1)(d) and Table Group A of Appendix 1 of this proposed rule for the proposed measure)? If so, then such inclusion would require most or all eligible clinicians to screen for social drivers of health during patient encounters.

- Is it appropriate to develop a quality measure to assess clinician referrals to community-based services upon screening positive for a social driver of health, including food insecurity, housing instability, transportation problems, utility help needs, and interpersonal safety?

We are interested in understanding differences in clinician’s performance on MIPS measures for different patient populations. We understand that patient outcomes, especially for those patients who belong to underserved communities, may be influenced by factors outside of the clinician’s control. We seek public comment on the following question. Would it be beneficial to: stratify either outcome or process measures by patient demographics; and/or stratify either outcome or process measures by identified social needs, such as food insecurity, housing instability,

transportation problems, utility help needs, or interpersonal safety?

(ii) Assessing Patient-Clinician Communication

Effective communication is critical to ensuring mutual clinician-patient understanding, empowering patients, and providing high-quality care across all patient care settings and clinician types. Reliance on unqualified individuals to interpret medical information can lead to misunderstandings, devastating outcomes, or even death.^{439 440} To promote access to care for patients in need of foreign language services, we developed the Guide to Developing a Language Access Plan⁴⁴¹ in February of 2018. The Guide to Developing a Language Access Plan outlines steps organizations can take to provide high-quality and appropriate language assistance services to all individuals they serve. While resources are available, currently, there are not clinician-level measures in MIPS that assess the receipt of language services.⁴⁴² We are considering the development of a patient-reported outcome measure that assesses the receipt of appropriate language services and/or the extent of clinician-patient communication. We are seeking feedback on the feasibility and usefulness of such a measure(s).

If we developed such measure(s), it may be considered for the foundational layer of MVPs, meaning this measure would be required of most, if not all, eligible clinicians. Given the variance in patient needs and organizational resources, we are seeking feedback on the appropriateness of requiring all clinicians to report on such measure(s).

(e) Developing Quality Measures That Address Amputation Avoidance in Diabetic Patients Request for Information

Diabetes affects 34 million, or 13 percent, of adults in the United States.

⁴⁴² CMS Health Services Advisory Group. (2021). CMS Quality Measure Development Plan 2020 Population Health Environmental Scan and Gap Analysis Report for the Quality Payment Program.

A serious potential complication of diabetes is lower extremity amputation (LEA), resulting from peripheral neuropathy (nerve damage), peripheral arterial disease (PAD, reduced blood flow to the extremities), or both. Patients with neuropathy or PAD are vulnerable to developing ulcers on the feet, which, if they become infected and do not heal, can lead to amputation. LEAs occur at a rate of 5.6 per 1000 persons with diabetes, affecting approximately 130,000 patients in 2016,⁴⁴³ and evidence indicates that amputations are on the rise.

The COVID-19 pandemic has likely accelerated rates of amputation, due in part to delayed wound care and preventive care.^{444 445} LEA has devastating consequences for a patient’s health and quality of life;⁴⁴⁶ the 5-year mortality rate following LEA is estimated at 50 percent.⁴⁴⁷ There are known disparities in LEA, with rates of amputation substantially higher among Black, Native American, and Hispanic patients as compared to White non-Hispanic patients.^{448 449} Evidence indicates that there may be gaps in care for certain populations, which contribute to these disparities.⁴⁵⁰ For

⁴⁵⁰ Rivero, M., Nader, N.D., Blochle, R., Harris, L.M., Dryjski, M.L., & Dosluoglu, H.H. (2016).

example, evidence has demonstrated that Black patients are less likely to undergo potentially limb-saving interventions, such as revascularization or wound debridement, prior to having an amputation, as compared to White patients.⁴⁵¹ Disparities are also observed by socioeconomic status and region (with rural regions experiencing higher amputation rates).^{452 453}

High-quality care can reduce the risk of amputation, through activities such as regular foot exams to identify ulcers, screening for risk factors such as neuropathy and PAD, patient engagement in foot self-care, therapeutic footwear for patients at high risk of developing ulcers, offloading treatment for patients who develop ulcers, and revascularization to restore blood flow to the limbs.⁴⁵⁴

We are exploring the development of a process quality measure, as well as a composite measure, for inclusion in MIPS, designed to reduce the risk of LEA among patients with diabetes. Based on review of the literature, technical expert panel (TEP) feedback, and prioritization of health equity, we are prioritizing the following process quality measure concept for potential future development: Ulcer Risk Assessment and Follow-Up. The measure would assess the percent of patients with diabetes who receive neurologic and vascular assessments of their lower extremities to determine ulcer risk, have a documented ulcer risk level, and who receive a follow-up plan of care if identified as high risk for ulcer. We intend to consider either

adoption and modification of an existing measure or development of a new measure to achieve this measure concept. We are seeking feedback on the following questions in order to understand, account for, and address challenges that may be experienced during development, testing, and implementation of the process measure.

- Are neurological and vascular assessments, and the determination of risk the most important care processes in the prevention of foot ulceration among individuals with diabetes?
- Once a process quality measure concept would be fully developed and implemented, would high performance on the measure contribute to a reduction in diabetes-related LEA? Why or why not?

- Once a process quality measure concept would be fully developed and implemented, would clinicians be able to report performance without undue burden? Why or why not?

- Once a process quality measure concept would be fully developed and implemented, should performance be measured at the clinician level or group level? Is the measure appropriate for all clinicians? If not, to whom should the measure apply?

- What would be the benefits and/or unintended consequences of the process quality measure concept?

- Would a process quality measure concept contribute to health equity? Why or why not?

We may also consider the development of a composite quality measure. A composite measure is a measure that combines two or more individual measures and yields a single score. Composite measures are intended to capture information about complex, multidimensional care processes. Within the context of diabetes and LEA, a composite measure may include individual measures focused on A1C control, cardiovascular risk factors (such as blood pressure control, tobacco non-use), peripheral neuropathy screening, PAD screening, evaluation of footwear, and offloading when ulcers occur. We are seeking feedback on the following questions in order to understand, account for, and address challenges that may be experienced during development, testing, and implementation of a composite quality measure.

- Would the single measures comprising the composite be appropriate? Why or why not?
- Once a composite quality measure concept would be fully developed and implemented, would high performance on the measure contribute to a reduction in diabetes-related LEA?

- Once a process quality measure concept would be fully developed and implemented, should performance be measured at the clinician level or group level? Would the measure be appropriate for all clinicians? If not, to whom should the measure apply?

- Once a quality measure concept would be fully developed and implemented, would clinicians be able to report performance without undue burden? Why or why not?

- What would be the benefits and/or unintended consequences of a composite quality measure concept?

- Would a composite quality measure concept contribute to health equity? Why or why not?

(2) Cost Performance Category

(a) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (81 FR 77162 through 77177, 82 FR 53641 through 53648, 83 FR 59765 through 59776, 84 FR 62959 through 62979, 85 FR 84877 through 84881, and 86 FR 65445 through 65461, respectively) for a description of the statutory basis for and existing policies pertaining to the cost performance category.

In this rule, we are proposing to update the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as a care episode group.

(b) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from interested parties, and subsequently, post an operational list of such groups and

codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other interested parties. For more information about past revisions to the operational list, we refer readers to 84 FR 62968 through 62969 and 86 FR 65452 through 65453. The current operational list is available at the MACRA Feedback page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>. Additionally, as required by section 1848(r)(2)(I) of the Act, information on resource use (or cost) measures currently in use in MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of engagement with interested parties, and the percent of expenditures under Medicare Parts A and B that are covered by cost measures must be provided on the website of CMS not later than December 31 of each year.

In prior rulemaking, we have included episode-based measures that focus on specific procedures and conditions in the operational list of care episode and patient condition groups and codes (84 FR 62968 through 62969 and 86 FR 65452 through 65453). Section 1848(r)(2)(D)(ii) of the Act specifies that in establishing the care episode groups, we must take into account the patient's clinical problems at the time items and services are furnished during an episode of care, such as the clinical conditions or diagnoses, whether or not inpatient hospitalization occurs, and the principal procedures or services furnished, as well as other factors we determine appropriate. Section 1848(r)(2)(D)(iii) of the Act specifies that in establishing the patient condition groups, we must take into account the patient's clinical history at the time of a medical visit, such as the patient's combination of chronic conditions, current health status, and recent significant history (such as hospitalization and major surgery during a previous period, such as 3 months), as well as other factors we determine appropriate. Currently, in the operational list there are 21 care episode groups, which served as the basis for the 15 procedural episode-based measures and the 6 acute inpatient medical episode-based measures that have been

established for the cost performance category (83 FR 59767 through 59773, 84 FR 62962 through 62968, and 86 FR 65446 through 65453), and 2 patient condition groups, which served as the basis for the 2 chronic condition episode-based measures that have been established for the cost performance category (86 FR 65446 through 65453). Given that population-based measures, such as the MSPB Clinician and total per capita cost measures, focus on a broader range of patient care, CMS and interested parties have considered them to be distinct from episode-based measures. Therefore, we did not include these two population-based measures in the operational list after they were comprehensively re-evaluated in 2019 and revised for use in MIPS beginning with the CY 2020 performance period/2022 MIPS payment year (84 FR 62974 through 62977). This distinction between episode-based measures and population-based measures also reflects development status as episode-based measures were developed specifically for use in MIPS, while the original versions of the MSPB Clinician and total per capita cost measures were first used in the Value Modifier (VM) program before being adapted for MIPS for the CY 2017 performance period/2019 MIPS payment year (81 FR 77166 through 77168). For additional background on the population-based measures currently in use in MIPS please refer to 84 FR 62969 through 62977.

We propose to add the MSPB Clinician measure to the operational list as a care episode group. Consistent with section 1848(r)(2)(D)(ii) of the Act, the MSPB Clinician measure takes into account the patient's clinical diagnoses at the time of an inpatient hospitalization and includes the costs of various items and services furnished during an episode of care. The MSPB Clinician measure is constructed using many aspects of the same logic as episode-based measures based on the care episode groups currently on the operational list. Both the MSPB Clinician and the episode-based measures are based on clearly-defined episodes and include the services that are clinically related to the clinician's role in the care being assessed. Further, the MSPB Clinician measure attributes episodes under medical Medicare Severity—Diagnosis Related Groups (MS-DRGs) to clinician groups billing at least 30 percent of evaluation and management (E/M) services during an inpatient stay, which is the same attribution logic as the one used for acute inpatient medical episode-based measures. Therefore, designating the

MSPB Clinician measure as a care episode group alongside the episode-based measures would ensure that these similarities are reflected in the operational list. For more information on the MSPB Clinician measure, we refer readers to the CY 2020 PFS final rule (84 FR 62974 through 62977) and to the measure specification documents that are available on the QPP Resource Library at <https://qpp.cms.gov/about/resource-library>.

We note that at this time we are not proposing to add the total per capita cost measure to the operational list as a care episode group or patient condition group. The measure is not constructed based on episodes of care; rather, it includes all costs after a primary care-type relationship has been identified. It also does not focus on specific patient conditions as it aims to include all patients where this clinician-patient relationship has been identified. More detailed information on the total per capita cost measure is included in the measure specifications documents available at the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library>.

We do not intend for our proposal to detract from the importance of episode-based measures or affect our plans to continue developing episode-based measures for potential use in MIPS. There are 7 episode-based measures under development and 4 anticipated episode-based measures to begin development this year. The operational list as revised to reflect the proposal is available on the MACRA Feedback Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>. We seek public comment on our proposal.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886) and the CY 2022 PFS final rule (86 FR 65462 through 65466). We also refer readers to 42 CFR 414.1305 for the definitions of improvement activities and attestation,

§ 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

We are not proposing any changes to the traditional MIPS improvement activities policies for the CY 2023 performance period/2025 MIPS payment year. However, we are proposing changes to the improvement activities Inventory for the CY 2023 performance period/2025 MIPS payment year and future years as follows: adding four new improvement activities; modifying five existing improvement activities; and removing six previously adopted improvement activities.

(b) Improvement Activities Inventory

(i) Annual Call for Activities Background

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory consisting of approximately 95 activities (81 FR 77817 through 77831). We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had conducted numerous interviews with highly performing organizations of all sizes and had conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including the patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ's Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 71259) and the comments received in response to the MIPS and APMs RFI in relation to the improvement activities performance category, which sought input on what activities could be classified as clinical practice improvement activities according to the definition under section 1848(q)(2)(C)(v)(III) of the Act.

For the CY 2018 performance period/2020 MIPS payment year, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program CY 2018 performance period/

2020 MIPS payment year and future years through subregulatory guidance.⁴⁵⁵ In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for the CY 2019 performance period/2021 MIPS payment year and for future years, we finalized a formal Annual Call for Activities process for the addition of possible new activities and for possible modifications to current activities in the improvement activities Inventory. This process included the requirement to submit a nomination form similar to the one we utilized for CY 2018 performance period/2020 MIPS payment year (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing improvement activity, the stakeholder must submit a nomination form (OMB control #0938–1314) available at www.qpp.cms.gov during the Annual Call for Activities.

(ii) Proposed Changes to the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix to the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 to the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 to the CY 2020 PFS final rule (84 FR 63514 through 63538), Tables A, B, and C in the Appendix 2 to the CY 2021 PFS final rule (85 FR 85370 through 85377), and Tables A, B, and C in the Appendix 2 to the CY 2022 PFS final rule (86 FR 65969 through 65997) for our previously finalized improvement activities Inventories. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2020> for a complete list of the current improvement activities. In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant stakeholders identify as improving

clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

In this proposed rule, we are proposing to add four new improvement activities, modify five existing improvement activities, and remove six previously adopted improvement activities for the CY 2023 performance period/2025 MIPS payment year and future years. We refer readers to Appendix 2 to this proposed rule for more details.

All of our proposed new improvement activities are responsive to the Administration's goal of advancing health equity for all, as outlined in the President's January 20, 2021, Executive Order 13985, "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government" (<https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/20/executive-order-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government/>). Additionally, all of the proposed new improvement activities address Priorities for Reducing Disparities in Health, as described in the CMS Framework for Health Equity (<https://www.cms.gov/About-CMS/Agency-Information/OMH/equity-initiatives/framework-for-health-equity>).

The first proposed new improvement activity, IA_AHE_XX titled "Use Security Labeling Services Available in Certified Health Information Technology (IT) for Electronic Health Record (EHR) Data to Facilitate Data Segmentation" would promote the adoption of technology certified to the Security tags—summary of care—send and Security tags—summary of care—receive criteria at 45 CFR 170.315(b)(7) and (b)(8) in the ONC Health IT Certification Program.^{456 457} ONC finalized updated versions of these criteria as part of the ONC 21st Century Cures Act Final Rule (85 FR 25702), which are available for certification by health IT developers. Security tagging allows sharing of certain portions of an EHR while not sharing others, such as sensitive information related to drivers of health. We refer readers to the 2015 Edition final rule (80 FR 62647) for further details. This proposed improvement activity would involve

⁴⁵⁶ For more information see: [HealthIT.gov](https://www.healthit.gov). (2020). §.(b)(7) Security tags—summary of care—receive. https://www.healthit.gov/test-method/data-segmentation-privacy-receive#cures_ccg.

⁴⁵⁷ For more information see: [HealthIT.gov](https://www.healthit.gov). (2020). §.(b)(8) Security tags—summary of care—send. https://www.healthit.gov/test-method/data-segmentation-privacy-send#cures_ccg.

⁴⁵⁵ CMS, *Annual Call for Measures and Activities: Fact Sheet*, https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf.

clinicians working with their EHR vendors to implement technology meeting the security tags criteria in practice systems and clinic workflows. We believe that implementing this technology would improve interoperability while protecting patient privacy, thus improving care delivery and patients' care experience.⁴⁵⁸ We believe this activity is likely to improve patient outcomes because protection of patient privacy and increased interoperability helps improve patient care delivery. This proposed improvement activity would address the CMS Framework for Health Equity Priority 1, Expand the Collection, Reporting, and Analysis of Standardized Data.⁴⁵⁹

The proposed new improvement activity IA_AHE_XX titled "Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients" supports both CMS Framework for Health Equity Priority 1 and Priority 3, Build Capacity of Health Care Organizations and the Workforce to Reduce Health and Health Care Disparities. Eligible clinicians would receive improvement activity credit for creating and implementing a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population, which may include analysis of sexual orientation and gender identity (SO/GI) data to identify and address disparities in care. Actions to implement this activity may include identifying target goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on SO/GI terminology (including as supported by certified health IT and ONC's United States Core Data for Interoperability [USCDI] as finalized as 45 CFR 170.213), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories. LGBTQ+ individuals face health disparities and challenges navigating and accessing healthcare.^{460 461} We refer

readers to the ONC USCDI website at <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi> for further information. Due to lack of clinician training about providing culturally competent and sensitive care for LGBTQ+ individuals, several studies indicate that LGBTQ+ patients, especially gender minority patients, have high rates of negative healthcare experiences.^{462 463 464} This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on improving care for LGBTQ+ patients. We believe this activity has the potential to improve clinical practice and care delivery because training clinicians about working with LGBTQ+ patients may lead to more positive care experiences and health outcomes.⁴⁶⁵

Another proposed new improvement activity, IA_EPA_XX titled "Create and Implement a Language Access Plan" directly responds to the CMS Framework for Health Equity Priority 4, Advance Language Access, Health Literacy, and the Provision of Culturally Tailored Services. This activity involves eligible clinicians' creating and implementing a language access plan to address communication barriers for individuals with limited English proficiency. These language access plans should align with standards for communication and language assistance defined in the National Standards for

and improving collection of sexual orientation and gender identity data in electronic health Records. *Computers, Informatics, Nursing*, 36(6), 267–274. <https://doi.org/10.1097/CIN.0000000000000417>.

Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care. We believe that accurate patient-clinician communication, delivered and received in a culturally competent manner, is an essential aspect of improving equity in healthcare and patient outcomes.^{466 467} This proposed improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on language access. We believe this proposed improvement activity has the potential to improve clinical practice and care delivery and is likely to result in improved patient outcomes, because research indicates the importance of accurate clinical communication in achieving positive patient outcomes.⁴⁶⁸

The fourth proposed new improvement activity, IA_ERP_XX titled "COVID-19 Vaccine Promotion for Practice Staff" supports CMS Framework for Health Equity Priority 3. COVID-19 vaccination rates in the U.S. can be improved significantly, particularly in underserved communities.⁴⁶⁹ Disparities in COVID-19 vaccination rates have been observed specifically among healthcare workers, with physicians and advanced practiced staff being more likely to be vaccinated than nurses and support staff. Also, it has been reported that Black and younger health care workers have lower vaccination rates than other groups of healthcare workers.⁴⁷⁰ This proposed improvement activity would fill a gap in

⁴⁶⁰ Bosse, J.D., Leblanc, R.G., Jackman, K., & Bjarnadottir, R.I. (2018). Benefits of implementing

the Inventory, which does not currently include an activity focused on COVID-19 vaccination. We believe this activity has the potential to improve clinical practice and is likely to result in improved outcomes and public health, as research indicates the importance of vaccination in reducing the severity and spread of COVID-19.⁴⁷¹

We are also proposing a number of modifications focused on combining activities where possible and other administrative changes. A particularly important proposed modification to an existing activity is focused on Priority 1 of the CMS Framework for Health Equity, Expand the Collection, Reporting, and Analysis of Standardized Data. We are proposing to: (1) recategorize the IA_CC_14 improvement activity, currently titled “Practice improvements that engage community resources to support patient health goals,” from the Care Coordination subcategory to the Achieving Health Equity subcategory, and (2) re-name and re-focus the improvement activity on obtaining and acting on drivers of health data. More specifically, the proposed updated improvement activity with a new ID, IA_AHE_XX, would be titled “Practice Improvements that Engage Community Resources to Address Drivers of Health.” We are proposing to modify this improvement activity description to include ‘drivers of health’ terminology, which better encompasses both ‘social determinants of health (SDOH)’ and ‘health-related social needs (HSRN)’ concepts. We are also proposing to update the list of these factors in the description to reflect a more comprehensive array of drivers of health. These proposed modifications build on ongoing efforts to advance health equity in accordance with the Advance Equity Pillar of the CMS Strategic Plan (<https://www.cms.gov/cms-strategic-plan>). We believe the proposed modifications will better enable eligible clinicians to not only improve clinical practice by screening for and addressing drivers of health, but to also receive credit for their efforts. Furthermore, we anticipate such efforts will be associated with improved clinical outcomes because of the potential impact of social drivers of

health and other upstream factors on both healthcare and health status.^{472 473} Finally, these proposed modifications would also more clearly align this activity with available evidence and other CMS work in this area, including the CMS Innovation Center’s Accountable Health Communities (AHC) Model, designed to test how “addressing health-related social needs through enhanced clinical-community linkages can improve health outcomes and reduce costs.”⁴⁷⁴

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category). For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199–77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), and CY 2022 PFS final rule (86 FR 65466–65490).

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2021 PFS final rule at § 414.1320(g)(1) (85 FR 84886) (subsequently re-designated as § 414.1320(h)(1) (86 FR 65671)), for the 2024 MIPS payment year, and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable

MIPS payment year, up to and including the full calendar year. Thus, for the CY 2025 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within CY 2023, up to and including the full CY 2023 (January 1, 2023 through December 31, 2023). We are not proposing any changes to the Promoting Interoperability performance category performance period that we established under § 414.1320(h)(1).

(c) CEHRT Requirements

The Promoting Interoperability Program and the QPP require the use of CEHRT as defined at 42 CFR 495.4 and 414.1305, respectively. Since 2019, in general, this has consisted of EHR technology (which could include multiple technologies) certified under the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition.

The “21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program” final rule (also referred to as the “ONC 21st Century Cures Act final rule”), published in the May 1, 2020 **Federal Register** (85 FR 25642 through 25961), finalized a number of updates to the 2015 Edition of health IT certification criteria (also referred to as the 2015 Edition Cures Update) and introduced new 2015 Edition certification criteria. In connection with these updates, ONC also finalized that health IT developers have 24 months from the publication date of the final rule (until May 2, 2022) to make technology available that is certified to the updated, or new criteria. In response to additional calls for flexibility in response to the public health emergency (PHE) for COVID-19, ONC published an interim final rule with comment period on November 4, 2020 entitled, “Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the COVID-19 Public Health Emergency” (hereinafter the “ONC interim final rule”) (85 FR 70064). In this interim final rule, ONC finalized extended compliance dates for certain 2015 Edition certification criteria. Specifically, where the ONC 21st Century Cures Act final rule provided that developers of certified health IT have 24 months from the publication

⁴⁷¹ Johnson, A.G., Amin, A.B., Ali, A.R., Hoots, B., Cadwell, B.L., Arora, S., Avoundjian, T., Awofeso, A.O., Barnes, J., Bayoumi, N.S., Busen, K., Chang, C., Cima, M., Crockett, M., Cronquist, A., Davidson, S., Davis, E., Delgadillo, J., Dorabawila, V. . . (2022). COVID-19 incidence and death rates among unvaccinated and fully Vaccinated adults with and without booster doses during periods of delta and omicron variant emergence—25 U.S. jurisdictions, April 4–December 25, 2021. *Morbidity and Mortality Weekly Report (MMWR)*, 71(4), 132–138. <https://doi.org/10.15585/mmwr.mm7104e2>.

⁴⁷³ Gómez, C.A., Kleinman, D.V., Pronk, N., Wrenn Gordon, G.L., Ochiai, E., Blakey, C., Johnson, A., & Brewer, K.H. (2021). Addressing health equity and social determinants of health through healthy people 2030. *Journal of Public Health Management and Practice*, 27, S249–S257. <https://doi.org/10.1097/phh.0000000000001297>.

⁴⁷⁴ Accountable Health Communities Model | CMS Innovation Center.

date of the final rule to make technology certified to new or updated criteria available, ONC extended the timeline until December 31, 2022 (and until December 31, 2023 for 45 CFR 170.315(b)(10), “electronic health information ((EHI) export”).

In the CY 2021 PFS final rule (85 FR 84815 through 84825), we finalized that the technology used by health care providers to satisfy the definitions of CEHRT at §§ 495.4 and 414.1305 must be certified under the ONC Health IT Certification Program, in accordance with the updated 2015 Edition certification criteria as finalized in the ONC 21st Century Cures Act final rule (85 FR 25642). We further finalized aligning the transition period during which health care providers participating in the Promoting Interoperability Program or QPP may use technology certified to either the existing or updated 2015 Edition certification criteria, with the December 31, 2022 date established in the ONC interim final rule for health IT developers to make updated certified health IT available. After this date, health care providers will be required to use only certified technology updated to the 2015 Edition Cures Update for an EHR reporting period or performance period in CY 2023. We are not proposing any changes to this final policy within this proposed rule.

We remind readers that health care providers would not be required to demonstrate that they are using updated technology to meet the CEHRT definitions immediately upon the transition date of December 31, 2022. In accordance with the EHR reporting period and performance period established for the Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, participants are only required to use technology meeting the CEHRT definitions during a self-selected EHR reporting period or performance period of a minimum of any consecutive 90 days in CY 2023, including the final 90 days of 2023 (86 FR 45460 through 45462 and 86 FR 65466, respectively). The eligible hospital, CAH, or MIPS eligible clinician is not required to demonstrate meaningful use of technology meeting the 2015 Edition Cures Update until the EHR reporting period or performance period they have selected.

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

i. Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

(A) Measure Background

We have adopted a Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing objective. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 performance period/CY 2023 MIPS payment year. In the CY 2022 PFS final rule (86 FR 65466 through 65467), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2022 performance period/CY 2024 MIPS payment year.

(B) State PDMPs’ Progress and Previous Interested Parties’ Feedback

In the CY 2020, CY 2021, and CY 2022 PFS final rules (84 FR 62992 through 62994, 85 FR 84887 through 84888 and 86 FR 65467), we described the concerns expressed by interested parties that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. In the CY 2022 PFS proposed rule (86 FR 39410) we discussed our support of efforts to expand the use of PDMPs, describing Federally supported activities aimed at developing a more robust and standardized approach to EHR–PDMP integration, and additional discussions on the feedback we have received from health IT vendors and MIPS eligible clinicians thus far. For more detailed information, we refer readers to the CY 2022 PFS proposed rule (86 FR 39410).

We heard extensive feedback from EHR developers that effectively incorporating the ability to count the number of PDMP queries in the EHR would require more robust measurement specifications. These interested parties stated that EHR

developers may face significant cost burdens if they fully develop numerator and denominator calculations and are then required to change the specification at a later date. Interested parties have stated that the costs of additional development would likely be passed on to health care providers without additional benefit, as this development would be solely for the purpose of calculating the measure, rather than furthering the clinical goal of the measure. While we recognize that a numerator/denominator-based measure remains challenging, we also note (as discussed in more detail later in this section) that the widespread availability of PDMPs across the country, and recent progress toward solutions for connecting PDMPs with health care provider EHR systems, has made use of PDMPs feasible through a wide variety of approaches.

(C) Current Status of PDMP Adoption

Today, all 50 States and several localities host PDMPs.⁴⁷⁵ The final State to establish a PDMP, the State of Missouri, passed legislation to address this issue in 2021, and is currently working to make its PDMP operational. A 2021 American Medical Association report found that physicians and others used State PDMPs more than 910 million times in 2020.⁴⁷⁶ An assessment of PDMPs conducted by the PDMP Training and Technical Assistance Center (TTAC) at the Institute for Intergovernmental Research (IIR) found an increase in the number of PDMPs that are integrated with Health Information Exchanges (HIEs), EHRs, and/or Pharmacy Dispensing Systems (PDSs), with 44 PDMPs integrated in 2021 reflecting an increase from 28 PDMPs with at least one type of integration in 2017. We refer readers to Table 82 for the report’s findings on the type of integration and the number of PDMPs that have implemented that type of integration in 2021.

⁴⁷⁵ Prescription Drug Monitoring Program Training and Technical Assistance Center, PDMP Policies and Capabilities: Results From 2021 State Assessment, September 2021, https://www.pdmpassist.org/pdf/PDMP%20Policies%20and%20Capabilities%202021%20Assessment%20Results_20210921.pdf.

⁴⁷⁶ American Medical Association, 2021 Overdose Epidemic Report, <https://www.ama-assn.org/system/files/ama-overdose-epidemic-report.pdf>.

TABLE 82: PDMP Integration – Type and Number of PDMPs*

Type of Integration	# of PDMPs
EHR and PDS	35
HIE and EHR	20
HIE, EHR, and PDS	18
EHR only	5
HIE only	1
PDS only	1

* PDMP Policies and Capabilities: Results From 2021 State Assessment, September 2021, https://www.pdmpassist.org/pdf/PDMP%20Policies%20and%20Capabilities%202021%20Assessment%20Results_20210921.pdf.

Moreover, a number of enhancements to PDMPs are occurring across the country, including enhancements to RxCheck, which is a free, Federally supported interstate exchange hub for PDMP data. RxCheck is connected to 50 out of 54 PDMPs in states and territories and does not require providers to pay to have the PDMP data integrated into the EHR.

The goal of the project is to allow any health care provider who is live on the eHealth Exchange to use that existing connection to query a patient's record on the RxCheck Hub, which routes the query to individual State PDMPs that are also live on RxCheck. This solution enables health care providers to query PDMPs via existing connections to health information exchange networks. Most States use either RxCheck or Prescription Monitoring Program (PMP) InterConnect or both to facilitate the sharing of PDMP information between States, allowing health care providers to query other States' PDMP information from within their own State PDMP.⁴⁷⁷

We also note that the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (Pub. L. 115–271), enacted in 2018, has focused on ways to address the nation's opioid epidemic. The SUPPORT for Patients and Communities Act included new requirements for PDMP enhancement and integration, to help reduce opioid misuse and overprescribing and promote the effective prevention and treatment of opioid use disorder beginning in October of 2021. Enhanced Federal matching funds were available to States to support related PDMP design, development, and implementation activities during FYs 2019 and 2020.

(D) Proposed Changes to the Query of PDMP Measure and Related Policies

(aa) Proposal To Change the Query of PDMP Measure Description

The description of the Query of PDMP measure provides that for at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law. In section IV.A.10.c.(4)(d)(i)(D) of this proposed rule, beginning with the performance period in CY 2023, we are proposing to require the Query of PDMP measure for MIPS eligible clinicians participating in the Promoting Interoperability performance category. In section IV.A.10.c.(4)(d)(iii) of this proposed rule, we note that should we finalize our proposal to require the Query of PDMP measure beginning with CY 2023, we are proposing two exclusions beginning with the performance period in CY 2023: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period, and (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.

Should we finalize the proposals to require the Query of PDMP measure and the associated exclusions, we believe the inclusion of the phrase “except where prohibited and in accordance with applicable law” in the description of the Query of PDMP measure and in the language of the exclusion would be duplicative and potentially cause confusion. Therefore, we are proposing to remove the phrase “except where prohibited in accordance with applicable law” from the measure description should our proposals to require the Query of PDMP measure and the associated exclusions be finalized. We refer readers to section IV.A.10.c.(4)(d)(i)(D) of this proposed

rule for our proposed measure description that would reflect this proposed change and additional proposed policy changes for the Query of PDMP measure.

(ab) Proposal to Require the Query of PDMP Measure

In the CY 2022 PFS final rule (86 FR 65466 through 65467), we noted that the decision to maintain the Query of PDMP as an optional measure for CY 2022 considered the current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act, our ongoing review of alternative measure approaches, and concerns from interested parties about the current readiness across States for implementation of the existing measure. We also noted that this measure can play an important role in helping health care providers to improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions (86 FR 65467); maintaining it as an optional measure with bonus points signals to the clinician and vendor community that this is an important measure which can help spur development and innovation to reduce barriers and challenges (86 FR 65467).

We continue to believe that PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. Querying the PDMP is important for tracking dispensed controlled substances and improving prescribing practices. Efforts to expand the use of PDMPs and integrate PDMPs with health information technology systems are supported by Federal interested parties including ONC, the Centers for Disease Control and Prevention (CDC),

⁴⁷⁷ GAO–21–22, PRESCRIPTION DRUG MONITORING PROGRAMS: Views on Usefulness and Challenges of Programs.

the Department of Justice (DOJ), and the Substance Abuse and Mental Health Services Administration (SAMHSA). The Query of PDMP measure offers a way to reward health care providers who participate in current PDMP initiatives, including those supported by Federal partners.

While work continues to improve standardized approaches to PDMP and EHR interoperability, we believe that it is feasible at this time to require MIPS eligible clinicians to report the current Query of PDMP measure, which requires reporting a “yes/no” response. Given our policies for the Query of PDMP measure that included increasing the eligible bonus points to reward MIPS eligible clinicians that could report the measure, as well as the recent progress in the availability of PDMPs in all 50 States, and solutions which support accessibility of PDMPs to health care providers, we believe MIPS eligible clinicians have had time to grow familiar with what this measure requires of them, even as technical approaches to the use of PDMPs continue to advance. By requiring a “yes/no” response the measure allows MIPS eligible clinicians to use a variety of technical solutions to conduct a query of the PDMP and receive credit for the measure.

Therefore, beginning with the performance period in CY 2023, we are proposing to require MIPS eligible clinicians to report the Query of PDMP measure (which requires reporting a

“yes/no” response) for the Promoting Interoperability performance category. We would maintain the associated points at 10 points and refer readers to section IV.A.10.c.(4)(l) of this proposed rule for a discussion of our scoring methodology and proposed concurrent changes. As a result of this proposal, the maximum total points available for the Electronic Prescribing Objective would remain at 20 points for CY 2023. We are inviting public comment on these proposals. We are also seeking feedback on ways CMS can ensure coordination and alignment with varying State requirements for PDMPs. Additionally, we invite public comment on what information returned from the PDMP query would be clinically significant.

(ii) Proposed Changes to the Query of PDMP Measure To Include Schedules II, III and IV

The Query of PDMP measure was adopted in the CY 2019 PFS final rule (83 FR 59800 through 59803) as one of two measures under the Electronic Prescribing Objective intended to support HHS initiatives related to the treatment of opioid and substance use disorders by helping health care providers avoid inappropriate prescriptions, improving coordination of prescribing amongst health care providers, and focusing on the advanced use of CEHRT. The measure description for the Query of PDMP measure is as follows: for at least one Schedule II

opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law (83 FR 59800 through 59803).

Under the Controlled Substances Act (CSA),⁴⁷⁸ the Drug Enforcement Administration classifies drugs, substances, and certain chemicals used to make drugs into five distinct categories or schedules depending upon the drug’s acceptable medical use and the drug’s abuse or dependency potential. A drug’s abuse rate is a factor used to determine its classification; for example, Schedule I medications have the highest abuse potential while medications in Schedule V have a low abuse potential. We refer readers to Table 83 for information on each Schedule, including abuse potential, medicinal use, if any, and drug examples. For additional information, we refer readers to the listing of drugs and their schedule located at CSA Scheduling at https://www.deadiversion.usdoj.gov/schedules/orangebook/c_cs_alpha.pdf.⁴⁷⁹

⁴⁷⁸ Public Law 91–513, tit. II, 84 Stat. 1236, 1242–84 (1970); codified, as amended, at 21 U.S.C. 801 *et seq.*

⁴⁷⁹ See also https://www.dea.gov/sites/default/files/2020-04/Drugs%20of%20Abuse%202020-Web%20Version-508%20compliant-4-24-20_0.pdf.

TABLE 83: Controlled Substance Schedules, Descriptions, and Examples*

Schedule	Description	Examples
Schedule I	No accepted medical use, are unsafe, and hold a high potential for abuse.	Heroin and LSD
Schedule II	Accepted medical use, high potential for abuse, abuse could lead to severe psychological or physical dependence.	Hydrocodone, methadone, Demerol, OxyContin, Percocet, morphine, codeine, and amphetamine
Schedule III	Accepted medical use, less potential for abuse than schedule I or II substances, abuse may lead to moderate or low physical dependence or high psychological dependence.	Tylenol with Codeine and anabolic steroids
Schedule IV	Accepted medical use, low potential for abuse relative to schedule III substances, abuse may lead to limited physical or psychological dependence relative to schedule III substances.	Xanax, Klonopin, Valium, and Ativan
Schedule V	Accepted medical use, low potential for abuse relative to schedule IV substances, abuse may lead to limited physical or psychological dependence relative to schedule IV substances.	Cough syrups containing codeine

* GAO-21-22, Prescription Drug Monitoring Programs: Views on Usefulness and Challenges of Programs; 21 U.S.C. section 812, and the U.S. Drug Enforcement Administration.

PDMPs are operated at the State level and individual State requirements for reporting and use differ from State to State.⁴⁸⁰ Currently, every State collects data on schedules II, III, and IV.⁴⁸¹ Some States collect information about certain non-controlled substances that are potentially subject to abuse or on all prescription drugs.⁴⁸² While State laws vary, we note that most State PDMPs require physicians and dispensing pharmacists to review a patient's prescribing information for the past 12 months prior to prescribing or dispensing any Schedule II, III, and IV controlled substances.⁴⁸³

PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. We believe that expanding the requirements of the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids would further support HHS initiatives related to the treatment of opioid and substance use disorders by expanding the types of

drugs included in the Query of PDMP measure while aligning with the PDMP requirements in a majority of States. We also believe this expansion to include additional Scheduled drugs would facilitate more informed prescribing practices and improve patient outcomes. Therefore, beginning with the performance period in CY 2023, we are proposing to expand the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids.

Proposed Measure Description: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.

To align with policy for the Query of PDMP measure with regard to Schedule II opioids, we are proposing the query of the PDMP for prescription drug history must occur prior to the electronic transmission of an electronic prescription for a Schedule II opioid or Schedule III or Schedule IV drug. We also note that this measure would include all permissible prescriptions and dispensing of Schedule II, III, or IV drugs no matter how small the amount prescribed during an encounter in order for MIPS eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, and controlled substances prescribed in high quantities. We also note that multiple prescriptions for Schedule II opioids or

Schedule III and IV drugs prescribed on the same date by the same MIPS eligible clinician would not require multiple queries of the PDMP and only one query would have to be performed for this measure. MIPS eligible clinicians would have flexibility to query the PDMP using data from CEHRT in any manner allowed under State law.

We are inviting public comment on these proposals. We are also inviting public comment on whether to expand this measure to include Schedule V or other drugs with potential for abuse.

(iii) Exclusions

In CY 2019 PFS proposed rule, we proposed an exclusion for MIPS eligible clinicians from reporting the Query of PDMP measure beginning with CY 2020 when the measure would have been required by the Promoting Interoperability performance category (83 FR 35922 through 35923). The proposed exclusion was: Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period. In the CY 2019 PFS final rule, we finalized the Query of PDMP measure as optional for CY 2019, and thus we did not finalize the proposed exclusion (83 FR 59803). We also stated that we would propose policy for CY 2020 in future rulemaking. To date, we have not adopted any exclusions for this measure because it has remained optional for CY 2020 (84 FR 62992 through 62994), CY

⁴⁸⁰ For additional information, we refer readers to <https://www.cdc.gov/drugoverdose/pdf/Leveraging-PDMPs-508.pdf>; <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4605194/>; and <https://www.pdmpassist.org/Policies/Legislative/StatutesAndRegulations>.

⁴⁸² GAO report, GAO-21-22 Prescription Drug Monitoring Programs.

⁴⁸³ <https://www.pdmpassist.org/State>.

2021 (85 FR 84887 through 84888) and CY 2022 (86 FR 65466 through 65467).

In section IV.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule, beginning with the performance period in CY 2023, we are proposing to require MIPS eligible clinicians to report the Query of PDMP measure for the Promoting Interoperability performance category. Should we finalize our proposal to require the Query of PDMP measure beginning with CY 2023, we believe that an exclusion for the measure would be needed for MIPS eligible clinicians. Therefore, we have revisited the exclusion we proposed in the CY 2019 PFS proposed rule (83 FR 35922 through 35923) and are proposing a modified version here. Specifically, if we finalize our proposal to require the Query of PDMP measure in section IV.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule, we are proposing the following exclusion beginning with the performance period in CY 2023: Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period. In addition, if we finalize our proposal to require the Query of PDMP measure in section IV.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule, we are proposing a second exclusion beginning with the performance period in CY 2023: Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period. We adopted this same exclusion previously for the e-Prescribing measure (82 FR 53679). We believe this exclusion is also applicable to the Query of PDMP measure based on similar feedback we received from prior rulemaking, where fewer than 100 encounters were supported as an appropriate cutoff number (82 FR 53680). We are also proposing that if a MIPS eligible clinician claims an exclusion for the Query of PDMP measure, we would redistribute the points associated with the Query of PDMP measure to the e-Prescribing measure under the Electronic Prescribing Objective.

We are inviting public comment on these proposals. We are also asking commenters to provide feedback on barriers to reporting on this measure, barriers related to technology solutions, cost, and workflow, that should be considered for MIPS eligible clinicians. We also request comment on any additional exclusions that we should consider proposing for this measure in future rulemaking.

(iv) Future Direction

While we believe that proposing to require the Query of PDMP measure is feasible and appropriate at this time, we are continuing to work with industry and other Federal partners to advance common standards for exchange of information between PDMPs, EHRs, pharmacy information systems, and exchange networks. We believe this work will ultimately allow us to achieve our ideal State, under which we would modify the Query of PDMP measure to be numerator/denominator-based and require use of standardized functionality within certified health IT systems to support the actions associated with the measure and reporting of a numerator and denominator. We will continue to collaborate with ONC to monitor developments across the industry and efforts to advance relevant standards, and plan to revisit this measure in the future to explore further specifying health IT requirements if they become available and are incorporated into the ONC Health IT Certification Program.

Federally supported activities continue to focus on developing and refining standards-based approaches to enable effective integration into clinical workflows; exploring emerging technical solutions to enhance access to and use of PDMP data; and providing technical resources to a variety of interested parties to advance and scale the interoperability of health IT systems and PDMPs. Moreover, updates to certified health IT systems incorporating application programming interfaces (APIs) based on HL7® FHIR® standard version Release 4 (85 FR 25642) can help support future technical approaches that enable more seamless exchange of data between CEHRT and PDMP systems. For more information about current and emerging standards related to PDMP data capture and exchange, we refer readers to the ONC Interoperability Standards Advisory.⁴⁸⁴

(e) Health Information Exchange (HIE) Objective: Proposed Addition of an Alternative Measure for Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA)

(i) Background on the Health Information Exchange Objective

The Health Information Exchange (HIE) Objective and its associated measures for MIPS eligible clinicians hold particular importance because of

the role they play within the care continuum. In addition, these measures encourage and leverage interoperability on a broader scale and promote health IT-based care coordination. The Health Information Exchange Objective currently includes three measures: Support Electronic Referral Loops by Sending Health Information; Support Electronic Referral Loops by Receiving and Reconciling Health Information; and Health Information Exchange Bi-Directional Exchange. For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59807 through 59812) and the CY 2021 PFS final rule (85 FR 84888 through 84893).

In the CY 2021 PFS final rule (85 FR 84888 through 84893), we finalized the HIE Bi-Directional Exchange measure, under the Health Information Exchange Objective. The HIE Bi-Directional Exchange measure is worth 40 points, the maximum number of points of the Health Information Exchange Objective, and was finalized as an alternative to reporting on the two existing Health Information Exchange Objective measures: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure. To meet the measure, MIPS eligible clinicians must attest to the following statements:

- Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy.
- Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners.
- Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.

We stated that, by enabling bi-directional exchange of information between health care providers and aggregating data across health care providers with disparate systems, HIEs (including a wide range of organizations facilitating health information exchange) can bring together the information needed to create a true longitudinal care record and support improved care coordination by facilitating timely access to robust health information across care settings (CY 2021 PFS proposed rule, 85 FR

⁴⁸⁴ <https://www.healthit.gov/isa/allows-a-provider-request-a-patients-medication-history-a-state-prescription-drug-monitoring>.

50300). We further described how participation in HIEs can amplify health care providers' capacity to share information beyond what a health care provider can achieve through the sending and receiving actions described in the existing measures under the Health Information Exchange Objective, for instance, by facilitating information exchange when a health care provider is unaware of another health care provider's need to receive information about a patient (CY 2021 PFS proposed rule, 85 FR 50300). By finalizing this measure for MIPS eligible clinicians, we sought to ensure that health care providers participating in the Promoting Interoperability performance category would be rewarded for connecting to exchange arrangements that can enable this type of robust information sharing.

(ii) Background on TEFCA

Section 4003(b) of the 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, amended section 3001(c) of the Public Health Service Act (42 U.S.C. 300jj–11(c)), and required HHS to take steps to advance interoperability for the purpose of ensuring full network-to-network exchange of health information. Specifically, Congress directed the National Coordinator to “develop or support a trusted exchange framework, including a common agreement among health information networks nationally.” Since the enactment of the 21st Century Cures Act, HHS has pursued development of a Trusted Exchange Framework and Common Agreement, or TEFCA. ONC's goals for TEFCA are ⁴⁸⁵:

- Goal 1: Establish a universal policy and technical floor for nationwide interoperability.
- Goal 2: Simplify connectivity for organizations to securely exchange information to improve patient care, enhance the welfare of populations, and generate health care value.
- Goal 3: Enable individuals to gather their health care information.

Since we adopted the HIE Bi-Directional Exchange measure, important additional developments have occurred with respect to TEFCA.⁴⁸⁶ On January 18, 2022, ONC announced a significant TEFCA milestone by releasing the Trusted Exchange Framework⁴⁸⁷ and Common

Agreement Version 1.⁴⁸⁸ The Trusted Exchange Framework is a set of non-binding principles for health information exchange, and the Common Agreement for Nationwide Health Information Interoperability Version 1 (also referred to as Common Agreement) is a contract that advances those principles. The Common Agreement and the incorporated by reference Qualified Health Information Network (QHIN) Technical Framework Version 1 (QTF)⁴⁸⁹ establish the technical infrastructure model and governing approach for different health information networks and their users to securely share clinical information with each other—all under commonly agreed-to terms. The Common Agreement is a legal contract that QHINs⁴⁹⁰ can sign with the ONC Recognized Coordinating Entity (RCE),⁴⁹¹ a private-sector entity that implements the Common Agreement and ensures QHINs comply with its terms.

The technical and policy architecture of how exchange occurs under TEFCA follows a network-of-networks structure, which allows for connections at different levels and is inclusive of many different types of entities at different levels, such as health information networks, care practices, hospitals, public health agencies, and Individual

Access Services (IAS)⁴⁹² Providers,⁴⁹³ QHINs connect directly to each other to facilitate nationwide interoperability, and each QHIN can connect Participants, which can connect Subparticipants.⁴⁹⁴ Compared to most nationwide exchange today, the Common Agreement also includes an expanded set of Exchange Purposes⁴⁹⁵ beyond Treatment to include Individual Access Services, Payment, Health Care Operations, Public Health, and Government Benefits Determination—all built upon common technical and policy requirements and to meet key needs of the U.S. health care system. This flexible structure allows interested parties to participate in the way that makes the most sense for them, while also supporting simplified, seamless exchange.

The QTF,⁴⁹⁶ which was developed and released by the RCE, describes the

⁴⁹² The Common Agreement defines Individual Access Services (IAS) as “with respect to the Exchange Purposes definition, the services provided utilizing the Connectivity Services, to the extent consistent with Applicable Law, to an Individual with whom the QHIN, Participant, or Subparticipant has a Direct Relationship to satisfy that Individual's ability to access, inspect, or obtain a copy of that Individual's Required Information that is then maintained by or for any QHIN, Participant, or Subparticipant.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁹³ The Common Agreement defines “IAS Provider” as: “Each QHIN, Participant, and Subparticipant that offers Individual Access Services.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁹⁴ For the Common Agreement definitions of QHIN, Participant, and Subparticipant, see Common Agreement for Nationwide Health Information Interoperability Version 1, at 8–12 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁹⁵ Exchange Purpose(s): means the reason, as authorized by [the] Common Agreement including the Exchange Purposes SOP, for a Request, Use, Disclosure, or Response transmitted via QHIN-to-QHIN exchange as one step in the transmission. Authorized Exchange Purposes are: Treatment, Payment, Health Care Operations, Public Health, Government Benefits Determination, Individual Access Services, and any other purpose authorized as an Exchange Purpose by the Exchange Purposes SOP, each to the extent permitted under Applicable Law, under all applicable provisions of [the] Common Agreement, and, if applicable, under the implementation SOP for the applicable Exchange Purpose. See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁹⁶ Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022),

⁴⁸⁶ For more information on current developments related to TEFCA, we refer readers to www.healthit.gov/TEFCA.

⁴⁸⁷ Trusted Exchange Framework (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Trusted_Exchange_Framework_0122.pdf.

⁴⁸⁸ Common Agreement for Nationwide Health Information Interoperability Version 1 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁸⁹ Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 1.0 (Jan. 2022), https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf.

⁴⁹⁰ The Common Agreement defines a QHIN as “to the extent permitted by applicable SOP(s), a Health Information Network that is a U.S. Entity that has been Designated by the RCE and is a party to the Common Agreement countersigned by the RCE.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 10 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁴⁹¹ In August 2019, ONC awarded a cooperative agreement to The Sequoia Project to serve as the initial RCE. The RCE will operationalize and enforce the Common Agreement, oversee QHIN-facilitated network operations, and ensure compliance by participating QHINs. The RCE will also engage interested parties to create a roadmap for expanding interoperability over time.

functional and technical requirements that a Health Information Network (HIN)⁴⁹⁷ must fulfill to serve as a QHIN under the Common Agreement. The QTF specifies the technical underpinnings for QHIN-to-QHIN exchange and certain other responsibilities described in the Common Agreement. The technical and functional requirements described in the QTF enable information exchange modalities, including querying and message delivery across participating entities.

In general, the information to be exchanged within the TEFCA ecosystem allows for the use of Health Level Seven (HL7®) Implementation Guide for Clinical Document Architecture (CDA®) Release 2: Consolidated CDA Templates for Clinical Notes (US Realm) Draft Standard for Trial Use Release 2.1 (C-CDA 2.1) document format, including data defined as part of U.S. Core Data for Interoperability (USCDI), with allowance for flexibility to further expand the content to support a multitude of use cases.⁴⁹⁸ The Common Agreement and the QTF do not require HL7® Fast Healthcare Interoperability Resource (FHIR®) based exchange. TEFCA allows for the optional exchange of FHIR content using more traditional, established standards to enable the transport of that content. However, TEFCA can nonetheless be a strong catalyst for network enablement of FHIR maturation. To that end, the RCE released a 3-year FHIR Roadmap for TEFCA Exchange, which lays out a deliberate strategy to add FHIR-based exchange under TEFCA in the near future.⁴⁹⁹

(iii) Proposed Enabling Exchange Under TEFCA Measure

In 2022, prospective QHINs are anticipated to begin signing the Common Agreement and applying for designation. The RCE will then begin onboarding and designating QHINs to share information. In 2023, HHS expects interested parties across the care continuum to have increasing opportunities to enable exchange under

TEFCA. Specifically, this would mean such interested parties would be: (1) signatories to either the Common Agreement or an agreement that meets the flow-down requirements of the Common Agreement (called a Framework Agreement⁵⁰⁰ under the Common Agreement); (2) in good standing (that is, not suspended) under that agreement; and (3) enabling secure, bi-directional exchange of information to occur, in production. TEFCA is expected to give individuals and entities easier, more efficient access to more health information. The Common Agreement requires strong privacy and security protections for all entities who elect to participate, including entities not covered by the Health Insurance Portability and Accountability Act (HIPAA).⁵⁰¹

By connecting to a network that connects to a QHIN or directly to a QHIN, a MIPS eligible clinician can share health information in the same manner as described in the attestation statements previously finalized for the HIE Bi-Directional Exchange measure (CY 2021 PFS final rule (85 FR 84888 through 84893). By connecting to an entity that connects to a QHIN, or connecting directly to a QHIN, that supports sharing information on patients as part of a Framework Agreement,⁵⁰² a MIPS eligible clinician would be thereby enabling bi-directional exchange with other health care providers as described in Statement 1 of the HIE Bi-Directional Exchange measure. Since participation in a Framework Agreement as a QHIN, Participant, or Sub-participant will be open to all qualifying entities and will not be restricted by use of a single vendor, a connection via a Framework Agreement would also satisfy the requirements of Statement 2 of the HIE

Bi-Directional Exchange measure. Finally, as discussed above, the technical requirements for exchanging information by entities through the Common Agreement and Framework Agreements utilize standards included in certified technology referenced under the CEHRT definition (see 42 CFR 414.1305), including the ability to exchange and receive data using the C-CDA standard (see certification criteria at 45 CFR 170.315(b)(1) and (b)(2)), thus health care providers participating in a Framework Agreement can use the functions of CEHRT to support bi-directional exchange with an HIE.

To offer health care providers more opportunities to earn credit for the Health Information Exchange Objective, and given the alignment between enabling exchange under TEFCA and the existing HIE Bi-Directional Exchange measure, we are proposing to add an additional measure through which a MIPS eligible clinician could earn credit for the Health Information Exchange Objective by connecting to an entity that connects to a QHIN or connecting directly to a QHIN. Specifically, we are proposing to add the following new measure to the Health Information Exchange Objective beginning with the performance period in CY 2023: Enabling Exchange Under TEFCA measure. We propose MIPS eligible clinicians would have three reporting options for the Health Information Exchange Objective: (1) report on both the Support Electronic Referral Loops by Sending Health Information measure (or the exclusion, if applicable) and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure (or the exclusion, if applicable); (2) report on the HIE Bi-Directional Exchange measure; or (3) report on the proposed Enabling Exchange Under TEFCA measure. We propose the Enabling Exchange Under TEFCA measure would be worth the total amount of points available for the Health Information Exchange Objective. Under the current scoring methodology finalized in the CY 2021 PFS final rule, the Health Information Exchange Objective is worth a total of 40 points (85 FR 84894). We note in section IV.A.10.c.(4) of this proposed rule, we are proposing changes to the scoring methodology beginning with the performance period in CY 2023 such that the Health Information Exchange Objective would be worth no more than 30 points. Therefore, under our proposal, the proposed Enabling Exchange Under TEFCA measure would be worth 30 points. We are proposing

⁴⁹⁷ https://rce.sequoiaproject.org/wp-content/uploads/2022/01/QTF_0122.pdf.

⁴⁹⁸ “Health Information Network” under TEFCA has the meaning assigned to the term “Health Information Network or Health Information Exchange” in the information blocking regulations at 45 CFR 171.102.

⁵⁰⁰ FHIR® Roadmap for TEFCA Exchange Version 1 (Jan. 2022), https://rce.sequoiaproject.org/wp-content/uploads/2022/01/FHIR-Roadmap-v1.0_updated.pdf.

⁵⁰⁰ The Common Agreement defines “Framework Agreement(s)” as: “any one or combination of the Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022) https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁵⁰¹ Common Agreement for Nationwide Health Information Interoperability Version 1, at 8–12 (Jan. 2022), https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

⁵⁰² The Common Agreement defines “Framework Agreement(s)” as: “any one or combination of the Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.” See Common Agreement for Nationwide Health Information Interoperability Version 1, at 6 (Jan. 2022) https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.

this change to the scoring methodology as a result of our proposal in section IV.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule to make the Query of PDMP measure required and worth 10 points. However, should we not finalize the Query of PDMP measure proposal, we propose the Enabling Exchange Under TEFCA measure would be worth 40 points (the current total point value of the Health Information Exchange Objective). In no case could more than 40 points total be earned for the Health Information Exchange Objective.

We believe the new measure for Enabling Exchange Under TEFCA that we are proposing would incentivize MIPS eligible clinicians to exchange information by connecting directly or indirectly to a QHIN and support health information exchange at a national level. We believe that fulfillment of this measure is an extremely high value action. The overall TEFCA goal of establishing a universal floor of interoperability across the country aligns with our commitment to promoting and prioritizing interoperability and exchange of healthcare data. Incentivizing health care providers to enable exchange under TEFCA is a critical component to advancing healthcare data exchange nationwide. We are proposing a MIPS eligible clinician would report the Enabling Exchange Under TEFCA measure by attestation, and the measure would require a “yes/no” response. A “yes” response would enable a MIPS eligible clinician to earn the proposed 30 points allotted to the Health Information Exchange Objective. We propose that a MIPS eligible clinician would attest to the following:

- Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ONC’s website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy.

- Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.

Similar to the HIE Bi-Directional Exchange measure, to successfully attest to this measure, we propose that a MIPS eligible clinician must use the capabilities of CEHRT to support bi-directional exchange under a

Framework Agreement, which includes capabilities that support exchanging the clinical data within the Common Clinical Data Set (CCDS) or the United States Core Data for Interoperability (USCDI). This is consistent with the other measures under the Health Information Exchange Objective, which point to the use of CEHRT to support the exchange of the clinical data within the CCDS or the USCDI.

We believe there are numerous certified health IT capabilities that can support bi-directional exchange under a Framework Agreement. For instance, participants may exchange information under a Framework Agreement by using technology certified to the criterion at 45 CFR 170.315(b)(1), “Care coordination—Transitions of care,” to transmit C-CDAs across a network. Where supported, participants could also utilize API technology certified to either the criterion at 45 CFR 170.315(g)(8), “Design and performance—Application access—data category request,” or (g)(10), “Design and performance—Standardized API for patient and population services,” as finalized in the ONC 21st Century Cures Act final rule (85 FR 25742), to enable exchange of data in the CCDS or USCDI from a participant’s EHR. Additional certified health IT modules may also support exchange of information under a Framework Agreement for transitions of care, including modules certified to certification criteria at 45 CFR 170.315(g)(7), “Design and performance—Application access—patient selection,” and (g)(9), “Design and performance—Application access—all data request,” which support information exchange via API; the certification criterion at 45 CFR 170.315(e)(1), “Patient engagement—View, download, and transmit to 3rd party,” which supports patient access to their information; and the certification criterion at 45 CFR 170.315(g)(6), “Design and performance—Consolidated CDA creation performance,” which supports creation of a summary of care record. We recognize that entities that will connect directly or indirectly to a QHIN are currently interacting with health care providers using certified health IT in a variety of ways, and, as with the Bi-Directional HIE Exchange measure, believe that we should allow for substantial flexibility in how health care providers use certified health IT to exchange data under a Framework Agreement.

The Enabling Exchange Under TEFCA measure could offer health care providers an alternative to earn credit for the Health Information Exchange

Objective. The Enabling Exchange Under TEFCA measure would not require a MIPS eligible clinician to assess whether they participate in a health information exchange that meets the attributes of attestation Statement 2 under the HIE Bi-Directional Exchange measure regarding exchange across a broad network of unaffiliated exchange partners including those using disparate EHRs. These attributes are key to the goals of TEFCA, which aims to offer health care providers a uniform set of expectations around information sharing regardless of which network for information exchange they participate in.

We are inviting public comment on these proposals. As noted in section IV.A.5. of this proposed rule, we are also requesting comment on other ways that TEFCA can advance CMS policy and program objectives, including how TEFCA can support exchange of information required under other measures in the Promoting Interoperability performance category. For instance, how can TEFCA support exchange of information specified under the Public Health and Clinical Data Exchange and the Patient Access to their Health Information objectives?

(f) Modifications to the Public Health and Clinical Data Exchange Objective

(i) Background

The Promoting Interoperability performance category for MIPS eligible clinicians has been an important mechanism for encouraging healthcare data exchange for public health purposes through the Public Health and Clinical Data Exchange Objective. Effective responses to public health events, such as the COVID-19 PHE, require fast, accurate exchange of data between health care providers and Federal, State, and local public health agencies (PHAs). Health care providers collect these data for patient care, and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

There are five measures under the Public Health and Clinical Data Exchange Objective: Immunization Registry Reporting; Syndromic Surveillance Reporting; Electronic Case Reporting; Public Health Registry Reporting; and Clinical Data Registry Reporting. For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817). In the CY 2022 PFS final rule (86 FR 65469 through 65475), we

finalized the requirement for MIPS eligible clinicians to report two of the five measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. These two measures will put PHAs on better footing for future health threats and a long-term COVID-19 pandemic recovery by strengthening two important public health functions: (1) case surveillance; and (2) vaccine uptake. Requiring these measures will enable nationwide automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies. (See <https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html> <https://www.healthit.gov/topic/safety/safer-guides>.)

(ii) Proposed Revisions to Active Engagement

(A) Background

The Promoting Interoperability performance category has been an important mechanism for encouraging data exchange between health care providers and public health agencies through the Public Health and Clinical Data Exchange Objective. We believe requiring MIPS eligible clinicians to report on the Immunization Registry Reporting measure and Electronic Case Reporting measure will motivate EHR vendors to implement the necessary capabilities in their products and encourage MIPS eligible clinicians to engage in the reporting activities described in the measures.

Despite these gains, ensuring the nation's thousands of clinicians implement and initiate data production for these vital public health capabilities remains an ongoing and important effort. The Promoting Interoperability performance category provides an opportunity to continue strengthening the incentives for MIPS eligible clinicians to engage in these essential reporting activities. Without adequate incentives, it will be difficult to attain the comprehensive data exchange needed to ensure fast, complete, actionable data in response to future public health threats.

In the EHR Incentive Program Stage 3 final rule (80 FR 62862 through 62864), beginning with the EHR reporting period in 2016, we established a definition for active engagement under the Public Health and Clinical Data Registry Reporting Objective

(subsequently renamed for MIPS the Public Health and Clinical Data Exchange Objective, see 83 FR 59815 through 59817). Active engagement is defined as when an eligible professional (now a MIPS eligible clinician) is in the process of moving towards sending “production data” to a public health agency or clinical data registry, or is sending production data to a public health agency or clinical data registry. We noted that the term “production data” refers to data generated through clinical processes involving patient care and it is used to distinguish between this data and “test data” which may be submitted for the purposes of enrolling in and testing electronic data transfers. We established the following three options for eligible professionals to demonstrate active engagement:

- *Option 1—Completed registration to submit data:* The eligible professional registered to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted; registration was completed within 60 days after the start of the EHR reporting period; and the eligible professional is awaiting an invitation from the PHA or CDR to begin testing and validation. Eligible professionals that have registered in previous years do not need to submit an additional registration to meet this requirement for each EHR reporting period.

- *Option 2—Testing and validation:* The eligible professional is in the process of testing and validation of the electronic submission of data. The eligible professional must respond to requests from the PHA or, where applicable, the CDR within 30 days; failure to respond twice within an EHR reporting period would result in the eligible professional not meeting the measure.

- *Option 3—Production:* The eligible professional has completed testing and validation of the electronic submission and is electronically submitting production data to the PHA or CDR.

For more information about the current options for active engagement, we refer readers to the EHR Incentive Program Stage 3 final rule (80 FR 62862 through 62864).

(B) Proposed Revision to Options for Active Engagement

The three active engagement options provided flexibility for eligible professionals and MIPS eligible clinicians to meet the measures under the Public Health and Clinical Data Registry Reporting Objective/Public Health and Clinical Data Exchange

Objective in a variety of ways, but they did not provide an incentive to move through the options and get to option 3, production, where there is the ongoing electronic submission of data. Option 1, completed registration to submit data, was an important option in 2016 as many PHAs and CDRs were starting to come online, and thus the provision of this option recognized that many eligible professionals were just beginning to engage in electronic data exchange with PHAs and CDRs. Now many years have passed, and we believe that MIPS eligible clinicians have had ample time to complete option 1.

Thus, we propose to consolidate current options 1 and 2 into one option beginning with the performance period in CY 2023, as follows:

- *Proposed Option 1. Pre-production and Validation* (a combination of current option 1, completed registration to submit data, and current option 2, testing and validation). The MIPS eligible clinician must first register to submit data with the PHA or, where applicable, the clinical data registry (CDR) to which the information is being submitted. Registration must be completed within 60 days after the start of the EHR reporting period, while awaiting an invitation from the PHA or CDR to begin testing and validation. MIPS eligible clinicians that have registered in previous years do not need to submit an additional registration for subsequent performance periods. Upon completion of the initial registration, the MIPS eligible clinician must begin the process of testing and validation of the electronic submission of data. The MIPS eligible clinician must respond to requests from the PHA or, where applicable, the CDR within 30 days; failure to respond twice within a performance period would result in the MIPS eligible clinician not meeting the measure.

Eligible clinicians could select this option if they have previously completed the initial registration (existing Option 1). They could also select this option if they are currently in the process of testing and validation (existing Option 2).

- *Proposed Option 2. Validated Data Production* (current option 3, production). The MIPS eligible clinician has completed testing and validation of the electronic submission and is electronically submitting production data to the PHA or CDR.

Under this proposal, a MIPS eligible clinician must demonstrate their level of active engagement at either proposed Option 1 (pre-production and validation) or proposed Option 2 (validated data production) to fulfill each measure. We are inviting public comment on these proposed changes to the options for active engagement.

(C) Proposed Reporting Requirement for Level of Engagement

MIPS eligible clinicians currently are not required to report their level of active engagement for any of the measures associated with the Public Health and Clinical Data Exchange Objective. We believe that this information would be helpful as it would enable HHS to identify registries and PHAs which may be having difficulty onboarding MIPS eligible clinicians and moving them to the Validated Data Production phase. During the recent COVID-19 PHE, we recognized the importance of public health reporting (as discussed further in section IV.A.10.c.(4)(f)(i) of this proposed rule), and we believe that knowing the level of active engagement that a MIPS eligible clinician selects would provide information on the types of registries and geographic areas with health care providers in the Pre-production and Validation stage. Our goal is for all health care providers nationwide to be at the Validated Data Production stage so that data will be actively flowing and public health threats can be monitored. Therefore, for the Public Health and Clinical Data Exchange Objective, in addition to submitting responses for the required measures and any optional measures a MIPS eligible clinician chooses to report, we propose to require MIPS eligible clinicians to submit their level of active engagement, either Pre-production and Validation or Validated Data Production (as proposed in section IV.A.10.c.(4)(B)), for each measure they report beginning with the performance period in CY 2023. If our proposal to reduce the three current options of active engagement to two options is not finalized, we propose to require MIPS eligible clinicians to submit one of the three current options of active engagement for each measure they report.

We are inviting public comment on this proposed change to require submission of the level of active engagement.

(D) Proposed Changes to the Duration of Active Engagement Options

MIPS eligible clinicians currently are not required to advance from one option

of active engagement to the next within a certain period of time. Beginning with the performance period in CY 2023, we are proposing that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation level of active engagement per measure, and that they must progress to the Validated Data Production level in the next performance period for which they report a particular measure. For example, under this proposal, if a MIPS eligible clinician submits the Immunization Registry Reporting measure for the performance period in CY 2023 at the level of active engagement for proposed option 1 (Pre-production and Validation), the clinician must submit the Immunization Registry Reporting measure at the level of active engagement for proposed option 2 (Validated Data Production phase) for the next performance period in CY 2024, or they would fail to satisfy the Public Health and Clinical Data Exchange Objective. To use an optional measure as an example to illustrate this proposal, if a MIPS eligible clinician chooses to submit the Syndromic Surveillance Reporting measure for the performance period in CY 2023 at the level of active engagement for proposed option 1 (Pre-production and Validation) and then chooses to submit the Syndromic Surveillance Reporting measure for a later performance period, the clinician would have to submit the measure at the level of active engagement for proposed option 2 (Validated Data Production phase) for the next performance period for which they choose to submit the measure. The options for active engagement assume the same PHA or CDR is used by the MIPS eligible clinician. In the event a MIPS eligible clinician chooses to switch between one or more CDRs or PHAs, we are proposing they would be permitted to spend one additional performance period at the Pre-production and Validation phase to assist with onboarding to the new CDR or PHA. As electronic transmission of high-quality data is achieved at the Validated Data Production phase, we want all MIPS eligible clinicians to reach this level.

We are inviting public comments on this proposed change to the duration of the active engagement options.

(E) Public Health Reporting and Information Blocking

The ONC 21st Century Cures Act final rule (85 FR 25642) implemented policies related to information blocking as authorized under section 4004 of the 21st Century Cures Act. The 21st

Century Cures Act final rule established a regulatory definition of information blocking, under which information blocking is, in general, a practice by a health IT developer of certified health IT, health information network, health information exchange, or health care provider (actors⁵⁰³) that, except as required by law or covered by an exception in 45 CFR part 171, subparts B or C, is likely to interfere with (as defined in 45 CFR 171.102) access, exchange, or use of EHI.^{504 505} For a health care provider (as defined in 45 CFR 171.102), information blocking (see 45 CFR 171.103) means a practice (except as required by law or covered by an exception defined in 45 CFR part 171) that is likely to interfere with access, exchange, or use of EHI that the health care provider knows is unreasonable and is likely to interfere with access, exchange, or use of electronic health information.^{506 507}

ONC recently released an information blocking frequently asked question (FAQ) (IB.FAQ43.1.2022FEB) that highlights important points about public health reporting and information blocking.⁵⁰⁸ Specifically, if an actor is required to comply with another law that relates to the access, exchange, or use of EHI, failure to comply with that law may implicate the information blocking regulations. As an example, where a law requires actors to submit EHI to public health authorities, an actor's failure to submit EHI to public health authorities could be considered an interference under the information blocking regulations. For example, many States legally require reporting of certain diseases and conditions to detect

⁵⁰³ Actor is defined in 45 CFR 171.102 as "health care provider, health IT developer of certified health IT, health information network or health information exchange."

⁵⁰⁴ For purposes of the definition of information blocking, for the period before October 6, 2022, electronic health information is defined in 45 CFR 171.103(b). As of that date, electronic health information will be defined as it is in 45 CFR 171.102.

⁵⁰⁵ In order for a practice to be considered information blocking, additional requirements at 45 CFR 171.103(a)(2) or (a)(3) apply, depending on the type of actor engaging in the practice.

⁵⁰⁶ For other types of actors (health IT developers of certified health IT and health information networks or health information exchanges, as defined in 45 CFR 171.102), the definition of "information blocking" (see 45 CFR 171.103) specifies that the actor "knows, or should know, that such practice is likely to interfere with access, exchange, or use of electronic health information."

⁵⁰⁷ The exceptions to the definition of information blocking (practices that are required by law or covered by an exception in 45 CFR part 171, subparts B or C) described in the previous sentence apply to this definition as well.

⁵⁰⁸ See <https://www.healthit.gov/curesrule/faq/would-not-complying-another-law-implicate-information-blocking-regulations>.

outbreaks and reduce the spread of disease. Should an actor that is required to comply with such a law fail to report, the failure could be an interference with access, exchange, or use of EHI under the information blocking regulations. Practices would be evaluated to determine whether the unique facts and circumstances constitute information blocking,

consistent with additional ONC frequently asked questions.⁵⁰⁹

(g) Proposed Changes to the Scoring Methodology for the Performance Period in CY 2023

For ease of reference, Table 84 lists the objectives and measures for the

⁵⁰⁹ See <https://www.healthit.gov/curesrule/faq/how-would-any-claim-or-report-information-blocking-be-evaluated>.

Promoting Interoperability performance category for the CY 2023 performance period/CY 2025 MIPS payment year as revised to reflect the proposals made in this proposed rule.

BILLING CODE 4120-01-P

**TABLE 84: Objectives and Measures for the Promoting Interoperability
Performance Category for the Performance Period in CY 2023**

Objective	Measure	Numerator	Denominator	Exclusion
e-Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
e-Prescribing	Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history*.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. writes fewer than 100 permissible prescriptions during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.
Health Information Exchange	Support Electronic Referral Loops by Receiving and Reconciling Health	Number of electronic summary of care records in the denominator for	Number of electronic summary of care records received using CEHRT for	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which

Objective	Measure	Numerator	Denominator	Exclusion
	Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.	which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange	HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners. Statement 3: I use the functions of CEHRT to support bi-	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	directional exchange with an HIE.			
Health Information Exchange	<p>Enabling Exchange Under TEFCA* MIPS eligible clinicians would attest to the following:</p> <ul style="list-style-type: none"> • Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the Federal Register and on ONC's website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. • Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement. 	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information.	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her	Number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.	technical specifications of the API in the MIPS eligible clinician's CEHRT.		
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.	Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).	N/A (measure is Yes/No)	N/A (measure is Yes/No)	The MIPS eligible clinician: 1. does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.
Public Health and Clinical Data Exchange	Electronic Case Reporting: The MIPS eligible clinician is in active engagement with a public health agency to electronically submit case reporting of reportable conditions.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	The MIPS eligible clinician: 1. Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period; OR 2. operates in a jurisdiction for which no public health agency is capable of receiving electronic case

Objective	Measure	Numerator	Denominator	Exclusion
				reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period; OR 4. for the CY 2022 performance period/CY 2024 MIPS payment year only, the MIPS eligible clinician uses CEHRT that is not certified to the electronic case reporting certification criterion at § 170.315(f)(5) prior to the start of the performance period they select in CY 2022.
Public Health and Clinical Data Exchange	Public Health Registry Reporting: (bonus) The MIPS eligible clinician is in active engagement with a public health agency to submit data to public health registries.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Public Health and Clinical Data Exchange	Clinical Data Registry Reporting: (bonus) The MIPS eligible clinician is in active engagement to submit data to a clinical data registry.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Public Health and Clinical Data Exchange	Syndromic Surveillance Reporting: (bonus) The MIPS eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Protect Patient Health Information: Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical,	Security Risk Assessment: Conduct or review a security risk analysis in accordance with the requirements in 45 CFR 164.308(a)(1), including addressing the security (to include	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none

administrative, and physical safeguards.	encryption) of ePHI data created or maintained by certified electronic health record technology (CEHRT) in accordance with requirements in 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the MIPS eligible clinician's risk management process.			
Protect Patient Health Information	SAFER Guides High Priority Practices Guide: Conduct an annual assessment of the High Priority Practices Guide SAFER Guides	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none

* Signifies a proposal made in this CY 2023 PFS proposed rule.

In this proposed rule, we are making various proposals that would affect the scoring of the objectives and measures

for the performance period in CY 2023. For reference, Table 85 reflects the scoring methodology for the Promoting

Interoperability performance category for the performance period in CY 2022.

TABLE 85: Scoring Methodology for the Performance Period in CY 2022

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	<i>Bonus:</i> Query of PDMP	10 points (<i>bonus</i>)
Health Information Exchange -OR-	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	20 points
Health Information Exchange (alternative)	Health Information Exchange Bi-Directional Exchange	40 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report the following 2 measures: • Immunization Registry Reporting • Electronic Case Reporting	10 points
	Report on any one of the following measures: • Public Health Registry Reporting OR • Clinical Data Registry Reporting OR • Syndromic Surveillance Reporting	5 points (<i>bonus</i>)

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored. In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review and actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

In proposing to make the Query of PDMP measure required, we would retain the 10 points associated with it, which are allocated as bonus points for the performance period in CY 2022. To accommodate this change if our proposal is finalized, we are proposing to reduce the points associated with the Health Information Exchange Objective measures from the current 40 points to 30 points beginning with the CY 2023 performance period.

The Public Health and Clinical Data Exchange Objective, with its two required measures, is currently worth only 10 points. Despite requiring certain measures to make the objective more effective in promoting public health data electronic exchange, the total number of points did not change between CY 2021 and CY 2022. We believe that increasing the point value of the Public Health and Clinical Data Exchange Objective would create a more meaningful incentive for MIPS eligible clinicians to engage in the electronic reporting of public health information and recognize the importance of public health systems affirmed by the COVID-19 pandemic. Increasing the point value would make the Public Health and Clinical Data Exchange Objective a more central piece of the Promoting

Interoperability performance category and better incentivize MIPS eligible clinicians to implement these essential public health data exchange capabilities. Without adequate incentives, there remains a risk that MIPS eligible clinicians will simply not prioritize implementing these capabilities, which are essential to ongoing efforts to address COVID-19 and will be indispensable for responding to future public health threats and emergencies. Increasing the point value would more appropriately incentivize MIPS eligible clinicians to engage in the electronic reporting of public health information and would align the value of the objective with the objective's importance and the effort necessary to meet the required measures.

Thus, we are proposing to increase the points allocated to the Public Health and Clinical Data Exchange Objective from 10 to 25 points to better align with the true value of this objective beginning with the CY 2023 performance period. We believe assigning 25 points to the objective reflects the importance of comprehensive, nationwide health care data exchange between MIPS eligible clinicians and public health agencies.

Nationwide health care data exchange would provide immense value to the public by improving the speed and effectiveness of public health responses, as well as to MIPS eligible clinicians, since better public health response reduces pressure on clinicians, which can be overwhelmed in a public health crisis. To balance the increase in the points associated with the Public Health and Clinical Data Exchange Objective, we are proposing to reduce the points associated with the Provide Patients Electronic Access to Their Health Information measure from the current 40 points to 25 points beginning with the CY 2023 performance period. We are proposing to revise the regulatory text for scoring the Promoting Interoperability performance category at § 414.1380(b)(4)(ii)(B) and (C) to reflect these proposals for scoring the objectives and measures. We are inviting public comment on these proposed changes to our scoring methodology.

Table 86 reflects the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2023 if the proposals discussed are finalized.

TABLE 86: Scoring Methodology for the Performance Period in CY 2023

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP*	10 points*	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points*	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points*	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points*	
	-OR-		
	Enabling Exchange under TEFCA*	30 points*	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points*	Required
Public Health and Clinical Data Exchange	Report the following two measures*: <ul style="list-style-type: none"> Immunization Registry Reporting Electronic Case Reporting 	25 points*	Required
	Report one of the following measures: <ul style="list-style-type: none"> Public Health Registry Reporting Clinical Data Registry Reporting Syndromic Surveillance Reporting 	5 points (<i>bonus</i>)*	Optional

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review and actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

*Signifies a proposal made in this CY 2023 PFS proposed rule.

The maximum points available in Table 86 do not include the points that would be redistributed in the event an exclusion is claimed. For ease of

reference, Table 87 shows how points would be redistributed among the objectives and measures for the performance period in CY 2023 in the

event a MIPS eligible clinician claims an exclusion, if the proposals discussed in this section are finalized.

TABLE 87: Exclusion Redistribution for Performance Period in CY 2023

Objective	Measure	Redistribution if exclusion is claimed
Electronic Prescribing	e-Prescribing	10 points to HIE Objective
	Query of PDMP*	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange under TEFCA*	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following five measures: <ul style="list-style-type: none"> • Syndromic Surveillance Reporting • Immunization Registry Reporting 	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review and actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

*Signifies a proposal made in this CY 2023 PFS proposed rule.

For ease of reference, Table 88 lists the objectives and measures for the

Promoting Interoperability performance category for the performance period in

CY 2023 and the 2015 Edition certification criteria.

TABLE 88: Promoting Interoperability Performance Category Objectives and Measures and 2015 Edition Certification Criteria

Objective	Measure	2015 Edition (CY 2022 EHR Reporting Period)
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	Query of PDMP	§ 170.315(b)(3) Electronic prescribing
Health Information Exchange	Support electronic referral loops by sending health information	§ 170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
Health Information Exchange (alternative)	Health Information Exchange (HIE Bi-Directional Exchange)	Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(8) Application access — data category request
		§ 170.315(g)(9) Application access — all data request
Health Information Exchange (alternative)	Enabling Exchange under TEFCA	§ 170.315(g)(10) Application access — standardized API for patient and population services
		Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(8) Application access — data category request
Provider to Patient Exchange	Provide patients electronic access to their health information	§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
		§ 170.315(e)(1) View, download, and transmit to 3rd party
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(8) Application access — data category request
		§ 170.315(g)(9) Application access — all data request
Public Health and Clinical Data Exchange	Immunization registry reporting	§ 170.315(f)(1) Transmission to immunization registries
	Syndromic surveillance reporting	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance

Objective	Measure	2015 Edition (CY 2022 EHR Reporting Period)
	Electronic case reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	§ 170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
		§ 170.315(f)(7) Transmission to public health agencies — health care surveys
	Clinical data registry reporting	No 2015 health IT certification criteria at this time.
Protect Patient Health Information	Security Risk Assessment	The requirements are a part of CEHRT specific to each certification criterion.
	Safety Assurance Factors for EHR Resilience Guides (SAFER Guides)	No 2015 health IT certification criteria at this time.

*The ONC Cures Act final rule made changes to the existing 2015 Edition Health IT Certification Criteria by introducing new criteria, revising and removing existing criteria (85 FR 25667 through 25668). These changes are required beginning with the CY 2023 performance period.

BILLING CODE 4120-01-C

(h) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(2)(i)(A)(4)(ii) for the performance periods in CY 2017 through 2022 (CY 2019 through CY 2024 MIPS payment years) under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We analyzed the data submitted for the 2017 performance period for the Promoting

Interoperability performance category and discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, we initially found approximately 34 percent submitted data individually for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics, we found that this percentage was 24 percent, not 34 percent. For the 2019 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. For the 2020 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 27.5 percent submitted data individually for the Promoting Interoperability performance category, a modest decrease from 2019. For the 2021 performance period, of the

MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually for MIPS, approximately 21.3 percent submitted data individually for the Promoting Interoperability performance category, a decrease from 2020.

Due to the continued relatively low numbers of NPs, PAs, CRNAs, or CNSs that submitted data individually for the Promoting Interoperability performance category for prior performance periods, we did consider proposing to extend the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) for another year (for the CY 2023 performance period/2025 MIPS payment year). However, we believe that incentivizing more of these types of MIPS eligible clinicians to adopt and use CEHRT and submit data for the Promoting Interoperability performance category is important for increased interoperability and data exchange nationwide. We adopted the reweighting policy beginning with the first year of MIPS (the CY 2017 performance period/2019 MIPS payment year), and we believe that there has been sufficient time for NPs, PAs, CRNAs, and CNSs to adopt and implement CEHRT. At this point in the program's maturity, we are concerned that the reweighting policy itself might be serving as a disincentive to these types of MIPS eligible clinicians adopting and using CEHRT, which would be an unintended consequence. We believe it is possible that these clinician types are now able to submit data individually on the measures for the Promoting Interoperability performance category, but they are

choosing not to because they would prefer for the performance category to be reweighted and not to contribute to their final score. Further, we believe that there are sufficient measures applicable and available in the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs. The measures that may not apply to these clinician types, such as the e-Prescribing measure, have exclusions that can be claimed if applicable. We considered the impact that not extending the policy may have on MIPS eligible clinicians in small practices, but we believe that the policy we established in the CY 2022 PFS final rule at § 414.1380(c)(2)(i)(A)(4)(ii) to automatically assign a weight of zero to the Promoting Interoperability performance category for MIPS eligible clinicians in a small practice will result in very few NPs, PAs, CRNAs, and CNSs being affected. Further, we remind readers that a MIPS eligible clinician who meets the criteria for a significant hardship may submit an application to reweight the Promoting Interoperability performance category based on a significant hardship, such as lack of control over the availability CEHRT and insufficient internet access (81 FR 77240 through 77243, 82 FR 53680 through 53686, 82 FR 53783 through 53785, and 85 FR 84984).

For these reasons, we are not proposing to continue the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score for NPs, PAs, CRNAs, or CNSs for the CY 2023 performance period/2025 MIPS payment year. We are, however, requesting public comment on whether we should continue this policy for the CY 2023 performance period/CY 2025 MIPS payment year, and we may decide to take a different approach in the final rule depending on the comments we receive. We are particularly interested in comments on potential barriers to CEHRT adoption and implementation that may impact one or more of these clinician types, as well as comments on the applicability of the Promoting Interoperability performance category measures to NPs, PAs, CRNAs, or CNSs.

(ii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition Professionals

In the CY 2019 PFS final rule (83 FR 59819 through 59820), we established that we will apply the same reweighting policy for the Promoting Interoperability performance category that we adopted

previously for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are non-physician practitioners (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals) for the CY 2019 performance period. The reweighting policy for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals is codified at § 414.1380(c)(2)(i)(A)(4)(i). We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance periods in CY 2020 (84 FR 63003 through 63004), CY 2021 (85 FR 84895), and CY 2022 (86 FR 65488 through 65489). We analyzed the data from the CY 2019 performance period/CY 2021 MIPS payment year, and approximately 18.4 percent of occupational therapists, 2 percent of physical therapists, and 1 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, approximately 18.8 percent of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category. We analyzed the data from the CY 2020 performance period/CY 2022 MIPS payment year, and approximately 3.3 percent of occupational therapists, 1.4 percent of physical therapists, and 0.6 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, 0 percent (rounded from 16 total clinicians) of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category. We analyzed the data from the CY 2021 performance period/CY 2023 MIPS payment year, and 0 percent of occupational therapists, 0.3 percent of

physical therapists, 0.5 percent of clinical psychologists who submitted data individually for MIPS, submitted data individually for the Promoting Interoperability performance category. For qualified speech-language pathologists, qualified audiologists, and registered dietitians/nutrition professionals, 6.7 (6.66) percent of those who submitted data individually for MIPS also submitted data individually for the Promoting Interoperability performance category.

Based on low participation, it is possible that these clinician types may be finding that there are not sufficient measures that are applicable to them. As with NPs, PAs, CRNAs, and CNSs, however, it is also possible that the reweighting policy itself might be serving as a disincentive to these types of MIPS eligible clinicians adopting and using CEHRT, and that they are choosing not to submit data individually on the measures because they would prefer for the performance category to be reweighted and not to contribute to their final score. Because these clinician types were added to the definition of a MIPS eligible clinician under § 414.1305 more recently than NPs, PAs, CRNAs, and CNSs, we believe it would be appropriate to continue the existing reweighting policy for them for one more year. Therefore, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals only for the CY 2023 performance period/2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(i) to reflect the proposal. We want to continue to encourage these types of MIPS eligible clinicians to adopt and use CEHRT, which would contribute to increased interoperability and data exchange nationwide; therefore, we do not anticipate proposing in future rulemaking to extend the policy for additional years.

We invite comments on this proposal.

(iii) Clinical Social Workers

In the CY 2022 PFS final rule (86 FR 65387 through 65389), we added clinical social workers to the definition of a MIPS eligible clinician under § 414.1305, beginning with the CY 2022 performance period/CY 2024 MIPS payment year. This clinician type was not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive

reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers also were not eligible for Medicaid EHR incentive payments. We stated that clinical social workers may lack experience with the adoption or use of CEHRT, and that we believed there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to them (86 FR 65489). For the CY 2022 performance period/CY 2024 MIPS payment year, we established that we will apply to clinical social workers the same reweighting policy for the Promoting Interoperability performance category that we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians who are non-physician practitioners (86 FR 65489). The reweighting policy for clinical social workers is codified at § 414.1380(c)(2)(i)(A)(4)(iii).

CY 2022 is the first year that clinical social workers are considered MIPS eligible clinicians, and thus we do not yet have any performance period data that we could use to evaluate whether the Promoting Interoperability performance category measures are applicable and available to this type of MIPS eligible clinician. We are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/CY 2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(iii) to reflect the proposal. We will evaluate whether the policy should be continued for future years when we have performance period data available.

(i) Patient Access to Health Information Measure—Request for Information (RFI)

Patient use of portals to access their health information has been tied to benefits such as improvements in access, quality of care, and health outcomes, and reductions in healthcare expenditures.⁵¹⁰ In particular, access to health information has been shown to enable the discovery of medical errors, to improve medication adherence, and to promote communication between the patient and health care provider.⁵¹¹ Health care provider encouragement (and other facilitating conditions),

perceived usefulness, ease of use, control of health information, and enhanced communication are demonstrated as facilitators, while concerns of privacy, security, and lack of awareness have been tied to barriers of use.^{512 513}

The Health Information National Trends Survey (HINTS), a large, nationally representative survey operated by the National Cancer Institute (with support from ONC), is conducted routinely and contains key utilization data on consumer access and use of their online medical record through patient portals. The HINTS results showed the rates of individuals being offered and subsequently using their health information through a patient portal, as well as use of mobile health applications (apps) and the role health care providers play in encouraging use.⁵¹⁴ Results showed that health care providers and staff have a substantial role in influencing patient use of the portal.

In the past for the Promoting Interoperability performance category, we attempted to promote patient access to their health information through measuring the number of patients who actively engaged with the electronic health record through the View, Download, Transmit (VDT) measure in the CY 2017 Quality Payment Program final rule (81 FR 77228 through 77237). In the CY 2019 PFS final rule (83 FR 59812 through 59814), we renamed the Patient Electronic Access Objective to the Provider to Patient Exchange Objective and updated the measures within the Provider to Patient Exchange Objective. Specifically, we removed the standalone VDT measure from the Promoting Interoperability performance category in response to feedback from interested parties, including physician specialty societies ongoing concern with measures that require patient action for successful submission (83 FR 59814). We have also noted that data analysis of VDT measure supports concerns from interested parties that barriers exist which impact a clinician's ability to

meet them. Interested parties have indicated that success of the measure is reliant upon the patient, who may face barriers to access which are outside a clinician's control. Additionally, in the CY 2019 PFS final rule (83 FR 59812 through 59813), we changed the name of the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information and finalized changes to the measure description. These measure changes included a requirement for MIPS eligible clinicians to provide timely access for viewing, downloading or transmitting their health information for at least one unique patient discharged using any application of the patient's choice (83 FR 59812 through 59813). This change emphasized timely electronic access of patient health information rather than requiring health care providers to be accountable for patient actions.

Through the current Provide Patients Electronic Access to Their Health Information measure in the Provider to Patient Exchange Objective, we are ensuring that patients have access to their health information through any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the CEHRT of the MIPS eligible clinician. Promoting the use of API-enabled applications that provide timely access to updated information whenever the patient needs that information is an integral step in enhancing patient access and use of their health information. These API-enabled applications should be configured using standardized technology and contain the information the patient needs to make informed decisions about their care in a way the patient understands, and that recognizes the community's level of access to devices and internet connectivity. While we removed the VDT measure holding MIPS eligible clinicians responsible for patient action (83 FR 59814), we still require that the technical capabilities be in place within a MIPS eligible clinician's CEHRT through the Provide Patients Electronic Access to Their Health Information measure should patients choose to access and use their health information (83 FR 59812 through 59813).

We continue to believe in the importance of taking a patient-centered approach to health information access and moving to a system in which patients have immediate access to their electronic health information and can be assured that their health information will follow them as they move throughout the health care system. Recognizing the concerns and barriers

⁵¹⁰ Ronda MC, Dijkhorst-Oei LT, Rutten GE. Reasons and barriers for using a patient portal: survey among patients with diabetes mellitus. *J Med Internet Res*. 2014 Nov 25;16(11):e263. doi: 10.2196/jmir.3457. PMID: 25424228; PMCID: PMC4260081.

⁵¹¹ Wildenbos GA, Peute L, Jaspers M. Facilitators and Barriers of Electronic Health Record Patient Portal Adoption by Older Adults: A Literature Study. *Stud Health Technol Inform*. 2017;235:308–312. PMID: 28423804.

with the previous VDT measure discussed previously, but acknowledging the advancements made within the health IT industry over the past few years, this request for information is seeking a broad array of public comments regarding how to further promote equitable patient access and use of their health information without adding unnecessary burden on the MIPS eligible clinician or group. Specifically, we are seeking public comment on the following questions:

- Moving beyond providing the information and technical capabilities to access their data, are there additional approaches to promote patient access and use of their health information? Are there examples of successful approaches or initiatives that have enhanced patient access and use of their health information?

++ Would allowing patients to add information to their records be useful in promoting patient access and utilization? Are there other incentives that would promote patient access?

++ Are there potential unintended consequences in allowing patients to add information to their records? What could be done to mitigate any potential unintended consequences?

++ Are there certain tools found to be useful in promoting patient access and use of their health information?

- Recent studies have raised concerns about the presence of racial bias and stigmatizing language within EHRs that could lead to unintended consequences if patients were to obtain disparaging notes regarding their medical care.^{515 516}

++ What policy, implementation strategies, or other considerations are necessary to address existing racial bias or other biases and prevent use of stigmatizing language?

- Additional analysis of HINTS data provides insights into common barriers to patient portal access and use as well as characteristics that can help predict which individuals are more likely to experience certain barriers (for example, preference for in-person communication with their health care provider is one of the most prevalent barriers experienced more often by older adults and women).⁵¹⁷

++ What are the most common barriers to patient access and use of their health information that have been observed? Are there differences by populations or individual characteristics? For example, are there barriers caused by lack of accessibility to patients due to disability or limited English proficiency?

- Patients' health information may be found in multiple patient portals. How could CMS or HHS facilitate individuals' ability to access all their health information in one place?

++ If patient portals connected to a network participating in the recently launched TECA,^{518 519} would this enable more seamless access to individual health information across various patient portals?

- With the advancement of HIT, EHRs and other health-related communication technologies, there are concerns that implementation of these technologies can lead to unintended consequences that exacerbate existing health disparities within populations who could receive greater benefits but are less likely to adopt them.^{520 521 522 523}

What policy, governance and implementation strategies or other considerations are necessary to ensure equal access to consumer-facing health technologies including patient portals and mobile health applications, as well as equitable implementation and appropriate design and encouragement of use across all populations?

- What challenges do MIPS eligible clinicians face when addressing patient questions and requests resulting from patient access of patient portals or access of data through use of a mobile

app? What can be done to mitigate potential burden?

- For patients who access their health information, how could CMS, HHS, and health care providers help patients manage their health through the use of their personal health information?

- Do you believe the API and app ecosystem are at the point where it would be beneficial to revisit adding a measure of patient access to their health information which assesses clinicians on the degree to which their patients actively access their health information? What should be considered when designing a measure of patient access of their health information through portals or apps?

We welcome input on how we can encourage and enable patient access to and use of their health information to manage and improve their care across the care continuum.

(5) APM Entity Level Participation for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from § 414.1370(e) to § 414.1317, and titled that section “APM Entity Groups.”

(b) APM Entity Level Reporting of Promoting Interoperability Performance Category

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using any available MIPS reporting pathway, including the APM Performance Pathway (APP), traditional MIPS and, in the future, MIPS Value Pathways (MVPs).

We finalized that APM Entities that do not report through the APP will continue to have the cost performance category reweighted to zero percent of their MIPS final score, but will be required to report and be scored on the three remaining MIPS performance categories, including quality, IA, and promoting interoperability. We explained in that rule that the PI performance category would continue to be scored for multi-TIN APM Entities using the promoting interoperability roll-up calculation described at § 414.1317(b)(1) (85 FR 84897).

⁵¹⁶ Himmelstein G, Bates D, Zhou L. Examination of Stigmatizing Language in the Electronic Health Record. *JAMA Netw Open*. 2022;5(1):e2144967. doi:10.1001/jamanetworkopen.2021.44967.

⁵¹⁷ Turner K, Clary A, Hong Y, Alishahi Tabriz A, Shea CM. Patient Portal Barriers and Group Differences: Cross-Sectional National Survey Study. *J Med Internet Res* 2020;22(9):e18870.

It has come to our attention through feedback from interested parties that many of the workstream modifications, as well as data aggregation and integration tools that are likely to be used by multi-TIN APM Entities, such as use of the FHIR API or hiring vendors to complete the more complex reporting activities required for reporting APM Entity level eCQMs could also be used to collect data and submit for the promoting interoperability performance category at the APM Entity level.

It is also our understanding that it is possible that an APM Entity may represent only a single practice site or specialty within a larger multi-specialty TIN. We believe that in these circumstances the APM Entity may have both the ability and desire to report on the promoting interoperability performance category at the APM Entity level, thereby excluding data generated by the rest of the larger TIN, in cases where the APM Entity itself performed above average relative to the rest of that TIN.

Therefore, we are proposing to introduce a voluntary reporting option for APM Entities to report the promoting interoperability performance category at the APM Entity level beginning with the 2023 performance period. Multi-TIN APM Entities that do not choose this proposed new reporting option would continue to be scored using the roll-up calculation described at § 414.1317(b)(1). We seek comment on this proposal.

e. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act provides, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards for a performance period and use such methodology to provide for a composite performance score for each such clinician for each performance period.

For the CY 2023 performance period/2025 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. We believe that this scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We are proposing to update our scoring policies consistent with this framework. Specifically, we are proposing to—

- Amend the benchmarking policy to score administrative claims measures in

the quality performance category using a benchmark calculated from performance period data.

- Clarify the topped-out measure policy and update the topped-out measure life cycle for scoring topped-out measures in the quality performance category.

- Establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category beginning with the CY 2022 performance period/2024 MIPS payment year.

We refer readers to section IV.A.10.c.(4)(I) of this proposed rule for our proposed changes to the scoring methodology for the Promoting Interoperability performance category. We are not proposing changes to scoring policies for the improvement activities performance category.

We refer readers to § 414.1380 for our current policies on scoring.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our current policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913). In the CY 2022 PFS final rule we finalized policies to simplify scoring in MIPS as we transition to MVPs and to incentivize the selection of new, potentially high-value measures (86 FR 65496 through 65507).

(i) Scoring Administrative Claims Measures in the Quality Performance Category Using Performance Period Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules and PFS final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904, respectively) for our previously established benchmarking policies.

In the CY 2017 Quality Payment Program final rule (81 FR 77276 through 77282), we finalized a rule providing

that we will use MIPS eligible clinicians' performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period. In these cases, we will calculate benchmarks using data submitted during the applicable performance period. We defined the baseline period to be the 12-month CY that is 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2023 performance period/2025 MIPS payment year, the baseline period two performance periods prior would be the CY 2021 performance period (81 FR 77276 and 77277). Additionally, in the CY 2019 PFS final rule (83 FR 59842), we amended § 414.1380(b)(1)(ii) to align our benchmark policy with concurrently made changes to our date submission terminology. These changes removed references to each individual benchmark and instead stated that benchmarks will be based on measure collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Additionally, we refer readers to the CY 2017 Quality Payment Program final rule and the CY 2021 PFS final rule (81 FR 77130 through 77136 and 85 FR 84871 through 84873 respectively) and § 414.1325(a)(2)(i) for our previously established policies regarding administrative claims measures in the quality performance category.

The policy at § 414.1325 provides that there is no data submission requirement for cost measures or administrative claims measures in the quality performance category as these measures are calculated on behalf of participants by CMS using administrative claims data. In the CY 2017 Quality Payment Program final rule, we finalized a policy that clinicians would be scored on applicable administrative claims-based global or population health (henceforth referred to only as population health measures) in addition to the six required submitted measures. Additionally, we established exclusions to the case minimum policy of 20 cases. It was found that the all-cause hospital readmission (ACR) measure was not reliable for cases under 200 and for groups of fewer than ten clinicians. As a result, we established exceptions to the case minimum policy for this measures and others as specified in the MIPS final list of quality measures through rule making (§ 414.1380(b)(1)(iii)). In the CY 2021

PFS final rule (85 FR 84989 through 84901), we finalized a policy starting in the CY 2021 performance period/2023 MIPS payment year that would allow for performance periods longer than the standard 12-month performance period for administrative claims measures in the cost and quality performance categories as specified through rulemaking.

Beginning with the CY 2023 performance period/2025 MIPS payment year, we are proposing that we will score administrative claims measures using benchmarks calculated using performance period benchmarks. We believe that using a performance period benchmark to score these measures would allow for scores that are more reflective of current performance, while adding no additional burden to clinicians. For the reasons described below, we believe it is more appropriate in certain circumstances to evaluate clinicians against current performance benchmarks. As previously noted, they do not require the submission of data by or on behalf of clinicians and may have a measure-specific performance period to ensure appropriate sample sizes. Additionally, in instances where these measures do not meet the case minimum or benchmark requirements, they are excluded from a MIPS-eligible clinician's quality performance category score.

The use of performance period benchmarks for such measures would help us to improve quality measurement. For example, the Risk-standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) has a 3-year performance period (consecutive 36-month timeframe)⁵²⁴ that would start on October 1 of the calendar year 3 years prior to the applicable performance year and conclude on September 30 of the calendar year of the applicable performance year, proceeding with a 3-month numerator assessment period (capturing complication outcomes) followed by a 2-month claims run-out period. For the CY 2023 performance period/2025 MIPS payment year, the 3-year (36 consecutive months) performance period for this measure would span from October 1, 2020 to September 30, 2023 with a 90-day numerator

assessment period followed by a 60-day claims run-out period. This means that according to standard scoring policy, the corresponding baseline would include data from October 1, 2018 to September 30 2021. We believe that comparison to data that precedes that standard 2-year baseline period may limit the usefulness of this measure. By comparing performance to data that was collected 5 years prior, this measure does not account for changes to the healthcare landscape and improvements in care that might have been made in the timeframe.

We do not believe using performance period benchmarks would increase burden to clinicians. We believe that clinicians prefer to have historical benchmarks to aid in measure selection and have performance targets. Additionally, population health administrative claims measures in MIPS are not subject to case minimum policies reducing the risk in being scored on these measures.

Accordingly, we are proposing to add a paragraph at § 414.1380(b)(1)(ii)(D) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, CMS will calculate a benchmark for an administrative claims quality measure using the performance on the measure during the current performance period. We note that we do not intend this proposal to modify our existing policies regarding case minimums and measures for which no benchmark may be calculated. Specifically, measures would remain subject to case minimum requirements described in paragraph (b)(1)(iii) and benchmark requirements in paragraph (b)(1)(ii)(A) of this section. Measures that cannot have a benchmark calculated or meet case minimum requirements would still be deducted from the eligible clinician's total measure achievement points consistent with (b)(1)(i)(A)(2)(i).

We are seeking public comment on our proposals to score administrative claims measures in the quality performance category using performance period benchmarks.

(ii) Assigning Measure Achievement Points for Topped Out Measures

Section 1848(q)(3)(B) of the Act requires that, in establishing performance standards with respect to measures and activities, the Secretary consider, among other things, the opportunity for continued improvement. As part of our implementation of section 1848(q)(3)(B) of the Act, we established our topped out measure policy, which is intended to encourage clinicians to focus on areas

where clinical improvement is necessary possible by capping the points received for reporting on MIPS measures where meaningful distinctions in clinical performance are no longer measurable. We refer readers to § 414.1380(b)(1)(iv)(B) for our policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we identify topped out measures in the benchmarks published for each performance year. Under § 414.1380(b)(1)(iv)(B), beginning with the CY 2019 performance period/2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 and 53727).

We finalized in the CY 2017 Quality Payment Program final rule (81 FR 77286) that we would define topped out process measures as those with a median performance rate of 95 percent or higher (§ 414.1305). We defined topped out non-process measures using a definition similar to the definition used in the Hospital Value-Based Purchasing (VBP) Program: a measure where the truncated coefficient of variation is less than 0.10 and the 75th and 90th percentiles are within 2 standard errors (81 FR 77286). When a measure is topped out, a large majority of clinicians submitting the measure perform at or very near the top of the distribution; therefore, there is little or no room for the majority of MIPS eligible clinicians who submit the measure to improve. We understand that each measure we have identified as topped out may offer room for improvement for some MIPS eligible clinicians; however, we believe asking clinicians to submit measures that we have identified as topped out and measures for which the vast majority of MIPS eligible clinicians already excel is an unnecessary burden that does not add value or improve beneficiary outcomes.

In the CY 2018 Quality Payment Program final rule, we finalized that, beginning in the CY 2019 performance period/2021 MIPS payment year, each measure (excluding measures in the CMS Web Interface) that is identified as topped out for two or more consecutive years can receive no more than 7 points in the second year that it is identified as topped out and beyond (82 FR 53726 through 53727). A measure is identified as topped out for a given performance period by assessing its historical benchmark. Two consecutive historical

⁵²⁴ Section 414.1320(e)(1) provides in relevant part that, beginning with the 2023 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures.

benchmarks must be labeled as topped out for the 7-point cap to be applied for a given performance period. For example, for the CY 2023 performance period/2025 MIPS payment year, a measure is considered topped out if the historical benchmark calculated from data submitted in the CY 2021 performance period has a median performance of 95 percent or higher in the case of process measures or the truncated coefficient of variation is less than 0.10 and the 75th and 90th percentiles are within two standard errors in the case of non-process measures. If this same measure is identified as topped out again for the CY 2024 performance period/2026 MIPS payment year from data from the historical baseline period from CY 2022, this measure would be labeled as topped out and have the 7-point cap applied until the historical baseline period shows that the measure is no longer topped out or the measure is removed from the program. We believe this methodology incentivizes MIPS eligible clinicians to begin submitting non-topped out measures without performing below the median score. The methodology also does not impact scoring for those MIPS eligible clinicians that do not perform near the top of the measure, and therefore, have significant room to improve on the measure.

In the CY 2021 PFS final rule (85 FR 84989 through 84901), we finalized a policy at § 414.1380(b)(1)(vii)(A) that consolidated previously established scoring flexibilities regarding the truncation of a quality measure's performance period to 9-months of data from the CY 2018 Quality Payment Program final rule (82 FR 52714 through 53716) and the measure suppression policy established in the CY 2019 PFS final rule (FR 59845 through 59847). The updated scoring flexibilities policy stated that, beginning with the CY 2021 performance period/2023 MIPS payment year, CMS would truncate the performance period or suppress a quality measure if CMS determined that revised clinical guidelines, measure specifications, or codes impacted a clinician's ability to submit information on the measure or may lead to potentially misleading results (85 FR 84899 through 84901). We stated that, based on the timing of the changes to clinical guidelines, measure specifications or codes, we will assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we will suppress the measure by reducing the total available measure achievement points from the quality

performance category by 10 points for each measure submitted that is impacted (85 FR 84899). In the CY 2022 PFS final rule (86 FR 65491 and 65492), the scope of the truncation and suppression policy was expanded to include errors that are outside the control of the clinician, such as an incorrect coding status.

We now clarify the interaction of our topped-out measure policy and our measure truncation and measure suppression policies. First, we must note that not all instances in which a measure lacks a benchmark affect the scoring of the measure equally. For example, when a measure is suppressed in the baseline period for the incorrect inclusion of an inactive status code in the measure specifications, the measure could resume to be scored comparably once the measure specifications are accurate in both the baseline and applicable performance period. Conversely, a measure that was suppressed or had its performance period truncated because it underwent a substantive change could not be comparably scored. In a case like the former, it is not until the suppressed or otherwise affected data is in the baseline period that the topped-out measure lifecycle is affected. A measure that lacks a benchmark for a performance period due to the suppression of data in the measure's baseline period will not have the 7-point cap applied for that performance period. This is because the measure lacks the two topped out historical performance periods necessary for the application of the cap. This does not preclude, however, CMS determining that the measure is topped out for the performance period. In the case of a measure that lacks a baseline period, CMS may base the benchmark on performance during the applicable performance period (See § 414.1380(b)(1)(ii)). Determining the measure was topped out during the performance period would thus require only that MIPS eligible clinician data for the performance period met the topped-out measure standard. In such a case, the 7-point cap could next be applied as soon as the following year.

Where a measure was suppressed or had its performance period truncated because of a substantive change or a change in clinical guidelines, the topped-out measure resets entirely the year following the change as there is no longer a historical benchmark with which to compare the measure for the purpose of determining whether it is topped out.

(c) Cost Performance Category Score (i) Improvement Scoring Methodology

In the CY 2018 Quality Payment Program final rule, we established policies related to measuring improvement in the cost performance category at the measure level, an improvement scoring methodology for the cost performance category, and a formula for calculating the cost performance category percent score to include achievement and improvement (82 FR 53748 through 53752). These policies were to apply beginning with the CY 2018 performance period/2020 MIPS payment year. We codified these policies under § 414.1380(b)(2)(iii) and (iv) (82 FR 53748 through 53752, 53957). Subsequent to the publication of that final rule, the Bipartisan Budget Act of 2018 (BBA 18) (Pub. L. 115–123, enacted February 9, 2018) was enacted. Section 51003(a)(1)(B) of the BBA 18 modified section 1848(q)(5)(D) of the Act such that the cost performance category score shall not take in to account the improvement of the MIPS eligible clinician for each of the second, third, fourth, and fifth years for which the MIPS applies to payments. In the CY 2019 PFS proposed rule, we stated that we do not believe this statutory change requires us to remove our existing methodology for scoring improvement in the cost performance category (see 82 FR 53749 through 53752), but it does prohibit us from including an improvement component in the cost performance category percent score for each of the CY 2020 through 2023 MIPS payment years (83 FR 35956). Therefore, we proposed to revise § 414.1380(b)(2)(iv)(E) to provide that the maximum cost improvement score for the CY 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points (83 FR 35956). We stated that under our existing policy (82 FR 53751 through 53752), the maximum cost improvement score for the CY 2020 MIPS payment year is 1 percentage point, but due to the statutory changes and under our proposal, the maximum cost improvement score for the CY 2020 MIPS payment year would be zero percentage points (83 FR 35956). We also proposed at § 414.1380(a)(1)(ii) to modify the performance standards to reflect that the cost performance category percent score will not take in to account improvement until the CY 2024 MIPS payment year (83 FR 35956). In the CY 2019 PFS final rule, we finalized these proposals as proposed (83 FR 59856).

In prior rulemaking, we inadvertently failed to address what the maximum cost improvement score would be under

§ 414.1380(b)(2)(iv)(E) beginning with the CY 2022 performance period/2024 MIPS payment year. As we stated previously in the CY 2019 PFS proposed and final rules (83 FR 35956 and 83 FR 59856, respectively), we do not believe the changes made to section 1848(q)(5)(D) of the Act by section 51003(a)(1)(B) of the BBA 18 required us to remove our existing methodology for scoring improvement in the cost performance category. Thus, in the CY 2019 PFS final rule, we maintained the methodology we had previously established under § 414.1380(b)(2)(iii) and (iv), while modifying § 414.1380(b)(2)(iv)(E) to reflect the statutory change made by section 51003(a)(1)(B) of the BBA 18. Section 1848(q)(5)(D) of the Act requires us to take in to account the improvement of the MIPS eligible clinician when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year) and for subsequent years. We are proposing to establish a maximum cost improvement score of 1 percentage point for the cost performance category beginning with the CY 2022 performance period/2024 MIPS payment year. A maximum cost improvement score of 1 percentage point was the policy we established previously, before the amendments made by section 51003(a)(1)(B) of the BBA 18 with respect to the second, third, fourth, and fifth years of MIPS. We believe this policy is still appropriate at this time because although there are many opportunities for clinicians to actively work on improving their performance on cost measures, such as through more active care management or reductions in certain services, we recognize that many clinicians are still learning about cost measurement under MIPS. We aim to continue to educate clinicians about cost measurement and develop opportunities for robust feedback and measures that better recognize the role of clinicians. Clinicians are navigating and overcoming the obstacles of the COVID-19 public health emergency while having to familiarize themselves with new policies we have adopted for MIPS, such as the establishment of MVPs as a voluntary means for participation starting with the CY 2023 performance period that could become a mandatory means of participation, the opportunity for subgroup participation and reporting, the sunset of the CMS Web Interface as a collection/ submission type and transition to other collection and submission types for CMS Web Interface users starting with

the CY 2023 performance period, and the implementation of new cost measures. As the CY 2022 performance period/2024 MIPS payment year is the first program year we will be measuring improvement for the cost performance category, we believe it would be appropriate to begin gradually with a maximum cost improvement score of 1 percentage point—a policy clinicians already would be familiar with from prior rulemaking. In a future year, we may consider and assess the possibility of increasing the maximum cost improvement score.

To the extent that this proposed change constitutes a change to the MIPS scoring or payment methodology for the CY 2024 MIPS payment adjustment after the start of the CY 2022 performance period, we believe that, consistent with section 1871(e)(1)(A)(i) of the Act, it is necessary to comply with the requirement of section 1848(q)(5)(D) of the Act that we take in to account the improvement of the MIPS eligible clinician when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year). We also believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to fill the gap in our existing methodology for scoring improvement in the cost performance category for the CY 2022 performance period/2024 MIPS payment year. Currently, our improvement scoring methodology for the cost performance category under § 414.1380(b)(2)(iv)(E) does not include a maximum cost improvement score for the CY 2022 performance period/2024 MIPS payment year. Our proposal would correct this deficiency by establishing a maximum cost improvement score of 1 percentage point beginning with the CY 2022 performance period/2024 MIPS payment year. In addition, it would be contrary to the public interest not to comply the statutory requirement of section 1848(q)(5)(D) of the Act to take in to account improvement when scoring the cost performance category for the sixth year of MIPS (the CY 2022 performance period/2024 MIPS payment year).

We are proposing corresponding changes to § 414.1380(b)(2)(iv)(E) to reflect the proposal. We solicit public comment on the proposal.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018

Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, 86 FR 65509 through 65527, respectively) on final score calculations, performance category weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, we:

- Propose that a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus.
- Request information on which additional risk indicators and data sources we should consider for use within the complex patient bonus formula to better assess the social and medical complexity for the patients of MIPS eligible clinicians.
- Propose that virtual groups would be eligible for facility-based measurement.
- Propose changes to the definition of a facility-based MIPS eligible clinician.

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual's health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021, 2022, and 2023 MIPS payment

years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively). Additionally, we finalized for the 2022 and 2023 MIPS payment years at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2, but cannot exceed 10.0 (85 FR 84911 through 84913 and 86 FR 65510 and 65511, respectively). Finally, beginning with the CY 2022 performance period/2024 MIPS payment year, we revised the complex patient bonus by: (1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (Hierarchical Condition Category (HCC) and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10 bonus points (86 FR 65511 through 65519). We refer readers to the final rules cited above for additional details on the background, statutory authority, policy rationale, and calculation of the complex patient bonus.

(ii) Eligibility for the Complex Patient Bonus

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1380(c)(3) a complex patient bonus for MIPS eligible clinicians, groups, APM Entities, and virtual groups that submit data for at least one MIPS performance category during the applicable performance period, which will be added to the final score (82 FR 53771 through 53776). In the CY 2018 Quality Payment Program proposed rule, we proposed that a MIPS eligible clinician, group, virtual group or APM Entity must submit data on at least one measure or activity in a performance category during the performance period to receive the complex patient bonus (82 FR 30138). We stated that under this proposal, MIPS eligible clinicians would not need to meet submission requirements for the quality performance category to receive the bonus (they could instead submit improvement activities or Promoting Interoperability performance category measures only or submit fewer than the required number of measures for the quality performance category). In the CY 2018 Quality Payment Program final rule, we also established facility-based measurement for certain MIPS eligible clinicians under the authority in section 1848(q)(2)(C)(ii) of the Act, which provides that the Secretary may use

measures used for a payment system other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). We did not address whether facility-based MIPS eligible clinicians would be eligible to receive the complex patient bonus. Under the scoring methodology for facility-based measurement under § 414.1380(e), there are no data submission requirements for individual clinicians to be scored under facility-based measurement (§ 414.1380(e)(4)). Although individual facility-based MIPS eligible clinicians are not required to submit data for at least one MIPS performance category, and it is possible they may choose not to submit data voluntarily, we believe they should be eligible to receive the complex patient bonus. As with other MIPS eligible clinicians who submit data for the quality performance category, we are able to score this performance category for facility-based MIPS eligible clinicians based on quality measure data available to us pursuant to the methodology described under § 414.1380(e). Thus, we are proposing that beginning with the 2023 performance period/2025 MIPS payment year, a facility-based MIPS eligible clinician would be eligible to receive the complex patient bonus, even if they do not submit data for at least one MIPS performance category. We are proposing corresponding revisions to § 414.1380(c)(3). We seek comments on this proposal.

(iii) Request for Information on Risk Indicators for the Complex Patient Bonus Formula

(A) Background on Risk Indicators Within the Complex Patient Bonus Formula

In the CY 2022 PFS final rule, we finalized to continue using the existing risk indicators for the complex patient bonus formula (86 FR 65511 through 65517). We received comments regarding our policy to continue to use the existing risk indicators. A few commenters requested that CMS look at additional risk indicators to account for additional complexities within the complex patient bonus formula. Specifically, a few commenters suggested CMS consider clinical data to capture comorbidities and alternatives to dual eligibility to capture social risk. Other commenters suggested CMS consider using other data such as Z-codes and indices (for example, Social Vulnerability Index, Community Needs Index, etc.). In response to these comments, we stated that we would take

the comments into consideration as we continue updating the complex patient bonus in future years (86 FR 65517). We also stated that, although the HHS Assistant Secretary for Planning and Evaluation (ASPE) report found dual eligibility to be a reliable indicator of social risk, we understand there may be some limitations.⁵²⁵ However, at that time, we were unaware of data sources and/or methodologies to account for other social indicators such as income and education which are readily available for all Medicare beneficiaries and would be more complete indices of a patient's complexity. We stated that we continue to believe that average HCC risk scores are a valid proxy for medical complexity which are also used by other CMS programs. Therefore, we stated that we will continue to pair the HCC risk score with the proportion of dually eligible patients to create a more complete complex patient indicator than can be captured using HCC risk scores alone. We stated that we will evaluate additional, more comprehensive options, such as Z-codes and indices, based on any updated data or additional information, including to better account for social risk factors while minimizing unintended consequences.

When we considered the approaches for a complex patient bonus in the CY 2018 Quality Payment Program proposed rule (82 FR 30135 through 30139), we reviewed evidence to identify how indicators of patient complexity have an impact on performance under MIPS as well as availability of data to implement the bonus, described in more detail in the regulatory impact analysis of the CY 2018 Quality Payment Program proposed rule (82 FR 30235 through 30238). At that time, we identified two potential indicators for complexity: medical complexity as measured through HCC risk scores and social risk as measured through the proportion of patients with dual eligible status. We identified these indicators because they are common indicators of patient complexity in the Medicare program and the data is readily available. Please refer to the CY 2018 Quality Payment Program proposed rule for a detailed discussion of our analysis of both indicators that informed our proposal (82 FR 30135 through 30138). Specifically, we proposed (82 FR 30138) and finalized (82 FR 53776) at § 414.1380(c)(3)(i) to calculate an

⁵²⁵ ASPE, Second Report to Congress on Social Risk and Medicare's Value-Based Purchasing Programs, June 29, 2020. <https://aspe.hhs.gov/pdf-report/second-impact-report-to-congress>.

average HCC risk score, using the model adopted under section 1853 of the Act for Medicare Advantage risk adjustment purposes, for each MIPS eligible clinician or group, and to use that average HCC risk score as the complex patient bonus.

Additionally, in the CY 2019 PFS final rule (83 FR 59870), we finalized to calculate the average HCC risk score for a MIPS eligible clinician or group by averaging HCC risk scores for beneficiaries cared for by the MIPS eligible clinician or clinicians in the group during the second 12-month segment of the eligibility period, which begins on October 1 of the calendar year preceding the applicable performance period and ends on September 30 of the calendar year in which the applicable performance period occurs. Beginning with the 2021 MIPS payment year, the second 12-month segment of the MIPS determination period (beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs) is used when calculating average HCC risk scores and proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians.

(B) Request for Information on Risk Indicators Within Complex Patient Bonus Formula to Continue to Align With CMS Approach to Operationalizing Health Equity

CMS defines “health equity” as the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, social economic status, geography, preferred language, or other factors that affect access to care and health outcomes. We are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our enrollees need to thrive. We focus our health equity actions in five high-impact areas based on input from interested parties and communities, which incorporate both community- and system-level approaches to achieving health equity.⁵²⁶

- Expand the Collection, Reporting, and Analysis of Standardized Data;
- Assess Causes of Disparities Within CMS Programs and Address Inequities in Policies and Operations to Close Gaps;
- Build Capacity of Health Care Organizations and the Workforce to Reduce Health and Health Care Disparities;
- Advance Language Access, Health Literacy, and the Provision of Culturally Tailored Services; and
- Increase All Forms of Accessibility to Health Care Services and Coverage.

We believe the complex patient bonus aligns with all five focus areas, addressing the need for standardized data collection, supporting CMS in addressing inequities to close gaps, and helping build capacity among health care professionals to provide tailored, culturally and linguistically appropriate, accessible care that meets their patients’ needs and addresses social risk factors that individuals experience which can affect health care quality, access, and outcomes. To ensure our focus remains on the communities, individuals, and health care professionals we serve, we continue to explore ways and efforts to improve our current policies to advance health equity in ways that are responsive to the needs of our interested parties.

In section III.G.4.b.(7)(d) of this rule, we are proposing a positive adjustment to the quality performance score for an Accountable Care Organizations (ACO) that achieves a specified level of quality performance and serves beneficiaries in areas with a high Area Deprivation Index (ADI) or serves a large proportion of dual eligible beneficiaries. At this time, we are evaluating and inquiring whether the ADI measure is a good indicator of beneficiaries with high needs for use within the MIPS program as it is intended to capture local socioeconomic factors correlated with medical disparities and underservice. ADI is now reported publicly through the Neighborhood Atlas from the University of Wisconsin. It is a relative measure that is reported at the individual level, typically reported by percentile (1–100) or decile (1–10), with a higher percentile indicating greater disadvantage.

While we are not currently proposing to use the ADI measure within the complex patient bonus, we ask for public comments on the potential future incorporation of the measure. We are particularly interested in information from, or related to perspectives of, individuals living in or serving underserved communities, including

health care professionals disproportionately serving underserved communities and medically and socially complex patients:

- What additional risk indicators should CMS consider incorporating within the complex patient bonus formula?
- ++ How should CMS incorporate those additional risk indicators into the complex patient bonus formula?
- ++ What additional data sources should CMS consider that would allow for CMS to calculate the complex patient bonus in both a feasible and timely manner?
- ++ What additional measures or indicators are already developed which may capture the social determinants of health?
- In considering a potential future definition of “safety net providers” in the context of the complex patient bonus, CMS is interested in input and information related to the definition of “Essential Community Providers” (ECPs) as defined in 45 CFR 156.235. Under that regulation, ECPs are defined as providers that serve predominantly low-income, medically underserved individuals. They include covered entities defined in section 340B(a)(4) of the Public Health Service (PHS) Act and entities described in section 1927(c)(1)(D)(i)(IV) of the Act. Additional providers may submit an online petition to be considered and approved by CMS for inclusion on the ECP list through the ECP petition review process. We are interested in information from commenters regarding:
 - ++ Whether the definition of “essential community providers” adequately functions as a potential definition for safety net providers and could include all MIPS eligible clinicians who may receive the complex patient bonus? What (if any) concerns would health care providers or health care professionals have regarding the use of this definition?
 - ++ What recommendations for alternate definitions should CMS consider as a definition of “safety net provider” that would be inclusive of all MIPS eligible clinicians who may receive the complex patient bonus?
 - ++ When considering the “safety net provider” definition, how would commenters suggest CMS consider differences related to location or facilities that might qualify as “safety net providers” versus individual health care professionals who might also qualify as “safety net providers”? What would commenters identify as key determinations when considering a location, site-based, or facility-based definition or an individual health care

⁵²⁶ <https://www.cms.gov/About-CMS/Agency-Information/OMH/equity-initiatives/framework-for-health-equity>.

professional based definition of “safety net provider” in the context of MIPS eligible clinicians who may receive the complex patient bonus?

(b) Facility-Based Measurement

(i) Background

Section 1848(q)(2)(C)(ii) of the Act provides that the Secretary may use measures used for a payment system other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767), we established facility-based measurement under the authority in section 1848(q)(2)(C)(ii) of the Act for certain MIPS eligible clinicians. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 performance period/2021 MIPS payment year. In the CY 2022 PFS final rule, we finalized at § 414.1380(e)(6)(vi)(B) that for clinicians and groups eligible for facility-based measurement, beginning with the CY 2022 performance period/2024 MIPS payment year, the MIPS quality and cost performance category scores for such clinicians and groups will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission (86 FR 65526 and 65527). For more background on facility-based measurement, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767), the CY 2019 PFS final rule (83 FR 59856 and 59867), the CY 2020 PFS final rule (84 FR 63018 through 63020), and the CY 2022 PFS final rule (86 FR 65526 and 65527).

(A) Eligibility for Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule (82 FR 53756 and 53757), we finalized individual eligibility criteria for facility-based measurement at § 414.1380(e)(2)(i). We established that a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service (POS) codes used in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) standard transaction as an inpatient hospital or emergency room based on

claims for a period prior to the performance period as specified by CMS is eligible as an individual for facility-based measurement. We specified that we would use the definition of professional services provided in section 1848(k)(3)(A) of the Act in applying this standard (82 FR 53756). In the CY 2019 PFS final rule, we added the on-campus outpatient hospital (POS code 22) to the list of sites of service we consider when determining eligibility for facility-based measurement (83 FR 59857 through 59860). Additionally, we required that clinicians bill at least one covered professional service in a site of service identified by the POS codes for inpatient hospital or the emergency room in order to be eligible for facility-based measurement. We codified these standards in § 414.1380(e)(2)(i)(A) and (B). We also finalized that we must be able to attribute a clinician to a particular facility that has a value-based purchasing score under the methodology specified in § 414.1380(e)(5) in order for the clinician to be eligible for facility-based measurement (§ 414.1380(e)(2)(i)(C)).

Separately, in the CY 2018 Quality Payment Program final rule (82 FR 53759), we defined a facility-based group as a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements described above.

As we clarified and expanded our definition of a facility-based MIPS eligible clinician, we intended to allow MIPS eligible clinicians participating in virtual groups to be eligible for facility-based measurement using the same standards applicable to individual MIPS eligible clinicians and groups. We intended this because, just like individual clinicians and groups, some virtual groups may predominantly practice within a hospital setting and their MIPS eligible clinicians may otherwise be eligible for facility-based measurement based on the eligibility standards established at § 414.1380(e)(2)(i)(A) through (C) were they to participate in MIPS individually or as a group. However, we did not specify at § 414.1380(e)(2) that virtual groups may be eligible for facility-based measurement. Therefore, we are proposing to revise § 414.1380(e)(2) to permit facility-based measurement of a virtual group so long as it meets the specified eligibility standards beginning with the 2023 performance period/2025 MIPS payment year. Additionally, we are also proposing to revise § 414.1380(e)(2) to specify, consistent with our prior discussion of the matter, that a MIPS eligible clinician is eligible for facility-based measurement only if

CMS determines it eligible to be facility-based (82 FR 53757). We seek comments on this proposal.

(B) Definition of Facility-Based MIPS Eligible Clinician

In the CY 2018 Quality Payment Program final rule, we finalized the definition of a facility-based MIPS eligible clinician at § 414.1305 (82 FR 53578). In the CY 2019 PFS final rule, we finalized additions to the determination of eligibility for facility-based measurement as reflected in the regulation text at § 414.1380(e)(2)(i)(A), (B), and (C) (83 FR 59856 through 59860); however, we inadvertently did not update the definition of a facility-based MIPS eligible clinician at § 414.1305 to reflect these additions. Therefore, we are proposing to revise the facility-based MIPS eligible clinician definition at § 414.1305 to align with the current policies at § 414.1380(e)(2)(i)(A), (B), and (C), which are described in detail in section IV.A.10.d.(2)(b)(i)(A) of this proposed rule. We are also proposing to revise the terminology within § 414.1380(e) to align with the terminology used in the definition of a facility-based MIPS eligible clinician at § 414.1305. We are seeking comments on these proposals.

e. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments, we refer readers to the CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). In this CY 2023 PFS proposed rule, we are proposing to establish the performance threshold for the CY 2025 MIPS payment year using 2019 MIPS payment year data. In addition, we are including information about our timing for providing MIPS performance feedback to clinicians for the performance period in 2021.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a

year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which required the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget

Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS

payment year) to which the MIPS applies.

We applied these special rules for the first 5 years of MIPS to provide for a gradual and incremental transition to the performance we estimated for the sixth year of MIPS (the CY 2024 MIPS payment year). In the CY 2022 PFS final rule, we set the performance threshold at 75 points for the CY 2024 MIPS payment year (86 FR 65532). For further information on the performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53794), CY 2019 PFS final rule (83 FR 59880 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), and CY 2022 PFS final rule (86 FR 65527 through 65532). We codified the performance thresholds for each of the first 6 years of MIPS at § 414.1405(b)(4) through (9), as shown in Table 89.

TABLE 89: Performance Thresholds for the 2019 MIPS Payment Year through 2024 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year	2024 MIPS Payment Year
Performance Threshold	Year 1 3 points	Year 2 15 points	Year 3 30 points	Year 4 45 points	Year 5 60 points	Year 6 75 points
Difference in Performance Threshold (year n minus (year n-1))	N/A	12 points	15 points	15 points	15 points	15 points

Beginning with the CY 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every 3 years. In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean as the methodology for determining the performance threshold for each of the 2024, 2025, and 2026 MIPS payment years. We intend to reassess and establish the

methodology (mean or median) that we will use to determine the performance threshold for each of the next 3 years (2027 MIPS payment year, 2028 MIPS payment year, and 2029 MIPS payment year) in future rulemaking.

While we identified the mean as our methodology for determining the performance threshold for MIPS payment years CY 2024 through 2026, we have not specified which prior period’s mean final score we would use for the 2025 MIPS payment year’s performance threshold. From our review of the data available to us, we have identified the mean final scores for each

of the 2019 through 2022 MIPS payment years, as shown in Table 90. These four values represent the mean final scores for all MIPS eligible clinicians from prior periods that are available for consideration for the CY 2025 MIPS payment year performance threshold. The final scores for the CY 2021 MIPS performance period/2023 MIPS payment year were not finalized in time for this proposed rule; thus, the mean final score for the CY 2023 MIPS payment year is not listed as a potential performance threshold value for the CY 2025 MIPS payment year.

TABLE 90: Possible Values for the 2025 MIPS Payment Year Performance Threshold

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year
Mean	74.65 Points	87 Points	85.63 Points	89.47

As shown in Table 90, the mean final scores available for consideration for the CY 2025 MIPS payment year performance threshold cover a range of values from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). We are proposing to use the CY 2019 MIPS payment year as the prior period for the purpose of determining the performance threshold for the CY 2025 MIPS payment year for several reasons. We expect the mean final score for the CY 2023 performance period/2025 MIPS payment year to be lower than the mean final scores from the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years. In the CY 2022 PFS final rule (86 FR 65491 through 65507), we removed transition policies such as quality bonus points that had been established for scoring the quality performance category for the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years. Additionally, for the CY 2019 through 2023 MIPS payment years, we applied certain extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE, which resulted in the reweighting of some performance categories if data were not submitted for a MIPS eligible clinician. In setting the performance threshold for the CY 2025 MIPS payment year, we believe we should take into account the elimination of those transition policies, as well as the possibility that the performance categories will not be reweighted for as many MIPS eligible clinicians for the CY 2023 performance period/2025 MIPS payment year. Furthermore, continuing to use the mean final score from the CY 2019 MIPS payment year to determine the performance threshold for the CY 2025 MIPS payment year would maintain stability in the program. We believe continuing to use the mean final score from the CY 2019 MIPS payment year would provide predictability to MIPS eligible clinicians during a program year in which they might be affected by those prior policy changes as well as potentially scored on performance categories that were

previously reweighted due to the COVID-19 PHE.

We estimate in the Regulatory Impact Analysis (RIA) in section VII.E.16.d.(4) of this proposed rule that approximately a third of MIPS eligible clinicians would receive a negative payment adjustment for the CY 2023 performance period/2025 MIPS payment year if the policies proposed in this proposed rule are finalized and the performance threshold is equal to 75 points. However, we have estimated that final scores for many clinicians for the CY 2023 performance period/2025 MIPS payment year would be close to the proposed performance threshold of 75 points; therefore, the actual observed percentage of clinicians receiving negative payment adjustments may slightly differ from the RIA estimates. We refer readers to the alternatives considered in the RIA in section VII.F.7 of this proposed rule where we present the impact of using data from alternative years to determine the performance threshold for the 2025 MIPS payment year. We intend to revisit in future rulemaking whether we should use a different prior period to establish the performance threshold for future MIPS payment years.

Under this proposal, and pursuant to the methodology we established previously at § 414.1405(g), the performance threshold for the CY 2025 MIPS payment year would be the mean of the final scores for all MIPS eligible clinicians for the CY 2019 MIPS payment year, which is 75 points (rounded from 74.65 points). We propose corresponding changes to § 414.1405(b)(9) to reflect this proposal. We request comments on this proposal, as well as whether we should use data from alternative years to set the performance threshold for the CY 2025 MIPS payment year, which we considered and discussed in the RIA in section VII.F.7 of this proposed rule.

(3) Example of Adjustment Factors

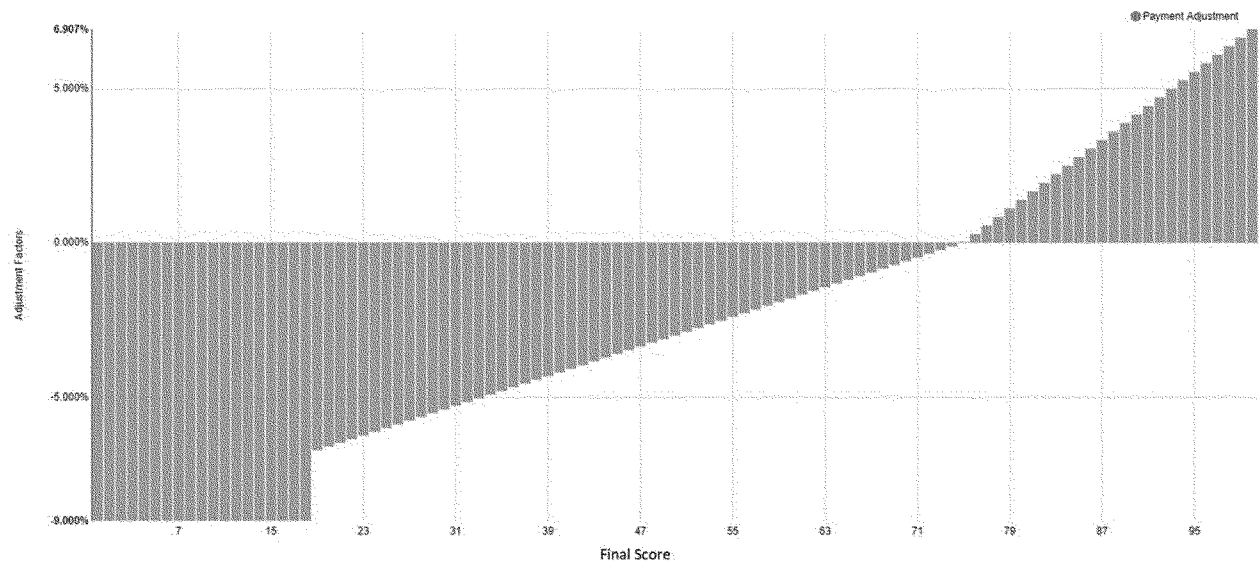

Figure 4 provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2025 MIPS payment year. In Figure 4, the performance

threshold is set at 75 points. The applicable percentage is 9 percent for the CY 2025 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the CY 2025 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the performance threshold of 75 points for the CY 2025 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive the lowest negative applicable percentage (negative 9 percent for the CY 2025 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 75 points (which is the proposed performance threshold for the CY 2025 MIPS payment year) would receive a neutral MIPS payment adjustment. Beginning with the CY 2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act will no longer be available. For this reason, Figure 4 no longer illustrates an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

Figure 4: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Proposed Performance Threshold for the 2025 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN), but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 91 illustrates the changes in payment adjustment based on the final policies from the CY 2022 PFS final rule

(86 FR 65527 through 65536) for the 2024 MIPS payment year and the proposed policies for the 2025 MIPS

payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 91: Illustration of Point System and Associated Adjustments Comparison between the 2024 MIPS Payment Year and the Proposed 2025 MIPS Payment Year

2024 MIPS Payment Year		2025 MIPS Payment Year	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
0.0-18.75	Negative 9%	0.0-18.75	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.0	0% adjustment	75.0	0% adjustment
75.01-88.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.
89.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 89.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance		

f. Review and Correction of MIPS Final Score

(1) Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized

that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

As we explained previously, we aim to provide performance feedback on or around July 1 of each year, but due to the PHE and COVID-19, it is possible that we might provide performance feedback at a later date (85 FR 50321). We made performance feedback available for the CY 2019 performance

period on August 5, 2020, and for the CY 2020 performance period on August 2 and September 27, 2021. Although we aim to provide performance feedback for the CY 2021 performance period on or around July 1, 2022, it is possible that the release date could be later depending on the circumstances. We direct readers to [gpp.cms.gov](https://www.gpp.cms.gov) for more information.

g. Third Party Intermediaries General Requirements

(1) General Requirements

(a) Background

Flexible reporting options will provide eligible clinicians with options

to accommodate different practices and make measurement meaningful. We believe that allowing eligible clinicians to participate in MIPS through the use of third party intermediaries that will collect or submit data on their behalf, will help us accomplish our goal of implementing a flexible program (82 FR 53806).

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 through 27595), the CY 2021 PFS final rule (85 FR 84926 through 84947), and the CY 2022 PFS final rule (86 FR 65538 through 65550) for our previously established policies regarding third party intermediaries.

In this proposed rule, we are proposing to update the definition of a third party intermediary at § 1400.1305 and to make other minor conforming technical edits to the regulation text governing third party intermediaries set forth in § 414.1400. We are also proposing to revise Qualified Clinical Data Registry (QCDR) measure self-nomination and measure approval requirements, including proposing to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year. We are also proposing to revise remedial action and termination of third party intermediaries' policies. Finally, we have also included two requests for information on third party intermediary support of MIPS value pathways (MVPs) and national Continuing Medical Education (CME) organizations becoming a new type of third party intermediary.

(b) Definition of a Third Party Intermediary

In the CY 2022 PFS final rule (86 FR 65542 through 65545), we finalized at § 414.1400(a)(1) that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or Alternative Payment Model (APM) Entity by any of the following third party intermediaries: QCDR; qualified registry; health IT vendor; or CMS approved survey vendor. In that rule, we added APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries reporting MIPS on behalf of APM Entities (86 FR 65542). We also revised § 414.1400(a)(1) to allow for QCDRs, qualified registries,

health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, a recently adopted option for MIPS eligible clinicians reporting MIPS Value Pathways (86 FR 65544 through 65545). One of our strategic goals in developing MIPS included developing a program that is meaningful, understandable, and flexible for participating MIPS eligible clinicians. One way we believe this could be accomplished is through flexible reporting options, including allowing MIPS eligible clinicians the flexibility of using third party intermediaries to collect or submit data on their behalf. In the CY 2019 PFS final rule (83 FR 59894) we finalized at § 414.1305 to define a third party intermediary as an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the quality, improvement activities, and Promoting Interoperability performance categories.

We now propose to update the definition of a third party intermediary at § 414.1305 to include subgroups and APM Entities and to make minor edits for technical clarity. We propose the revised definition would state that a third party intermediary means an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. We request comments on this proposal.

(2) Requirements Specific to QCDRs

(a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(B)(ii) of the Act provides, that the Secretary shall encourage MIPS eligible professionals to report on applicable measures through the use of certified EHR technology and qualified clinical data registries.

We believe QCDRs and QCDR measures further health equity through the expansion of data collection, reporting, and analysis. QCDR measures data can be used not only to identify gaps in the standard of care, but also to determine solutions to disparate impacts on different populations. We anticipate growth in the number of

QCDR measures that address health equity in upcoming performance years. We refer readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID–19 IFC (85 FR 27594 through 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944) and the CY 2022 PFS final rule (86 FR 65540 through 65550) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

(b) QCDR Measure Self-Nomination Requirements

As part of QCDR measure self-nomination, § 414.1400(b)(4)(i) and (b)(4)(i)(B) require the nominating QCDR to publicly post the QCDR measure specifications (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted no later than 15 calendar days following CMS approval. We typically notify a QCDR of its measure's approval prior to our posting of the approved measure specifications. While we require QCDRs to post their approved measure specifications, as their websites are an important source for clinicians, we want to limit the chance of discrepancies between CMS's posting and QCDRs' postings.

To avoid confusion, we are proposing to revise § 414.1400(b)(4)(i)(B) to clarify requirements for publicly posting the approved measure specifications. Specifically, we propose to revise the language such that entities must publicly post measure specifications no later than 15 calendar days following CMS's posting of approved QCDR measure specifications on a CMS website and that QCDRs need to confirm that the measure specifications they post align with the measure specifications posted by CMS. We propose to revise § 414.1400(b)(4)(i)(B) to state that, for a QCDR measure, the entity must submit for CMS approval measure specifications including the Name/title of measure, National Quality Forum (NQF) number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the

QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. We request comments on this proposal. The burden estimates for the self-nomination process are currently associated with OMB Control No. 0938–1314 (CMS–10621). We refer readers to section V.B.9.c. of this rule for the associated burden estimates relevant to this proposal.

(c) QCDR Measure Approval Criteria

We refer readers to § 414.1400(b)(4)(iii), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID–19 IFC (85 FR 27594 through 27595), the CY 2021 PFS final rule (85 FR 84937 through 84942), and the CY 2022 PFS final rule (86 FR 65540 through 65542) for previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements.

We refer readers to the CY 2020 PFS final rule where we finalized requirements for QCDR measure testing (84 FR 63065 through 63067). Based on our goal that all measures available in MIPS are reliable and valid, we finalized in the CY 2020 PFS final rule a requirement for all QCDR measures to be fully developed and tested with complete testing results at the clinician level beginning with the CY 2021 performance period/2023 MIPS payment year (84 FR 63065 through 63067).⁵²⁷ In consideration of the burden of collecting data as part of QCDR measure testing on clinicians and hospitals on the front lines of the COVID–19 pandemic, in the May 8th COVID–19 IFC and CY 2021 PFS final rule, we delayed the requirement for fully developed and tested QCDR measures by a year, to begin with the CY 2022 performance year (85 FR 27594 and 85 FR 84938 through 84939). Separately, to incorporate feedback from interested parties into the CY 2021 PFS final rule, we finalized an incremental approach to the QCDR measure testing requirements beginning with the CY 2022 performance year. Specifically, we finalized a policy that a QCDR measure must be face valid prior to being self-

nominated for the CY 2022 performance year (85 FR 84939). For new QCDR measures to be approved, we must verify they are face valid for the initial performance year and fully tested for any subsequent performance year (85 FR 84939). Thus, a QCDR measure that we approve for the CY 2022 performance year; does not have to be fully tested until the CY 2023 performance year (85 FR 84939).

We recognize concerns expressed by interested parties regarding the burden of full measure testing and the continuing impact of the COVID–19 PHE (86 FR 65540 and 65541). Data collection efforts pose a challenge given the myriad disruptions to the health care system caused by the PHE, including clinicians' need to prioritize care for COVID–19 patients (and deprioritize data collection), and lost data due to the delay and cancellation of elective procedures. In particular, the COVID–19 extreme and uncontrollable circumstances exception decreased the number of groups reporting to MIPS through QCDRs. Without data from clinicians, QCDRs cannot complete their measure assessments, and delaying for one year will reduce the burden placed on QCDRs and clinicians. Despite these challenges, we believe QCDRs will soon be able to work with clinicians on full measure testing. Fully developed and tested measures improve measure reliability and validity thereby increasing clinician usability. Full measure testing also prevents instances where QCDRs may discover that a measure is not feasible part way through data collection (84 FR 63066).

Therefore, we propose to revise our QCDR measure approval requirements again by delaying the requirement for a QCDR measure to be fully developed and tested with complete testing results at the clinician level until the CY 2024 performance year. Under this proposal, a QCDR measure approved for the CY 2023 performance year or earlier would not need to be fully developed and tested until the CY 2024 performance year. A new QCDR measure proposed for the CY 2024 performance year would be required to meet face validity. We would require full testing at the clinician level before the QCDR measure can continue in the program beyond the first year. We propose to amend § 414.1400(b)(4)(iii)(A)(3) to state that beginning with the CY 2022 performance period/2024 MIPS payment year, CMS may approve a QCDR measure only if the QCDR measure meets face validity. Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR

measure approved for a previous performance year must be fully developed and tested, with complete testing results at the clinician level, prior to self-nomination. We request comments on this proposal.

(3) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(e), the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77389), the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), the CY 2021 PFS final rule (85 FR 84947), and the CY 2022 PFS final rule (86 FR 65542 and 65550) for previously finalized policies for remedial action and termination of third party intermediaries.

We are proposing a few changes to the regulations relating to remedial actions and terminations set forth in § 414.1400(e). These include one revised and one new requirement for Corrective Action Plans (CAPs), and proposed termination of certain approved QCDRs and Qualified Registries that continue to fail to submit performance data.

Section 414.1400(e)(1) provides that, after providing written notice, CMS may take remedial action if CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised. As described in § 414.1400(e)(1)(i) and (ii), the remedial actions CMS may take against a third party intermediary include requiring the third party intermediary to submit to CMS by a date specified by the agency a corrective action plan (CAP) and publicly disclosing an entity's data error rate on the CMS website until the data error rate falls below 3 percent.

As described in § 414.1400(e)(2), CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons: CMS has grounds to impose remedial action; CMS has not received a CAP within the specified time-period or the CAP is not accepted by CMS; or the third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

We are taking this opportunity to propose a technical correction in § 414.1400(e)(3), to include the missing introductory text of, "A data submission that," which we inadvertently failed to

⁵²⁷ We refer readers to the Blueprint for the CMS Measures Management System for additional details and guidance on QCDR measure testing. Available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>.

include when finalizing our proposal to revise and redesignate existing language from former § 414.1400(f)(3)(ii) to paragraph (e)(3) in the CY 2022 PFS final rule (86 FR 65550). With this proposed technical correction, the provision at § 414.1400(e)(3) would read, “A data submission that contains data inaccuracies affecting the third party intermediary’s total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.”

(a) Revised Corrective Action Plan (CAP) Requirements

As described in § 414.1400(e)(1)(i), the remedial actions CMS may take against a third party intermediary include requiring the third party intermediary to submit to CMS by a date specified by the agency a corrective action plan (CAP). As finalized in the CY 2021 PFS final rule and specified at §§ 414.1400(e)(1)(i)(A) through (D), unless different or additional information is specified by CMS, the CAP must address the following issues: (A) the issues that contributed to the non-compliance; (B) the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program; (C) the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future; and (D) a detailed timeline for achieving compliance with the applicable requirements.

In this proposed rule, we are proposing to revise the scope of affected parties impacted by the second CAP requirement at § 414.1400(e)(1)(i)(B). As finalized in the CY 2021 PFS final rule at § 414.1400(e)(1)(i)(B), we explained that, depending on the circumstances, non-compliance by a third party intermediary may affect an uncertain number of clinicians and groups and has the potential to implicate substantial program dollars. We noted our belief that the information regarding the scope of harms was necessary for the agency to assess the full program impact of the non-compliance, as well as our belief that it was important for the CAP to include this impact information regardless of the clinician’s participation status, because non-compliance may have programmatic implications even if it does not affect payment, such as for data posted on the

Physician Compare website (85 FR 84947).

We have become aware that in some cases, QCDRs granted licenses to the measures of another QCDR upon which a CAP has been imposed may be directly impacted by the issues that led to the CAP. We are proposing to broaden the scope of affected parties under the CAP requirement at § 414.1400(e)(1)(i)(B) to also identify impacts to any QCDRs that were granted licenses to the measures of the affected QCDR, rather than limit the identification of impacts to clinicians only. We are also proposing a technical correction in § 414.1400(e)(1)(i)(B) to correct the word “voluntary” to “voluntarily.” Accordingly, we propose to revise the CAP requirement at § 414.1400(e)(1)(i)(B) to require the third party intermediary to address in its CAP the impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed.

We also propose to add a new CAP requirement to require the third party intermediary to notify the parties identified in proposed § 414.1400(e)(1)(i)(B) of the impact to these parties by submitting a communication plan. The intent of this proposal is to enable affected parties to better understand and prepare for any operational and other challenges as needed. We believe having third party intermediaries submit a communication plan as part of their CAP would ensure third party intermediaries directly communicate the situation and its impact to these parties in a timely and consistent manner. Accordingly, we propose to add § 414.1400(e)(1)(i)(E) to require the third party intermediary to develop a communication plan for communicating the impact to the parties identified in proposed § 414.1400(e)(1)(i)(B). Specifically, as proposed above, this would include individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed. We refer readers to section V.B.9.c. of this rule for the associated burden estimates relevant to

these proposals. We request comments on these proposals.

(b) Termination of Approved QCDRs and Qualified Registries That Have Not Submitted Performance Data

In the CY 2022 PFS final rule, we noted that we had identified a number of QCDRs and qualified registries that had continued to self-nominate to become a third party intermediary for the MIPS program but had not submitted clinician, group, or virtual group data to CMS (86 FR 65545). We further noted as the MIPS program continues to mature, we wished to reduce the number of vendors that self-nominate to become a qualified vendor but do not actively participate in the MIPS program (*Id.*). We also noted that our goal was to decrease the operational burden on CMS and those vendors that do not submit MIPS data to CMS (86 FR 65546). Accordingly, we finalized requirements for approved QCDRs and qualified registries that have not submitted performance data to submit a participation plan as part of their self-nomination process (*Id.*). We finalized an incremental approach to addressing this issue. First, we established a participation plan requirement, which requires a QCDR or qualified registry that was approved but did not submit data for any of the CY 2019 through 2023 MIPS payment years to submit a participation plan in order to be approved for the CY 2023 performance period/2025 MIPS payment year (§ 414.1400(b)(3)(vii)). Second, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan in order for it to be approved for the CY 2024 performance period/2026 MIPS payment year or for a future performance period/payment year (§ 414.1400(b)(3)(viii)).

Even with the participation requirements in place, we remain concerned about the administrative burden created by QCDRs and qualified registries that submit the required participation plans during the self-nomination process and continue as an approved QCDR or qualified registry, yet continue not to submit MIPS data to CMS. Maintaining these vendors that do not actively participate does not provide a benefit to the MIPS program, rather it creates confusion for interested parties by including these vendors in our qualified postings (86 FR 65545).

Our goal is also to decrease the operational burden on CMS and interested parties. CMS would decrease its operational burden by eliminating

the need to screen these entities. Removing QCDRs and qualified registries who do not actively participate from our qualified postings would also decrease the administrative burden for clinicians trying to identify an active participating QCDR or qualified registry.

Accordingly, beginning with the CY 2024 performance period, we propose to terminate those QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period, and continue to not submit MIPS data to CMS for the applicable performance period. For example, if a QCDR or qualified registry is required to submit a participation plan during the self-nomination process for the CY 2024 performance period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for the CY 2022 and 2023 performance periods, and CMS approves their participation plan, but the QCDR or qualified registry continues to not submit MIPS data for the CY 2024 performance period (CY 2024 performance data is submitted by March 2025), then under our proposed policy, that QCDR or qualified registry would be terminated.

Specifically, we propose to add a new ground for termination at § 414.1400(e)(5) stating that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under § 414.1400(b)(3)(viii), but does not submit MIPS data for the applicable performance period for which they self-nominated under § 414.1400(b)(3)(viii), will be terminated. We refer readers to section V.B.9.c. of this rule for the associated burden estimates relevant to this proposal. We request comments on this proposal.

Finally, in conjunction with our proposal in section IV.A.10.g.(1)(b) above to amend the definition of “third party intermediary” to refer to subgroups and APM Entities, we are proposing a conforming change to § 414.1400(e)(2), which currently states that CMS may immediately or with advance notice terminate “the ability of a third party intermediary to submit MIPS data on behalf of MIPS eligible clinician, group or virtual group” under certain circumstances. Rather than amend this provision to add references to subgroups and APM Entities, we propose to revise § 414.1400(e)(2) by removing the previously quoted phrase.

If this proposal is finalized, the revised regulation would simply provide that CMS may immediately or with advance notice “terminate a third party intermediary” under the specified circumstances. We request comments on this proposal.

(4) Auditing of Entities Submitting MIPS Data

(a) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77389 through 77390), we finalized that third party intermediaries submitting MIPS data must comply with auditing procedures as a condition of qualification and approval to participate in MIPS, including the requirement to make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data (§ 414.1400(f)(1)).

(b) Proposed Revisions to the Requirement to Make Contact Information Available

In conjunction with our proposal in section IV.A.10.g.(1)(b) above updating the definition of a third party intermediary, we are similarly proposing to revise the requirements codified at § 414.1400(f)(1) to account for third party intermediaries reporting on behalf of subgroups and APM Entities. Additionally, we are also proposing to update the requirement to apply to third party intermediaries submitting data on behalf of virtual groups. We therefore propose to update § 414.1400(f)(1) to require that the entity must make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email. We invite public comment on this proposal.

(5) Requests for Information

(a) Request for Information on Third Party Intermediary Support of MVPs

In the 2022 PFS rule (86 FR 65394 through 65395) we discussed our proposals related to furthering our transition to MVPs. We believe it is important to allow third party intermediaries to support MVPs. Furthermore, we noted that we expect QCDRs, qualified registries, and Health IT vendors who support MVPs to support all measures and activities across the quality, Promoting Interoperability, and improvement

activities performance categories that are included in the MVP (86 FR 65543). Thus, we believe it is important for third party intermediaries to have the capabilities to support MVPs (86 FR 65415 and 65542 through 65544).

Although our MVP proposals have generally been supported, some third party intermediaries have had questions and expressed concerns with the requirement for third party intermediaries to support all measures within an MVP due to operational limitations (86 FR 65543). While we recognize these limitations, we believe allowing third party intermediaries to only support specific measures in an MVP creates undue burden on the MVP Participant and limits the clinicians' choice of measures available.

Given public comments on the challenges of the current requirement to support all quality measures within an MVP (86 FR 65543), we are requesting input on the following:

- Should third party intermediaries have the flexibility to choose which measures they will support within an MVP?
- What are the barriers/burdens that third party intermediaries face to supporting all measures within an MVP?
- What type of technical educational resources would be helpful for QCDRs, qualified registries, and Health IT vendors to support all measures within an MVP?

We request comments on these questions.

(b) Request for Information on National Continuing Medical Education (CME) Accreditation Organizations Submitting Improvement Activities

We have signaled an interest in aligning MIPS with efforts clinicians undertake to maintain their state licensure and, as appropriate, board certification status, which often requires completion of Continuing Medical Education (CME) requirements and/or Maintenance of Certification (MOC) requirements. We are considering whether national continuing medical education (CME) accreditation organizations that provide certification of CME could serve as a new type of third party intermediary to submit data for clinicians seeking improvement activities performance category credit for IA_PSPA_28, “Completion of an Accredited Safety or Quality Improvement Program,” and IA_PSPA_2, “Participation in MOC Part IV,” which are both medium-weighted improvement activities, so that clinicians would not need to attest to completion of the improvement

activities through the QPP web portal. We are considering how to include information from national CME accreditation organizations in MIPS.

Currently, the only entities that are permitted to submit attestations on behalf of clinicians are third party intermediaries which includes QCDRs, qualified registries, health IT vendors, and CMS-approved survey vendors. We are considering approaches to including CME accreditation organizations as third party intermediaries, however our current third party intermediary policies do not allow third party intermediaries to submit data solely for the improvement activities performance category. We have established that QCDRs and quality registries must support the reporting of three performance categories: quality; Promoting Interoperability; and improvement activities (§ 414.1400(b)(1)(i)). We have finalized requirements that Health IT vendors supporting MVPs must be able to submit data for the quality, Promoting Interoperability, and improvement activities performance categories (§ 414.1400(c)(1)(i)). In the quality performance category, QCDRs, quality registries and Health IT vendors are not required to support the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for MIPS surveys and qualified registries and Health IT vendors are not required to support QCDR measures (85 FR 84926). CMS-approved survey vendors are allowed to report the CAHPS for MIPS survey only for the quality performance category (§ 414.1400(d)).

We are considering establishing a different type of third party intermediary, that allows national CME accreditation organizations to submit improvement activities based on completion of CME or MOC for the improvement activities performance category. We are seeking comment on whether a new type of third party intermediary would be valuable to clinicians. We believe that if we add a new type of third party intermediary, we should consider only national CME accreditation organizations to reduce potential clinician confusion and program complexity. We realize there are numerous issues on which we need feedback to determine the usefulness of CME accreditation organizations reporting for clinicians and to fully implement policies. We are interested in the value to clinicians, including burden reduction, to allow CME accreditation organizations to submit one or two improvement activities. We are interested in the types of organizations that should be considered

if we establish a different type of third party intermediary and seek feedback on criteria for selection. We also are interested in benefits and barriers to the CME accreditation organizations if we established a different type of third party intermediary. It is important to note that all requirements that apply to third party intermediaries would need to be applied to CME Accreditation Organizations. We would need to establish criteria for the types of CME accreditation organizations that would be included, a review process to evaluate vendor application forms, requirements for yearly vendor training and additional training as required, submission of a Quality Assurance Plan (QAP) regarding the data submitted, and policies about the public posting of information submitted.

We are seeking feedback on the value to clinicians of adding CME accreditation organizations as third party intermediaries including burden reduction, criteria for selecting CME accreditation organizations including the types of entities that should be considered and implementation policies.

(i) Request for Information on Value of Adding CME Accreditation Organizations as Third Party Intermediaries

We are requesting feedback on the value to clinicians of the program including CME accreditation organizations as a new type of third party intermediary that submits data on improvement activities that align with efforts clinicians undertake to complete CME, rather than attest to completing the activity at the time of submission.

- What is the value to clinicians for adding a new third party intermediary as an alternative method of data submission for the two improvement activities noted above, rather than attesting to completion of the improvement activities?

- What considerations are there for including a new type of third party intermediary that supports only select improvement activities in the improvement activities performance category? Currently, completion of the improvement activities related to CME and MOC do not satisfy the requirements of the improvement activities performance category; additional improvement activities must be submitted to meet the requirements. Improvement activities related to CME and MOC are not included in all MVPs. We are concerned that including an additional reporting method might be confusing for clinicians, who would need to attest to additional improvement activities to meet

requirements of the improvement activities performance category. If a new type of third party intermediary was created that allowed a CME accreditation organization to submit data for select improvement activities, would there be any additional burden or operational costs to clinicians using multiple vendors to submit data to meet the requirements of the improvement activities performance category?

- If a new type of third party intermediary was created for reporting only the improvement activities performance category, are CME accreditation organizations interested in developing capacity over time to submit additional improvement activities in the Improvement Activities Inventory, especially activities that address CMS priority issues, such as closing the health equity gap, inclusion of the patient voice in quality improvement, shared decision-making, and care coordination?

- As the program transitions to MVPs, we are interested in reducing complexity and burden for clinicians. Would CME accreditation organizations need to be able to support MVPs (submission of measures and activities for quality, Promoting Interoperability and improvement activities performance categories) to reduce burden?

- Are there other approaches to aligning MIPS and MVP requirements with completion of CME requirements and/or MOC requirements that we should consider?

(ii) Request for Information on Criteria for Selecting the CME Accreditation Organizations

We request feedback on the types of organizations that should be considered for this potential new type of third party intermediary.

- If we add a new type of third party intermediary, we believe we should develop criteria that permit only national CME accreditation organizations to become a new third party intermediary, to reduce confusion and complexity for clinicians. Are there special considerations or factors we should consider in the criteria related to regional CME accreditation organizations?

- If we develop a new type of third party intermediary that allows only reporting for specific improvement activities for the improvement activities performance category, what type of selection criteria should be established? What type of entity would be eligible to be this new third party intermediary type? For example, would only national certifying accrediting organizations for CME with the ability to report for all

MIPS clinicians meet the requirement when we initially implement the policy because the relevant improvement activity is specific to physicians: IA_PSPA_28, “Completion of an Accredited Safety or Quality Improvement Program” and IA_PSPA_2, “Participation in MOC Part IV”? Should we consider only organizations that can support submission of all improvement activities in the improvement activities performance category to reduce clinician confusion and burden?

• Should we allow only CME accreditation organizations that can submit all measures and activities required in MVPs, to parallel the requirements for QCDRs, qualified registries and Health IT vendors? Are there technical resources that would be helpful to CME accreditation organizations to describe how measures and activities are submitted to CMS to assist a transition to supporting three performance categories? If CME accreditation organizations could support measures and activities in MVPs, would we need to develop any separate third party intermediary policies for the selection and approval of national CME accreditation organizations?

• Should we consider inclusion of organizations that are accredited to provide continuing clinicians education (for example, CME, certified nurse educator (CNE), etc.)?

• Should we consider organizations that accredit facilities and clinical practices as part of this new third party intermediaries type?

(iii) Request for Information on Third Party Intermediary Implementation Policies

We request feedback on how third party intermediary policies should be maintained or modified if we add a new type of third party intermediary.

• If we develop a new type of third party intermediary, we believe we should align with existing third party intermediary requirements and policies to the extent possible. Are there concerns with current policies used for CMS-approved vendors that includes completion of a vendor application form; completion of yearly vendor training and additional training as required; submission of a QAP; and the requirement that CMS be able to publicly post submitted data? Are there recommendations about this approval process?

• Third party intermediaries currently submit data via a file upload or application programming interface or API submission. Should we maintain submission requirements? Are there

advantages or concerns with allowing the direct, log in and upload, and attestation submission types? Would any other submission types or methodologies be needed to submit improvement activity data for this new third party intermediary type?

We request feedback on these topics.

h. Public Reporting on the Compare Tools Hosted by HHS

Section 10331(a)(1) of the Affordable Care Act authorized the development of a Physician Compare internet website with information on physicians and other eligible professionals enrolled in Medicare who participate in the Physician Quality Reporting Initiative (PQRI). Section 1848(q)(9) of the Act, as added by section 101(b) of MACRA, aligned Physician Compare with the newly-established Merit-Based Incentive Program by requiring the public reporting of MIPS performance information for MIPS eligible professionals through Physician Compare.

For previous discussions on public reporting, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2022 PFS final rule (86 FR 65550 through 65554) and the Care Compare: Doctors and Clinicians Initiative Page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC>. We also note that as finalized at § 414.1305 “Physician Compare” is defined as the Physician Compare internet website of CMS (or a successor website). As discussed in prior rulemaking, we note the current website is the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as “compare tool” throughout this proposed rule (86 FR 39466).

(1) Telehealth Indicator

Prior to the start of the COVID-19 public health emergency (PHE) in March 2020, Medicare paid for telehealth under limited circumstances, with telemedicine services restricted to rural or health professional shortage areas, established patients, or certain types of health care providers. In response to the ongoing PHE, we expanded Medicare payment for telemedicine services to increase access to care. In the CY 2021 PFS final rule,

we finalized a number of more permanent Category 1 CPT codes and authorized a number of time-limited Category 3 codes due to the PHE (85 FR 84502 through 84540). Additionally, in the CY 2022 PFS final rule, we expanded upon definitions of different telehealth services to increase coverage, and extended the time period for certain Category 3 codes (86 FR 65047 through 65065).

According to the September 2021 Medicare Telemedicine Snapshot,⁵²⁸ telehealth services have increased more than 30-fold since the start of the PHE and have been utilized by more than half of the Medicare population. With the increase in patients seeking telehealth due to the ongoing PHE and CMS finalizing and expanding coverage of certain Category 1 and Category 3 telehealth services codes, adding an indicator to clinician and group profile pages would clarify for website users which clinicians offer telehealth services.

The Compare tool includes information on how beneficiaries may access care. We believe knowing whether a clinician offers services via telehealth would be useful to patients and caregivers generally, beyond the PHE, particularly for those who have access to care barriers such as living in rural areas or have transportation constraints. The ability to search for clinicians and groups who offer telehealth would also eliminate the burden of patients and caregivers having to call offices to obtain this information.

Our research suggests that the addition of a telehealth indicator would meet a gap in the current information we provide on access to care and that such an indicator would be well understood by users. Keyword searches from the legacy Physician Compare website showed that, historically, website users search for telehealth information. Additionally, user testing we conducted with Medicare beneficiaries and caregivers showed that users accurately understood the meaning of a telehealth indicator and some even expressed an interest in knowing which services, specifically, might be offered via telehealth. Most users found the telehealth indicator to be important and useful when selecting a clinician. Users also mentioned convenience or personal preference as

⁵²⁸ CMS, *Medicare Telemedicine Snapshot: March 2020–Feb. 2021* (2021), <https://www.cms.gov/files/document/medicare-telemedicine-snapshot.pdf>. See also *Medicare Telemedicine Snapshot Data File*, <https://www.cms.gov/files/zip/medicare-telemedicine-snapshot-data-file.zip>.

reasons a telehealth indicator would be important to include on the website.

We also believe that publicly reporting a telehealth indicator on clinician and group profile pages would further CMS's health equity goals. According to the aforementioned Medicare Telemedicine Snapshot, more than half of the Medicare population in almost every racial/ethnic group regardless of sex or Medicare and Medicaid status are utilizing telehealth services. Given the exponential increase in Medicare telehealth usage by Medicare users over the past 2 years, particularly by those in areas with limited healthcare access, and those who cannot physically access a clinician's office, publicly reporting information on which clinicians furnish services via telehealth would aid in more widely applicable health care provider selection across the Medicare and dually eligible Medicare and Medicaid populations, since some beneficiaries have preferences for, or limitations preventing them from seeing a clinician in-person. For these reasons, we propose adding a telehealth indicator to clinician and group profile pages, as technically feasible. Along with the indicator, we would include a statement on the profile page caveating, in a user-friendly way based on consumer testing, that the clinician or group only provides some, not all, services via telehealth.

To develop the indicator that would display on the Compare tool clinician and group profile pages, we propose to identify clinicians who perform telehealth services using Place of Service Code 02 (indicating telehealth) on paid physician & ancillary service (that is, carrier) claims, or modifier 95 appended on paid claims. To keep the indicator current and address concerns that some telehealth codes are time-limited, we would use a 6-month lookback period and refresh the telehealth indicator on clinician profile pages bi-monthly, which is the same cadence in which we update other clinician directory information. Frequently updating the telehealth indicator information would ensure that when a time-limited Category 3 codes expires, a clinician who only bills telehealth services under that code would no longer have a telehealth indicator on their profile page.

We seek comment on all aspects of our proposals to add a telehealth indicator to clinician and group profile pages, as technically feasible; our proposed approach to identifying clinicians and groups furnishing telehealth services; and our proposed 6-month lookback period and bi-monthly

data refresh frequency, which account for potential changes to telehealth coverage.

(2) Publicly Reporting Utilization Data on Profile Pages

Section 104(a) of MACRA provides that, beginning with 2015, the Secretary shall make publicly available on an annual basis, in an easily understandable format, information with respect to physicians and, as appropriate, other eligible professionals, on items and services furnished to Medicare beneficiaries. The information made available must be similar to the physician and other supplier utilization data we have historically made available and shall include information on the number of services furnished by the physician or other eligible professional under Medicare, which may include information on the most frequent services furnished or groupings of services. Section 104(e) of MACRA requires that we integrate this data into the Compare tool.

To satisfy section 104(e), we implemented a policy of including utilization data in a downloadable format from late 2017 using the most currently available data and that the specific codes to be included were determined using data analysis and reported at the eligible clinician level (80 FR 71130). We also finalized a policy of continuing to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today in the Medicare Provider Data Catalog (PDC) available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>. Separately, we have reported on the Compare tool clinician training information as well as a clinician's primary and secondary specialties.⁵²⁹

We believe it would be useful to patients and their caregivers, when making healthcare decisions, if a subset of procedures performed were publicly reported on clinician profile pages in an understandable and meaningful way. To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled "Physician and Other Supplier Data." These data are useful to the healthcare industry, healthcare researchers, and other interested parties

who have the expertise to accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical manner that is not easily accessible or usable by patients, who do not frequently visit data.cms.gov or understand medical procedure coding. Additionally, the amount of information available in the PUF may overwhelm patients and caregivers.

We envision that reporting utilization data on patient-facing clinician profile pages would provide two main areas of benefit. The first would be to allow for more granular clinician searches. Patients would not only be able to find specific types of clinicians but also those clinicians who have performed specific types of procedures. The second would be to provide categories of utilization data in a plain language display that is more usable to patients and their caregivers than what is available in the PDC.

For example, someone with severe arthritis of the knee may want to search for an orthopedic surgeon who specifically performs knee replacements. Currently, the clinician search returns only results for "orthopedic surgeons" generally. That is, the patient does not see which clinicians have performed knee replacements in the past, and the patient likely would need to spend time calling clinicians to ascertain such information. We believe that indicating which clinicians have performed certain procedures would relieve some of this patient burden as it would yield more specific and useful search results.

In order to publicly report procedural utilization data in a meaningful way to patients and caregivers, rather than showing thousands of rows of individual Healthcare Common Procedure Coding System (HCPCS) data, as we do for the research community in the PDC, we propose to collapse HCPCS codes using the Restructured Berenson-Eggers Type of Service (BETOS) Codes Classification System into procedural categories. BETOS is a taxonomy that allows for the grouping of health care services codes for Medicare Part B into clinically meaningful categories and subcategories. Additional BETOS information is available at <https://data.cms.gov/provider-summary-by-type-of-service/provider-service-classifications/restructured-betos-classification-system>. For example, applying categories would enable us to list that a clinician performs knee arthroplasties, which we could further simplify to knee replacements for understandability instead listing each of nine unique procedure codes indicating

⁵²⁹ CMS, *Physician Compare Report to Congress* 36 (2014), available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/physician-compare-initiative/Downloads/Physician-Compare-Report-to-Congress.pdf>.

the specifics of exactly which bones and implants were utilized. We would exclude non-specific procedure codes, such as evaluation and management (E&M) codes for office visits which do not provide context about the care provided, and low complexity procedures such as basic wound care or administering a vaccine because these codes encompass many types of care and are not specific enough about the services covered. For procedures in which no Restructured BETOS categories are available, we would utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures.

Prior to publishing this data, we would conduct user testing with patients and caregivers to determine which procedures are of most importance, as well as how to best display and plain language utilization data on profile pages. User testing would also inform the appropriate context necessary to display utilization data in a meaningful way that ensures it is interpreted accurately.

We note that the utilization data shown on profile pages would only reflect Medicare claims data. Though this would provide information to patients and caregivers about which procedures are covered by Medicare, the utilization data would not include procedures performed for patients who have other types of insurance. For this reason, we would include a disclaimer on profile pages that the utilization data only represents the care that has been provided to Medicare beneficiaries and does not include those of patients with other forms of insurance.

In summary, we believe that publicly reporting summary utilization data on profile pages in a way that is easily accessible and understandable by patients and caregivers will assist in more informed healthcare decision-making and further the implementation of the MACRA requirement to publicly report utilization data beyond what we publish today in the PDC. It would allow patients and their caregivers to more easily find and compare clinicians who perform specific procedures without having to contact each individual clinician directly.

Therefore, we propose publicly reporting Medicare procedural utilization data on the Compare tool clinician and group profile pages in a way that is understandable to patients and caregivers, based on user testing, and helps them make healthcare decisions. We would begin publicly reporting procedural utilization data no earlier than CY 2023. We will use a 12-

month lookback period and bi-monthly data refresh frequency, as technically feasible. We seek comment on all aspects of this proposal, including the proposed approaches to identifying the most relevant and understandable procedural categories.

(3) Incorporating Health Equity Into Public Reporting Request for Information

In an effort to gather information from interested parties to help guide efforts to advance health equity, we seek comment on ways to incorporate health equity into public reporting on doctor and clinician profile pages with the goal of ensuring that all patients and caregivers can easily access meaningful information to assist with their healthcare decisions. As defined by CMS, for the purpose of this request for information, health equity means “the attainment of the highest level of health of all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, or other factors that affect access to care and health outcomes.”⁵³⁰ In accordance with this definition and other CMS efforts to improve health equity, we believe that empowering all patients with information that enables them to select high quality, high value clinicians will be one facet that helps improve outcomes and close disparity gaps across social risk factors, race, and ethnicity.

We note that, consistent with § 414.1395(b) and subject to the limitations of § 414.1395 (c), all new MIPS quality or cost measures, improvement activities, and Promoting Interoperability measures and attestations, including those that aim to improve health equity will be available for public reporting on the Compare tool. CMS’s public reporting of such information would provide patients and caregivers with information regarding health equity efforts and culture within a particular practice. For example, should the proposed improvement activity “Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients” be added to the improvement activity inventory, visitors to the Compare tool could see, when selecting a clinician, which clinicians chose to complete this improvement activity. This may be especially meaningful for patients concerned about care for

LGBTQ+ individuals when selecting a clinician.

We have also considered including additional information to the Compare tool clinician and group profile pages, such as whether the clinician or group has language services available, speaks other languages besides English, and whether they accept insurance outside of traditional Medicare Fee-for-Service, such as Medicaid, Medigap, Medicare Advantage, and other commercial insurance. During prior user testing sessions, participants have indicated an interest in seeing more demographic information on profile pages including available language services, other languages spoken, and additional insurances accepted. Beneficiary inquiries from the 1–800–MEDICARE have also shown that patients are interested in information about available language services provided by a clinician’s office.

However, we lack data sources from which to obtain language services, languages spoken, and other payer information. That said, we request information on what additional information, such as the information described previously in this section of the proposed rule, should be publicly reported on the Compare tool, as well as what readily available, centralized data sources could be used for gathering them. Additionally, we request information on other ways to incorporate health equity into public reporting. Specifically, we request information on the following questions:

- Should we publicly report available language (including sign language) services on a clinician’s Compare tool profile pages? If so, what data sources are available? This could also include if a clinician offers translator services including human interpreters, digital interpreter, and languages the clinician or staff speak.

- Should we publicly report information through the Compare tool on whether clinicians and groups accept other insurance outside of traditional Medicare Fee-for-Service, such as Medigap, and Medicare Advantage; Medicaid; and commercial insurance for non-Medicare eligible patients, including through the healthcare exchanges. If so, what data sources are available for this information?

- What additional information would be useful to add to Compare tool profile pages to help patients and caregivers make healthcare decisions?

11. Overview of the APM Incentive

a. Overview

Under the Quality Payment Program, an eligible clinician who is a Qualifying

⁵³⁰ <https://www.cms.gov/pillar/health-equity>.

APM Participant (QP) for a performance year earns an APM Incentive Payment, which is made in the corresponding payment year for payment years 2019 through 2024. As provided in our regulation at § 414.1450(d), this payment is made based on the clinician's QP status in the QP Performance Period that is 2 years prior (for example, the 2022 APM Incentive Payment will correspond to the 2020 performance year), and at § 414.1450(b)(1) the APM Incentive Payment is equal to 5 percent of the eligible clinician's estimated aggregate payments for covered professional services in the base period (the year between the QP performance and payment years).

b. APM Incentive Payment Recipient

In the CY 2017 Quality Payment Program final rule (81 FR 77008, 77487), we initially finalized a policy that the APM Incentive Payment is made to the TIN associated with the APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In the CY 2021 PFS final rule (85 FR 84472, 84949 through 84950), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment at § 414.1450(c) to use a stepwise hierarchy to identify an appropriate payee TIN or TINs.

c. Public Notice

As specified in § 414.1450(c)(8), we notify QPs for whom we are unable to identify an appropriate TIN to which to make the APM Incentive Payment through a notice published annually in the **Federal Register**. In that notice, we include information on how the QP can update their information to enable CMS to make the APM Incentive Payment. Under our current policy, the deadline for providing CMS with updated information is the later of November 1 of each payment year or 60 days from the date on which we make the initial round of APM Incentive Payments for such year.

Section 414.1450(d) specifies that we make APM Incentive Payments as soon as practicable following calculation and validation of the APM Incentive Payment amount, but in no event later than 1 year after the incentive payment base period, defined in § 414.1305 as the calendar year prior to the year in which CMS disburses the APM Incentive Payment. Based on our experience and lessons learned in disbursing APM Incentive Payments, we have determined that the November 1 cutoff date for QPs to provide us with updated information does not leave sufficient

time for us to process the information provided and make payments within the timeframe established in § 414.1450(d). In addition, we made operational adjustments beginning in the 2021 payment year that allowed us to make the initial round of APM Incentive Payments earlier in the calendar year than was possible in the first 2 payment years. Because we are now able to notify QPs for whom we have not identified a TIN to which to make the APM Incentive Payment through the **Federal Register** notice earlier in the payment year, and because we have found that we need additional time to process the updated information we receive in response to the notice, we now are proposing to change the specified cutoff date from November 1 to September 1 of the payment year, or 60 days from the date on which we make the initial round of payments, whichever is later. As is the case under the current policy, after the specified cutoff date, we will no longer accept updated information from QPs or their representatives, and any claims to an APM Incentive Payment for such QPs for the payment year will be forfeited.

We believe this change to the cutoff date for response to the public notice would allow us to disburse APM Incentive Payments more efficiently and effectively, reducing the time within which we make the remaining APM Incentive Payments for the payment year. This change would also improve our ability to make all APM Incentive Payments within the timeframe established under § 414.1450(d), and therefore, affected QPs would not have to wait as long to receive their payments.

We seek comment on this proposal to amend § 414.1450(c)(8) to change the cutoff date for response to the public notice from November 1 to September 1 of each payment year, or 60 days from the date on which we make the initial round of APM Incentive Payments, whichever is later.

d. Request for Information on Quality Payment Program Incentives Beginning in Performance Year 2023

Section 1833(z)(1) of the Act provides for APM Incentive Payments in each year for eligible clinicians who are QPs with respect to a year from 2019 through 2024. Specifically, for each of the specified payment years, in addition to the amount of payment that would otherwise be made for covered professional services furnished by an eligible clinician who is a QP for such year, there is an additional lump sum APM Incentive Payment equal to 5 percent of the eligible clinician's

estimated aggregate payment amounts for such covered professional services for the preceding year. Covered professional services is defined at § 414.1305, with reference to the statutory definition at section 1848(k)(3) of the Act, as services for which payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician; practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(l)(4)(B) of the Act.

In the CY 2017 Quality Payment Program final rule (81 FR 77445), we established a policy that, beginning with the 2017 QP Performance Period, the QP Performance Period would be the calendar year that is 2 calendar years before the payment year for the APM Incentive Payment. Thus, we established that the first QP Performance Period would begin on January 1, 2017, the first "base year" (established at 81 FR 77481 and 77482) for which we would use claims for professional services to calculate the 5 percent APM Incentive Payment amount would be in 2018, and the first payment year for the APM Incentive Payment would be in 2019 as required by the statute. The QP Performance Period, base year, and payment year continue in this fashion through payment year 2024, which is the final year for which the statute authorizes an APM Incentive Payment.

After performance year 2022, which correlates with payment year 2024, there is no further statutory authority for a 5 percent APM Incentive Payment for eligible clinicians who become QPs for a year. In performance year 2023, which correlates with payment year 2025, the statute does not provide for any type of incentive for eligible clinicians who become QPs. Beginning with performance year 2024, which correlates with payment year 2026, section 1848(d)(1) of the Act provides for the application of two different PFS conversion factors depending on whether the services are furnished by an eligible clinician who is a QP for the year. The PFS conversion factor is the fixed-dollar constant, updated each year in accordance with statute, that is used to convert the RVUs (relative value units) for a service, after application of geographic practice cost indices to adjust for cost variations, into PFS payment amounts. Section 1848(d)(20) of the Act specifies that, beginning in CY 2026 (which is the payment year that correlates with the 2024 QP Performance Period under the Quality Payment Program), the update to the

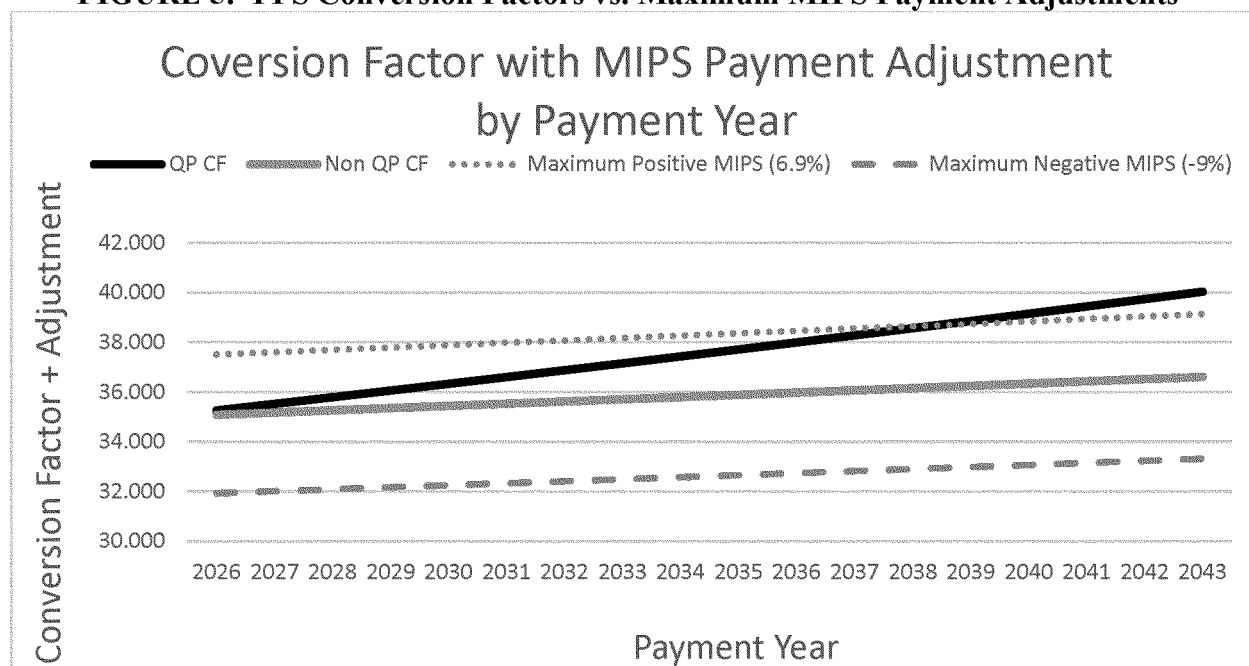

“qualifying APM conversion factor” (hereafter, “QP conversion factor”) that applies for eligible clinicians who are QPs with respect to the payment year is 0.75 percent, and the update to the “non-qualifying APM conversion factor” (hereafter, “general conversion factor”) that applies for eligible clinicians who are not QPs with respect to the year (as well as other types of suppliers that are not eligible clinicians under the Quality Payment Program) is 0.25 percent. With the differentially higher 0.75 percent update to the QP conversion factor compounding each year beginning with CY 2026, compared to the 0.25 percent update to the general

conversion factor in each year, the two PFS conversion factors will continue to diverge with each year, as illustrated in the chart below

Beginning in payment year 2025, the statutory incentive structure under the Quality Payment Program for eligible clinicians who participate in Advanced APMs stands in contrast to the incentives for MIPS eligible clinicians. Specifically, as described in section VI.E.16.d.(4) of this proposed rule, we anticipate that the maximum potential positive payment adjustment that could be applied under MIPS for payment years beginning in 2025 will be at or above 6.9 percent, and the corresponding maximum negative

payment adjustment will be 9 percent. While only some MIPS eligible clinicians could earn the maximum positive payment adjustment, there is nonetheless a significant range of potential positive payment adjustments under MIPS that would exceed the differentially higher QP conversion factor beginning in payment year 2026 and for many years to come. As illustrated in Figure 5, the QP conversion factor, with the compounded differentially higher 0.75 percent update in each year, is not expected to equate to the anticipated maximum available positive payment adjustment under MIPS until after CY 2038.

FIGURE 5: PFS Conversion Factors vs. Maximum MIPS Payment Adjustments*

*This graph depicts the PFS conversion factors that would apply for each year given the annual updates as specified in current statute, and does not otherwise depict an estimate of PFS payment rates for future years.

We note again that the statute does not provide for any financial incentives for eligible clinicians who achieve QP status in QP Performance Period 2023/ payment year 2025. Because section 1848(q)(1)(C)(ii)(I) of the Act explicitly excludes eligible clinicians who are QPs for a year from being considered as MIPS eligible clinicians, eligible clinicians who are QPs for a year are not subject to MIPS for that year, and thus, cannot receive MIPS payment adjustments. As such, eligible clinicians who are determined to be QPs in performance year 2023 will be paid under the PFS in payment year 2025 at the same rate as any other eligible clinicians who are not subject to MIPS

and suppliers that are not subject to the Quality Payment Program at all.

We recognize that the lack of any available financial incentive under the Quality Payment Program for QPs for the 2025 payment year could affect the willingness of some eligible clinicians to participate in Advanced APMs in performance year 2023. Moreover, we recognize that the substantial difference between the QP conversion factor that will apply for QPs beginning in CY 2026 and maximum positive payment adjustment available under MIPS might affect the willingness of eligible clinicians to participate in Advanced APMs for several years to come. We recognize that there are other factors

that affect an eligible clinician's decision whether to participate in an Advanced APM, including the avoidance of MIPS reporting requirements and the availability of shared savings and other incentives within the various Advanced APMs.

However, we are concerned that the statutory incentive structure under the Quality Payment Program beginning in the 2023 performance year and corresponding 2025 payment year could potentially lead to a drop in Advanced APM participation, and a corresponding increase in MIPS participation as eligible clinicians may believe their payments would be higher if they receive the MIPS payment adjustment.

While it has been CMS's goal to increase MIPS participation, we continue to believe MIPS should be a first step on a glide path towards Advanced APM participation. Furthermore, we are concerned that a significant reduction in Advanced APM participation stemming from changes in financial incentives under the Quality Payment Program could potentially bias the CMS Innovation Center's model tests of voluntary Advanced APMs by leading clinicians who have performed well in Advanced APMs on both cost and quality metrics, to leave participation in the Advanced APM in which they currently participate, or decide not to apply for and participate in Advanced APMs, thereby interfering with the evaluation of current model tests and interfering with potential participation in future models.

We also are concerned that a shift of eligible clinicians into MIPS and out of Advanced APMs would be likely to affect the availability and distribution of funds in the budget-neutral MIPS payment pool. The average MIPS final score for MIPS eligible clinicians who were participants in MIPS APMs in 2020 was 96.24 points while the average MIPS final score for all other MIPS eligible clinicians was 84.42 points. Given these statistics, we can reasonably anticipate that eligible clinicians who would shift away from participation in Advanced APMs and into MIPS would increase the relative number of high-performing MIPS eligible clinicians likely to earn a positive MIPS payment adjustment. As a result of more MIPS eligible clinicians earning a positive MIPS payment adjustment, we would expect to see a corresponding reduction in the average and maximum positive MIPS payment adjustment due to the statutory requirement under section 1848(q)(6)(F)(ii) of the Act to maintain budget neutrality in MIPS.

We have considered a range of potential administrative actions within our authority that might address these concerns. For example, we explored options for modifying the Advanced APM criteria or the requirements for current and future Advanced APMs to permit some degree of flexibility for eligible clinicians to choose whether to be considered under either the MIPS or the Advanced APM track of the Quality Payment Program. We have found it difficult to conceive of potential administrative options that would increase flexibility for eligible clinicians without drastically modifying characteristics of Advanced APMs, including CEHRT use, quality-based payment, and financial risk. After further consideration, we have

concluded that it would be more prudent to forego administrative action for the 2023 performance period and 2025 payment year, and instead to seek robust public input that we will consider in identifying potential options for the 2024 performance period and 2026 payment year of the Quality Payment Program (and potentially beyond). Specifically, we seek public comment on whether administrative action is needed beginning in the 2024 performance period and 2026 payment year, and if so, what would be the best approach to address the multi-faceted issues that arise with the end of statutory authority for an APM Incentive Payment for QPs and the transition to the differential QP and general conversion factors beginning in payment year 2026, which correlates to the 2024 performance year.

Taking into account that the current statute: (1) requires us to make QP determinations for eligible clinicians participating in Advanced APMs; (2) defines Advanced APMs as those APMs that require CEHRT use, sets payment based on MIPS-comparable quality measures, and assumption of more than nominal financial risk, as described at § 414.1415; and (3) specifically excludes QPs from being MIPS eligible clinicians, we are seeking input on what, if any, administrative actions eligible clinicians and APM Entities would potentially find helpful to better balance the payment incentives within the Quality Payment Program going forward, while continuing to encourage eligible clinicians and APM Entities to participate in APMs that align with the broader goals of CMS.

We are particularly interested in receiving public comments in response to the questions stated below, which will help us to gauge options going forward. We are also considering holding a public listening session in the near future to gather additional feedback on these questions and ideas, though we encourage the public to submit written comments on this Request for Information.

- What are your primary considerations going forward as you choose whether to participate in an Advanced APM or be subject to MIPS reporting requirements and payment adjustments? What factors are the most important as you make this decision?
- If you are participating in an Advanced APM now and have been or could be a QP for a year, will the end of the 5 percent lump-sum APM Incentive Payments beginning in the 2025 payment year (associated with the 2023 QP Performance Period) cause you to consider dropping your participation

in the Advanced APM, which would mean forgoing QP determinations, thereby ensuring you are subject to MIPS reporting requirements and payment adjustments?

- Going forward, attaining QP status for a year through sufficient participation in one or more Advanced APMs will enable an eligible clinician to, for a year: (1) continue receiving any financial incentive payments available under the Advanced APM(s) in which they participate, subject to the terms and conditions applicable to the specific Advanced APM(s); (2) be paid under the PFS in the payment year using the a higher QP conversion factor (0.75 percent rather than 0.25 percent) beginning in payment year 2026; and (3) not be subject to MIPS reporting requirements or payment adjustments. Do these three conditions provide sufficient incentives for you to participate in an Advanced APM, or would you instead decide to be subject to MIPS reporting requirements and payment adjustments?

- Are there other advantages of MIPS participation that might lead a clinician to prefer MIPS over participation in an Advanced APM, such as: (1) quality measurement that may be specific to a particular practice area or specialty area; or (2) the desire for more precise accountability through public reporting of quality measure performance in the future?

e. Advanced APMs

(1) Advanced APM Criteria

(a) General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77408), we finalized the criteria that define an Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that:

- Requires its participants to use certified EHR technology (CEHRT) (81 FR 77409 through 77414);
- Provides for payment for covered professional services based on quality measures comparable to measures under the quality performance category under MIPS (81 FR 77414 through 77418); and
- Either requires its participating APM Entities to bear financial risk for monetary losses that are in excess of a nominal amount, or is a Medical Home Model expanded under section 1115A(c) of the Act (81 FR 77418 through 77431). We refer to this criterion as the financial risk criterion.

In this section of the proposed rule, we address policies regarding several aspects of the Advanced APM criteria. We provide a clarification around

payment based on quality measures and a proposal to modify the period of applicability for the generally applicable nominal amount standard.

(b) Payment Based on Quality Measures

In the CY 2017 Quality Payment Program final rule, we finalized the requirement for Advanced APMs that payment be based on quality measures at § 414.1415(b). In the CY 2019 PFS final rule (83 FR 59915 through 59938), we revised § 414.1415(b)(2) to clarify, effective January 1, 2020, that at least one of the quality measures upon which an Advanced APM bases payment must either be finalized on the MIPS final list of measures, as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidenced-based, reliable, and valid. We also revised the requirement at § 414.1415(b)(3) that the quality measures upon which an Advanced APM bases payment must include at least one outcome measure (unless there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM's first QP Performance Period) to provide, effective January 1, 2020, that at least one such outcome measure must either be finalized on the MIPS final list of measures as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidence-based, reliable, and valid.

It has come to our attention that it may not be clear whether the two criteria at § 414.1415(b) require different quality measures. That is, interested parties have questioned whether two separate measures are required with one to meet each criterion, or whether it is sufficient that a single quality measure meets both of the criteria. Therefore, in this proposed rule, we propose to revise the regulation at § 414.1415(b)(3) and adding a new paragraph (b)(4) to clarify that the requirement for Advanced APMs that payment must be based on quality measures as specified at § 414.1415(b)(1) can be met through the use of a single quality measure that meets the criteria under both § 414.1415(b)(2) and (b)(3). Likewise, consistent with our practice of aligning Advanced APM and Other Payer Advanced APM policies to the extent feasible and appropriate, we are also proposing to revise § 414.1420(c)(3)(ii) and add a new paragraph (c)(4) to clarify that the requirement for Other Payer Advanced APMs that payment must be based on quality measures as specified at § 414.1420(c)(1) can be met through the use of a single quality measure that meets the criteria at § 414.1420(c)(2) and

(c)(3). We seek public comment on these proposals.

(c) Generally Applicable Nominal Amount Standard

In the CY 2017 Quality Payment Program final rule, we finalized the amount of the generally applicable revenue-based nominal amount standard at 8 percent for the first two QP Performance Periods only, and we sought comment on what the revenue-based nominal amount standard should be for the third and subsequent QP Performance Periods. Specifically, we sought comment on setting the revenue-based standard: (1) for 2019 and later at up to 15 percent of revenue; or (2) at 10 percent so long as risk is equal to at least 1.5 percent of expected expenditures for which an APM Entity is responsible under an APM (81 FR 77427).

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1415(c)(3)(i)(A) our proposal to maintain the generally applicable revenue-based nominal amount standard at 8 percent for the 2019 and 2020 QP Performance Periods. We also specified that the standard is based on the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities. We stated that we would address the nominal amount standard for QP Performance Periods after 2020 in future rulemaking (82 FR 53838).

In the CY 2019 PFS final rule (83 FR 59922 through 59923), we revised § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

At the same time, we established the generally applicable revenue-based nominal amount standard for Other Payer Advanced APMs at § 414.1420(d)(3)(i) to reflect the same 8 percent standard for QP Performance Periods for years 2021 through 2024, but based on the total combined revenues from the payer to providers and other entities under the payment arrangement.

We are proposing to amend § 414.1415(c)(3)(i)(A) to permanently establish the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for the QP Performance Period. We are proposing this change because the nominal amount standard of 8 percent has

worked well and we are making the change permanent at this time to provide continuity in policy into the future.

We are also proposing to amend § 414.1420(d)(3)(i) to permanently establish the generally applicable revenue-based nominal amount standard at 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement, consistent with our longstanding practice of aligning Advanced APM policies with Other Payer Advanced APM policies to the extent feasible and appropriate. We propose to amend these regulations to remove the specified end date of the 2024 QP Performance Period, such that the 8 percent standard would apply for all future performance years beginning with the 2023 QP Performance Period. This proposal would not change the current generally applicable revenue-based nominal amount standard. While we will continue to evaluate the generally applicable revenue-based nominal amount standard going forward and may determine at some point that it would be appropriate to propose to change the generally applicable revenue-based nominal amount standard, we believe that the current standard of 8 percent continues to be appropriate at this time for both the Advanced APM and Other Payer Advanced APM financial risk criteria.

We seek public comment on the proposals to amend § 414.1415(c)(3)(i)(A) and 414.1420(d)(3)(i) to make permanent the 8 percent level of the generally applicable revenue-based nominal amount standard such that it would apply to all future QP Performance Periods beginning January 1, 2023.

(d) Medical Home Model 50 Eligible Clinician Limit

In the 2017 Quality Payment Program final rule (81 FR 77428), we finalized a policy for the Medical Home Model nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates in an Advanced APM through a Medical Home Model.

At that time, we described the way in which we would identify APM Entities that meet this standard as looking for "APM Entities that participate in Medical Home Models and that have 50 or fewer eligible clinicians in the organization through which the entity is owned and operated." We defined organizational size as measured based on the size of the "parent organization" rather than the size of the APM Entity itself. We recognized that there would

be “additional but [. . .] achievable” burden to correctly identify parent organizations and their size (81 FR 77428).

In the 2017 Quality Payment Program final rule, we responded to the many comments we had received in opposition to the proposal (81 FR 77429), where commenters expressed opinions that identifying eligible entities in this way was arbitrary, or that it would unfairly discriminate between similarly situated organizations. We finalized the proposal despite these concerns because we believed we could identify organizations that were or were not reasonably capable of taking on the generally applicable level of financial risk by identifying the ultimate size of the parent organization, and in so doing, identify organizations that should be excluded from the Medical Home Model financial risk standard.

After several years of implementation and upon closer analysis of our results under the Medical Home Model standard, we have gained experience about the composition of parent organizations and that there is a wide variation in how practices are organized and are proposing a change in our policy. These changes are based on a re-evaluation of two assumptions we used in finalizing the 50 eligible clinician limit, codified at § 414.1415(c)(7), have not borne out in practice.

Our belief that we could easily gather accurate data about the size and composition of “parent organizations” through disclosures from the APM Entities affiliated with them was misplaced. To accurately understand the numerous and varied ways in which a parent organization (itself a complex concept) may enter into contractual relationships with other subsidiary entities that have Taxpayer Identification Numbers (TINs), which otherwise might have no apparent relationship with one another, would require insight and access to private contracts do not have. The administration of QPP is not the same as the administration of an individual APM and we are not party to the contracts between those private entities. Based on the information about these relationships, we are unable to confidently say that, under the parent organization approach we had finalized, all similarly situated organizations are being treated in the same manner. On the other hand, we believe we have a good understanding of APM Entities and how they will manage financial risk from our time implementing the QPP and various APMs.

Based on this insight and experience implementing the 50 eligible clinician

limit for the Medical Home Model financial risk standard, we are proposing to amend our methodology for identifying which eligible clinicians are to be included under the 50 eligible clinician limit.

Specifically, we propose to amend § 414.1415(c)(7) to apply the 50 eligible clinician limit directly to the APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity. We would identify the eligible clinicians in the APM Entity by using the TIN/NPIs on the participation list of the APM Entity on each of the three QP determination dates (March 31, June 30, and August 31). This proposal, if finalized, would become effective beginning in Performance Year 2023. We believe this change will address the challenges we have faced in implementing this policy, as discussed above.

We are also proposing to amend § 414.1420(d)(8) to apply the 50 eligible clinician limit directly to the APM Entity participating in Aligned Other Payer Medical Home Model and Medicaid Medical Home Model, and to no longer look to the parent organization for the APM Entity, consistent with our longstanding practice of aligning Advanced APM policies with Other Payer Advanced APM policies to the extent feasible and appropriate.

In order to continue to achieve our aim of reducing the possibility for an APM Entity to potentially manipulate their numbers of eligible clinicians to inappropriately take advantage of participation in an Advanced APM that is a Medical Home Model, we propose that the Medical Home Model financial risk and nominal amount standards under § 414.1415(c)(2) and (c)(4) would apply only if the APM Entity remains below the 50 eligible clinician limit on all three QP determination dates during the QP Performance Period. If the number of eligible clinicians in the APM Entity is above 50 on any of the three QP determination dates, the Medical Home Model financial risk and nominal amount standards will not apply for that APM Entity for the QP Performance Period. Should an APM Entity exceed the 50 eligible clinician limit on any of the three snapshot dates, no eligible clinicians would achieve or retain QP status through that APM Entity for the QP Performance Period and corresponding payment year, regardless of the outcome of QP determinations made at another QP determination date. We propose to amend the regulation text to say that an APM Entity’s Participation List will be

used to determine if the 50 eligible clinician limit requirement has been met three times a year, for each of the three QP determination dates (March 31, June 30, and August 31).

In addition, we propose to amend § 414.1440(e)(2) to require APM Entities or eligible clinician requesting a QP determination under the All-Payer Combination Option through participation in an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model to supply information and certify that the 50 eligible clinician limit is being met for any Aligned Other Payer Medical Home Model or Medicaid Medical Home Model in which they participate and for the applicable time period in which the APM Entity or eligible clinician QP determination is made under the All-Payer Combination Option, as specified in the proposed revised § 414.1420(d)(8). Note, a practice exceeding the 50 eligible clinician limit under the Medicare Option would not preclude an eligible clinician or APM Entity from seeking a QP determination based on an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model.

We believe this modification to the methodology used to apply the 50 eligible clinician limit would better identify the eligible clinicians and APM Entities that should be included in QP determinations for participation in Advanced APMs under the Medical Home Model financial risk standard, and therefore continue to encourage movement into value based payment arrangements. This methodology would not attempt the complex task of gathering information on parent organizations, and we believe it would treat similarly situated entities similarly.

We seek public comment on these proposals.

(2) Qualifying APM Participant Determination

(a) General Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77448), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the “snapshot dates” (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible

clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates of that year. An eligible clinician can be determined to be a QP only if they appear on the Participation List on a snapshot date that we use to identify the APM Entity group and to calculate Threshold Scores and make QP determinations at the APM Entity level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List with more than one APM Entity, but do not to achieve QP status based on any APM Entity group-level determinations, we make most QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians who appear on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

(b) Request for Information: Potential Transition to Individual QP Determinations Only

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77440), we discussed our reasons for establishing a policy to calculate Threshold Scores and make most QP determinations at the APM Entity group level, rather than at the individual eligible clinician level. At that time, we believed that this policy promoted administrative simplicity and collaboration among group members instead of imposing barriers or burden. We recognized that while many beneficiaries are attributed to an APM Entity based on the services rendered by one eligible clinician, many of the eligible clinicians participating in the APM Entity play a role in the actual diagnosis, treatment, and management of the many beneficiaries in the APM Entity's patient population. Each of these individual eligible clinicians can potentially be viewed as being instrumental to providing quality care to the beneficiary in alignment with the objectives of the APM, regardless of whether the specific services they furnish are used for purposes of APM-specific attribution methods. We noted that an APM Entity faces the risks and rewards of participation in an Advanced

APM as a single unit and generally is responsible for performance metrics that are aggregated to the level of that APM Entity. The policy is based on the premise that entire organizations commit to participating in an Advanced APM and focusing on the attendant cost and quality goals as a whole.

Under the current policy at § 414.1425(b), for most eligible clinicians participating in Advanced APMs, QP determinations are made at the APM Entity level. As described in § 414.1435, the Threshold Score for an APM Entity or eligible clinician is calculated in one of two ways, either the payment amount method or patient count method. The threshold score using the payment count method is calculated by dividing: (1) the aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to attributed beneficiaries during the QP Performance Period; by (2) aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all attribution-eligible beneficiaries during the QP Performance Period. The Threshold Score using the patient count method is calculated by dividing: (1) the number of attributed beneficiaries to whom the APM Entity group furnishes Medicare Part B covered professional services; by (2) the number of attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services. Attributed beneficiaries are generally determined from each Advanced APM Entity's attributed beneficiary lists generated by each Advanced APM's specific attribution methodology.

The current policy for QP determinations under the All-Payer Combination Option at § 414.1440(d) establishes a process that is similar to the QP determination participating in Advanced APMs, but accounts for participation in Other Payer Advanced APMs. Under the All-Payer Combination Option, an eligible clinician may request the QP determination be made at the individual or APM Entity level, and an APM Entity may request that the QP determination made at the individual, TIN or APM Entity level. Further, § 414.1440(d) specifies that CMS uses data at the same level for the Medicare and other payer portions of Threshold Score calculations under the All-Payer Combination Option. When QP determinations are made at the eligible clinician or, at the TIN level when all clinicians who have reassigned billing rights to the TIN are included in a single APM Entity; and if

the Medicare Threshold Score for the APM Entity group is higher than when calculated for the eligible clinician or TIN, CMS makes QP determinations using a weighted Medicare Threshold Score that is factored into an All-Payer Combination Option Threshold Score.

We are requesting public comment on the idea of transitioning away from an APM Entity level QP determination and instead calculating Threshold Scores and making QP determinations at the individual eligible clinician level for all eligible clinicians in Advanced APMs and Other Payer Advanced APMs. We believe making QP determinations at the individual eligible clinician level may have several benefits over the current policy. First, as explained later in this section of the proposed rule, we believe that making all QP determinations at the individual eligible clinician level would substantially reduce the practice of APM Entities removing specialists from their participation lists. Second, the change to make all QP determinations at the individual eligible clinician level would increase the number of eligible clinicians who are determined to be QPs for whom their individual participation would qualify them, but whose APM Entities did not qualify because other eligible clinicians in the APM Entity reduced its Threshold Score. Third, if we were to begin making all QP determinations at the individual eligible clinician level, that approach would eliminate the number of eligible clinicians who become QPs for a year, but whose individual participation in their Advanced APM(s) is well below the Threshold Score. Under our current policy to make most QP determinations at the APM Entity level, many eligible clinicians who would not meet the Threshold Score individually but whose APM Entities met the Threshold Score are able to gain QP status. For at least some of those eligible clinicians, a significant portion of the covered professional services they furnish may occur outside of the Advanced APM. When such eligible clinicians receive QP status, they may receive a financial windfall because their APM Incentive Payments are calculated based on all of the covered professional services they furnish during the base year, not just the services they furnish as part of the APM Entity in the Advanced APM.

We note that this potential for receiving a financial windfall is possible through the 2022 QP Performance Period (which correlates to payment year 2024), but this will change beginning in the 2023 QP Performance Period (which correlates to payment year 2025) because the current statute does not provide for any APM Incentive

Payment for that year. As such, there will be no further potential windfall in the form of the APM Incentive Payment.

However, there could be a similar windfall beginning in CY 2026 (which corresponds to the 2024 QP Performance Period) because eligible clinicians who achieve QP status beginning in that year will be paid under the PFS using the differentially higher QP conversion factor for the year, which will apply to all the covered professional services the eligible clinician furnishes in the year. In addition, beginning in payment year 2025 there are competing incentives under the QPP between the MIPS and APM track which are discussed in detail in section IV.(A).(11)(d) of this proposed rule.

Because the APM Entity Threshold Scores (using the payment amount and patient count methods) that are used to make APM Entity-level QP determinations are based on an aggregate calculation across all eligible clinicians participating in the APM Entity group, eligible clinicians in the APM Entity group who furnish proportionally fewer services that lead to attribution of patients or payment amounts to the APM Entity are likely to lower the APM Entity's Threshold Score. For example, primary care physicians may furnish proportionally more evaluation and management (office visit) services which are frequently the basis for attribution of patients and payment amounts to the numerator of the APM Entity's Threshold Score; whereas specialist physicians may furnish proportionally more diagnostic tests and surgical procedures which are not usually part of the attribution basis to the APM Entity.

We have received reports from Advanced APM participants that some APM Entities have taken steps to reduce the number of such eligible clinicians on their Participation Lists. Specifically, to achieve higher QP Threshold Scores, some APM Entities have taken steps to exclude from their APM Entity groups (and consequently from their Participation Lists) eligible clinicians who furnish proportionally fewer services that lead to the attribution of patients or payment amounts for purposes of calculating threshold scores for APM Entity-level QP determinations. There are important reasons that it is not beneficial for an APM Entity to exclude specialists and other eligible clinicians who furnish relatively fewer services that lead to attribution. In both the Medicare Shared Savings Program and in models tested by the Innovation Center that meet the criteria to be Advanced APMs, CMS seeks to promote

patient-centered care that is integrated across the continuum of care. The inclusion of specialists in APM Entities is essential for achieving this goal. For example, a comprehensive network that includes a range of specialists is central to the success of an ACO in the Medicare Shared Savings Program for its intended purpose in patient-centered care that coordinates items and services for Medicare FFS beneficiaries, a key aim of value-based care and practice transformation.⁵³¹ The methodology used in beneficiary assignment for the Shared Savings Program is deliberately constructed such that assignment is largely based on primary care, rather than specialty care, which results in specialists contributing proportionately less in terms of payment amounts and patient counts to the ACO's QP numerator.

Similarly, it was not our intent to create a policy wherein eligible clinicians who are seeing most or all of their Medicare patients through an Advanced APM may remain unable to achieve QP status because the APM Entity with which they participate in the Advanced APM includes eligible clinicians who furnish very few services through the Advanced APM. It has always been one of the goals of the APM track of the Quality Payment Program for the availability of QP status to incentivize eligible clinicians to join Advanced APMs. But under our current policy to make most QP determinations at the APM Entity level, there is the potential that eligible clinicians who are fully engaged in an Advanced APM may still be unable to earn QP status.

We carefully considered our policy to make most QP determinations at the APM Entity level, and believed it was the best approach at the time. However, we did not intend for the policy to create potentially conflicting incentives for APM Entities between the goal for their eligible clinicians to achieve QP status under the Quality Payment Program, and their full participation in an Advanced APM with a group of eligible clinicians that can deliver a full spectrum of care.

Finally, we are concerned that, under our current policy to make most QP determinations at the APM Entity level, some eligible clinicians who furnish relatively fewer of their services through an APM Entity may receive a disproportionate financial benefit because they achieve QP status as a result of the care furnished by other eligible clinicians in the APM Entity, while their APM Incentive Payment is

calculated based on all of the covered professional services they furnish during the base year—both as part of the APM Entity and elsewhere. Our policy to make most QP determinations at the APM Entity level allows these windfall financial rewards because we calculate the Threshold Scores using the aggregate of payment amounts or patient counts for attributed patients based on Medicare Part B covered professional services furnished by all the eligible clinicians in the APM Entity, whether they furnished a few or many of such services. Once an eligible clinician receives QP status for a year, the APM Incentive Payment is calculated based on paid claims for that individual QP's covered professional services across all their TINs in the base year. This can allow an eligible clinician with minimal Advanced APM participation to receive a large APM Incentive Payment, which we do not believe aligns with the intent of the Quality Payment Program. Though, as we note above, QPs for payment year 2025 (QP Performance Period 2023) will not, by statute, receive a financial incentive for achieving such status, beginning in payment 2026 (QP Performance Period 2024) financial incentives once again will apply in the form of the enhanced QP conversion factor, which in turn compounds each year after that and therefore increases over time.

We are requesting input from interested parties on the possibility of discontinuing our policy to calculate Threshold Scores and make most QP determinations at the APM Entity level, and instead to make all QP determinations at the individual eligible clinician level. We believe this would avoid the potential incentive for APM Entities to limit or exclude specialists and other eligible clinicians who furnish services that are an important part of the health care spectrum, but less likely to be attributed to the APM Entity for purposes of calculating Threshold Scores for QP determinations. While the exclusion from an APM Entity of such specialists and other eligible clinicians can serve to improve the Threshold Scores for an APM Entity, it would not necessarily serve the central goals of many of our Advanced APMs, such as the statutory charge to Medicare Shared Savings Program ACOs to encourage groups of doctors, hospitals, and other health care providers to work together to manage and coordinate care for Medicare fee-for-service beneficiaries through an ACO.

In light of this potential conflict between Advanced APM goals and the existing QP Threshold Score calculation methodology, we are considering

⁵³¹ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/about>.

whether it would be better to make all QP determinations at the individual eligible clinician level using the unique National Provider Identifier (NPI) associated with an eligible clinician participating in an Advanced APM. Under that approach, we would calculate a Threshold Score for each eligible clinician, identified by their NPI, based on all the covered professional services furnished by that individual eligible clinician, including services billed across all of the TINs to which the individual has reassigned their Medicare billing rights. This Threshold Score calculated at the individual eligible clinician level would provide a more specific measurement of each such eligible clinician's level of participation in one or more Advanced APMs. This methodology to calculate Threshold Scores and make QP determinations at the individual eligible clinician level would ensure that only those eligible clinicians (NPIs) who individually meet or exceed the applicable Threshold Score would receive QP status. At the same time, it would allow APM Entities to make decisions about which eligible clinicians to include on their Participation Lists based on the scope of eligible clinicians needed to furnish services to their patient populations under the Advanced APM, and to include those eligible clinicians who furnish proportionally fewer services that lead to patient attribution to the APM Entity under the current QP determination policy, without potentially affecting the QP status of other eligible clinicians in the APM Entity group. Because APM Entities no longer would have a need to consider how each eligible clinician may affect their aggregate Threshold Score for the APM Entity group, they would be able to include any eligible clinician who they believe can help them meet the patient-centered care goals of the Advanced APM(s) they are participating in. Therefore, we are considering whether a change to make QP determinations at the individual eligible clinician level would have a positive health equity impact by ensuring that incentives under the Quality Payment Program would hold ACOs "accountable for the quality, cost, and experience of care of an assigned Medicare fee-for-service (FFS) beneficiary population."⁵³²

Additionally, an analysis conducted by CMS found that many eligible clinicians do in fact frequently provide covered professional services to beneficiaries attributed to other APM

Entities. These types of services and relationships are not necessarily accounted for or rewarded under the current methodology that makes QP determinations predominantly at the APM Entity level because they are outside the APM Entity participating in the Advanced APM, but would be if QP determinations were made at the individual eligible clinician level because all of the relevant covered professional services furnished by that eligible clinician would be counted in the QP determination. While our initial decision to calculate Threshold Scores and make most QP determinations at the APM Entity level was appropriate and, at the time, preferable to achieve the policy goals as stated in the CY 2017 proposed rule and reiterated above, for the reasons we identify here, we also believe that a change to calculate Threshold Scores and make QP determinations at the individual eligible clinician level may be preferable.

In this Request for Information, we are requesting public feedback on whether an individual level QP determination approach is an avenue we should continue exploring in future years to better identify and reward individual eligible clinicians with substantial engagement in Advanced APMs.

(c) QP Thresholds and Partial QP Thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician's participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

In the CY 2022 PFS final rule (86 FR 65557 through 65558), we finalized policies to implement section 114(a) of Subtitle B of Title I of Division CC of the CAA (referred to herein as section 114(a) of Division CC of the CAA), which amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021

and 2022), by freezing for such years the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. However, we neglected to fully amend our regulations at § 414.1430(a) and (b) to reflect these changes, and therefore, we are proposing conforming changes to § 414.1430(a) and (b) in this proposed rule.

Specifically, section 114(a) of Division CC of the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 for payment years 2023 and 2024. Additionally, section 114(a) of Division CC of the CAA amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary must use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare Option QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. Section 114(b) of Division CC of the CAA amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2024 the Partial QP thresholds that are established for payment years 2021 and 2022. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP Thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP Thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 40 percent for the payment amount

⁵³² Ibid.

method and 25 percent for the patient count method. The Partial QP thresholds for performance year 2023 and later (corresponding to payment years 2025 and later) will be 50 percent for the payment amount method and 35 percent for the patient count method. In

order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023 and later), the

minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.

TABLE 92: QP Threshold Score Updates

Medicare Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Payment Amount Threshold	50		50		75	
Partial QP Payment Amount Threshold	40		40		50	
Medicare Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35		35		50	
Partial QP Patient Count Threshold	25		25		35	
All-Payer Combination Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Payment Amount Threshold	50	25	50	25	75	25
Partial QP Payment Amount Threshold	40	20	40	20	50	20
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum
All-Payer Combination Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35	20	35	20	50	20
Partial QP Patient Count Threshold	25	10	25	10	35	10
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB’s implementing regulations.

To fairly evaluate whether an information collection should be

approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We solicited public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the

following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2021 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 93 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

BILLING CODE 4120-01-P

TABLE 93: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Administrative Support Worker	43-9000	18.98	18.98	37.96
Anesthesiologists	29-1211	159.22	159.22	318.44
Billing and Posting Clerks	43-3021	20.55	20.55	41.10
Bookkeeping, Accounting, and Auditing Clerks	43-3031	21.70	21.70	43.40
Computer System Analysts	15-1211	49.14	49.14	98.28
Family Medicine Physicians	29-1215	113.43	113.43	226.86
General Internal Medicine Physicians	29-1216	116.44	116.44	232.88
Licensed Practical and Licensed Vocational Nurses	29-2061	24.93	24.93	49.86
Medical and Health Services Managers	11-9111	57.61	57.61	115.22
Obstetricians and Gynecologists	29-1218	142.41	142.41	284.82
Office and Administrative Support Workers, All Other	43-9199	20.47	20.47	40.94
Pediatricians, General	29-1221	95.40	95.40	190.80
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1229	111.30	111.30	222.60
Psychiatrists	29-1223	120.08	120.08	240.16
Secretaries and Administrative Assistants	43-6014	19.75	19.75	39.50
Surgeons, Except Ophthalmologists	29-1249	143.17	143.17	286.34

TABLE 94: Physician Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Anesthesiologists	29-1211	159.22	159.22	318.44
Family Medicine Physicians	29-1215	113.43	113.43	226.86
General Internal Medicine Physicians	29-1216	116.44	116.44	232.88
Obstetricians and Gynecologists	29-1218	142.41	142.41	284.82
Pediatricians, General	29-1221	95.40	95.40	190.80
Physicians, All Other	29-1229	111.30	111.30	222.60
Psychiatrists	29-1223	120.08	120.08	240.16
Orthopedic Surgeons, Except Pediatric	29-1242	147.22	147.22	294.44
Pediatric Surgeons	29-1243	139.57	139.57	279.14
Surgeons, All Other	29-1249	143.17	143.17	286.34
Surgeons	29-1240	141.60	141.60	283.20
Total	2,859.69			
Average Wage (2,859.68/11)	259.98			

As indicated, we adjusted BLS' hourly wage estimates by a factor of 100 percent to obtain the adjusted hourly wage estimate. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Information Collection Requirements (ICRs)

1. ICRs Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts (§ 414.940)

As discussed in section III.A.7. of this proposed rule, as a part of implementing section 1847A(h) of the Act, as added by section 90004 of the Infrastructure Act, we recognize the need for establishing a dispute resolution process because of the nature of determining the estimated total allowed charges for a given calendar quarter and the methods by which the estimated refund amount is determined. We are proposing that each manufacturer have an opportunity to dispute the report, described in section III.A.4. of this proposed rule, by submitting an error report.

We are proposing that to assert that there have been one or more errors in the report, a manufacturer must submit a dispute with each asserted error. The dispute must include the following information: (1) Manufacturer name and address; (2) The name, telephone number, and email address of one or more employees or representatives of the manufacturer with whom the Secretary may discuss the claimed errors; (3) For a mathematical calculation error, the specific calculation element(s) that the manufacturer disputes and its proposed corrected calculation; and (4) For any other asserted error, an explanation of the nature of the error, how the error affects the refund calculation, an explanation of how the manufacturer established that an error occurred, the proposed correction to the error, and an explanation of why the Secretary should use the proposed corrected data instead.

As discussed in section VII.E.1. of this proposed rule, our estimates show a projected 26 billing and payment codes meeting the proposed definition of refundable single-dose container or single-use package drug would have 10 percent or more discarded units, which is the applicable percentage specified in

section 1847A(h)(3) of the Act. Therefore, we anticipate a similar number of drugs would owe a refund pursuant section 90004 of the Infrastructure Act. Since each of these billing and payment codes is a single source drug code, each would represent 1 manufacturer and we would expect disputes from fewer than 10 manufacturers per year.

Consistent with the estimated annual burden per respondent/recordkeeper for similar error reports utilized to implement the Branded Prescription Drug Fee (76 FR 51310), we estimate the annual burden per respondent/recordkeeper to be 40 hours. If we anticipate no more than 10 disputes per year, the total annual reporting and/or recordkeeping burden would be 400 hours (10 error reports per year × 40 hours per respondent). Based on the most recent Bureau of Labor and Statistics Occupational and Employment Data (May 2021) for Category 43–6014 (Secretaries and Administrative Assistants), the mean hourly wage for an administrative assistant is \$19.75.⁵³³ We have added 100% of the mean hourly wage to account for fringe and overhead benefits, which calculates to \$39.50 (\$19.75 + \$19.75). Therefore, we estimate an annual cost of this burden to be \$15,800 (\$39.50/hour × 400 hours). These information collection requirements discussed in this section will be submitted to OMB for approval as part of a new information collection request.

2. ICRs Regarding the Clinical Laboratory Fee Schedule: Data Reporting by Laboratories

As described in section III.B of this proposed rule, under the Clinical Laboratory Fee Schedule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” As stated in section 1834A(h)(2) of the Act, Chapter 35 of title 44, United States Code, shall not apply to information collected under section 1834A of the Act. Consequently, the information collection requirements contained in this proposed rule need not be reviewed by the Office of Management and Budget.

3. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which

includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to section VII.F.8. of this proposed rule for a discussion of the impacts associated with the proposed changes to the Shared Savings Program as described in section III.G. of this proposed rule.

4. ICRs for Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

In section III.I. of this proposed rule, we propose to clarify § 410.40(e)(2)(ii) by reorganizing existing language and stating that the PCS and additional documentation from the beneficiary's medical record may be used to support a claim that transportation by ground ambulance is required. We are also clarifying that the PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance. Finally, we are clarifying that coverage includes observation or other services rendered by qualified ambulance personnel. We do not expect that our proposal will yield a change in the information collection burdens currently approved under OMB control number 0938–1380 and 0938–0969 as this policy does not require providers and suppliers to submit additional information. We are simply clarifying existing policy requirements.

5. ICRs for Medicare Provider and Supplier Enrollment Changes

We propose the following three revisions to § 424.518:

- Add changes of ownership and the reporting of a new owner as provider enrollment transactions falling within the scope of § 424.518. (As explained in section III.J. of this proposed rule, these parties would have to submit fingerprints and be subject to a fingerprint-based criminal background check (FBCBC) if the provider or supplier is in the “high” level of categorical screening.)

- State that any screening level adjustment to “high” also applies to all other enrolled and prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier that originally triggered the screening level increase.

- Moving SNFs from the “limited” level of categorical screening to the “high” screening level.

⁵³³ <https://www.bls.gov/oes/current/oes436014.htm>.

These proposed changes would result in an increase in the annual number of providers and suppliers that must submit the fingerprints for a national background check (via FBI Applicant Fingerprint Card FD-258) of all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. The burden is currently approved by OMB under control number 1110-0046. An analysis of the impact of this requirement can be found in the RIA section of this rule.

None of our other proposed Medicare provider enrollment provisions implicate information collection requirements.

6. ICRs for State Options for Implementing Medicaid Provider Enrollment Affiliation Provision

We do not anticipate any information collection burden associated with our proposed revision to § 455.107(b), for the latter merely involves giving the states somewhat greater flexibility in executing the provisions of § 455.107.

7. ICRs Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan (Section 2003 of the SUPPORT Act)

In section III.M. of this proposed rule, we are proposing to extend the existing compliance action of sending letters to non-compliant prescribers from the CY 2023 EPCS program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 year (January 1, 2024 through December 31, 2024). Additionally, effective January 1, 2023, we are proposing to change the year from which PDE data is used from the preceding year to the current evaluated year when CMS determines whether a prescriber qualified for an exception based on the number of Part D controlled substance prescriptions (§ 423.160(a)(5)(ii)). We are also proposing to determine whether a prescriber qualifies for the emergency or disaster exception (§ 423.160(a)(5)(iii)) based on the prescriber's valid address in PECOS (Medicare Provider Enrollment, Chain, and Ownership System), instead of the NCPDP Pharmacy Database address, and for prescribers who are not enrolled or do not have a valid PECOS address, we are proposing to use the address in the National Plan and Provider Enumeration System (NPPES) data. We do not expect that our proposal will yield a change in the information collection burdens currently being submitted for review under OMB

control number 0938-1396 (CMS-10755) as these proposals do not require providers and suppliers to submit additional information. We refer readers to the 2022 PFS final rule (86 FR 65562 through 65564) for a detailed discussion of the EPCS collection of information burden that is being submitted under OMB control number 0938-1396.

8. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, this collection of information section does not set out any burden for the proposed provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

9. The Quality Payment Program (QPP) (42 CFR Part 414 and Section IV. of This Proposed Rule)

The following QPP-specific ICRs reflect this proposed rule's policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568), CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, and 86 FR 64996 respectively).

a. Background

(1) ICRs Associated With MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the proposed changes in the estimated burden for the information collections relevant to the revisions in the policies associated with the CY 2023 PFS proposed rule and the proposed revisions to our currently approved information requests for MIPS and Advanced APM ICRs. The proposed estimated burden will be submitted to OMB under control number OMB 0938-1314 (CMS-10621). The collection of information associated with the CAHPS for MIPS survey under OMB control number 0938-1222 (CMS-10450) is currently pending OMB review and

approval. We note that CMS has already received approval for collection of information associated with the virtual group election process under OMB control number 0938-1343 (CMS-10652).

(2) Summary of Quality Payment Program Changes: MIPS

We have included the change in estimated burden for the CY 2023 performance period/2025 MIPS payment year due to the proposed policies and information collections in this proposed rule. The proposed policies in this rule impact the burden estimates for the CY 2023 MIPS performance period/2025 MIPS payment year.

The following six MIPS ICRs show changes in burden due to the proposed policies in this rule: (1) Quality performance category data submission by Medicare Part B claims collection type; (2) Quality performance category data submission by QCDR and MIPS CQM collection type; (3) Quality performance category data submission by eCQM collection type; (4) MVP quality performance category submission; (5) MVP registration, and (6) Promoting Interoperability performance category data submission. In aggregate, we estimate the proposed policies would result in a net decrease in burden of 11,039 hours and \$1,213,933 for the CY 2023 performance period/2025 MIPS payment year. The remaining changes to our currently approved burden estimates are adjustments due to the revised burden assumptions based on the updated data available at the time of publication of this proposed rule.

We have added one new ICR for third party intermediaries to distinctly capture the burden for collection of information related to: (1) QCDR and qualified registry targeted audits as established under the conditions for approval at § 414.1400(b)(3)(vi) through (viii); and (2) all the requirements for remedial action and termination at § 414.1400(e). For simplicity, we capture the estimated burden for third party intermediaries to submit additional requirements for compliance with both the conditions of approval and remedial action and termination criteria under one ICR. We note that the proposed addition of this ICR is not due to proposed policy changes in this rule, but rather it is a change in our approach to representing the estimated burden for third party intermediaries in the CY 2022 PFS final rule. (86 FR 65569 through 65576)].

We are not making any changes or adjustments to the following ICRs:

Registration for virtual groups; CAHPS survey vendor applications; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; subgroups registration; call for quality measures; call for Promoting Interoperability measures; call for quality measures; nomination of improvement activities and opt-out of performance data display on Compare Tools for voluntary participants. See section V.B.9. of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a QP for the CY 2023 performance period/2025 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2023 performance period/2025 MIPS payment year compared to the CY 2019 performance period/2021 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2023 performance period/2025 MIPS payment year. We did not implement any changes to the Other Payer Advanced APM identification: Payer Initiated and

Eligible Clinician Initiated Processes; and submission of Data for QP determinations under the All-Payer Combination Option.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 95 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 95, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. Beginning with the CY 2023 performance period/2025 MIPS payment year, clinicians could also participate as subgroups for reporting measures and activities in a MIPS Value Pathway (MVP). We note that the subgroup reporting option is not available for clinicians participating in traditional MIPS.

Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 95.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule that the APP is available for both ACO participants and non-ACO participants to submit quality data (85 FR 84859 through 84866). Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2023 performance period/2025 MIPS payment year, we assume ACO APM Entities will submit data

through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. We also want to note that as finalized in the CY 2022 PFS final rule (86 FR 65259 through 65263), the CMS Web Interface collection type is available through the CY 2024 performance period/2026 MIPS payment year only for clinicians participating in the Shared Savings Program. Per section 1899 of the Act (42 U.S.C. 1395jjj), submissions received from eligible clinicians in ACOs are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. As described in section IV.A.10.c.(5)(b) of this proposed rule, we are proposing to introduce a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 QPP final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).

BILLING CODE 4120-01-P

TABLE 95: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures (CMS Web Interface will be available to only clinicians in ACOs through the CY 2024 performance period/ 2026 MIPS payment year)	As a virtual group, group, subgroup, individual clinician, or APM Entity. ^a	<p>As a virtual group, group, subgroup, individual clinician, or APM Entity.</p> <p>Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category.</p> <p>Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.</p> <p>Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or APM Entity TIN or individual reporting. [The burden estimates for this proposed rule assume group TIN-level reporting].^b</p>	<p>As a virtual group, group, subgroup, or individual clinician.</p> <p>MIPS APMs do not submit information.</p> <p>CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.^c</p>	<p>Groups electing to use a CMS-approved survey vendor to administer CAHPS must register.</p> <p>MVP participants electing to submit data for the measures and activities in an MVP must register.</p> <p>Clinicians in MIPS APMs electing the APM Performance Pathway. (CMS Web Interface will be available to only clinicians in ACOs through the CY 2024 performance period/2026 MIPS payment year.)</p> <p>APM Entities will make Partial QP election for participating eligible clinicians.</p> <p>Virtual groups must register via email.^d</p>

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

^a Submissions by the ACO are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 of the Act (42 U.S.C. 1395jj) states that the Shared Savings Program is not subject to the PRA.

^b Promoting Interoperability performance category data may be submitted at the group TIN, APM Entity TIN and individual clinician level. If group TIN, APM Entity TIN, and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. For multi-TIN APM Entities that do not submit at the APM Entity level, the TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

^c The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

^d Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568), the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472 and 86 FR 64996), and continued in this proposed rule create some additional data collection requirements not listed in Table 95. These additional data collections, some of which are currently approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional ICRs related to MIPS third-party intermediaries (see section V.B.9.c. of this proposed rule):

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938–1314).

- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314)

- Third party intermediary plan audits (New)

- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).

- Open Authorization Credentialing and Token Request Process (OMB 0938–1314) (85 FR 84969 through 84970).

Additional ICRs related to the data submission and the quality performance category (see section V.B.9.e. of this proposed rule):

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).

- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs related to the Promoting Interoperability performance category (see section V.B.9.g. of this proposed rule):

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs related to call for new MIPS measures and activities (see sections V.B.9.f., V.B.9.h., and V.B.9.j. of this proposed rule):

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).

- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).

- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938–1314).

- Nomination of MVPs (85 FR 84990 through 84991) (OMB 0938–1314).

Additional ICRs related to MIPS (see section V.B.9.o. of this proposed rule):

- Opt out of performance data display on Compare Tools for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs related to APMs (see sections V.B.9.m. and V.B.9.n. of this proposed rule):

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).

- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not proposing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not proposing any changes to the virtual group election process under that control number.

c. ICRs Regarding Third Party Intermediaries (§ 414.1400)

In this rule, we propose changes in our existing approach to capture the estimated burden for third party intermediaries. In the CY 2022 PFS final rule, for the burden related to the third party intermediaries, we combined the burden associated with the submission of targeted audits, corrective action plans, participation plans and transition plans under the ICRs for QCDR and qualified registry self-nomination process (86 FR 65569 through 65573 and 86 FR 65573 through 65576). We propose to separate the burden for submission of the targeted audits and other plans listed above under the ICR for third party intermediary plan audits (see section V.B.9.c.(4) of this proposed rule). We believe that the proposed change would more accurately capture the associated burden for the QCDR and

qualified registry self-nomination process because not every QCDR or qualified registry that submits a self-nomination application would also submit a targeted audit, corrective action plan (CAP), participation plan, or a transition plan. This change is not due to any proposed policies related to third party intermediaries in this rule, rather it is a change in representing the estimated burden from adopted policies. The proposed requirements and burden associated with this rule's self-nomination process related to qualified registries and QCDRs will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.10.g.(1)(b) of this rule, we propose updates to the definition of a third party intermediary at § 414.1305, and to make other minor conforming technical edits to the regulation text governing third party intermediaries set forth in § 414.1400. We also propose to revise QCDR measure self-nomination and measure approval requirements to delay the QCDR measure testing requirement for traditional MIPS by an additional year, until the CY 2024 performance period/2026 MIPS payment year.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.⁵³⁴ The processes for self-nomination of entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

As described below, in this rule we propose to adjust the number of self-nomination applications used to

⁵³⁴ As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

calculate our burden estimates based on current data (from 84 to 90). We are not proposing adjustments to the number of QCDR measures submitted for consideration by each QCDR at the time of self-nomination and the average time required to submit information for each QCDR measure. We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 through 77508, 82 FR 53906 through 53908), the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 59998 through 60000, 84 FR 63116 through 63121, 85 FR 84964 through 84969 and 86 FR 65569 through 65573) for our previously finalized requirements and estimated burden for self-nomination of QCDRs and nomination of QCDR measures.

(a) Self-Nomination Process and Other Requirements

In section IV.A.10.g.(1)(b) of this rule, we propose to update the definition of a third party intermediary at § 414.1305 to include subgroups and APM Entities and to make minor edits for technical clarity. We propose the revised definition would provide that a third party intermediary means an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities and Promoting Interoperability performance categories. This proposal is intended to update the regulation text to align with the existing policy and does not require additional information from QCDRs during the self-nomination process. Therefore, we are not proposing to revise our burden estimates related to this proposal.

(b) QCDR Measure Requirements

We previously finalized QCDR measure self-nomination requirements at § 414.1400(b)(4)(i), including the requirement at § 414.1400(b)(4)(i)(B) that entities must publicly post the measure specifications for QCDR measures no later than 15 calendar days following CMS approval of any QCDR measure specifications.

In section IV.A.10.g.(2)(b) of this rule, we propose to revise § 414.1400(b)(4)(i)(B) to clarify requirements for publicly posting the QCDR measure specifications. We are not adjusting our burden estimates as a result of this proposal because this would not substantively change the estimated time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Additionally, in section IV.A.10.g.(2)(c) of this rule, we propose to amend § 414.1400(b)(4)(iii)(A)(3) to delay the requirement for QCDR measure full testing until the CY 2024 performance period/2026 MIPS payment year. We are not adjusting our burden estimates as result of this proposal because we assume that this does not meaningfully change the existing requirements, or the time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

For this rule, we propose to adjust the number of estimated QCDRs that would submit applications for self-nomination from 84 to 90 based on the number of applications that we expect to receive during the CY 2022 self-nomination period for the CY 2023 performance period/2025 MIPS payment year. This is an increase of 6 from the currently

approved number of 84 respondents in the CY 2022 PFS final rule (86 FR 65571). We are not proposing any changes to the currently approved time of 0.5 hours required for the QCDR simplified self-nomination process and 2.5 hours for the full self-nomination process in the CY 2022 PFS final rule (86 FR 65571). Additionally, this rule is not proposing any new requirements for QCDRs that nominate QCDR measures as part of the self-nomination process. Therefore, we are not proposing changes to revise our currently approved estimated time for the QCDRs that submit measures as part of their self-nomination process (9.5 hours for the simplified self-nomination process and 11.5 hours for the full self-nomination process respectively) (86 FR 65571).

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 96, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr. Using the change in the number of respondents, in aggregate, the proposed estimated annual burden for the simplified and full-self nomination process will range from 855 hours (90 QCDRs × 9.5 hr) to 1,035 hours (90 QCDRs × 11.5 hr) at a cost ranging from \$84,029 (855 hr × \$98.28/hr) and \$101,720 (1,035 hr × \$98.28/hr), respectively.

TABLE 96: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	90	0
# of QCDR Full Self-Nomination Applications submitted (b)	0	90
Total Applications (c)	90	90
Annual Hours Per QCDR for Simplified Process (d)	9.5	0
Annual Hours Per QCDR for Full Process (e)	0	11.5
Total Annual Hours for Self-nomination (f) = (a) * (d) and (b) * (e)	855	1,035
Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of \$98.28/hr) (g) = (d) * \$98.28/hr	\$933.66	0
Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of \$98.28/hr) (h) = (e) * \$98.28/hr	0	\$1,130.22
Total Annual Cost (i) = (a) * (g) (min) and (b) * (e) (max)	\$84,029	\$101,720

As shown in Table 97, for the CY 2023 performance period/2025 MIPS

payment year, the proposed change in the representation of burden for this ICR

described above in this section and the estimated increase in 6 respondents

from the currently approved 84 respondents to 90 results in a change of – 63 hours at a cost of –\$6,192 for the simplified self-nomination process (or minimum burden) and – 141 hours at a cost of –\$13,857 for the full self-nomination process (or maximum

burden). We note that the decrease in burden is due to separating the estimated burden for targeted audits, CAPs, and participation plans and including that burden under a new ICR for third party intermediary plan audits (see Table 101).

We note that for the purposes of calculating proposed estimated change in burden in Tables 132, 133, and 135 of this rule, we use only the maximum burden estimate.

TABLE 97: Change in Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Minimum Burden	Maximum Burden
Total Currently Approved Annual Hours (a)	918	1,176
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 96, row (f))	855	1,035
Difference (c) = (b) - (a)	-63	-141
Total Currently Approved Annual Cost (d)	\$90,221	\$115,577
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 96, row (i))	\$84,029	\$101,720
Difference (f) = (e) - (d)	-\$6,192	-\$13,857

(3) Qualified Registry Self-Nomination Process and Other Requirements

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so.

In section IV.A.10.g.(1)(b) of this rule, we propose to update the definition of a third party intermediary at § 414.1305 to include subgroups and APM Entities and to make minor edits for technical clarity. This proposal would update the regulation text to align with existing policy and does not require additional information from qualified registries during the self-nomination process. Therefore, we are not proposing to revise our burden estimates related to this proposal.

For this rule, we propose to adjust the number of estimated qualified registries that would submit applications for self-

nomination from 147 to 160 based on the number of applications that we expect to receive during the CY 2022 self-nomination period for the CY 2023 performance period/2025 MIPS payment year. This is an increase of 13 applications from the currently approved estimate of 147 in the CY 2022 PFS final rule (86 FR 65574). Therefore, we are proposing to revise our estimates for this information collection related to the qualified registry self-nomination process. We are not proposing changes to revise our currently approved estimated time of 0.5 hours for the simplified qualified registry self-nomination process and 2 hours for the full qualified registry self-nomination process (86 FR 65574 through 65575).

As shown in Table 98, we assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr. Using

the proposed change in estimated number of respondents, combined with the estimated time required for a self-nomination process ranging from a minimum of 0.5 hours to a maximum of 2 hours, we estimate that the annual burden would range from 80 hours (160 qualified registries × 0.5 hr) to 320 hours (160 qualified registries × 2 hr) at a cost ranging from \$7,862 (80 hr × \$98.28/hr) and \$31,450 (320 hr × \$98.28/hr), respectively.

Both the proposed minimum and maximum burden shown in 99 reflect the adjustments to the number of respondents due to availability of more recent data. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 98: Estimated Burden for Qualified Registry Self-Nomination

Burden and Respondent Descriptions	Minimum	Maximum
# of Qualified Registry Simplified Self-Nomination Applications submitted (a)	160	0
# of Qualified Registry Full Self-Nomination Applications submitted (b)	0	160
Total Applications (c)	160	160
Annual Hours Per Qualified Registry for Simplified Process (d)	0.5	0
Annual Hours Per Qualified Registry for Full Process (e)	0	2
Total Annual Hours for Self-Nomination for min. (f) = (a) * (d) and max. (b) * (e)	80	320
Cost Per Simplified Process Per Qualified Registry (@ computer systems analyst's labor rate of \$98.28/hr) (g)	\$49.14	0
Cost Per Full Process Per Qualified Registry (@ computer systems analyst's labor rate of \$98.28/hr) (h)	0	\$196.56
Total Annual Cost (i) = (a) * (g) (min.) and (b) * (h) (max.)	\$7,862	\$31,450

As shown in Table 99, for the CY 2023 performance period/2025 MIPS payment year, the proposed change in the representation of burden for this ICR described above in this section and the estimated increase in 13 respondents from the currently approved 147 respondents to 160 results in a change of – 311 hours at a cost of – \$30,565 for

the simplified self-nomination process (or minimum burden) and – 521 hours at a cost of – \$51,203 for the full self-nomination process (or maximum burden). We note that the decrease in burden is due to separating the estimated burden for targeted audits and participation plans and including that burden under a new ICR for third party

intermediary plan audits (see Table 101).

We note that for the purposes of calculating proposed estimated change in burden in Tables 132, 133, and 135 of this rule, we use only the maximum burden estimate.

TABLE 99: Change in Estimated Burden for Qualified Registry Self -Nomination

Burden and Respondent Descriptions	Minimum Burden	Maximum Burden
Total Currently Approved Annual Hours (a)	391	841
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 100, row (f))	80	320
Difference (c) = (b) - (a)	-311	-521
Total Currently Approved Annual Cost (d)	\$38,427	\$82,653
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 98, row (i))	\$7,862	\$31,450
Difference (f) = (e) - (d)	-\$30,565	-\$51,203

(4) ICR for Third Party Intermediary Plan Audits

As discussed above in this section, we are proposing to add a new ICR to distinctly capture the burden for collection of information related to QCDR and qualified registry targeted audits at § 414.1400(b)(3)(vi) through (viii) and the requirements for remedial action and termination of third party intermediaries at § 414.1400(e) during the third party intermediary self-nomination process. We note that we capture the estimated burden for third party intermediaries to submit additional requirements for compliance with both the conditions of approval and remedial action and termination criteria under one ICR. The proposed requirements and burden associated with developing the plans and audits by

QCDRs and qualified registries will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2022 PFS final rule, we combined the burden associated with the submission of the targeted audits, corrective action plans, participation plans and transition plans with the ICR for QCDR self-nomination process and other requirements (86 FR 65569 through 65573) and the ICR for qualified registry self-nomination process and other requirements (86 FR 65573 through 65576). For the purposes of this ICR, we refer to these audits and plans collectively as “plan audits.” For this proposed rule, we determined that it is necessary to separately estimate the burden for QCDR and qualified registry targeted audits from self-nomination

application burden because it would more accurately represent the burden.

In section IV.A.10.g.(3) of this rule, we propose a few changes to the regulations remedial actions and terminations set forth in § 414.1400(e). These include one revised and one new requirement for Corrective Action Plans (CAPs), and proposed termination of certain approved QCDRs and qualified registries that continue to fail to submit performance data. The burden associated with these proposals is discussed below.

(a) Targeted Audits

In the CY 2022 PFS final rule (86 FR 65547 through 65548), we finalized that beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified

registry must conduct targeted audits in accordance with requirements at § 414.1400(b)(3)(vi). Consistent with our assumptions in the CY 2022 PFS final rule for the QCDRs (86 FR 65574) and qualified registries (86 FR 65571) that would submit targeted audits, we estimate that the time required for a QCDR or qualified registry to submit a targeted audit ranges between 5 and 10 hours for the simplified and full self-nomination process, respectively. We assume that the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr.

Using the proposed adjustments to the number of QCDRs and qualified registries expected to submit self-nomination applications in sections V.B.9.c.(2) and V.B.9.c.(3) of this rule, we estimate that 70 third party intermediaries (20 QCDRs and 50 qualified registries) would submit targeted audits for the CY 2023 performance period/2025 MIPS payment year (See Table 100). Using the unchanged currently approved time per respondent (86 FR 65572), we estimate the total impact associated with QCDRs and qualified registries completing targeted audits will range from 350 hours (70 respondents × 5 hours/audit) at a cost of \$34,398 (70 respondents × \$491.40/audit) to 700 hours (70 respondents × 10 hours/audit) at a cost of \$68,796 (70 respondents × \$982.80/audit) for the simplified and full self-nomination process, respectively (see Table 101 for the cost per audit).

(b) Participation Plans

In the CY 2022 PFS final rule (86 FR 65546), we finalized requirements for approved QCDRs and qualified registries that have not submitted performance data to submit a participation plan as part of their self-nomination process. We refer readers to § 414.1400(e) for previously finalized policies for remedial action and termination of third-party intermediaries.

In section IV.A.10.g.(3)(b) of this proposed rule, we propose a new termination policy for approved QCDRs and qualified registries which are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii). We propose to terminate those QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period, and continue to

not submit MIPS data to CMS for the applicable performance period. Specifically, we propose to add a new ground for termination at § 414.1400(e)(5) stating that, beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii) of this section, will be terminated. If this policy is finalized, CMS would terminate the qualified registry or QCDR as applicable under § 414.1400(e)(5) and we assume that it would not require additional requirements for interested parties to submit their information during the qualified registry and QCDR self-nomination process. (86 FR 65574). We refer readers to section IV.A.10.g.(3)(b) of this rule for additional details related to these proposals.

Consistent with our assumptions in the CY 2022 PFS final rule for the QCDRs (86 FR 65574) and qualified registries (86 FR 65571) that would submit participation plans, we estimate that it would take 3 hours for a QCDR or qualified registry to submit a participation plan during the self-nomination process. We assume that the staff involved in submitting a participation plan will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr.

As shown in Table 100, we estimate that 29 third party intermediaries (10 QCDRs and 19 qualified registries) would submit participation plans for the CY 2023 performance period/2025 MIPS payment year. Therefore, we estimate the total impact associated with QCDRs and qualified registries to submit participation plans would be 87 hours (29 respondents × 3 hours/plan) at a cost of \$8,550 (29 respondents × \$294.84/plan). (See Table 101 for the cost per audit).

(c) Corrective Action Plans (CAPs)

In section IV.A.10.g.(3)(a) of this rule, we propose to revise the CAP requirement at § 414.1400(e)(1)(i)(B) to require the third party intermediary to address in its CAP the impact to individual clinicians, groups, or virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP

has been imposed. We also propose to add a new CAP requirement to require the third-party intermediary to notify the parties identified in proposed § 414.1400(e)(1)(i)(B) of the impact to these parties by submitting a communication plan. Additionally, we propose to add § 414.1400(e)(1)(i)(E) to require the third party intermediary to develop a communication plan for communicating the impact to the parties identified in proposed § 414.1400(e)(1)(i)(B). We assume that the intent of this proposal is to enable affected parties to better understand and prepare for any operational and other challenges as needed. We believe having third party intermediaries submit a communication plan as part of their CAP would ensure third party intermediaries directly communicate the situation and its impact to these parties in a timely and consistent manner. However, due to the relatively low number of CAPs (an average of 10 responses) that we expect to receive from QCDRs and qualified registries for the CY 2023 performance period/2025 MIPS payment year, we are unable to estimate the burden associated with the development of a communication plan.

Consistent with our assumptions in the CY 2022 PFS final rule for the QCDRs and qualified registries (86 FR 65575) that would submit CAPs, we estimate that 10 third party intermediaries would submit CAPs for the CY 2023 performance period/2025 MIPS payment year. Additionally, we estimate that it would take 3 hours for a QCDR or qualified registry to submit a participation plan. We assume that the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$98.28/hr.

Therefore, we estimate the total impact associated with QCDRs and qualified registries to CAPs would be 30 hours (10 respondents × 3 hours/plan) at a cost of \$2,948 (10 respondents × \$294.84/plan). (See Table 101 for the cost per audit).

(d) Transition Plans

In the CY 2020 PFS final rule (84 FR 63052 through 63053), we established a policy at § 414.1400(a)(4)(vi) that a condition of approval for the third party intermediary is to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on

which data has been collected, collection type according to a CMS approved transition plan. In the CY 2020 PFS final rule (84 FR 63115), we did not estimate the total burden associated with the development of CMS approved transition plans because of the uncertain, but low frequency (less than 10 per year historically) with which third party intermediaries have elected to discontinue services during a performance period. Based on updated data received for the transition plans submitted by the registries and QCDRs beginning with the CY 2020 performance period/2022 MIPS payment year, we estimate to receive 15 transition plans from QCDRs and qualified registries for the CY 2023 performance period/2025 MIPS payment year. We estimate that it would take 1 hour for a computer system analyst or their equivalent at a labor rate of \$98.28/hr to develop a transition plan on behalf of each QCDR or qualified registry during the self-nomination period. However, we are unable to estimate the burden for implementing the actions in the transition plan because the level of effort may vary for each QCDR or qualified registry. Therefore, we estimate the total impact associated with qualified registries completing transition plans is 15 hours

(15 transition plans \times 1 hour/plan) at a cost of \$1,474 (15 hr \times \$98.28/hr). We refer readers to section VI.E.16.e.(2)(c) of this proposed rule where we discuss our impact analysis for the transition plans submitted by QCDRs and qualified registries.

In section IV.A.10.g.(3) of this rule, we propose to revise conforming changes to § 414.1400(e)(2), which currently states that CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group under certain circumstances. Rather than amend this provision to add references to subgroups and APM Entities, we propose to revise § 414.1400(e)(2) by removing the previously quoted phrase. If this proposal is finalized, the revised regulation would simply provide that CMS may immediately or with advance notice “terminate a third party intermediary” under the specified circumstances. We assume that these proposals are intended to revise the regulation text in conjunction with the proposal in section IV.A.10.g.(1)(b) of this rule to amend the definition of a “third party intermediary” to refer to subgroups and APM Entities, and do not require additional information from

qualified registries during the self-nomination process.

In section IV.A.10.g.(4)(b) of this rule, we propose to update § 414.1400(f)(1) to require that the entity must make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email. We assume that the intent of this proposal is to update the regulation text to align with the proposed updates to the definition of a “third party intermediary” at § 414.1305. We do not expect to receive additional information from qualified registries during the self-nomination process due to this proposal. Additionally, we refer readers to section VI.E.16.e.(2)(c) of this proposed rule where we discuss our impact analysis for these proposals.

As shown in Table 100, we assume that 124 third party intermediaries would submit plan audits (targeted audits, participation plans, CAPs, and transition plans).

TABLE 100: Estimated Number of Respondents to Submit Plan Audits

Burden and Respondent Descriptions	# of Respondents
# of Targeted Audits (a)	70
# of Participation Plans (b)	29
# of Corrective Action Plans (CAPs) (c)	10
# of Transition Plans (d)	15
Total Respondents (e) = (a) + (b) + (c) + (d)	124

As shown in Table 101, we assume that the staff involved in the submission of the plan audits during the third party intermediary self-nomination process will continue to be computer systems analysts or their equivalent, who have

an average labor rate of \$98.28/hr. For the CY 2023 performance period/2025 MIPS payment year, in aggregate, the proposed estimated annual burden for the simplified (or minimum) and full (or maximum) self-nomination process will

range from 482 hours to 832 hours at a cost ranging from \$50,370 (482 hr \times \$98.28/hr) and \$81,769 (832 hr \times \$98.28/hr), respectively.

TABLE 101: Estimated Burden for Third Party Intermediary Plan Audits

Burden and Respondent Descriptions	Minimum	Maximum
# of Hours per Completion of Targeted Audit (a)	5	10
Total Annual Hours for Completion of 70 Targeted Audits (b)	350	700
# of Hours per Submission of Participation Plan (c)	3	3
Total Annual Hours for Submission of 29 Participation Plans (d)	87	87
# of Hours per Submission of CAP (e)	3	3
Total Annual Hours for Submission of 10 CAPs (f)	30	30
# of Hours per Submission of Transition Plan (g)	1	1
Total Annual Hours for Submission of 15 Transition Plans (h)	15	15
Total Annual Hours for Submission of Plan Audits (i) = (b) + (d) + (f) + (h)	482	832
Cost Per Targeted Audit (@ computer systems analyst's labor rate of \$98.28/hr) (j) = (a) * \$98.28/hr	\$491.40	\$982.80
Cost Per Participation Plan (@ computer systems analyst's labor rate of \$98.28/hr) (k) = (c) * \$98.28/hr	\$294.84	\$294.84
Cost per CAP (@ computer systems analyst's labor rate of \$98.28/hr) (l) = (e) * \$98.28/hr	\$294.84	\$294.84
Cost per Transition Plan @computer systems analyst's labor rate of \$98.28/hr (m) = (g) * \$98.28/hr	\$98.28	\$98.28
Total Annual Cost (n) = 70 * (j) + 29 * (k) + 10 * (l) + 15 * (m) (min) and 70 * (j) + 29 * (k) + 10 * (l) + 15 * (m) (max)	\$50,370	\$81,769

As shown in Table 102, for the CY 2023 performance period/2025 MIPS payment year, the addition of this ICR for third party intermediary plan audits results in a change of +482 hours at a

cost of +\$50,370 for the simplified self-nomination process (or minimum burden) and +832 hours at a cost of +\$81,768 for the full self-nomination process (or maximum burden).

We note that for the purposes of calculating proposed estimated change in burden in Tables 132, 133, and 135 of this rule, we use only the maximum burden estimate.

TABLE 102: Change in Estimated Burden for Third Party Intermediary Plan Audits

Burden and Respondent Descriptions	Minimum Burden	Maximum Burden
Total Currently Approved Annual Hours (a)	0	0
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 101, row (i))	482	832
Difference (c) = (b) - (a)	+482	+832
Total Currently Approved Annual Cost (d)	\$0	\$0
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 101, row (n))	\$50,370	\$81,769
Difference (f) = (e) - (d)	+\$50,370	+\$81,769

(5) Survey Vendor Requirements

This rule is not proposing new or revised collection of information requirements related to the requirements for CAHPS Survey vendors. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not proposing any changes to the CAHPS for MIPS Survey

vendor information collection request under that control number.

d. ICR Regarding Open Authorization (OAuth) Credentialing and Token Request Process

The proposed requirements and burden associated with the OAuth Credentialing and token request process will be submitted to OMB for approval under control number 0938-1314 (CMS-10621). We refer readers to the CY 2021 and the CY 2022 PFS final

rules (85 FR 84969 through 85 FR 84970 and 86 FR 65576) for our previously finalized requirements and burden estimates for the information collection related to the OAuth credentialing and token request process.

This rule is not proposing new or revised collection of information requirements related to the OAuth credentialing and token request process. Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we made administrative

changes in the process for interested parties to submit their application for OAuth credentialing and token process. Based on the changes to the workflows, the CMS Office of Information Technology (OIT) has centralized Okta Administrator privileges. In previous years, the Quality Payment Program maintained the privileges for Administrator roles. As a result of this change, interested parties that would submit their information for OAuth Credentialing and Token request process are now required to meet with

both Quality Payment Program and OIT for final approvals to have their applications integrated with the CMS Okta production environment. Therefore, we propose to revise our estimates that it would take 2 hours for a computer systems analyst (or their equivalent) to provide documentation and any follow-up communication via email. This is an increase of 1 hour from the currently approved estimated time of 1 hour for interested parties to provide their documentation and any follow-up communication via email.

As shown in Table 103, we are not proposing any changes to our currently approved estimate of 15 respondents that would complete this process for the CY 2023 performance period/2025 MIPS payment year. In aggregate, accounting for the increase in time required for a computer systems analyst (or their equivalent) to complete the token request process, we estimate an annual burden of 30 hours (15 vendors \times 2 hrs) at a cost of \$2,948 (30 hrs \times \$98.28/hr).

TABLE 103: Estimated Burden for the OAuth Credentialing and Token Request Process

Burden and Respondent Descriptions	Burden Estimate
# of Respondents (a)	15
Total Hours per Respondent	2
Total Annual Hours (c) = (a) * (b)	30
Labor Rate for Computer System Analyst (d)	\$98.28/hr
Total Annual Cost (e) = (c) * (d)	\$2,948

As shown in Table 104, using our unchanged currently approved number of respondents (86 FR 65576), the proposed increase in the amount of time required for the OAuth credentialing

and token request process results in an adjustment of +15 hours (+15 respondents \times 1 hr/respondent) at a cost of +\$1,474 (+15 hr \times \$98.28/hr) from our currently approved burden of 15 hours

(15 respondents \times 1 hr/respondent) at a cost of \$1,474 (15 hrs \times \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

TABLE 104: Change in Estimated Burden for OAuth Credentialing and Token Request Process

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	15
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 103, row (c))	30
Difference (c) = (b) - (a)	+15
Total Currently Approved Annual Cost (d)	\$1,474
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 103, row (e))	\$2,948
Difference (f) = (e) - (d)	+\$1,474

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77502 through 77503 and 82 FR 53908 through 53912), the CY 2019, CY 2020, CY 2021, and CY 2022 PFS final rules (83 FR 60000 through 60003, 84 FR 63121 through 63124, 85 FR 84970 through 84974, 86 FR 65576 through 65588) for our previously

finalized estimated burden associated with data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: those who submit data as MIPS eligible clinicians, and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate

in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the third snapshot date for the

2021 QP Performance period. From this data, we calculated the QP determinations as Pdescribed in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2023 performance period/2025 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future for the CY 2023 performance period/2025 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). We note that we continue to use CY 2019 performance period/2021 MIPS payment year data to estimate the number of respondents in the CY 2023 PFS proposed rule.

There may be an undercount in submissions due to the PHE for COVID-19, because of the automatic extreme and uncontrollable circumstances policy, and application-based policy that allowed clinicians to elect not to submit during the submission period for the CY 2019 performance period/2021 MIPS payment year that we are using to inform our burden estimates. Despite this limitation, we believe the data from the CY 2019 performance period/2021 MIPS payment year is still the best data source available as it most accurately reflects the impacts of policies finalized in previous rules and trends toward increased group reporting.

We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2021 and CY 2022 PFS final rules (85 FR 84972 and 86 FR 65567), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As

stated in section V.B.9.a.(4) of this proposed rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2023 performance period/2025 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2021 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2019 performance period/2021 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this proposed rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.⁵³⁵

For the CY 2023 performance period/2025 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs.

⁵³⁵ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

Additionally, we capture the burden for clinicians who choose to submit via these collection types for the quality performance category of MVPs. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2019 performance period/2021 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 105 uses methods similar to those described above to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2023 performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 MIPS payment year, we estimate that approximately 27,006 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 37,306 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 38,464 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 performance period/2021 MIPS payment year, these are increases of 1,579, 850, and 2,063 respondents from the currently approved estimates of 25,427, 36,456, and 36,401 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

TABLE 105: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM		Total
2023 MIPS performance period (excludes QPs) (a)	30,689		42,393	43,709	116,791
MVP Adjustment (b) = (a)* 0.12	3,683	5,087	5,245	14,015	
2023 MIPS Performance Period (excludes QPs) (Adjusted for MVP) (c)	27,006	37,306	38,464	102,776	
*Currently approved 2023 MIPS Performance Period (excludes QPs) (d)	25,427	36,456	36,401		98,284
Difference (e) = (c) – (d)	+1,579	+850	+2,063	+4,492	

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 105 are not mutually exclusive.

Table 106 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the

CY 2023 performance periods/2025 MIPS payment year. We assume that clinicians who submitted quality data as groups in the CY 2019 performance period/2021 MIPS payment year will continue to submit quality data either as groups, or virtual groups for the same collection types for the 2023 performance period/2025 MIPS payment years. We refer readers to the CY 2022 PFS final rule (86 FR 65577) on our assumptions related to the use of an alternate collection type for groups that submitted data via the CMS Web Interface collection type for the CY 2019 performance period/2021 MIPS payment year.

As shown in Table 106, for the CY 2023 performance period/2025 MIPS payment year we estimate that 10,278

groups and virtual groups will submit data for the MIPS CQM and QCDR collection type and 7,296 groups and virtual groups will submit for eCQM collection types. These are decreases of 156 and 76 respondents from the currently approved estimates of 10,434, and 7,372 for the groups that would submit data using MIPS CQM and QCDR, and eCQM collection types, respectively.

As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities will participate through traditional MIPS and base our estimates on submissions received in the CY 2019 performance period/2021 MIPS payment year.

TABLE 106: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	Total
2023 MIPS performance period (excludes QPs) (a) prior to adjustments	0	11,680	8,291	19,971
Adjustment for MVPs (12%) (b) = (a) * 0.12	0	1,402	995	2,397
2023 MIPS performance period (excludes QPs) Adjusted for MVP. (c) = (a) – (b)	0	10,278	7,296	17,574
*Currently approved 2023 MIPS performance period (excludes QPs) (d)	0	10,434	7,372	17,806
Difference (e) = (d) - (c)	0	-156	-76	--232

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data has some limitations. We

believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes

for integrating quality data submission into their practices' workflows. Moreover, the time needed for a

clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or

third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. Additionally, as finalized in the CY 2022 PFS final rule (86 FR 65394 through 65397), group TINs could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. we refer readers to the CY 2022 PFS final rule for additional details on MVP quality reporting requirements (86 FR 65411 through 65412).

In terms of the quality measures available for clinicians and groups to report for the CY 2023 performance period/2025 MIPS payment year, we are proposing a measure set of 194 quality measures. The new MIPS quality measures finalized for inclusion in MIPS for the CY 2023 performance period/2025 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures finalized for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 107, as well as proposed counts of new, removed, and substantively changed measures.

TABLE 107: Summary of Quality Measures Proposed for the CY 2023 Performance Period/2025 MIPS Payment Year

Collection Type	# Measures Proposed as New	# Measures Proposed for Removal*	# Measures Proposed with a Substantive Change*	# Measures Proposed for CY 2023*
Medicare Part B Claims	0	-5	15	29
MIPS CQMs Specifications	+8	-14	56	168
eCQM Specifications	+1	-2	42	47
Survey – CSV	0	0	1	1
Administrative Claims	+1	0	0	4
Total*	+9	-15**	75	194

*A measure may be specified under multiple collection types but will only be counted once in the total.

**We are proposing to remove 15 MIPS quality measures and partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs.

For the CY 2023 performance period/2025 MIPS payment year, we are proposing a net reduction of 6 quality measures across all collection types compared to the 200 measures finalized for the CY 2022 performance period/2024 MIPS payment year (86 FR 65542). Specifically, as discussed in section IV.A.10.c.(1)(c) of this rule, we are proposing to add 9 new MIPS quality measures, remove 15 MIPS quality measures, partially remove 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs, and make substantive updates to 75 MIPS quality measures. We do not anticipate that our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures. We refer readers to section

V.B.9.e.(7) of this proposed rule for the proposed change in associated burden related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year.

(3) Quality Payment Program Identity Management Application Process

This rule is not proposing any new or revised collection of information requirements or burden related to the identity management application process. We are proposing to adjust the number of respondents based on updated data. The proposed requirements and burden will be submitted to OMB under control number 0938–1314 (CMS–10621).

Based on historical trends for the number of eligible clinicians, groups, or third parties that register for new accounts, we noticed that we

inadvertently underestimated our assumptions in the CY 2022 PFS final rule (86 FR 65582). In order to accurately capture the incremental change in the number of respondents in previous years, we are using a rolling average of the number of respondents that would register for obtaining new accounts. Therefore, we are proposing to adjust our estimates from 3,741 to 6,500 for the number of respondents that would submit their information to obtain new user accounts in the HARP system for the CY 2023 performance period/2025 MIPS payment year. This would result in an increase of 2,759 respondents. We are not proposing to adjust the currently approved estimated time of 1 hour per respondent to obtain a new account. As shown in Table 108, it would take 1 hour at \$98.28/hr for a computer systems analyst (or their equivalent) to obtain an account for the

HARP system. In aggregate we estimate an annual burden of 6,500 hours (6,500 registrations × 1 hr/registration) at a cost of \$638,820 (6,500 hrs × \$98.28/hr).

TABLE 108: Estimated Burden for Quality Payment Program Identity Management Application Process

Burden and Respondent Description	Burden Estimate
# of New Users completing the Identity Management Application Process (a)	6,500
Total Hours Per Application (b)	1
Total Annual Hours for completing the Identity Management Application Process (c) = (a)*(b)	6,500
Cost Per Application @ computer systems analyst's labor rate of \$95.22/hr.) (d)	\$98.28
Total Annual Cost for completing the Identity Management Application Process (e) = (a)*(d)	\$638,820

As shown in Table 109, using the unchanged currently approved hours per respondent burden estimate, the proposed increase of 2,759 respondents

from 3,741 to 6,500 for the CY 2023 performance period/2025 MIPS payment year would result in an estimated increase of 2,759 hours

(+2,759 respondents × 1hr/respondent) at a cost of \$271,155 (2,759 hrs × 98.28/hr).

TABLE 109: Estimated Burden for Quality Payment Program Identity Management Application Process

Burden and Respondent Description	Burden Estimate
Total Currently Approved Annual Hours (a)	3,741
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (See Table 108, row (c)) (b)	6,500
Difference (c) = (b) – (a)	+2,759
Total Currently Approved Annual Cost (d)	\$367,665
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (See Table 108, row (e)) (e)	\$638,820
Difference (f) = (e) – (d)	+271,155

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not proposing any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are proposing to adjust our currently approved burden estimates based on our changes in assumptions for calculating the data. We refer readers to Table 118 of this section for the proposed change in associated burden related to the submission of Medicare Part B claims data for the MVP quality performance category in the CY 2023 performance period/2025 MIPS payment year.

The following proposed burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77501 through 77504 and 82 FR 53912), the CY 2019, CY 2020, CY

2021 and CY 2022 PFS final rules (83 FR 60004 through 60005, 84 FR 63124 through 63126, 85 FR 84975 through 84976 and 86 FR 65582 through 65584) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 105, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that 27,006 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. In this rule, we are proposing to adjust the number of Medicare Part B claims respondents from the currently approved estimate of 25,427 to 27,006 (an increase of 1,579).

As shown in Table 105, consistent with our currently approved per response time figures, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) for a computer systems analyst at a cost of

\$14.74 (0.15 hr × \$98.28/hr) to 7.2 hours for a computer systems analyst at a cost of \$707.61 (7.2 hr × \$98.28/hr). We assume that the burden will involve becoming familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time estimates, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$115.22/hr for a medical and health services manager, 1 hour at \$259.98/hr for a physician, 1 hour at \$49.86/hr for an LPN, 1 hour at \$98.28/hr for a computer systems analyst, and 1 hour at \$41.10/hr for a billing and posting clerk. We are not proposing to revise our currently approved per response time estimates.

As shown in Table 110, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a

maximum of 14.2 hours (7.2 hr + 7 hr). In aggregate, the total annual time for the CY 2023 performance period/2025 MIPS payment year ranges from 193,093 hours (7.15 hr x 27,006 clinicians) to 383,485 hours (14.2 hr x 27,006 clinicians). The estimated annual cost (per clinician) ranges from \$809.62

[(0.15 hr x \$98.28/hr) + (3 hr x \$115.22/hr) + (1 hr x \$98.28/hr) + (1 hr x \$49.86/hr) + (1 hr x \$41.10/hr) + (1 hr x \$259.98/hr)] to a maximum of \$1,502.49 [(7.2 hr x \$98.28/hr) + (3 hr x \$115.22/hr) + (1 hr x \$98.28/hr) + (1 hr x \$49.86/hr) + (1 hr x \$41.10/hr) + (1 hr x \$259.98/hr)]. The total annual cost for

the CY 2023 performance period/2025 MIPS payment year ranges from a minimum of \$21,864,598 (27,006 clinicians x \$810) to a maximum of \$40,576,245 (27,006 clinicians x \$1,502.49).

TABLE 110: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden
# of Clinicians (a)	27,006	27,006	27,006
Hours Per Computer Systems Analyst to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2
Total Annual Hours (i) = (a) * (h)	193,093	217,398	383,485
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$98.28/hr @ varying times) (j)	\$14.74	\$103.19	\$707.61
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$115.22/hr @ 3 hr) (k)	\$345.66	\$345.66	\$345.66
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$98.28/hr @ 1 hr) (l)	\$98.28	\$98.28	\$98.28
Cost to Review Measure Specifications (@ LPN's labor rate of \$49.86/hr @ 1 hr) (m)	\$49.86	\$49.86	\$49.86
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$41.10/hr @ 1 hr) (n)	\$41.10	\$41.10	\$41.10
Cost to Review Measure Specifications (@ physician's labor rate of \$259.98/hr @ 1 hr) (o)	\$259.98	\$259.98	\$259.98
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	\$809.62	\$898.07	\$1,502.49
*Total Annual Cost (q) = (a) * (p)	\$21,864,598	\$24,253,278	\$40,576,245

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 111, using our unchanged currently approved burden per response estimates, the increase in number of respondents from 25,427 to 27,006 results in a total maximum

adjustment of 22,422 hours (+1,579 respondents x 14.2 hr/respondent) at a cost of \$2,372,432 (+1,579 respondents x \$1,502.49/respondent). For purposes of calculating total burden associated

with this proposed rule as shown in Tables 132, 133, and 135, only the maximum burden is used.

TABLE 111: Adjusted Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	361,063
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (see Table 110, row (i))	383,485
Difference (c) = (b) - (a)	+22,422
Total Currently Approved Annual Cost (d)	\$38,203,813
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (see Table 110, row (q))	\$40,576,245
Difference (f) = (e) - (d)	+\$2,372,432

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77504 through 77505 and 82 FR 53912 through 53914), the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60005 through 60006, 84 FR 63127 through 63128, 85 FR 84977 through 84979, and 86 FR 65584 through 65586) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. We refer readers to Table 118 for the estimated change in associated burden for quality data submission using MIPS CQM and QCDR collection types related to MVP and subgroup reporting in the CY 2023 performance period/2025 MIPS payment year.

As noted in Tables 105 and 106, based on data from the CY 2019 performance period/2021 MIPS payment year, for the CY 2023 performance period/2025 MIPS payment year, we assume that 47,584 clinicians (37,306 individuals and 10,278 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. This is an increase of 850 individuals and a decrease of 156 groups from the estimates of 36,456

individuals and the 10,434 groups provided in the CY 2022 PFS final rule (86 FR 65585). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of \$982.65 per response. This consists of 3 hours at \$98.28/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$115.22/hr for a medical

and health services manager, 1 hour at \$98.28/hr for a computer systems analyst, 1 hour at \$49.86/hr for a LPN, 1 hour at \$41.10/hr for a billing clerk, and 1 hour at \$259.98/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at \$98.28/hr for a computer systems analyst at a cost of \$8.15 (0.083 hr x \$98.28/hr). Overall, we estimate 9.083 hrs/response (3 hrs + 2 hrs + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hrs) at a cost of \$982.65/response [(3 hrs x \$98.28/hr) + (2 hrs x \$115.22/hr) + (1 hr x \$259.98/hr) + (1 hr x \$98.28/hr) + (1 hr x \$49.86/hr) + (1 hr x \$41.10/hr) + (0.083 hrs x \$98.28/hr)].

As shown in Table 112, For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 432,205 hours [9.083 hrs/response x (37,306 clinicians submitting as individuals + 10,278 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians, a total of 47,584 responses)] at a cost of \$46,758,418 (47,584 responses x \$982.65/response).

TABLE 112: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of clinicians submitting as individuals (a)	37,306
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	10,278
# of Respondents (groups plus clinicians submitting as individuals) (c)=(a)+(b)	47,584
Hours Per Respondent to Report Quality Data (d)	3
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Physician Review Measure Specifications (i)	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083
Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)	9.083
Total Annual Hours (l) = (c)*(k)	432,205
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$98.28/hr) (m)	\$294.84
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$115.22/hr) (n)	\$230.44
Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of \$98.28/hr) (o)	\$98.28
Cost LPN Review Measure Specifications (@ LPN's labor rate of \$49.86/hr) (p)	\$49.86
Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of \$41.10/hr) (q)	\$41.10
Cost Physician Review Measure Specifications (@ physician's labor rate of \$259.98/hr) (r)	\$259.98
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$98.28/hr) (s)	\$8.15
*Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	\$982.65
*Total Annual Cost (u) = (c) * (t)	\$46,758,418*

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 113, using the unchanged currently approved hours per respondent burden estimate, the increase of 694 respondents from 46,890

to 47,584 for the CY 2023 performance period/2025 MIPS payment year results in an increase of 6,303 hours (+694 respondents × 9.083 hr/respondent) and

\$681,959 (694 respondents × \$982.65/respondent).

TABLE 113: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	425,902
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (see Table 112, row (l))	432,205
Difference (c) = (b) - (a)	+6,303
Total Currently Approved Annual Cost (d)	\$46,076,459
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (see Table 112, row (u))	\$46,758,418
Difference (f) = (e) - (d)	+\$681,959

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130) and the CY 2021 PFS final rule (85 FR 84979 through 84980) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2023 performance period/2025 MIPS payment year, we refer readers to Table 118 of this section.

Based on CY 2019 performance period/2021 MIPS payment year data, for the CY 2023 performance period/2025 MIPS payment year, we assume that 45,760 clinicians (38,464 individual clinicians and 7,296 groups and virtual

groups) would submit quality data using the eCQM collection type. This is an increase of 2,063 individuals and a decrease of 76 groups from the estimates of 36,401 individuals and 7,372 groups provided in the CY 2021 PFS final rule (85 FR 84979). We assume the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and

clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$98.28/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$115.22/hr for a medical and health services manager, 1 hour at \$259.98/hr for a physician, 1 hour at \$98.28/hr for a computer systems analyst, 1 hour at \$49.86/hr for an LPN, and 1 hour at \$41.10/hr for a billing clerk. Overall, we estimate a cost of \$876.22/response [(2 hr × \$98.28/hr) + (2 hr × \$115.22/hr) + (1 hr × \$259.98/hr) + (1 hr × \$98.28/hr) + (1 hr × \$49.86/hr) + (1 hr × \$41.10/hr)].

As shown in Table 114, For the CY 2023 performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 366,080 hours [8 hr × 45,760 (38,464 clinicians + 7,296 groups and virtual groups)] at a cost of \$40,095,827 (45,760 responses × \$876.22/response).

TABLE 114: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of clinicians submitting as individuals (a)	38,464
# of Groups submitting via EHR on behalf of individual clinicians (b)	7,296

Cost to Review Measure Specifications (@ LPN's labor rate of \$49.86/hr) (o)	\$49.86
Cost to Review Measure Specifications (@ clerk's labor rate of \$41.10/hr) (p)	\$41.10
Cost to Review Measure Specifications (@ physician's labor rate of \$259.98/hr) (q)	\$259.98
*Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$876.22
*Total Annual Cost (s) = (c) * (r)	\$40,095,827

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 115, using the unchanged currently approved hours per respondent burden estimate, the proposed increase of 1,987 respondents

from 43,773 to 45,760 for the CY 2023 performance period/2025 MIPS payment year results in an increase of 15,896 hours (+1,987 respondents × 8

hr/respondent) at a cost of \$1,741,049 (+1,987 respondents × \$876.22/respondent).

TABLE 115: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate

Difference (c) = (b) - (a)	+15,896
Total Currently Approved Annual Cost (d)	\$38,354,778
Total Annual Cost for Respondents in CY 2022 PFS proposed rule (e) (see Table 114, row (s))	\$40,095,827
Difference (f) = (e) - (d)	+1,741,049

(7) ICRs Regarding Burden for MVP Reporting

The proposed requirements and burden associated with the implementation of MVPs and subgroups will be submitted to OMB for approval

under control number 0938–1314 (CMS–10621).

(a) Burden for MVP Reporting Requirements

We refer readers to the CY 2022 PFS final rule (86 FR 65588 through 65592)

for our previously finalized burden and requirements for submission of data for the MVP quality performance category. In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate

through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 PFS final rule for our previously finalized assumptions on the estimated number of clinicians participating as subgroups in the CY 2023 performance period/2025 MIPS payment year (86 FR 65589).

For the ICRs related to MVP participants, we continue to use the MIPS submission data from the CY 2019 performance period/2021 MIPS payment year. In Appendix 3: MVP Inventory of this rule, we propose to revise 6 of the 7 MVPs finalized in Appendix 3: MVP Inventory of the CY 2022 PFS final rule (86 FR 65998 through 66031). Specifically, these revisions are based on the proposed removal of certain improvement activities in section IV.A.10.c.(3)(b)(ii) of this rule, the addition of other relevant existing quality measures for MVP participants to select from and the proposed addition of the ONC direct review attestation requirement in the Promoting Interoperability performance category to all previously finalized MVPs. Additionally, we propose 5 new MVPs for the CY 2023 performance period/2025 MIPS payment year. If the proposed 5 new MVPs are finalized, MVP participants would have a total of 12 MVPs available for the CY 2023 performance period/2025 MIPS payment year. Due to the availability of new MVPs and addition of relevant quality measures to existing MVPs, we expect an increase in the number of MVP participants. Therefore, we estimate that 12 percent of the clinicians would participate in MVP reporting in the CY 2023 performance period/2025 MIPS payment year. This is an increase of 2 percentage points from the currently approved estimate of 10 percent in the CY 2022 PFS final rule (86 FR 65588 through 65589).

We assume that the changes to the existing MVPs and the addition of new MVPs would not impact the currently approved number of subgroups. We expect that clinician participation in subgroups will be relatively low for the CY 2023 performance period/2025 MIPS payment year due to the voluntary subgroup reporting option and the additional burden involved for groups to organize clinicians into subgroups.

Therefore, we are not proposing any adjustments to our previously finalized assumption in the CY 2022 PFS final rule (86 FR 65589) of 20 subgroups that would participate in MVP reporting.

In section IV.A.8.e.(4)(b) of this rule, we propose to modify § 414.1365(d)(3)(i)(A)(1) to read that subgroups are scored on each selected population health measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points. We also propose to add § 414.1365(d)(3)(i)(B)(1) so that subgroups are scored on each selected outcomes-based administrative claims measure based on their affiliated group score, if available, and that if the subgroup's affiliated group score is not available, each such measure will receive zero measure achievement points. We assume that these proposals are related to the subgroup scoring of administrative claim measures and do not impact clinician participation in subgroups. Furthermore, clinicians do not submit data for the administrative claims' measures and hence, there is no associated burden relevant to these measures for clinicians participating as subgroups. Therefore, we are not proposing any adjustments to our previously finalized assumptions for subgroup reporting burden of the MVP quality performance category in the CY 2022 PFS final rule (86 FR 65592).

Additionally, in section IV.A.8.e.(4)(c) of this rule, we propose at § 414.1318(b)(1) that we will not assign a score for a subgroup that registers and does not submit data for the applicable performance period. We also propose to make conforming changes at § 414.1318(b) to state that, except as provided under § 414.1317(b) and paragraph (b)(1) of this section, each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment. We assume that subgroups that register for MVP reporting intend to submit data for the measures and activities in an MVP. These proposed policies are meant to clarify the scoring for subgroups in instances when a subgroup does not submit data as originally intended when registering as

a subgroup. Therefore, we are not proposing any adjustments to our previously finalized assumptions for subgroup reporting burden of the MVP quality performance category in the CY 2022 PFS final rule (86 FR 65592).

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

We refer readers to the CY 2022 PFS final rule (86 FR 65589 through 65590) for our previously finalized burden relevant to MVP registration for clinicians participating as an individual and/or group for MVP reporting.

As shown in Table 116, consistent with our previously finalized assumptions in the CY 2022 PFS final rule (86 FR 65590), we estimate that the registration process for clinicians choosing to submit MIPS data for the measures and the activities in an MVP would require 0.25 hours of a computer systems analyst's time for the CY 2023 performance period/2025 MIPS payment year. We assume that the staff involved in the MVP registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of \$98.28/hour.

As discussed above, based on data from the CY 2019 performance period/2021 MIPS payment year, the proposed changes to existing MVPs and the addition of new MVPs, we estimate that approximately 12 percent of the clinicians that currently participate in MIPS would submit data for the measures and activities in an MVP. For the CY 2023 performance period/2025 MIPS payment year, we assume that we would receive a total of 16,432 submissions for the measures and activities included in MVPs. This total includes our estimate of 20 subgroup reporters that would also be reporting MVPs in addition to MVP reporters who currently participate in traditional MIPS. Therefore, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 16,432. As shown in Table 116, we estimate that it would take 4,108 hours (16,432 respondents × 0.25 hr/respondent) at a cost of \$403,734 (4,108 hrs × 98.28/hr) for individual clinicians, groups and APM Entities to register for MVPs in the CY 2023 performance period/2025 MIPS payment year.

**TABLE 116: Total Estimated Burden for MVP Registration
(Individual clinicians, Groups, Subgroups and APM Entities)**

Burden and Respondent Descriptions	Burden Estimate
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	16,432
Estimated Total Annual Burden Hours Per Registration (b)	0.25
Estimated Total Annual Burden Hours for MVP Registration (c) = (a) * (b)	4,108*
Estimated Cost Per MVP (@ computer systems analyst's labor rate of \$98.28/hr. (d)	98.28
Estimated Total Annual Burden Cost for MVP Registration (e) = (c) * (d)	\$403,734*

*Due to burden being estimated in fractions of minutes and hours, totals may reflect impact of rounding.

As shown in Table 117, for the CY 2023 performance period/2025 MIPS payment year, the proposed adjustment in the number of respondents expected to register for MVP reporting from

12,917 to 16,432 results in an increase of 3,515 respondents. In aggregate, when combined with the unchanged hourly burden per respondent, this would result in an increase of 879 hours

(+3,515 respondents × 0.25 hr/ respondent) at a cost of \$86,388 (879 hrs × 98.28/hr).

TABLE 117: Change in Estimated Burden for MVP Registration: Individuals, Groups, and APM Entities

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	3,229
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 116, row (c))	4,108
Difference (c) = (b) - (a)	+879
Total Currently Approved Annual Cost (d)	\$317,346
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 116, row (e))	\$403,734
Difference (f) = (e) - (d)	+86,388

(ii) Burden for Subgroup Registration

We previously established at § 414.1365(b) a registration process for clinicians who choose to report MVPs through a subgroup. We refer readers to the CY 2022 PFS final rule for our previously finalized burden relevant to subgroup registration for clinicians participating in MVP reporting (86 FR 65590).

In section IV.A.8.e.(2) of this rule, we propose to modify the definition of a single specialty group at § 414.1305 to state that single specialty group means a group that consists of one specialty type as determined by CMS using Medicare Part B claims. We also propose to modify the definition of a multispecialty group at § 414.1305 to state that multispecialty group means a group that consists of two or more specialty types as determined by CMS using Medicare Part B claims. We believe that these definitions would help groups understand their specialty determination. However, we are not proposing any adjustments to the subgroups burden associated with these proposals because we believe that these

definitions would not impact the utilization of subgroups by groups and hence, would not change the way groups choose to organize clinicians in subgroups.

In section IV.A.8.e.(3)(b) of this rule, we propose that as part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. Under this proposed policy, we would identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text—only field, if the options we provide do not correctly describe the subgroup. We assume that the burden associated with choosing a key scenario would minimize the time required for subgroups to provide a narrative description. Additionally, we anticipate the narratives to be short descriptions of the nature of a group practice and appropriately reflect the subgroup

composition. Therefore, we are not proposing any adjustments in the burden for subgroup registration because we assume that the narrative requirement would not add significant burden to the currently approved half an hour for subgroup registration in the CY 2022 PFS final rule (86 FR 65590). We refer readers to section IV.A.8.e.(3)(b) of this rule for examples of the subgroup narrative description.

In section IV.A.8.f.(3)(d) of this rule, we are proposing to add at § 414.1318(a)(4) that CMS will apply the low-volume threshold criteria for a subgroup as described under § 414.1318(a)(1) using information from the initial 12-month segment of the applicable MIPS determination period. Additionally, we propose to make conforming changes at § 414.1318(a)(1) to state that, except as provided under paragraph (a)(2) of this section and subject to (a)(4) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and

414.1310. We assume that these proposals would provide clarification for groups to identify their eligibility to form subgroups and also ensure that an individual eligible clinician or group will continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. This proposal does not change the application of low-volume threshold and special status as described under § 414.1318(a)(1) for clinicians in subgroups. Therefore, we are not proposing any adjustments to the currently approved burden for subgroup registration.

In section IV.A.8.e.(3)(c) of this rule, we propose at § 414.1318(a)(3) that an individual eligible clinician, as represented by a TIN–NPI combination may register for no more than one subgroup within a group’s TIN. We assume that the proposal would limit the number of subgroups that a clinician could participate under a TIN and would not result in additional burden for clinicians to participate as subgroups. Therefore, we are not proposing any adjustments to the currently approved burden for subgroup registration.

Therefore, we are not proposing any changes to our previously finalized assumptions for subgroup registration burden. The burden relevant to subgroup registration requirement is

currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the ICR for subgroup registration under that control number. Similar to our assumptions in the CY 2022 PFS final rule, we continue to capture the burden associated with subgroup quality reporting in the ICR for MVP quality performance category submission. The burden associated with subgroup submissions for Promoting Interoperability and improvement activities is included in the relevant ICRs in sections V.B.9.g.(3) and V.B.9.i. of this rule.

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we previously finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). As discussed in section IV.A.8.b. of this rule, we are not proposing new requirements to submit data for the quality performance category of MVPs. Therefore, we are not proposing any changes to our currently approved hourly burden per respondent estimates for submitting the MVP quality performance category data.

As described above in this section of the proposed rule, we estimate that 12 percent of the clinicians who participated in MIPS for the CY 2019 performance period/2021 MIPS

payment year would submit data for the quality performance category of MVP in the CY 2023 performance period/2025 MIPS payment year. We also estimate that there would be 20 subgroups reporters in the CY 2023 performance period/2025 MIPS payment year. As shown in Table 118, we estimate that 6,240 clinicians and 10 subgroups would submit data using eCQMs collection type; 6,849 clinicians and 10 subgroups would submit data using MIPS CQM and QCDR collection type; and 3,683 clinicians and 0 subgroups would submit data for the MVP quality performance category using the Medicare Part B claims collection type. For the CY 2023 performance period/2025 MIPS payment year, using our unchanged hourly burden per respondent estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 33,125 hours [5.3 hr × 6,250 (6,240 +10) respondents] at a cost of \$3,627,750 (6,250 respondents × 580.44/respondent) for the eCQM collection type, 38,799 hours [5.97 hr × 6,499 (6,489 +10)] at a cost of \$4,200,239 (6,499 respondents × 646.29/respondent) for the MIPS CQM and QCDR collection type, and 34,768 hours (9.44 hr × 3,683 clinicians) at a cost of \$3,678,102 (3,683 respondents × 998.67/respondent) for the Medicare Part B claims collection type.

BILLING CODE 4120–01–P

*Total Annual Cost Per Clinician (q) = (k) + (l) + (m) + (n) + (o) + (p)	\$580.44	\$646.29	\$998.67
*Total Annual Cost (r) = (c) * (q)	\$3,627,750	\$4,200,239	\$3,678,102

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

Table 119 illustrates the proposed changes in estimated burden for clinicians who would submit the MVP quality performance category utilizing the eCQM, MIPS CQM and QCDR, and claims collection types in the CY 2023 performance period/2025 MIPS

payment year. In aggregate, when combined with the unchanged hourly burden per respondent, the increase in 3,515 respondents that would submit data for the MVP quality performance category would result in an increase of 7,303 hours at a cost of \$799,845 for the

eCQM collection type, an increase of 7,636 hours at a cost of \$826,605 for the CQM and QCDR collection type, and an increase of 8,080 hours at a cost of \$856,859 for the claims collection type.

TABLE 119: Change in Estimated Burden for MVP Quality Performance Category Submission

Burden and Respondent Descriptions	eCQM Collection Type	CQM and QCDR Collection Type	Claims Collection Type
Total Currently Approved Annual Hours (a)	25,822	31,163	26,688
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 118, row (k))	33,125	38,799	34,768
Difference (c) = (b) - (a)	+7,303	+7,636	+8,080
Total Currently Approved Annual Cost (d)	\$2,827,905	\$3,373,634	\$2,821,243
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 118, row (r))	\$3,627,750	\$4,200,239	\$3,678,102
Difference (f) = (e) - (d)	+799,845	+826,605	+856,859

BILLING CODE 4120-01-C**(8) Beneficiary Responses to CAHPS for MIPS Survey**

This rule is not proposing any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not proposing any changes to the CAHPS for MIPS Survey process under that control number.

(9) Group Registration for CAHPS for MIPS Survey

This rule is not proposing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not proposing any changes to the CAHPS for MIPS Survey registration process under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. The requirements and the associated burden are currently approved under OMB control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to the call for MIPS quality measures process under that control number.

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)**(1) Background**

For the CY 2023 performance period/2025 MIPS payment year, clinicians and

groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The proposed requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), and the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60011 through 60012, 84 FR 63134 through 63135, 85 FR 84984 through 84985, and 86 FR 65596 through 65598) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

In section IV.A.10.c.(4)(m)(i) of this rule, we are proposing not to continue the reweighting policy at § 414.1380(c)(2)(i)(A)(4)(ii) to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score for NPs, PAs, CRNAs, and CNSs for the CY 2023 performance period/2025 MIPS payment year. If we adopt this proposal as final policy, some of these types of clinicians who are automatically assigned a weight of zero percent for the Promoting Interoperability performance category under our current policy may choose to submit an application for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship or as a result of a decertification of an EHR. Based on historically low participation trends for NPs, PAs, CRNAs, and CNSs that

submitted data individually for the Promoting Interoperability performance category for prior performance periods, we are unable to estimate how many of these clinicians would be applying for reweighting the Promoting Interoperability performance category to zero percent. Therefore, we are not proposing any adjustments to the number of respondents submitting reweighting applications.

In section IV.A.10.c.(4)(m)(ii) of this rule, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals only for the CY 2023 performance period/2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(i) to reflect the proposal. We are also proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2025 MIPS payment year and to revise § 414.1380(c)(2)(i)(A)(4)(iii) to reflect the proposal. We are not proposing any adjustments to the number of respondents submitting reweighting applications due to these proposals because it does not change the existing reweighting policy for these clinician types participating in MIPS in the CY 2023 performance period/2025 MIPS payment year.

Table 120 summarizes the burden for clinicians to apply for reweighting of the Promoting Interoperability performance category to zero percent due to a significant hardship or as a

result of a decertification of an EHR. Based on the number of reweighting applications received by March 31, 2022 for the CY 2021 performance period/2023 MIPS payment year, we estimate that we would receive a total of 31,135 reweighting applications for the CY 2023 performance period/2025 MIPS payment year. Out of the 31,135, we estimate that 13,480 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. We estimate that the remaining 17,655 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. As discussed in section V.B.9.a.(4) of this rule, we assume ACO APM Entities will submit data through the APP and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual, group, or at the APM Entity level. Based on the actual number of APM Entities that submitted reweighting applications for the CY 2021 performance period/2023 MIPS payment year, we estimate that 20 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2023 performance period/2024 MIPS payment year. This is a decrease of 10 from the currently approved estimate of 30 APM entities that would submit a reweighting application. Combined with

our aforementioned estimate of 31,135 eligible clinicians and groups, the total estimated number of respondents expected to submit applications for reweighting of the Promoting Interoperability and other performance categories for the CY 2023 performance period/2025 MIPS payment year is 31,155. This proposed adjustment results in a decrease of 11,672 respondents compared to our currently approved estimate of 42,827 respondents (86 FR 65597). This decrease is based on the actual number of reweighting applications submitted for the CY 2021 performance period/2023 MIPS payment year. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. We want to note that our respondent estimate also includes the reweighting applications submitted during the extended period ending March 31, 2022, due to the PHE for COVID-19.

Consistent with our assumptions in the CY 2022 PFS final rule (86 FR 65596 through 65598), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 120, we estimate an annual burden of 7,789 hours (31,155 applications × 0.25 hr/application) and \$765,503 (7,789 hours × \$98.28/hr).

TABLE 120: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	31,135
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	20
Total Applications Submitted (c)	31,155
Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	7,789
Labor Rate for a computer systems analyst (f)	\$98.28/hr
Total Annual Cost (g) = (e) * (f)	\$765,503

The proposed adjustment in the estimated number of respondents, from

42,827 to 31,155 respondents, results in a decrease of 11,672 respondents. In

aggregate, using the unchanged currently approved hourly burden per

response estimate, as shown in Table 121, the decrease in 11,672 respondents would result in a decrease of 2,918

hours ($-11,672 \text{ respondents} \times 0.25 \text{ hr/}$ respondent) at a cost of \$286,781 ($-2,918 \text{ hrs} \times \$98.28/\text{hr}$) for the CY

2023 performance period/2025 MIPS payment year.

TABLE 121: Adjusted Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours in CY 2022 PFS final rule (a)	10,707
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 120, row (c))	7,789
Difference (c) = (b) - (a)	-2,918
Total Currently Approved Annual Cost in CY 2022 PFS final rule (d)	\$1,052,284
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 120, row (e))	\$765,503
Difference (f) = (e) - (d)	-\$286,781

(3) Submitting Promoting Interoperability Data

The proposed requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77509 through 77511, 82 FR 53919 through 53920), and the CY 2019, CY 2020, CY 2021 and CY 2022 PFS final rules (83 FR 60013 through 60014, 84 FR 63135 through 63137, 85 FR 84985 through 84987, 86 FR 65598 through 65600) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In section IV.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule, we are proposing to require MIPS eligible clinicians to report the Query of PDMP measure (which requires reporting a "yes/no" response) for the Promoting Interoperability performance category. If this proposal is finalized, we are proposing two exclusions beginning with the performance period in CY 2023: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period, and, (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period. Due to lack of sufficient data regarding the number of clinicians who voluntarily submitted data for optional measures in the Promoting Interoperability performance category, we have consistently been unable to estimate the associated burden for the reporting of such measures. Therefore, we are not proposing to adjust our currently approved time

required for clinicians to submit data for the Promoting Interoperability performance category because we are unable to account for any change in burden due to the proposed change to require the currently optional Query of PDMP measure.

In section IV.A.10.c.(4)(e) of this rule, we are proposing to add an additional measure through which a MIPS eligible clinician could earn credit for the Health Information Exchange Objective by connecting to an entity that connects to a QHIN or connecting directly to a QHIN. Specifically, we are proposing to add the following new measure to the Health Information Exchange Objective beginning with the performance period in CY 2023: Enabling Exchange Under TEFCA measure. We propose MIPS eligible clinicians would have three reporting options for the Health Information Exchange Objective: (1) report on both the Support Electronic Referral Loops by Sending Health Information measure (or the exclusion, if applicable) and the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure (or the exclusion, if applicable); (2) report on the HIE Bi-Directional Exchange measure; or (3) report on the proposed Enabling Exchange Under TEFCA measure. We believe that given the alignment between the Enabling Exchange under TEFCA measure and the existing HIE Bi-Directional exchange measure, adding this measure offers clinicians more opportunities to earn credit for the Health Information Exchange Objective. Because the proposed addition of Enabling Exchange Under TEFCA measure is optional for the Health Information Exchange Objective, we are unable to estimate the number of clinicians that would report this

measure. Therefore, we are not proposing to adjust our currently approved time required for clinicians to submit data for the Promoting Interoperability performance category because we are unable to account for any change in burden due to the proposed change.

In section IV.A.10.c.(4)(f)(ii) of this rule, we propose revisions to the three active engagement options. Specifically, we propose to consolidate current options 1 and 2 into one option beginning with the performance period in CY 2023. Additionally, for the Public Health and Clinical Data Exchange Objective, in addition to submitting responses for the required measures and any optional measures a MIPS eligible clinician chooses to report, we propose to require MIPS eligible clinicians to submit their level of active engagement, either Pre-production and Validation or Validated Data Production (as proposed in section IV.A.10.c.(4)(f)(ii)(C) of this proposed rule), for each measure they report beginning with the performance period in CY 2023. If the proposed requirement for MIPS eligible clinicians to submit their level of active engagement with each measure is finalized, we estimate that it would add an additional one minute to the currently approved estimated time of 2.69 hours, resulting in a total estimated time of 2.71 hours, for clinicians to submit data for the Promoting Interoperability performance category.

In section IV.A.10.c.(4)(f)(ii)(D) of this rule, we also propose that beginning with the performance period in CY 2023, that MIPS eligible clinicians may spend only one performance period at the Pre-production and Validation level of active engagement per measure, and that they must progress to the Validated Data Production level in the next performance period for which they

report a particular measure. We refer readers to sections IV.A.10.c.4.(d) and IV.A.10.c.4.(g) of this rule for additional information on proposed measure descriptions and changes to scoring methodologies in the Promoting Interoperability performance category.

As shown in Table 122, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that a total of 54,770 respondents consisting of 43,117 individual MIPS eligible clinicians, 11,633 groups and virtual groups and 20 subgroups would submit Promoting Interoperability data in the CY 2023 performance period/2025 MIPS payment year. We assume that MIPS eligible clinicians previously scored under the APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a

similar way through the APP. As a result, we do not anticipate any change in burden for APM Participants submitting data for the Promoting Interoperability performance category. In section IV.A.10.c.5)(b) of this rule, we are proposing to introduce a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year. Because the proposed reporting of the Promoting Interoperability performance category is voluntary, we are unable to estimate the number of APM Entities that would submit data on behalf of their clinicians for this category. Therefore, we assume that each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance

category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants.

TABLE 122: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data

Burden and Respondent Descriptions	# of Respondents
Number of individual clinicians to submit Promoting Interoperability in CY 2023 (a)	43,117
Number of groups to submit Promoting Interoperability in CY 2023 (b)	11,633
# of Subgroups to submit Promoting Interoperability in MVPs during the CY 2023 MIPS performance period (c)	20
Total Respondents in 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	54,770
Currently Approved Respondents in 2023 MIPS performance period (e)	51,667
Difference (f) = (d) – (e)	+3,103

As shown in Table 123, accounting for the change in hourly burden per respondent due to the proposed requirement for clinicians to submit their level of active engagement for the Public Health and Clinical Data

Exchange Objective, the proposed increase in the number of respondents from 51,667 to 54,770 would result in a total burden of 148,427 hours (54,770 respondents × 2.71 incremental hours for a computer analyst's time above and

beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$14,587,406 (148,427 hrs × \$98.28/hr)).

TABLE 123: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2023

Burden and Respondent Description	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	43,117
Number of groups to submit Promoting Interoperability (b)	11,633
Number of subgroups to submit Promoting Interoperability (c)	20
Total (d) = (a) + (b) + (c)	54,770
Total Annual Hours Per Respondent (e)	2.71
Total Annual Hours (f) = (d) * (e)	148,427
Labor rate for a computer systems analyst to submit Promoting Interoperability data (g)	\$98.28/hr
Total Annual Cost (h) = (f) * (g)	\$14,587,406

As shown in Table 124, using our unchanged hourly burden per

respondent estimate, the proposed increase in the number of respondents

results in an increase of 9,443 hours (+3,103 respondents × 2.71 hrs + 51,667

× 0.02 hrs) at a cost of \$928,058 (+9,443 hours × \$98.28/hour).

TABLE 124: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission

Burden and Respondent Description	Burden Estimate
Total Currently Approved Annual Hours (a)	138,984
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (see Table 123, row (f))	148,427
Difference (c) = (b) - (a)	+9,443
Total Currently Approved Annual Cost (d)	\$13,659,348
Total Annual Cost for Respondents in CY 2022 PFS proposed rule (e) (see Table 123, row (h))	\$14,587,406
Difference (f) = (e) - (d)	+\$928,058

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the process for nomination of Promoting Interoperability measures under that control number.

i. ICR Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.10.c.(3)(b)(ii) of this rule, we are proposing changes to the improvement activities Inventory for the CY 2023 performance period/2025 MIPS payment year and future years as

follows: adding 4 new improvement activities; modifying 5 existing improvement activities; and removing 6 previously adopted improvement activities. We do not believe the changes to the improvement activities inventory will impact the estimated time required for interested parties to submit information, because MIPS eligible clinicians are still required to submit the same number of activities and the estimated time per response time for each activity is uniform. Therefore, we are not proposing to adjust our currently estimated time of 5 minutes or 0.083 hours (per response) for improvement activities submission.

We are proposing to adjust our currently approved burden estimates based on more recent data. As represented in Table 125, based on data from the CY 2019 performance period/2021 MIPS payment year, we estimate that a total of 96,980 respondents consisting of 78,239 individual clinicians, 17,721 groups and 20 subgroups will submit improvement activities during the CY 2023

performance period/2025 MIPS payment year. This proposed adjustment represents an increase of 15,398 respondents (14,394 individuals, 4 groups and 0 subgroups) from the currently approved estimate of 81,582 respondents (63,845 individuals and 17,717 groups, and 20 subgroups) in the CY 2022 PFS final rule (86 FR 65603).

As discussed in sections V.B.9.e.(2) and V.B.9.g.(3) of this proposed rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we are proposing to update our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or participating in an ACO in the CY 2019 performance period/2021 MIPS payment year but will be QPs in the CY 2023 performance period/2025 MIPS payment year, and will therefore not be required to submit improvement activities data.

TABLE 125: Estimated Burden for Improvement Activities Data Submission

Burden and Respondent Descriptions	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2023 MIPS performance period (a)	78,239
# of Groups to submit improvement activities on behalf of clinicians during the CY 2023 MIPS performance period (b)	17,721
# of Subgroups to submit improvement activities in MVPs during the CY 2023 MIPS performance period (c)	20
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data during the CY 2023 MIPS performance period (CY 2022 PFS Final Rule) (d) = (a) + (b) + (c)	96,980
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (CY 2022 PFS Final Rule) (e)	81,582
Difference (f) = (d) - (e)	+15,398

Consistent with the CY 2022 PFS final rule, we continue to estimate that the time required per response per individual or group is 5 minutes or 0.083 hours for a computer system analyst at a labor rate of \$98.28/hr to

submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (86 FR 65603). As shown in Table 126, we estimate an

annual burden of 8,049 hours (96,980 responses \times 0.083 hr) at a cost of \$791,056 (8,049 hrs \times \$98.28/hr) for the CY 2023 performance period/2025 MIPS payment year.

TABLE 126: Estimated Burden for Improvement Activities Data Submission

Burden and Respondent Descriptions	Burden Estimate
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 performance period (a)	96,980
Total Annual Hours Per Respondent (b)	0.083
Total Annual Hours (c) = (a) * (b)	8,049
Labor rate for a computer systems analyst to submit improvement activities (d)	\$98.28/hr
Total Annual Cost (e) = (c) * (d)	\$791,056

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 127, using our unchanged currently approved per respondent burden estimate, the proposed increase in the number of

respondents results in an increase of 1,278 hours (+15,398 respondents \times 0.083 hr/respondent) at a cost of \$125,602 (1,278 hrs \times \$98.28/hr) for the

CY 2023 performance period/2025 MIPS payment year.

TABLE 127: Change in Estimated Burden for Improvement Activities Submission

Burden and Respondent Descriptions	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	6,771
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 126, row (c))	8,049
Difference (c) = (b) - (a)	+1,278
Total Currently Approved Annual Cost (d)	\$665,454
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 126, row (e))	\$791,056
Difference (f) = (e) - (d)	+\$125,602

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

This rule is not proposing any new or revised collection of information requirements or burden related to the nomination of improvement activities. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the nomination of improvement activities under that control number.

k. Nomination of MVPs

The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We refer readers to the CY 2021 PFS and CY 2022 PFS final rules (85 FR 84990 through 84991 and 86 FR 65605) for our previously finalized requirements and burden for collection of information relevant to nomination of MVPs for inclusion in the Quality Payment Program.

In section IV.A.8.a. of this rule, we propose updates to the previously finalized policies for the MVP development and maintenance process in the CY 2021 and 2022 PFS final rules (85 FR 84849 through 84856 and 86 FR 65410). Specifically, we propose to modify the MVP development process such that we would evaluate a submitted candidate MVP through the MVP development process, and if we determine it is “ready” for feedback, we would post a draft version of the

submitted candidate MVP on the Quality Payment Program website (<https://qpp.cms.gov/>) and solicit feedback for a 30-day period. Interested parties and general public would have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We would review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determined changes should be made to the candidate MVP, we would not notify the interested party who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process. We also propose to modify the MVP maintenance process such that interested parties and the general public would be able to submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We would then review the submitted recommendations and determine whether any are potentially feasible and appropriate. If we identify any submitted recommendations that are potentially feasible and appropriate, we would host a public facing webinar, open to interested parties and the general public through which they may offer their feedback on the potential revisions we have identified. We would publish details related to the timing and registration process for the webinar through our Quality Payment Program

Listserv. If we decide to make any revisions to an established MVP based on the recommendations submitted, we would adopt such revisions through notice and comment rulemaking.

We anticipate that these proposed changes do not require additional steps being added to the information collection relevant to the MVP nomination process described in the CY 2021 PFS final rule (85 FR 84990 through 84991). Therefore, we are not making any changes to the currently approved estimated time of 12 hours (86 FR 65605) for interested parties to submit their MVP candidates utilizing a standard template. Additionally, we refer readers to section VI.E.16.e.(2)(a) of this proposed rule where we discuss our impact analysis for these proposals.

In this rule, we are proposing to adjust the number of respondents submitting MVP nominations from 25 to 20 based on more recent data. This proposed adjustment would result in a decrease of 5 from our currently approved estimate of 25 in the CY 2022 PFS final rule (86 FR 65605). As shown in Table 128, for the CY 2023 performance period/2025 MIPS payment year, we estimate that we would receive 20 MVP nominations and the estimated time required per respondent would be 12 hours. This would result in an estimated annual burden of 240 hours (20 nominations × 12 hr/nomination) at a cost of \$41,550 (20 × [(7.2 hr × \$115.22/hr) + (4.8 hr × \$259.97/hr)]).

TABLE 128: Estimated Burden for Nomination of MVPs

Burden and Respondent Descriptions	Burden Estimate
# of Nominations of New MVPs (a)	20
# of Hours Per Medical and Health Services Manager (b)	7.2
# of Hours Per Physician (c)	4.8
Annual Hours Per Respondent (d) = (b) + (c)	12
Total Annual Hours (e) = (a) * (d)	240
Cost to Nominate an MVP (@ medical and health services manager's labor rate of \$115.22/hr) (f)	\$829.58
Cost to Nominate an MVP (@ physician's labor rate of \$259.98/hr) (g)	\$1,247.90
Total Annual Cost Per Respondent (h) = (f) + (g)	\$2,077.48
Total Annual Cost (i) = (a) * (h)	\$41,550

As shown in Table 129, using our unchanged currently approved burden per respondent estimate, the proposed decrease in the number of respondents

submitting MVP nominations results in a total annual adjustment of – 60 hours (– 5 respondents × 12 hr/nomination) at a cost of – \$10,387 (– 5 × [(7.2 hr ×

\$115.22/hr) + (4.8 hr × \$259.97/hr)]) for the CY 2023 performance period/2025 MIPS payment year.

TABLE 129: Change in Estimated Burden for Nomination of MVPs

Burden and Respondent Descriptions	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	300
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 128, row (d))	240
Difference (c) = (b) - (a)	-60
Total Currently Approved Annual Cost (d)	\$51,937
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 128, row (i))	\$41,550
Difference (f) = (e) - (d)	-\$10,387

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not proposing any changes to this information collection under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule is not proposing any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we propose to adjust our currently approved burden estimates based on updated projections for the CY 2023 performance period/2025 MIPS payment year. The proposed adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 130, based on our predictive QP analysis for the 2023 QP performance period/2025 MIPS payment year, which accounts for historical response rates in the CY 2021

performance period/2023 MIPS payment year, we are proposing to revise our estimate that a total of 287 respondents (156 APM Entities and 131 individual eligible clinicians representing approximately 7,182 Partial QPs) would make the election to participate as a Partial QP in MIPS. This is an increase of 37 from the 250 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hrs) to make this election. In aggregate, we are proposing to revise our estimated annual burden to 72 hours (287 respondents × 0.25 hrs/election) and \$7,076 (72 hrs × \$98.28/hr).

TABLE 130: Estimated Burden for Partial QP Election

Burden and Respondent Description	Burden Estimate
# of respondents making Partial QP election (156 APM Entities, 131 eligible clinicians) (a)	287
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a) * (b)	72
Labor rate for computer systems analyst (d)	\$98.28/hr
Total Annual Cost (e) = (c) * (d)	\$7,076

As shown in Table 131, using our unchanged currently approved per respondent burden estimate (86 FR 65605), we propose that the increase in

the number of Partial QP elections results in an adjustment of 9 hours (+37 respondents \times 0.25 hr/election) at a cost of +\$884 (+9 hr \times \$98.28/hr) for the CY

2023 performance period/2025 MIPS payment year.

TABLE 131: Change in Estimated Burden for Partial QP Election

Burden and Respondent Descriptions	CY 2023 Performance Period
Total Currently Approved Annual Hours (a)	63
Total Annual Hours for Respondents in CY 2023 PFS proposed rule (b) (See Table 130, row (c))	72
Difference (c) = (b) - (a)	+9
Total Currently Approved Annual Cost (d)	\$6,192
Total Annual Cost for Respondents in CY 2023 PFS proposed rule (e) (See Table 130, row (e))	\$7,076
Difference (f) = (e) - (d)	+\$884

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician-Initiated Process (§ 414.1445)

The following burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer-Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements related to the Payer-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the Payer-Initiated process under that control number.

(2) Eligible Clinician-Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements or burden related to the Eligible Clinician-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–

10621). Consequently, we are not making any changes to the Eligible Clinician-Initiated Process under that control number.

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule is not proposing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden for the All-Payer Combination option are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Compare Tools (§ 414.1395)

This rule is not proposing any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Compare Tools. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–

10621). Consequently, we are not proposing any changes to the election of voluntary participants to opt-out of performance data display on Compare Tools under that control number.

p. Summary of Annual Quality Payment Program Burden Estimates

Table 132 summarizes this proposed rule's total burden estimates for the Quality Payment Program for the CY 2023 performance period/2025 MIPS payment year.

BILLING CODE 4120–04–P

In the CY 2022 PFS final rule, the total estimated burden for the CY 2023 performance period/2025 MIPS payment year was 1,383,049 hours at a cost of \$139,501,770 (86 FR 65613). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2022 PFS final rule, the total estimated annual burden of continuing the policies and information collections set forth in the CY 2022 PFS final rule into the CY 2023 performance period/2025 MIPS payment year is 1,386,649 hours at a cost of \$147,977,762. These represent an increase of 3,600 hours and an increase of \$8,475,992. To understand the burden implications of the policies in

this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2022 PFS final rule into the CY 2023 performance period/2025 MIPS payment year. This burden estimate of 1,476,903 hours at a cost of \$157,603,546 reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflect the

exclusion of QPs from all MIPS performance categories, an increase of 90,254 hours and \$9,625,784. This burden estimate is higher than the burden approved for information collection related to the CY 2022 PFS final rule due to updated data and assumptions. Our total burden estimate for the CY 2023 performance period/2025 MIPS payment year is 1,465,864 hours and \$156,389,613 which represents an increase of 79,215 hours

and \$8,411,851 from the CY 2022 PFS final rule. The difference of – 11,039 hours (79,215 hours–90,254 hours) and – \$1,213,933 (\$8,411,851–\$9,625,784) between this estimate and the total burden shown in Table 132 is the decrease in burden associated with impacts of the policies for the CY 2023 performance period/2025 MIPS payment year.

TABLE 132: Summary of Burden Estimates and Requirements from the CY 2023 PFS Proposed Rule

CY 2023 Performance Period/2025 MIPS Payment Year		
Burden Estimate Description	Time (Hours)	Cost
Currently approved burden in CY 2022 PFS final rule (a)	1,383,049	\$139,501,770
CY 2022 PFS final rule w/ updated wage rates and ICRs (b)	1,386,649	\$147,977,762
CY 2022 PFS final rule w/ updated data and assumptions (c)	1,476,903	\$157,603,546
Change in burden due to updated data and assumptions (d) = (c) – (b)	+90,254	+\$9,625,784
CY 2023 PFS proposed rule Total Burden (e)	1,465,864	\$156,389,613
Total change in burden (as shown in Table 133) (f) = (e) – (b)	+79,215	+\$8,411,851
Change in burden associated with policies (g) = (f) – (d)	-11,039	-\$1,213,933

**TABLE 133: Summary of Quality Payment Program Burden Estimates and Requirements
CMS-10621 (OMB 0938-1314)**

Requirement	Currently Approved Responses	Responses	Change in Responses	Currently Approved Total Time (Hours)*	Total Time (Hours)	Change in Total Time (Hours)

Table 134 provides the reasons for proposed changes in the estimated burden for information collections in the Quality Payment Program segment

of this rule. We have divided the reasons for our proposed change in burden into those related to proposed policies and those related to proposed

adjustments in burden continued from the CY 2022 PFS final rule policies that reflect updated data and revised methods.

TABLE 134: Reasons for Proposed Change in Burden Compared to the Currently Approved CY 2023 Information Collection Burden

ICR Title	Proposed Changes in burden due to CY 2023 proposed rule policies	Proposed Adjustments in burden continued from CY 2022 PFS final rule policies due to revised methods or updated data
QCDR self-nomination and other Requirements (see section V.B.9.c.(2)(a), Table 97)	None	Increase in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
Qualified Registry self-nomination and other Requirements (see section V.B.9.c.(3), Table 99)	None	Increase in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
§ 414.1400 Third Party Intermediary Plan Audits (see section V.B.9.c.(4), Table 102)	None	New ICR. Increase in number of respondents and hours due to restructuring the burden for third party intermediaries to submit a targeted audit, CAP, transition plan, or a participation plan.
Open Authorization (OAuth) Credentialing and Token Request Process (see section V.B.9.d., Table 104)	None	Increase in the number of hours due to changes in administrative workflow for the application process.
Quality Payment Program Identity Management Application Process (see section V.B.9.e.(3), Table 109)	None	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§§ 414.1325 and 414.1335 (Quality Performance Category) Medicare Part B Claims Collection Type (see section V.B.9.e.(4), Table 111)	Decrease in number of respondents due to the proposed increase in the number of respondents submitting for the MVP quality performance category via the claims collection type.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§§ 414.1325 and 414.1335 (Quality Performance Category) QCDR/ MIPS CQM Collection Type (see section V.B.9.e.(5), Table 113)	Decrease in number of respondents due to the proposed increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§§ 414.1325 and 414.1335 (Quality Performance Category) eCQM Collection Type (see section V.B.9.e.(6), Table 115)	Decrease in number of respondents due to the proposed increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
MVP Registration (see section V.B.9.e.(7)(a)(i), Table 117)	Increase in number of respondents due to proposed addition of 5 new MVPs.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
MVP Quality Submission (see section V.B.9.e.(7)(a)(iii), Table 119)	Increase in number of respondents due to proposed addition of 5 new MVPs.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§ 414.1375 (Promoting	None	Decrease in number of respondents due to

ICR Title	Proposed Changes in burden due to CY 2023 proposed rule policies	Proposed Adjustments in burden continued from CY 2022 PFS final rule policies due to revised methods or updated data
Interoperability Performance Category) Reweighting Applications for Promoting Interoperability and Other Performance Categories (see section V.B.9.g.(2), Table 121)		updated projections for the CY 2023 performance period/2025 MIPS payment year.
§§ 414.1375 and 414.1380 (Promoting Interoperability Performance Category) Data Submission (see section V.B.9.g.(3), Table 124)	Increase in the number of hours due to the proposed requirement for clinicians to submit their level of active engagement for the Public Health and Clinical Data Exchange Objective.	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§ 414.1360 (Improvement Activities Performance Category) Data Submission (see section V.B.9.i., Table 127)	None	Increase in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year
Nomination of MVPs (see section V.B.9.k., Table 129)	None	Decrease in number of respondents due to updated projections for the CY 2023 performance period/2025 MIPS payment year.
§ 414.1430 Partial Qualifying APM Participant (QP) Election (see section V.B.9.m. Table 131)	None	Increase in number of respondents due to updated projections for the CY 2022 performance period/2024 MIPS payment year.

C. Summary of Annual Burden Estimates for Changes

TABLE 135: Annual Requirements and Burden Estimates

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program)	0938-1314	180,365	+60,475	Varies	+79,215	Varies	+8,411,851
TOTAL			varies		varies		

D. Submission of Comments

We have submitted a copy of this rule to OMB for review of the rule's

information collection requirements and burden. The requirements are not

effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the

collections previously discussed, please visit CMS's website at [PaperworkReductionActof1995/PRAListing.html](https://www.cms.gov/paperworkreductionactof1995/pralisting.html), or call the Reports Clearance Office at (410) 786-1326.

If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS-1770-P) and where applicable the ICR's CFR citation, CMS ID number, and OMB control number.

VI. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing to make payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2021 (CAA, 2021); sections 301, 302, 303, 304, and 305 under the Consolidated Appropriations Act, 2022 (CAA, 2022); and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018, section 90004 of the Infrastructure Investment and Jobs Act, and section 4 of the Protecting Medicare and American Farmers from Sequester Cuts Act. Our proposed policies in this rule specifically address: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; improvements to the Medicare Shared Savings Program (Shared Savings Program) requirements that promote health equity and strengthen financial incentives for participation; updates to the Quality Payment Program; updates to the Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare provider enrollment policies; updates to electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan (section 2003 of the SUPPORT Act); and updates to the Medicare Ground Ambulance Data Collection System. The proposed

policies reflect CMS's stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Extension of Certain Medicare Telehealth Flexibilities, Under Section 1834(m) of the Act, as Amended by the Consolidated Appropriations Act, 2022

Section II.D.1.e. of this proposed rule implements sections 301, 302, 304, and 305, of the Consolidated Appropriations Act, 2022, which extended the geographic restrictions (section 301), extended the temporary expansion of practitioner types who are eligible to furnish Medicare telehealth (section 302), delayed the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS (section 304), and extended audio-only flexibilities for certain telehealth services that would otherwise not be available via telehealth (section 305) after the expiration of the PHE to remain on the Medicare Telehealth Services List for a 151-day period beginning on the first day after the end of the public health emergency (PHE) for COVID-19. This proposal is necessary to fulfill the statutory requirement to implement this extension until the 152nd day after the end of the PHE for COVID-19.

b. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs Payable Under Medicare Part B To Provide Refunds With Respect to Discarded Amounts

Section III.A. of this proposed rule implements section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) which requires drug manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. These proposals are necessary to fulfill the statutory requirement to implement this policy effective January 1, 2023 and reduce unnecessary Medicare spending for discarded drug.

c. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

Section III.C.3. of this proposed rule implements sections 303 and 304 of the Consolidated Appropriations Act, 2022. Section 303 of the CAA, 2022 amended section 1834(m)(8) of the Act to temporarily continue payment for telehealth services furnished by FQHCs and RHCs for the 151-day period beginning on the first day after the end

of the COVID-19 PHE using the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which, in accordance with section 1834(m)(8)(B) of the Act, is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS.

Section 304 of the CAA, 2022 delays the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology for a 151-day period beginning on the first day after the end of the public health emergency (PHE) for COVID-19. These proposals are necessary to fulfill these statutory requirements.

We also note in section III.C.3. of this proposed rule we discuss implementation of sections 301 and 305 of the CAA, 2022 that would apply to telehealth services (those that are not mental health visits) furnished by RHCs and FQHCs. That is, section 301 of the CAA, 2022 extended the geographic restrictions and section 305 of the CAA, 2022 extended audio-only flexibilities for certain telehealth services that would otherwise not be available via telehealth.

d. Clinical Laboratory Fee Schedule—Revisions Consistent With Recent Statutory Changes

Section III.B.5. of this rule proposes to make conforming regulations text changes for CLFS data reporting requirements due to the enactment of Protecting Medicare and American Farmers from Sequester Cuts Act (S. 610).

By statute, certain clinical laboratories are periodically required to submit private payor rates for certain kinds of lab tests. For Clinical Diagnostic Laboratory Tests (CDLTs) that are not Advanced Diagnostic Laboratory Tests (ADLTs), the Protecting Medicare and American Farmers from Sequester Cuts Act (S. 610) delayed the next data reporting period by one year. Instead of taking place from January 1, 2022 through March 31, 2022, data reporting will now take place from January 1, 2023 through March 31, 2023, based on the original data collection period of January 1, 2019 through June 30, 2019. Data reporting for these tests then resumes on a 3-year cycle (2026, 2029, etc.). Additionally, the statutory phase-in reduction provisions indicate for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

e. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan (Section 2003 of the SUPPORT Act)

In this rule, we are proposing changes to the electronic prescribing for controlled substances (EPCS) requirement specified in section 2003 of the SUPPORT Act. Previously finalized policies did not include actions for non-compliance after the 2023 year. Additionally, previously finalized policies for statutory exclusions may not have properly identified prescribers that are small prescribers during the compliance period and may have misidentified prescribers in locations with a recognized emergency. The proposals define action for non-compliance for electronic prescribing of controlled substances for the 2024 year and refine policies to better identify prescribers who qualify for the small practice and recognized emergency exceptions to the EPCS requirement.

f. Medicare Ground Ambulance Data Collection System

Section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. In this proposed rule, we are proposing a series of changes to the Medicare Ground Ambulance Data Collection System including the proposal to update § 414.626(d)(1) and (e)(2) to give us the necessary flexibility to specify how ground ambulance organizations should submit the hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

g. Quality Payment Program

This proposed rule is also necessary to make changes to the Quality Payment Program to move the Quality Payment Program forward to focus more on measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and encourage participation in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality

Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for MIPS is not required to be coordinated across performance categories. These policies are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories, and make changes to scoring that will provide a better picture of clinicians' performance.

2. Discretionary Provisions

a. RHCs and FQHCs

In section III.C.2. of this proposed rule, we are proposing to include chronic pain management (CPM) services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Since HCPCS code GYYY1 would be valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, we propose no change to the average used to calculate the G0511 payment rate.

In addition, in section III.C.2. of this proposed rule we discuss the new coding and payment for general behavioral health integration (BHI) services (HCPCS code GBHI1). We explain that since clinical psychologists (CPs) and clinical social workers (CSWs) are considered practitioners that can provide services in RHCs/FQHCs, we acknowledge when CPs and CSWs provide the services described in HCPCS code GBHI1 in an RHC or FQHC, they can bill HCPCS code G0511.

These proposals are necessary in that we evaluate coding proposals in this rule and their applicability to RHCs and FQHCs.

Section III.C.4. of this proposed rule proposes to provide discussion and clarification regarding the use of short-period cost reports vs 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs. This proposal is necessary to accurately reflect the costs of providing RHC services and will establish a more accurate base from which the payment limits will be upgraded going forward.

b. Clinical Laboratory Fee Schedule (CLFS) Specimen Collection and Travel Allowance

Section III.B.6. of this rule proposes to clarify and codify the CLFS specimen

collection and travel allowance payment policies.

In general, section 1833(h)(3) of the Act requires the Secretary to pay a nominal fee for specimen collection for laboratory testing and a fee to cover transportation and personnel expenses for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital). CMS' long-standing instructions regarding the statutory requirements for CLFS specimen collection and travel allowance are described in Medicare Claims Processing manual guidance. OIG and other interested parties have expressed concerns regarding inconsistent MAC implementation of the payment policies as well as unclear or conflicting guidance to providers related to the CLFS travel allowance. In the CY 2022 PFS final rule we solicited comments regarding these two payment policies; commenters supported clarification to the existing policy and also made suggestions regarding possible refinements.

Describing and codifying the payment policies related to CLFS specimen collection and travel allowance are necessary to clarify existing policy, address concerns expressed by interested parties, and reduce administrative burden.

c. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

In section III.F. of this proposed rule, we explain that because of the inconsistencies in the voluntarily reported ASP data for orally-administered methadone, which reflects data from a small subset of methadone manufacturers, we do not believe this voluntarily reported ASP data for orally administered methadone currently provides a reliable source for pricing the methadone codes. We previously issued an interim final rule with comment period to establish a limited exception to the methodology for determining the payment amount for the drug component of an episode of care under the OTP benefit in order to freeze the payment amount for methadone furnished during an episode of care in CY 2022 at the payment amount that was determined for CY 2021. For CY 2023 and subsequent years, we are proposing to revise our methodology for pricing methadone under the OTP benefit, specifically, the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone, so that it would not rely on voluntarily-submitted ASP data. We believe this proposal

would stabilize the payment amount for methadone dispensed by OTPs during an episode of care and therefore maintain access to treatment with methadone in the OTP setting for Medicare beneficiaries. Additionally, in section III.F. of this proposed rule, we are proposing to modify the payment rate for the non-drug component of the bundled payment for an episode of care to base the rate for individual therapy on a crosswalk code describing a longer duration of psychotherapy compared to the current crosswalk code. We believe this proposal is needed in order to more accurately reflect the resource costs involved with furnishing therapy in the OTP setting.

d. Medicare Part B Payment for Preventive Vaccine Administration Services

Sections III.H.2. and 3. of this proposed rule discuss proposals that implement policies impacting the payment amount for administration of preventive vaccines paid under the Part B vaccine benefit. Section III.H.4. of this proposed rule proposes to clarify the timing of payment policies for COVID-19 vaccines and COVID-19 monoclonal antibody products. These proposals are necessary to provide stable payment for preventive vaccine administration to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

e. Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

We propose to modify nonemergency, repetitive, scheduled ambulance policy at § 410.40(e)(2)(ii) by clarifying that (1) the physician certification statement and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance; and (2) that coverage includes observation or other services rendered by qualified ambulance personnel. Existing regulations at § 410.40(e)(2) are interpreted too narrowly by some interested parties, excluding beneficiaries in need of monitoring. This proposed language clarifies the intent of existing regulatory language by explicitly stating that beneficiaries who may not be in need of tangible services, but otherwise are in need of monitoring, qualify for this limited ambulance benefit. This is not a statutorily-mandated provision but addresses a longstanding ambiguity potentially affecting vulnerable populations.

f. Expansion of Coverage for Colorectal Cancer Screening and Reducing Barriers

In CY 2019, the last year for which incidence data are available, colorectal cancer (CRC) accounted for the 4th highest rate of new cancer cases and 4th highest rate of cancer deaths in the United States.⁵³⁶ The Center for Disease Control and Prevention (CDC) advises, "Colorectal cancer almost always develops from precancerous polyps (abnormal growths) in the colon or rectum. Screening tests can find precancerous polyps, so that they can be removed before they turn into cancer. Screening tests can also find colorectal cancer early, when treatment works best. Regular screening, beginning at age 45, is the key to preventing colorectal cancer and finding it early."⁵³⁷ This proposed rule would expand coverage for colorectal cancer screening tests by reducing the minimum age payment limitation for certain tests from 50 to 45 years of age. In addition, we propose to expand the regulatory definition of CRC screening tests to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result. Our proposals would update Medicare coverage and payment policies to align with our new understanding of CRC screening, the latest recommendations from the U.S. Preventive Services Task Force and recommendations from professional societies and other appropriate organizations. We propose to expand coverage of colorectal cancer screening tests by exercising our authority under sections 1834(n) and 1861(pp)(1)(D) of the Act. We believe these proposals would expand access to quality care and improve health outcomes through prevention, early detection, more effective treatment and reduced mortality. Moreover, it would directly advance health equity by promoting access and removing barriers for much needed cancer prevention and early detection within rural communities and communities of color that are especially impacted by the incidence of CRC.

g. Removal of Selected National Coverage Determinations

CMS periodically identifies and proposes to remove National Coverage Determinations (NCDs) that no longer contain clinically pertinent and current information, in other words those items and services that no longer reflect current medical practice, or that involve

items and services that are used infrequently by beneficiaries. Since the CY 2021 PFS final rule (85 FR 84472), we have used notice and comment rulemaking to obtain public comment on removing outdated NCDs, replacing the prior subregulatory administrative process used on two occasions in 2013 and 2015. Eliminating an NCD that provides national coverage for items and services means that the item or service will no longer be automatically, nationally covered by Medicare (42 CFR 405.1060). Instead, the initial coverage determinations for those items and services will be made by local Medicare Administrative Contractors (MACs). As described in section III.G. of this proposed rule, we are proposing to remove NCD 160.22 Ambulatory EEG Monitoring (06/12/1984), because the NCD contains outdated language that is inconsistent with, and contrary to current standards of care. We believe that allowing local contractor discretion to make coverage decision for this service better serves the needs of the Medicare program and its beneficiaries. We estimate there would be de minimis change to 2023 payments, compared to 2021 because this is a long-established service for which the MACs already have LCDs and guidance articles. Therefore, we believe removing the outdated NCD would allow MACs to update local coverage guidance for this established diagnostic test, but would not result in significant changes to utilization or payments.

h. Medicare Shared Savings Program

As we seek to advance the overall value-based care strategy of growth, alignment, and equity, we are proposing modifications to the Medicare Shared Savings Program to increase program participation by supporting organizations new to value-based care and shared savings, especially for organizations serving underserved populations, and providing greater flexibility in the progression to performance-based risk, allowing these organizations more time to redesign their care processes to be successful under risk arrangements. As part of this effort, we are proposing advance investment payments to new, low-revenue ACOs that are inexperienced with performance-based risk Medicare ACO initiatives. To address the social needs of people with Medicare, these payments would increase when more people who are dually eligible and/or who live in areas with high deprivation (measured by the area deprivation index (ADI)) are attributed to the ACO. We are also building on the existing Shared Savings Program benchmarking

⁵³⁶ <https://gis.cdc.gov/Cancer/USCS/#/AtAGlance/>.

⁵³⁷ https://www.cdc.gov/cancer/colorectal/basic_info/screening/.

methodology by proposing modifications to strengthen financial incentives for long term participation by reducing the impact of ACOs' performance on their benchmarks, to address the impact of ACO market penetration on regional expenditures used to adjust and update benchmarks, and to strengthen the business case for participation for ACOs serving high-risk and high dually eligible populations, which would help sustain participation and grow the program. Additionally, we are proposing modifications to the benchmarking methodology to mitigate bias in regional expenditure calculations that benefits ACOs electing prospective assignment. We are also proposing changes to the quality reporting and the quality performance requirements to support the transition of ACOs to all payer quality measure reporting. These proposals include implementing a health equity adjustment to an ACO's MIPS quality performance category score to recognize high performing ACOs serving a high proportion of underserved beneficiaries. Finally, we are proposing changes that are important for improved operations of the Shared Savings Program, including policies to reduce ACO administrative burden while maintaining program integrity.

i. Provider Enrollment and DMEPOS Conditions of Payment

This proposed rule is also needed to make regulatory enhancements to our provider enrollment policies and to our DMEPOS conditions of payments. These provisions focus on, but are not limited to: (1) expanding the bases for denying or revoking a provider's or supplier's Medicare enrollment; (2) subjecting a greater number of providers and suppliers, such as skilled nursing facilities, to the highest level of screening, which includes fingerprinting all 5 percent or greater owners of these providers and suppliers; and (3) denying payment to DMEPOS suppliers that are not appropriately licensed. These changes are necessary to help ensure that payments are made only to qualified providers and suppliers and that owners of these entities are carefully screened. As explained in section III.J. of this proposed rule, we believe that fulfilling both of these objectives would assist in protecting the Trust Funds and Medicare beneficiaries.

j. Proposal To Revise HCPCS Level II Coding Procedures for Wound Care Management Products

The HCPCS is a standardized coding system used to identify particular items

and services on claims submitted to Medicare, Medicaid, and other health insurance programs in a consistent and orderly manner. The HCPCS is divided into two principal subsystems, referred to as HCPCS Level I and HCPCS Level II. The HCPCS Level I code set is comprised of Current Procedural Terminology (CPT®) codes, which are owned and maintained by the American Medical Association. The HCPCS Level II code set is used primarily to identify items, services, supplies, and equipment that are not identified by CPT® codes. CMS updates and maintains the HCPCS Level II code set on a periodic and routine basis.

One of the categories of items and supplies that are typically described by HCPCS Level II codes are wound care management products, which are regulated by the Food and Drug Administration. In order to provide a more uniform and permanent approach to coding for wound care management products, we are making five proposals in this proposed rule: (1) that the assignment of A codes to all wound care management products (that are not regulated by FDA as drugs or biological products that would otherwise be eligible for separate payment under section 1847A of the Act) would continue with respect to products for which a HCPCS Level II code is requested for the first time, as well as for wound care management products to which we previously assigned a Q code; (2) to discontinue all existing Q codes for wound care management products; (3) to, prior to the assignment of an A code, require products with an existing Q code that were described by the applicant as a 361 HCT/P to submit a HCPCS Level II re-application within 12 months of the effective date of the final rule (that is, January 1, 2024); (4) to require a recommendation letter from the FDA's TRG to be submitted as part of the HCPCS Level II application for all wound care management products described by the applicant as a 361 HCT/P, regardless if it is a first time application or re-application for a product with an existing Q code; and (5) to evaluate HCPCS Level II coding applications for all 361 HCT/P wound care management products through our biannual coding cycles for non-drugs and non-biological products, rather than on a quarterly basis, beginning January 1, 2024. These proposals align with our proposal in section II.J. of this proposed rule that all wound care management products (that are not regulated by FDA as drugs or biological products that would otherwise be eligible for separate payment under section 1847A of the

Act) would be covered under section 1861(s)(2)(A) of the Act as incident to supplies that are commonly furnished in the physician office setting.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this proposed rule will redistribute more than \$100 million in 1 year. Therefore, we estimate that this rulemaking is "economically significant" as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a

substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2022, that threshold is approximately \$165 million. This proposed rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this proposed rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement provisions of the statute. We provide information for each of the proposed policy changes in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2022 with payment rates for CY 2023 using CY 2021 Medicare utilization. The payment impacts described in this proposed rule reflect averages by specialty based on Medicare utilization. The payment

impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2023, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, the Protecting Medicare and American Farmers from Sequester Cuts Act provided a 3.00 percent increase in PFS payment amounts for services furnished on or after January 1, 2022, and before January 1, 2023 and required that the increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.00 percent increase in payment amounts will result in the CY 2023 conversion factor being calculated as though the 3.00 percent increase for the CY 2022 conversion factor had never been applied.

To calculate the CY 2023 PFS conversion factor (CF), we took the CY 2022 conversion factor without the 1-year 3.00 percent increase provided by the CAA and multiplied it by the BN adjustment required as described in the preceding paragraphs. We estimate the CY 2023 PFS CF to be 33.0775 which reflects the BN adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.00 percent increase for services furnished in CY 2022, as provided in the CAA. We estimate the CY 2022 anesthesia CF to be 20.7191 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

BILLING CODE 4120-01-P

TABLE 136: Calculation of the CY 2023 PFS Conversion Factor

CY 2022 Conversion Factor		34.6062
Conversion Factor without CY 2022 Protecting Medicare and American Farmers from Sequester Cuts Act		33.5983
Statutory Update Factor	0.00 percent (1.0000)	
CY 2023 RVU Budget Neutrality Adjustment	-1.55 percent (0.9845)	
CY 2023 Conversion Factor		33.0775

TABLE 137: Calculation of the CY 2023 Anesthesia Conversion Factor

CY 2022 National Average Anesthesia Conversion Factor		21.5623
Conversion Factor without CY 2022 Protecting Medicare and American Farmers from Sequester Cuts Act		20.9343
Statutory Update Factor	0.00 percent (1.0000)	
CY 2023 RVU Budget Neutrality Adjustment	-1.55 percent (0.9845)	
CY 2023 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.53 percent (1.0053)	
CY 2023 Conversion Factor		20.7191

Table 138 shows the payment impact of the policies contained in this proposed rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 138 (CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 138.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY

2021 utilization and CY 2022 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2023 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2023 impact on total allowed charges of the changes in the PE RVUs.

- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2023 impact on total allowed charges of the changes in the MP RVUs.

- Column F (Combined Impact): This column shows the estimated CY 2023 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

* Column F may not equal the sum of columns C, D, and E due to rounding.

We have received requests from interested parties for CMS to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented high-level information to CMS suggesting that Medicare payment policies are directly responsible for the consolidation of privately owned physician practices and free standing supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in the delivery of health care, especially concerning independent versus facility-based practices. In response to interested party feedback, we have recently improved our current suite of public use files

(PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2023 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For this rulemaking cycle, we are providing an additional impact table that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 139.

- Column A (Specialty): Identifies the specialty for which data are shown.

- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.

- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2021 utilization and CY 2022 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column D (Combined Impact): This column shows the estimated CY 2023 combined impact on total allowed charges.

BILLING CODE 4120-01-C**2. CY 2023 PFS Impact Discussion****a. Changes in RVUs**

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including infectious disease, internal medicine, geriatrics, diagnostic testing facility, and physical medicine reflect increases relative to other physician specialties. These increases can largely be attributed to the revaluation of the other E/M services and/or the second

year transition to updated clinical labor pricing. The services that make up these specialties rely primarily on E/M services or on clinical labor for their practice expense costs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including clinical social workers, clinical psychologists, radiology and interventional radiology, vascular surgery, and nuclear medicine,

reflect decreases in payments relative to payment to other physician specialties which are largely the result of the redistributive effects of the revaluation of other E/M services and/or the second year transition to updated clinical labor pricing. The services that make up these specialties were also negatively affected by updated malpractice premium data for CY 2023, or rely primarily on supply/equipment items for their practice expense costs and therefore were affected negatively by the transition to updated clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of

AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 138), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 138 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2021 utilization data, Total RVUs change between –1 percent and 1 percent for more than 45 percent of practitioners, representing more than 44 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Specialties, such as chiropractic, hand surgery, ophthalmology, optometry, and orthopedic surgery, exhibit little variation in changes in total RVUs per practitioner. For these specialties, more than 90 percent of these practitioners will experience a change in Total RVUs between –1 percent and 1 percent. The specific service mix *within* a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 138 (CY 2022 PFS Estimated Impact on Total Allowed Charges by

Specialty) indicates a 5 percent increase in RVUs for the infectious disease specialty as a whole, however, only 36 percent of infectious disease specialty practitioners—representing over 51 percent of Total RVUs for the specialty—would experience a 5 percent or more increase in Total RVUs. Meanwhile, nearly 12 percent of infectious disease specialty practitioners would experience 1 percent or more decreases in Total RVUs, and these practitioners account for about 6 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

Many interested parties have requested that CMS maintain the 3.00 percent increase in PFS payment amounts that was specified in the Protecting Medicare and American Farmers from Sequester Cuts Act for services furnished during CY 2022. We remind readers that this increase was provided through a time-limited amendment to the statute, which CMS does not have legal authority to alter. The expiration of this 3.00 percent increase in payment amounts will result in the CY 2023 conversion factor being calculated as though the 3.00 percent increase for the CY 2022 conversion factor had never been applied. Several interested parties have requested clarification regarding whether the specialty impacts displayed in Table 138 reflected the expiration of the 3.00 percent CAA provision for CY 2023. We can clarify for the commenters that the specialty impacts displayed in Table 138 reflect changes that take place within the pool of total RVUs. The specialty impacts table therefore includes any changes in spending which result from finalized policies within BN (such as the revaluation of other E/M codes in CY 2023 or the clinical labor pricing update in CY 2022) but does not include any changes in spending which result from finalized policies that are not subject to BN adjustment, and therefore, have a neutral impact across all specialties. The expiration of the 3.00 percent CAA provision for CY 2023 is a statutory change that takes place outside of BN, and therefore, is not captured in the specialty impacts displayed in Table 138.

b. Impact

Column F of Table 138 displays the estimated CY 2023 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2023 PFS proposed rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

D. Changes Related to Telehealth Services

In last year’s final rule, we discussed various flexibilities that would expire at the end of the PHE. Further, we clarified certain policies that were initially implemented as temporary policies, and subsequently made permanent by provisions of the CAA, 2021 that amended section 1834(m) of the Act (refer to 86 FR 65055–65063). Also, we note that the CAA, 2022 includes provisions that further amend section 1834(m) of the Act. For a detailed discussion of our implementation of the CAA, 2022 provisions refer to section II.B of this proposed rule.

Following the expiration of the PHE for COVID–19, Medicare telehealth will see changes occur in a number of areas. CMS implemented many temporary policy changes during the PHE to facilitate continued safe access to care during the pandemic, and that those changes will end with the expiration of the PHE ends or, in the case of some policies, after 151 days following the end of the PHE as specified in the relevant sections of the CAA, 2022.

Following the expiration of the flexibilities put in place during the PHE for COVID–19, the statutory and regulatory restrictions on payment for Medicare telehealth services under section 1834(m) of the Act and our regulations at §§ 410.78 and 414.65 will apply once again.

For most Medicare telehealth services, payment will be made only when furnished by certain types of physicians and practitioners to patients located in specified types of medical settings (originating sites) located in mostly rural areas, and only when the service is furnished using audio and video equipment permitting two-way, real-time interactive communication between the patient and furnishing practitioner. There are limited exceptions to these restrictions that allow Medicare telehealth services to be furnished without geographic limitations, to patients in their homes, and in some cases using audio-only technology, when the services are for the diagnosis, evaluation, or treatment of a mental health disorder (including a substance use disorder (SUD), including opioid misuse). There are also limited statutory exceptions for home dialysis monthly ESRD-related visits and for services for purposes of diagnosis, evaluation or treatment of symptoms of an acute stroke, to allow Medicare telehealth services to be furnished without geographic limitations, and to patients in their homes or certain other locations.

As such, after the expiration of the flexibilities put in place during the PHE, we expect a significant reduction in the volume of Medicare telehealth services overall, and a corresponding reduction in aggregate spending for Medicare telehealth services. We further expect that many of the services that have been furnished via telehealth during the PHE will return to in-person settings. However, because the provisions of the CAA, 2021 and CAA, 2022 required permanent changes to remove previous restrictions on the use of telehealth for the diagnosis, evaluation or treatment of a mental health disorder (including a substance use disorder (SUD), including opioid use disorder), we anticipate that volume and spending for Medicare telehealth mental health services will increase from pre-pandemic levels coming years.

In this proposed rule, we propose to continue including on the Medicare Telehealth Services List, either permanently or temporarily through the end of CY 2023, many of the services added to the list during the PHE. However, after the expiration of the flexibilities put in place during the PHE, payment for Medicare telehealth services will be subject to the statutory and regulatory limitations described previously in this section of the RIA. Compared to overall utilization of these services during the PHE, we do not expect new significant overall growth in Medicare telehealth services by

aggregate volume. Further, we estimate that the proposed addition of telehealth services added to the Medicare Telehealth Services List will have a negligible impact on PFS expenditures.

We are also proposing to implement provisions of the CAA, 2022 that extend the application of certain Medicare telehealth flexibilities for an additional 151 days after the end of the PHE for COVID-19, including allowing Medicare telehealth services to be furnished to patients located anywhere within the U.S.; allowing the extended scope of eligible telehealth practitioners to include occupational therapists, physical therapists, speech-language pathologists, and audiologists; extending payment for telehealth services furnished by FQHCs and RHCs; and delaying the requirement that there be an in-person visit with the physician or practitioner within 6 months before an initial mental health telehealth service. We anticipate that these proposals will result in continued utilization of Medicare telehealth services during the remainder of the PHE and the immediate subsequent 151 days at levels comparable to observed utilization of these services thus far during the PHE for COVID-19.

Regarding our proposal to retain on the Medicare Telehealth Services List until the end of CY 2023 the services that we added to the list on a temporary Category 3 basis, we believe our proposals would provide clarity to interested parties, but will have a negligible impact on PFS expenditures. For example, outside the circumstances and flexibilities available during the PHE, services that are permanently included on the Medicare Telehealth Services List are furnished via telehealth, on average, less than 0.1 percent of the time they are reported.⁵³⁸ The statutory and regulatory requirements for payment of Medicare telehealth services that apply outside the circumstances of the PHE have limited increases in utilization.

E. Other Provisions of the Regulation

1. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs Payable Under Medicare Part B To Provide Refunds With Respect to Discarded Amounts

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or

single-use package drug. The refund amount is the payment limit for the drug, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In section III.A of this proposed rule, we are proposing implementation of this provision including: how discarded amounts of drugs are determined; a definition of which drugs are subject to refunds (and exclusions); when and how often CMS will notify manufacturers of refunds; when and how often payment of refunds from manufacturers to CMS is required; refund calculation methodology; a dispute resolution process; and enforcement provisions.

To estimate anticipated quarterly refund amounts due from manufacturers, we analyzed JW modifier data from 2020 as if the data represented dates of service on or after the effective date of section 90004 of the Infrastructure Act (that is, January 1, 2023).⁵³⁹ Overall in the 2020 calendar year, Medicare paid nearly \$720 million for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 39 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 8 would not meet the proposed definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are multiple source drug codes; 5 would be excluded from the proposed definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling. After these exclusions, there were 26 billing and payment codes that would meet the proposed definition of refundable single-dose container or single-use package drug and have 10 percent or more discarded units.

We estimated refund amounts as described in section 1847A(h)(3) of the Act were calculated based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage). Then, we multiplied that percentage by the CY 2020 total allow amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based

⁵³⁸ <https://www.cms.gov/medicare-telemedicine-snapshot>.

⁵³⁹ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicare-spending-by-drug/medicare-part-b-discarded-drug-units>.

on this data, there would be approximately \$141 million dollars in refunds due from manufacturers for the

calendar year of 2020 (\$35.4 million

dollars each calendar quarter). See Table 140.

BILLING CODE 4120-01-P

TABLE 140: Estimated Refund Amounts Based on CY 2020 JW Modifier Data

BILLING CODE 4120-01-C

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that would meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for

fewer than 18 months from this definition, we would expect impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code would become a multiple source drug code and would no longer meet the definition of refundable single-

dose container or single-use package drug. Subsequently, the manufacturers would not be responsible for refunds under this provision. There may be changes in the percent discarded units for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on

the ASP drug pricing file⁵⁴⁰ and implementation of section 90004 of the Infrastructure Act would not be restricted to billing and payment codes included on the file, there may be other applicable data that was not assessed as part of this estimate.

a. Impacts Related to the Proposed Dispute Resolution Process

As described in section V.B.1. of this proposed rule, the information collection requirements, we estimate the annual burden per respondent/recordkeeper to be 40 hours. If we anticipate no more than 10 disputes per year, the total annual reporting and/or recordkeeping burden would be 400 hours (10 error reports per year \times 40 hours per respondent). We estimate an annual cost of this burden to be \$15,800 (\$39.50/hour \times 400 hours).

2. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.C.2. of this proposed rule, we are proposing to include chronic pain management services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Since HCPCS code GYYY1 would be valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, we propose no change to the average used to calculate the G0511 payment rate.

In addition, in section III.C.2. of this proposed rule we discuss the new coding and payment for general behavioral health integration services (HCPCS code GBHI1). We explain that since clinical psychologists (CPs) and clinical social workers (CSWs) are considered practitioners that can provide services in RHCs/FQHCs, we acknowledge when CPs and CSWs provide the services described in HCPCS code GBHI1 in an RHC or FQHC, they can bill HCPCS code G0511.

In terms of estimated impacts to the Medicare program, expanding use of General Care Management HCPCS code G0511 to include chronic pain management services (GYYY1) and behavioral health integration services (GBHI1) for RHCs and FQHCs would have a negligible impact on Medicare spending because these services are already included.

In section III.C.4. of this proposed rule, we provide a discussion and clarification regarding the use of short-

period cost reports vs 12-consecutive month cost reports to establish the payment limit for specified provider-based RHCs in accordance with section 1833(f)(3)(A) of the Act. We believe this clarification would have negligible impact on Medicare spending.

3. Clinical Laboratory Fee Schedule

In section III.B. of this proposed rule, we discuss statutory revisions to the data reporting period and phase-in of payment reductions under the CLFS. In accordance with section 4(b) of the Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA) (Pub. L. 117–71, enacted December 10, 2021), we are proposing to make certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we are proposing to update certain definitions and revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2023. The PMAFSCA delays the next data reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it requires the next data reporting period for these tests to take place during the period of January 1, 2023 through March 31, 2023. Subsequently, the next private payor rate-based CLFS update for these tests would be effective January 1, 2024 instead of January 1, 2023. In addition, we are proposing to make conforming changes to our requirements for the phase-in of payment reductions to reflect the PMAFSCA amendments. Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2022, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2021, and for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as discussed in section III.A. of this proposed rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS–1450 14x Type of

Bill. As such, the PMAFSCA amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to the unforeseen changes in private payor rates due to potential shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, it is uncertain whether the delay in data reporting would result in a measurable budgetary impact. In other words, in order to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we would need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories, and calculating the updated CLFS rates.

With regard to the proposed conforming changes to our requirements for the phase-in of payment reductions, we note that for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

Based on data reported in the 2017 data collection period, we estimate 14.8 percent (191) of tests on the CLFS may receive the full 15 percent phase-in reduction in CY2023.

4. Expansion of Coverage for Colorectal Cancer Screening and Reducing Barriers

In section III.D. of this proposed rule, we propose to expand CRC screening test coverage by modifying coverage and payment limitations of certain CRC screening tests to begin at age 45 instead of 50. An updated modeling study that accompanied the May 2021 updated USPSTF CRC screening recommendation found that the most efficient strategy for CRC screening began for individuals at 45 years of age. The expected benefits include longer life and fewer new cases and total deaths from colorectal cancer.⁵⁴¹ We considered the comparatively small population of traditional Medicare enrollees in the affected age group. The CMS website reports that total Medicare beneficiary enrollment in Part A and/or Part B aged 45–54 years in CY 2020

⁵⁴⁰ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

⁵⁴¹ <https://www.uspreventiveservicestaskforce.org/uspstf/document/final-modeling-study18/colorectal-cancer-screening>.

totalled only 1,956,634, whereas total Medicare beneficiary enrollment in Part A and/or Part B of all ages totalled 62,840,267.⁵⁴²

In addition, we propose to expand CRC screening test coverage to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result. We anticipate the impact of beneficiary cost sharing no longer being applicable to the follow-on screening colonoscopy would be balanced, in part or in whole, by the benefits and savings of additional beneficiaries choosing a less expensive and non-invasive stool-based test as their first step in the CRC screening process.

We anticipate that both proposals would result in some additional service utilization, but we also anticipate the additional utilization to be balanced, in part or in whole, by benefits and savings resulting from increased prevention, early detection (allowing for less invasive and more effective treatment) and reduced mortality. We do not anticipate expanding CRC screening test coverage (in accordance with recommendations by the USPSTF and in consultation with other appropriate organizations described earlier in our proposal) to result in a significant impact on the Medicare program.

An internal analysis by the CMS Office of the Actuary of CY 2019 Medicare FFS CRC screening test claims confirmed our understanding that our proposals would not likely result in a significant impact on the Medicare program. Regarding our proposal to expand CRC screening test coverage by modifying coverage and payment limitations of certain CRC screening tests to begin at age 45 instead of 50, we calculated CY 2019 FFS CRC screening test spending and utilization for patients between 45 and 55 years old, estimated CY 2019 Medicare FFS member months by age, and assumed that current colorectal screening test utilization for 45–49 year old patients would increase on a per enrollee basis to that of patients between 50–55. We estimated the impact from additional utilization to be approximately \$5 million in additional spending. Regarding our proposal to expand CRC screening test coverage to include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based CRC screening test returns a positive result, we matched CY 2019 FFS colonoscopy claims to Cologuard usage claims,

identified colonoscopy claims as screening or diagnostic, assumed that all diagnostic colonoscopy claims with a prior Cologuard test had a positive test result, and calculated the applicable beneficiary cost sharing for those claims. We estimated the impact from additional utilization to be approximately \$5 million in additional spending.

5. Removal of Selected National Coverage Determinations (NCDs)

We are proposing to remove one older NCD that no longer contains clinically pertinent and current information. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for interested parties and CMS. NCDs generally fall into one of two impact categories. First, eliminating an NCD for items and services that were previously nationally covered means that the item or service will no longer be automatically nationally covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs would now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within this policy will be limited, affecting less than one percent of the Medicare FFS population.

By proposing to remove NCD 160.22 Ambulatory EEG Monitoring, we are proposing to go from positive national coverage to local coverage by the MACs. Claims data for 2021 shows that for the 20 CPT/HCPCS codes associated with this NCD, CMS paid 167,242 Medicare FFS claims for approximately 78,267 unique beneficiaries totaling CMS payments of \$48,702,876.00. We estimate there will be de minimis change to 2023 payments, compared to 2021 because this is a long-established service for which the MACs already have LCDs and guidance articles. The NCD contains outdated language that is inconsistent with, and contrary to current standards of care. Therefore, we believe removing the outdated NCD will allow MACs to update local coverage guidance for this established diagnostic test, but would not result in significant changes to utilization or payments.

6. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.F of this proposed rule, for CY 2023 and subsequent years, we are proposing to revise our methodology for pricing the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone. Under this proposal, we would base the payment amount for the drug component of HCPCS codes G2067 and G2078 for CY 2023 and subsequent years on the payment amount for methadone in CY 2021 and update this amount annually to account for inflation using the PPI for Pharmaceuticals for Human Use (Prescription). We propose to update the methadone payment amount for CY 2023 based on the projected increase in the PPI for Pharmaceuticals for Human Use (Prescription) to reflect the forecasted price growth for prescription drugs for the 2-year period from CY 2021 to 2022 and from CY 2022 to 2023. Because we froze the payment amount for methadone at the 2021 amount for CY 2022, we propose to account for the inflation for both CY 2022 and CY 2023 in setting the payment rate for CY 2023. Based on the 2022 Q1 forecast from IHS Global Inc. (IGI) the proposed CY 2023 methadone payment amount would be \$39.29, which is the CY 2022 payment amount of \$37.38 increased by a projected 5.1 percent growth in the PPI for Pharmaceuticals for Human Use (Prescription) from CY 2021 to CY 2023 ($\$37.38 \times 1.051 = \39.29). IGI is a nationally recognized economic and financial forecasting firm that contracts with CMS to forecast various price proxies used in the CMS market baskets. Additionally, we are proposing that if more recent data become subsequently available (for example, a more recent estimate of the PPI), we would use such data in the final rule to determine the final CY 2023 methadone payment amount. For subsequent years, we are proposing to continue to update this rate annually using the PPI for Pharmaceuticals for Human Use (Prescription).

Overall, CMS estimates that the impact of our proposal to revise the OTP methadone pricing methodology would increase Medicare spending by roughly \$2.5 million in CY 2023. This estimate is based on actual utilization of the OTP benefit by Medicare beneficiaries under Part B through CY 2021. The estimate does not reflect any additional utilization that may occur in CY 2023.

⁵⁴² <https://data.cms.gov/summary-statistics-on-beneficiary-enrollment/medicare-and-medicaid-reports/medicare-total-enrollment>.

Additionally, as discussed in section III.F of this proposed rule, we are proposing to modify the payment rate for the non-drug component of the bundled payment for an episode of care to base the rate for individual therapy on a crosswalk to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), instead of a crosswalk to CPT code 90832 (*Psychotherapy, 30 minutes with patient*), as is our current policy. We believe CPT code 90834 most closely corresponds to a 50-minute therapy session, which interested parties have indicated is the typical amount of therapy received by patients in the first few months of treatment at an OTP. In the CY 2020 PFS final rule (84 FR 62658), we stated that we based the rate for individual therapy in the bundled payment on the 2019 non-facility payment rate for CPT code 90832, which was \$68.47. Therefore, to change the rate for individual therapy, we are proposing to substitute the 2019 rate for CPT code 90832 included in the non-drug component of each of the bundled payments for an episode of care with the 2019 PFS non-facility payment rate for CPT code 90834, which was \$91.18, to determine an adjusted payment rate for CY 2020 for the non-drug component of each applicable HCPCS code. As described in § 410.67(d)(4)(iii), we would then apply the Medicare Economic Index (MEI) updates for 2021, 2022, and 2023 to these adjusted payment rates to determine the CY 2023 payment amounts for the non-drug component of the bundled payments for an episode of care.

CMS anticipates that the proposed increase to the bundled rates to reflect longer individual therapy sessions would result in an increase of \$25.93 to the non-drug component of the weekly bundled payments for HCPCS codes G2067 through G2075 from CY 2022 to 2023. Based on utilization data from Medicare beneficiaries under the OTP benefit through CY 2021, the estimated impact of this policy is an increase in Medicare spending of approximately \$27 million in CY 2023. This estimate does not reflect any additional utilization that may occur during CY 2023.

Additionally, as discussed in section III.F. of this proposed rule, we are proposing to allow the OTP intake add-on code to be furnished via two-way audio-video communications technology when billed for the initiation of treatment with buprenorphine, to the extent that the use of audio-video telecommunications technology to initiate treatment with buprenorphine is authorized by DEA and SAMHSA at the

time the service is furnished. We are also proposing to permit the use of audio-only communication technology to initiate treatment with buprenorphine in cases where audio-video technology is not available to the beneficiary.

We believe the Part B cost impact of the proposed flexibilities for the use of telecommunications policies will be minimal because, we do not expect that this provision will increase the frequency at which medically necessary intake assessments are furnished.

7. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2022, over 11 million people with Medicare receive care from at least one health care provider in one of the 483 ACOs participating in the Medicare Shared Savings Program (Shared Savings Program), the largest value-based payment program in the country. The Shared Savings Program proposed policies advance Medicare's overall value-based care strategy of growth, alignment, and equity, with many proposals overlapping these categories. The proposed policies are designed to reverse recent trends where participation has plateaued in the Shared Savings Program has plateaued, higher spending populations are increasingly underrepresented in the program since the change to regionally-adjusted benchmarks, and access to ACOs appears inequitable as evidenced by data indicating underserved populations are less likely to be assigned to a Shared Savings Program and to encourage growth of ACOs in underserved communities based, in part, on recent observations where the highest earning ACOs had a higher proportion of beneficiaries who were members of racial and ethnic minority communities and included a greater proportion of ESRD, disabled, and aged/dual eligible beneficiaries than the lowest earning ACOs.

Stagnation in overall participation in the Shared Savings Program in recent years has coincided with increasing total shared savings outlays, driven by sharply higher shared savings payments to ACOs that were already low spending relative to their region electing to transition to risk in the ENHANCED track. While this type of selection was anticipated in estimating the impacts of the December 2018 final rule (83 FR 67816), it was also assumed that: (1) ACOs making the transition to risk would respond with stronger efforts to improve efficiency, and (2) a broader spectrum of relatively higher-spending ACOs would be influenced by the revised benchmarking methodology to

drive down spending for their assigned beneficiaries while participating under the BASIC track glide path in order to ultimately achieve sustainable participation under risk in following agreement periods.

The overall increase in shared savings payments to ACOs transitioning to the ENHANCED track appears to be driven largely by favorable regional benchmark adjustments and the ENHANCED track's higher sharing rate, calling into question whether ACOs selecting risk will further improve efficiency or simply be content to collect steady shared savings by maintaining their spending level relative to their region. Meanwhile, ACO Investment Model participants—a subset of Track 1 ACOs that meaningfully outperformed peer ACOs in reducing spending and earning shared savings over the period from 2016 through 2018—have also dropped out at an elevated frequency before even attempting the risk-free portion of the BASIC track glide path. The spending reductions achieved by AIM ACOs were found to be similar regardless of an AIM ACO's decision to continue or exit the program. Superior financial performance during an initial agreement period under a one-sided mode therefore failed to provide sufficient incentive to overcome a pronounced aversion to risk demonstrated by this otherwise-effective subset of ACOs.⁵⁴³

Without modification, the Shared Savings Program is at high risk of increasing overall Medicare spending over the coming decade. ACOs serving patients with low spending will likely continue to dominate the roster of ACOs making the transition to risk. Shared savings payments to low-spending ACOs will increase alongside a growing disincentive for ACOs to serve higher spending populations for whom potential savings from care management would likely be greater.⁵⁴⁴ This selective participation is in response to regional benchmark adjustments that have increased shared savings payments to low spending ACOs and has resulted in higher cost beneficiaries, who have the most need for ACO care management, being increasingly excluded from assignment to ACOs participating in the program. It currently appears very unlikely that selective transition to downside risk under the

⁵⁴³ Trombley, MJ, et al. ACO Investment Model Produced Savings, But the Majority of Participants Exited when Faced with Downside Risk. *Health Affairs*. 2020; 138–146. doi:10.1377/hlthaff.2020.01819.

⁵⁴⁴ McWilliams, JM, et al. Early Performance of Accountable Care Organizations in Medicare. *New England Journal of Medicine*. June 2016. 374:2357–2366. DOI: 10.1056/NEJMsa1600142.

current participation options and financial methodology will drive down spending enough to offset increased shared savings payments to ACOs with favorable regional benchmarks. Furthermore, a growing subset of ACOs that elect prospective beneficiary assignment are finding their regional benchmarks to be artificially inflated because of a systematic bias in calculations based on regional FFS expenditures resulting from comparing expenditures for the ACO's own assigned beneficiary population identified based on the offset assignment window, and expenditures for the assignable population of beneficiaries in the ACO's region identified based on the calendar year assignment window. Therefore, the program's baseline trajectory is now projected to increase net Medicare spending by approximately \$4.2 billion over the period from 2024–2034, which spans two 5-year agreement periods for ACOs renewing or entering in 2024 and 2025. Absent proposed changes, the program is projected to violate the statutory requirement that provisions implemented under authority of section 1899(i)(3) of the Act not increase spending.

The proposals are designed to increase program participation for new ACOs through advance investment payments to promote health equity and provide ACOs greater choice in the pace of progression to performance-based risk; sustain program participation by reducing the effect of ACO performance on benchmark updates and benchmark rebasing; mitigate the bias in regional expenditure calculations that benefits ACOs electing prospective assignment; strengthen incentives for ACOs serving high risk and high dual populations; improve the risk adjustment methodology to better account for medically complex, high cost beneficiaries while continuing to guard against coding initiatives; increase opportunities for low revenue ACOs in the BASIC track to share in savings by allowing ACOs that do not meet the minimum savings rate (MSR) requirement to share in savings at a lower rate; encourage ACOs to transition more quickly to all-payer quality measure reporting; update the ACO beneficiary assignment methodology; and reduce administrative burden on ACOs.

Reducing the cap on negative regional adjustments to high spending ACOs'

benchmarks and offering eligible ACOs a shared savings-only BASIC track participation option for a full 5-year agreement period are expected to significantly re-engage participation for ACOs serving higher cost beneficiaries. While we are uncertain how large the group of new and re-entering ACOs would be and whether they would have a similar savings potential as the first implementation of Track 1, other proposed incentives targeted to low revenue (typically physician-led) ACOs, like advance investment payments and paying partial shared savings to low-revenue ACOs with savings under their MSR, as well as adjusting rebased benchmarks for prior savings should improve the incentive for new ACOs to join the program and reduce spending to a greater extent than the incentive provided under Track 1. Table 141 shows the combined benchmark and the relative impact that 2024/2025 renewing and new ACOs are expected to have on average over the two 5-year agreement periods from 2024–2034. The Baseline columns show these projections under current program rules and the Proposed columns show the projections for performance under the proposed rule.

TABLE 141: Projected Impacts on Benchmark and Spending for 2024/2025 Renewing, Re-entering and New ACOs

	Renewing ACOs		New ACOs / Re-entering ACOs	
	Baseline	Proposed	Baseline	Proposed
Average Annual Benchmark (\$ Billion)	\$73	\$91	\$11	\$44
Gross Savings (Impact on Claims, % of Bmark)	-2.7%	-2.8%	-1.3%	-2.7%
AAPM QP Physician Pay Increase (% of Bmark)	0.3%	0.3%	0.3%	0.1%
Shared Savings/(Losses) (% of Bmark)	2.8%	2.1%	2.2%	1.0%
Net Advance Investment (% of Bmark)				0.01%
Net Federal Impact (% of Bmark)	0.4%	-0.4%	1.2%	-1.6%
Net Federal Impact (\$Billions)	\$2.9	-\$3.6	\$1.3	-\$6.8
10th percentile	-\$1.4	-\$10	\$0.5	-\$11
90th percentile	\$7.0	\$3.0	\$2.0	-\$3.2

b. Impacts for Renewing ACOs

Renewing ACOs for the projected two 5-year agreement periods are anticipated at baseline to generate higher net shared savings earnings (2.8 percent of benchmark) than actual reductions in spending on claims (2.7 percent of benchmark). After also accounting for higher physician fee schedule payments to qualifying practitioners (QPs), totaling on average 0.3 percent of benchmark over 10 years, this cohort of ACOs is projected to increase net program spending by 0.4 percent of

benchmark on average, or \$2.9 billion over 10 years. For existing ACOs, the proposed changes would help retain more of the otherwise shrinking subset of ACOs that serve higher spending populations, would remove the bias favoring benchmarks for ACOs electing prospective assignment, and would marginally improve the incentive for efficiency via the use of a three-way blend of the Accountable Care Prospective Trend (ACPT)/national-regional growth rates to update benchmarks and the prior savings

adjustment. As a result, overall savings on claims are projected to increase by a small margin to 2.8 percent of benchmark while average shared savings payments would be reduced to an average of 2.1 percent of benchmark. The total 10-year impact for this cohort would flip from a \$2.9 billion cost at baseline (range of \$1.4 billion savings to \$7.0 billion cost at 10th and 90th percentiles) to a \$3.6 billion savings under the proposed changes (range of \$10 billion savings to \$3 billion cost at the 10th and 90th percentiles).

c. Impacts for New ACOs and Re-Entering ACOs

At baseline without the proposed changes, the cohort of new ACOs and re-entering ACOs starting in 2024 would be relatively small (only \$11 billion in annual benchmark) and skewed toward ACOs serving beneficiary populations that are already low cost at baseline. Shared savings payments to this group would also be elevated by the bias inflating benchmarks for ACOs electing prospective assignment. At baseline this cohort would increase net program spending by an estimated 1.2 percent of benchmark or \$1.3 billion over 10 years (ranging from an increase of \$0.5 to \$2.0 billion at the 10th and 90th percentiles). Alternatively, under the proposed changes, the cohort of new and re-entering participation starting in 2024 is estimated to increase to \$44 billion in combined benchmark per year. An anticipated influx of low revenue physician-led ACOs serving higher cost patients is expected to allow this cohort to produce significantly greater savings on claims (2.7 percent of benchmark) than would be paid out in shared savings (1.0 percent of benchmark) because these ACOs would be starting with lower relative benchmarks than existing low-spending ACOs and they would predominantly be paid under the lower 40 percent sharing rate offered in the BASIC track's one-sided models. After accounting for slightly higher physician fee schedule payments to QPs and a nominal net cost of advance investment payments, this cohort is projected to reduce net program spending about 1.6 percent of benchmark or \$6.8 billion over a 10-year period (net savings range from \$3.2 billion to \$11 billion at the 90th and 10th percentiles).

Average gross savings for this cohort (2.7 percent of benchmark) are projected to roughly match average gross savings for renewing ACOs (2.8 percent of benchmark) despite being less-experienced and heavily concentrated in the BASIC track because they are both serving higher-spending patients presenting greater savings opportunities and because they are anticipated to predominantly include low-revenue

ACOs for whom sharing-only incentives are relatively strong despite not being pushed toward risk in their first agreement period. As a percentage of benchmark, these projected gross savings rates are consistent with the savings range estimated for historical performance for the Shared Savings Program detailed in Regulatory Impact Analysis for the December 2018 final rule (83 FR 68047 through 68050) and would represent modest progression from the 1.3 to 2 percent savings estimated by MEDPAC using an "intent to treat" approach for evaluating performance through 2016, which was dominated by participation in Track 1.⁵⁴⁵

d. Annual Combined Impacts 2023–2034

As described in Table 142, relative to baseline projections, the combined cohort entering or renewing for agreement periods beginning in 2024 and 2025 is projected to add roughly \$50 billion in annual benchmark, reduce claims costs by \$15.5 billion, and on net increase aggregate shared savings payments by about \$650 million. The proposed rule changes are estimated to reduce overall program spending by \$14.8 billion over 12 years relative to the \$4.2 billion cost anticipated for the trajectory of the program at baseline, or \$10.6 billion in absolute terms relative to a baseline without a Shared Savings Program in FFS Medicare. Approximately 80 percent of advance investment payments are anticipated to be recovered from shared savings payments by the middle of the second agreement period; the estimate shows \$40 million in outstanding advance investment payments by the end of the projection period after an initial \$210 million in initial funding. Approximately \$60 million in net savings for 2023 is projected for retaining existing higher-spending ACOs that would have

otherwise dropped out if not offered the ability to remain in one-sided risk for the remainder of their current agreement period.

More importantly, the Shared Savings Program would increase participation from ACOs serving higher-spending beneficiaries by reducing the negative regional adjustment cap and creating a sharing-only option covering an entire agreement period plus the first 2 years of the succeeding agreement period for eligible ACOs. Advance investment payments and partial shared savings payments for certain ACOs in the BASIC track with savings below their MSR would only marginally increase payments to ACOs while increasing overall program savings by drawing new participation from low revenue ACOs (typically physician-led ACOs), the type that performed well under Track 1. Including a prior savings adjustment as part of benchmark rebasing would broaden the incentive for ACOs to drive down spending over multiple agreement periods by mitigating the ratchet effect for high-spending ACOs, for ACOs in competitive markets with collectively low trend, and for ACOs under prospective assignment that may be concerned about the proposal to remove the favorable bias in regional benchmark calculations. Modifications to the quality scoring system through adding a sliding scale approach to determining shared savings and offering bonus points to higher performing ACOs with a high proportion of underserved populations may increase shared savings payments marginally overall depending on how ACOs may otherwise have progressed in future years against what is still a relatively new quality rubric. The proposed changes are estimated to reduce overall program spending by \$14.8 billion over 12 years relative to the \$4.2 billion cost anticipated for the trajectory of the program at baseline, or \$10.6 billion in absolute terms relative to a baseline without a Shared Savings Program in FFS Medicare. The impact estimate ranges from a reduction of \$8.2 billion to a reduction of \$21.4 billion at the 10th and 90th percentiles.

BILLING CODE 4120-01-C**e. Discussion of Key Proposals and Related Assumptions**

The stochastic model and associated assumptions previously described in the December 2018 final rule (83 FR 67816) were updated to produce this estimate. The model continues to assume that high-revenue ACOs are on average only 50 percent as effective as low-revenue ACOs at reducing spending because high-revenue ACOs include a more comprehensive mix of hospitals and other providers and suppliers for whom the incentive to potentially share in a fraction of savings from preventing utilization is weak compared to the immediate revenue from utilization—an expectation that has been supported by evaluation of actual program performance.⁵⁴⁶ Updates included accounting for the current mix of participating ACOs in constructing the potential ACOs making up the renewing cohort and considering the population of exiting ACOs to build a sample of higher spending populations that may

be added to the program under the proposals that are expected to boost interest in the program from potential ACOs associated with average and higher spending populations. New low-revenue ACOs were assumed to always prefer the extended glidepath unless they expected a regional benchmark at least 3 percent higher than baseline spending, in which case a one-third probability was assigned for the entrant to opt for higher potential earnings under Level E of the BASIC track. The model was also updated to first decrease the baseline savings potential for existing and new ACOs under the current program rules by about 25 to 50 percent (to better match emerging actual performance from selective low-spending ACO participation) which was then scaled up for estimating the proposed impacts to account for new incentives driven mainly by the ACPT and prior savings adjustment, taking the form of a 0 to 50 percent increase in gross savings for low and average spending ACOs and a zero to 100 percent increase for new ACOs serving markedly high spending populations at baseline (at least 10 percent higher than their regional average benchmark spending level). The resulting savings

ranges produced by the modeled participation are supported by the proximity to previous estimates of program savings under more balanced participation in Track 1, as noted previously in this section. Savings are expected to increase because of the many new features that would improve the incentive for ACOs to drive down spending over multiple agreement periods. Below is a further discussion of these factors.

Introducing a prospective 5-year growth rate to be blended with the existing retrospective benchmark trend would help address the so-called ‘rural glitch’ complaint from ACOs and other interested parties and should at least marginally improve the incentive for ACOs to reduce spending, in particular when multiple ACOs are present in the same market and collectively driving down regional spending. The proposal that interested parties have floated for mitigating ACO effects on their region—effectively removing ACO assigned beneficiaries from the regional calculation—has multiple problems that would increase program spending. It would amplify the benefit to ACOs for selecting lower cost patients and avoiding higher needs groups, it would

⁵⁴⁶ McWilliams JM, et al. Medicare Spending After 3 Years of the Medicare Shared Savings Program. *New England Journal of Medicine*. Sept. 2018. 379:1139–1149. DOI: 10.1056/NEJMsa1803388.

drive market consolidation, and it would still fail to mitigate the cited problem for cases where multiple ACOs work in combination to drive down regional spending. Furthermore, it would increase program spending to such a degree that compliance with the requirements of section 1899(i)(3) of the Act, to use other payment models, would be violated.

We acknowledge a potential elevated risk; however, that uncertainty around external conditions related to the end of the PHE for COVID-19 and economic conditions like emerging inflation could cause a prospective trend to differ materially from actual program-wide growth in per capita spending. Blending the ACPT as one-third of the overall update helps lower the risk that projection error would create problems with appropriateness of spending targets. Risk-bearing ACOs would have extra protection against exposure to ACPT projection error because they would be held harmless on the downside if the new method would charge them more in losses than the prior retrospective trend method. Modeling indicates this safeguard would reduce shared losses owed by ACOs by about \$100 million over 10 years, but the net impact of this provision is likely to save several times that amount by retaining ACOs that would have otherwise dropped out of the program.

The most important factor returning the program to net savings is attracting more ACOs into the BASIC track that serve higher spending populations, particularly low revenue physician-led ACOs for whom a 40 percent sharing rate is a strong incentive for efficiency even absent downside risk. The most important provision for growing this participation is the proposal to allow ACOs to stay sharing only (that is, Level A or Level B of the BASIC track) for a full 5-year agreement period. Advance investment payments and partial shared savings payments for savings under the MSR would help to increase the share of these new ACOs that are low revenue. These exclusive provisions for low revenue ACOs are estimated to drive \$3 billion in net savings over the projection period notwithstanding marginal increases in shared savings outlays. This analysis highlights that the savings gained from increasing participation from this type of ACO would greatly exceed the marginal increase in program outlays from paying partial shared savings under the MSR and advance investment payments, as combined incentive payments (consisting mainly of shared savings payments combined with slightly higher payments to

clinicians achieving QP status) to new and reentering ACOs are only projected to reach about 1.1 percent of benchmark over the projection period in return for savings on benefits of 2.7 percent (as detailed in Table 141).

Another key proposal for improving the financial impact of the program is establishing a separate ratebook to calculate county-level expenditures for ACOs selecting prospective assignment using an assignable population of beneficiaries that is identified based on the offset assignment window. This proposal would remove a bias that would otherwise artificially boost benchmarks and thereby account for \$3.7 billion of the total savings projected above. Most existing ACOs currently benefiting from this bias would still expect to receive favorable regional adjustments at rebasing despite removal of the bias. The proposal to adjust benchmarks for prior savings would help restore a positive benchmark adjustment for the subset of ACOs for whom removal of the prospective assignment bias would minimize their regional adjustments at rebasing. However, because the prior savings adjustment would only be applied if it produced a higher adjustment than the regional benchmark adjustment, it would not further increase benchmarks for ACOs already benefiting from the existing regional adjustment.

Modifications to the quality scoring system through the proposal to add a sliding scale approach to determining shared savings for ACOs to allow for payment of scaled shared savings and the proposal to award health equity bonus points to ACOs that perform well on at least one or more measures while serving a high proportion of duals or beneficiaries in areas with high Area Deprivation Index scores may increase shared savings payments marginally overall depending on how ACOs may otherwise have progressed in future years against what is still a relatively new quality rubric. The costs of adding these new methods for improving scores and paying scaled shared savings are projected to add about \$1.3 billion in program spending over 10 years. Other proposals related to assignment and risk adjustment are expected to have relatively nominal financial impacts on the program.

f. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other

payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposals require the use of our authority under section 1899(i) of the Act: allowing for advance investment payments; the proposed modifications to the loss sharing rate under the ENHANCED track to allow for a sliding scale based on an alternative quality performance standard; use of the ACPT/national-regional three-way blended benchmark update factor; expanding the criteria for certain low revenue ACOs participating in the BASIC track to qualify for shared savings in the event the ACO does not meet the MSR as required under section 1899(d)(1)(B)(i) of the Act; and exclusion of the proposed new supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals from the determination of Medicare Parts A and B expenditures used in certain financial calculations under the Shared Savings Program. These proposed changes to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

A comparison was constructed between the projected impact of the payment methodology that incorporates all proposed changes and a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority. The hypothetical baseline was assumed to be limited to a 50 percent upside-only track rebased every three years but including adjustments allowed under section 1899(d)(1)(B)(ii) of the Act including the up to 50 percent weight used in calculating the regional adjustment to the ACO's rebased historical benchmark (capped on the upside or downside as detailed in this proposed rule) and the prior savings adjustment if producing a higher benchmark (also as detailed in this proposed rule). The stochastic model and associated assumptions described previously in this section were adapted to reflect a marginally reduced participation from low-revenue ACOs

because the hypothetical baseline would lack advance investment payments and partial shared savings payments for certain BASIC track ACOs with savings under their MSR. Such analysis estimated approximately \$4.9 billion greater average net program savings under the alternative payment model (with the modifications proposed in this proposed rule) that includes all policies that require the authority of section 1899(i)(3) of Act than would be expected under the hypothetical baseline in total over the 2023 to 2034 projection period.

Participation in performance-based risk in the ENHANCED track and the higher levels of the BASIC track is assumed to improve the incentive for ACOs to increase the efficiency of care for beneficiaries (similar to the assumptions used in the modeling of the impacts, described previously). Such added savings are partly offset by lower participation associated with the requirement to transition to performance-based risk. Despite the higher maximum sharing rate of 75 percent in the ENHANCED track under the alternative payment model that includes all policies adopted under section 1899(i)(3) of the Act, relative to the 50 percent maximum sharing rate assumed for the single one-sided risk track under the hypothetical baseline, shared savings payments are expected to be reduced relative to the hypothetical baseline because of lower expected participation resulting from the eventual requirement to transition to risk in the second agreement period under the BASIC track and generally more accurate benchmarks due to the incorporation of regional factors into the calculation of benchmark updates for all ACOs.

We will reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

8. Medicare Part B Payment for Preventive Vaccine Administration Services

In section III.H.2.c of this proposed rule, for CY 2023 we are proposing to annually adjust the payment amount for administration of preventive vaccines to reflect geographic locality cost differences. That is, we propose to use the Geographic Adjustment Factor (GAF) described in § 414.26 to adjust the payment to reflect the costs of administering preventive vaccines in each of the PFS fee schedule areas. Additionally, in section III.H.2.d of this proposed rule, for CY 2023 we are proposing to annually update the payment amount for the administration of preventive vaccines based upon the Medicare Economic Index (MEI). In section III.H.3.c. of this proposed rule, we are proposing to continue the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home under the certain circumstances. Further, we are proposing to adjust and update the \$35.50 by the GAF and MEI as we proposed for the preventive vaccine administration services.

The estimated impact of the proposal to update the payment amount for the administration of preventive vaccines based upon the proposed MEI (3.8%) in CY 2023 is an increase in spending of roughly \$40 million. Approximately \$30 million of the increase is for administration of the COVID-19 vaccine and the remaining \$10 million is for the other preventive vaccines. Regarding the proposal to adjust the payment amount for the administration of preventive vaccines by the GAF and the proposal to continue the additional payment for at-home COVID-19 vaccinations, these would have a negligible impact on Medicare spending.

9. Medical Necessity and Documentation Requirements for Nonemergency, Scheduled, Repetitive Ambulance Services

In section III.I. of this proposed rule, we propose to clarify § 410.40(e)(2)(ii) by reorganizing existing language and stating that the PCS and additional documentation from the beneficiary's medical record may be used to support a claim that transportation by ground ambulance is required. We are also clarifying that the PCS and additional documentation must provide detailed

explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance. Finally, we are clarifying that coverage includes observation or other services rendered by qualified ambulance personnel. While we believe that clarification of the regulatory provisions is needed and would be well received by interested parties, we do not believe that these clarifications would have any substantive monetary or impact the amount of time needed to submit claims. We believe the primary benefit of the clarification would be for providers and suppliers in preparing and submitting claims. It is feasible the clarification could result in fewer claims being denied. However, hypothetically, these denials are likely a small subset of the ambulance claim denials and those denied for technical PCS issues are likely appealed and overturned.

10. Medicare Provider and Supplier Enrollment Changes—Provider Enrollment

a. Expansion of Revocation Reasons

As explained in section III.J. of this proposed rule, we propose changes to two of our existing revocation reasons:

- We propose to expand § 424.535(a)(2) to permit revocation based on an OIG exclusion of the provider's or supplier's managing organization, corporate officer, or corporate director.

- We propose to expand § 424.535(a)(3) to permit revocation based on a felony conviction of the provider's or supplier's managing organization, corporate officer, or corporate director.

We believe these two changes would result in an increase in the number of revocations that CMS imposes. However, we believe this number would be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2) and (a)(3). Accordingly, since our expansion of these revocation reasons would be fairly modest, we do not foresee more than a very slight increase in revocations thereunder.

Table 143 outlines the number of revocations we estimate would ensue under our proposed revocation expansions. These numbers only account for additional revocations stemming from our changes:

TABLE 143: Additional Revocations

Revocation Reason	Number
§ 424.535(a)(2)	5
§ 424.535(a)(3)	5
Total	10

Internal CMS data indicates that the average provider/supplier that would be affected by these regulatory expansions receives roughly \$50,000 in Medicare payments each year. (We used a similar \$50,000 annual payment estimate for our provider enrollment provisions in the CY 2022 PFS final rule) (86 FR 64995)). Providers/suppliers revoked under our proposed revocation expansions would thus not receive these payments. Hence, multiplying our \$50,000 estimate by the revocation totals in Table 143 results in a projected transfer from these providers/suppliers to the Federal Government of \$500,000 (\$50,000 × 10 revocations).

b. Expansion of Fingerprinting Requirements

We propose the following three revisions to § 424.518:

- Adding changes of ownership and the reporting of a new owner as provider enrollment transactions falling within the scope of § 424.518. (As explained in section III.J. of this proposed rule, affected parties would have to submit fingerprints and be subject to a fingerprint-based criminal background check (FBCBC) if the provider or supplier is in the “high” level of categorical screening.)
- Stating that any screening level adjustment to “high” also applies to all other enrolled and prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier that originally triggered the screening level increase.
- Moving SNFs from the “limited” level of categorical screening to the “high” screening level.

These proposed changes would result in an increase in the annual number of providers and suppliers that must furnish fingerprints for their 5 percent or greater direct or indirect owners. Based on existing enrollment statistics and our experience, we project that: (1) 29,726 providers and suppliers per year would be required to submit the fingerprints of their owners (new or existing) pursuant to these changes; and (2) 29,726 owners would annually be fingerprinted (or one owner per provider/supplier, which is roughly consistent with prior estimates).

Consistent with previous burden estimates we have made regarding fingerprinting, we estimate that it would take each owner approximately 2 hours to be fingerprinted. According to the most recent BLS wage data for May 2021, the mean hourly wage for the general category of “Top Executives” (the most appropriate BLS category for owners) is \$57.94. With fringe benefits and overhead, the figure is \$115.88. This would result in an estimated annual burden involving our proposed changes to § 424.518 of 59,452 hours at a cost of \$6,889,298.

c. DME Payment Denials

We are also proposing to add a new DMEPOS condition of payment to § 424.57(b). It would require the DMEPOS supplier to be in compliance with all conditions of payment in § 424.57(b), as well as with the licensure requirements of § 424.57(c)(1)(ii)(A), at the time the item or service is furnished in order to receive payment. Based on data collected from our experience with the scenario our proposed change seeks to remedy, we project 6,100 claim denials per month associated with our proposal involving \$1.3 million in denied/unpaid claims. Over a 12-month period, this results in 73,200 claim denials and \$15.6 million in unpaid claims, the latter constituting our estimated annual transfer to the federal government. We welcome comments on this estimate.

11. State Options for Implementing Medicaid Provider Enrollment Affiliation Provision

We do not anticipate any additional costs or savings associated with our proposed revision to § 455.107(b), for the latter merely involves giving the states somewhat greater flexibility in executing the provisions of § 455.107.

12. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (Section 2003 of the SUPPORT Act)

In section III.M. of this proposed rule, we are proposing to extend the existing compliance action of sending letters to non-compliant prescribers from the CY

2023 EPCS program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 year (January 1, 2024 through December 31, 2024). Additionally, effective January 1, 2023, we are proposing to change the year from which PDE data is used from the preceding year to the current evaluated year when CMS determines whether a prescriber qualified for an exception based on the number of Part D controlled substance prescriptions (§ 423.160(a)(5)(ii)). We are also proposing to determine whether a prescriber qualifies for the emergency or disaster exception (§ 423.160(a)(5)(iii)) based on the prescriber’s valid address in PECOS (Medicare Provider Enrollment, Chain, and Ownership System), instead of the NCPDP Pharmacy Database address, and for prescribers who are not enrolled or do not have a valid PECOS address, we are proposing to use the address in the National Plan and Provider Enumeration System (NPPES) data. We understand that with continuing the compliance action of sending letters to non-compliant prescribers for another year, some prescribers may delay EPCS implementation, but we also believe that our education and outreach with these prescribers during this additional year may help increase adoption. We do not anticipate these proposals to have any incremental impact on the cost or time associated with prescriber compliance of the electronic prescribing for controlled substances requirement or the cost to interested parties. However, we acknowledge there will be a delay in compliance enforcement by an additional year. We seek comment on our impact assumptions.

13. Medicare Ground Ambulance Data Collection System

In section III.K. of this proposed rule, we propose a series of changes to the Medicare Ground Ambulance Data Collection System including the proposal to update § 414.626(d)(1) and (e)(2) to give us the necessary flexibility to specify how ground ambulance organizations should submit the hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational, and proposed revisions to

the Medicare Ground Ambulance Data Collection Instrument.

The changes and clarifications aim to reduce burden on respondents, improve data quality, or both. We group our proposed changes and clarifications into four broad categories: editorial changes for clarity and consistency; updates to reflect the web-based system; clarifications responding to feedback from interested parties questions and testing and typos and technical corrections.

While we believe that these changes and clarifications will be well received by the ground ambulance interested parties, we do not believe that these changes would have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We note that the overall length of the Medicare Ground Ambulance Data Collection Instrument would be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we propose to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

14. HCPCS Level II Coding for Wound Care Management Products

We are proposing several changes to our policies for skin substitute products. Specifically, we are soliciting feedback on our key objectives related to skin substitute policies, proposing to change the terminology of skin substitutes to more accurately reflect how clinicians use these products, and to treat and pay for these products under section 1861(s)(2)(A) of the Act as incident to supplies the PFS beginning on Jan 1, 2024. Our estimates related to revising the benefit category to incident to supplies will be contained in the CY 2024 PFS rulemaking.

Additionally, in section III.N. of this proposed rule, we are proposing to revise our HCPCS coding procedures, the impacts related to these proposals are in section III.N. The financial impact of this proposal will be largely contingent on the prices the MACs set for these products.

15. Effects of Proposals for Medicare Part A and B Payment for Dental

In section II.L.2. of this proposed rule, we are: (1) proposing to clarify our interpretation of section 1862(a)(12) of the Act, and clarify and codify certain of our current Medicare FFS payment policies for medically necessary dental services; (2) proposing and seeking comment on payment for other dental

services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup and certain diagnostic and treatment services prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services; and (3) requesting comments on other types of clinical scenarios where the dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services.

If finalized, we do not believe the proposed codification of current payment policy would result in a significant payment impact because it would be a continuation of existing Medicare payment policy. If we were to finalize the payment for an oral or dental examination, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, we do not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of organ transplant, cardiac valve replacement and valvuloplasty surgeries.

To complete this analysis, and to ensure that we captured dental services that occurred prior to the covered medical service that occurred within CY 2019, we pulled claims data for which Medicare made payment for dental services from June 1, 2018 through December 31, 2019. This allowed us to capture any dental services that were furnished prior to 90 days of a covered medical service. Further, we believe that the use of these claims data would be more representative of future utilization patterns given the COVID-19 PHE. Based on this analysis, we estimated that there were roughly 200,000 additional services where Medicare could provide payment for dental services prior to organ transplants, cardiac valve replacement or valvuloplasty surgeries. Based on claims data from this time period, Medicare provided payment for dental services for 186 patients with an average cost of care of roughly \$525 per person. The majority of these claims were for tooth extraction in patients undergoing radiation treatment of the mouth as opposed to transplant patients, and the range in costs was from \$33 to \$5,711 per patient. Based on a review of claims data for our existing payment policies

and our review of current utilization for beneficiaries, we estimated that effective rate of coverage of current utilization was less than 0.2 percent. We then used this utilization ratio to estimate projected payments for dental exams and treatments prior to organ transplants, cardiac valve replacement or valvuloplasty surgeries. Given current utilization of organ transplants, cardiac valve replacement or valvuloplasty procedures, current utilization and payment for dental exams and treatments, we are projecting an estimated cost of this proposal at approximately \$65 million or roughly 0.07 percent of Medicare PFS expenditures. Therefore, we do not anticipate a significant payment impact for these proposals. We note, however, that if we were to finalize, as discussed in section II.L.2.c.(i) of this proposed rule, payment in other clinical scenarios for dental services inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services, we may adjust this estimate. We further note that we have requested public comment on alternative ways to estimate the expected utilization and volume of these services under the proposal discussed further in section II.2.c. of this proposed rule.

16. Updates to the Quality Payment Program

In this section, we estimate the overall and incremental impacts due to the Quality Payment Program policies proposed in this rule. We estimate participation, final scores, and payment adjustment for clinicians participating through traditional MIPS, MVPs, and the APM. We also present the incremental impacts to the number of expected QPs and associated APM Incentive Payments that result from our proposed policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

a. Overall MIPS Modeling Approach and Data Assessment

(1) Updating the MIPS Model

We created two MIPS RIA models: a baseline and proposed policies RIA model. The aim of the baseline model is to reflect participation, final scores, and payment adjustments for the CY 2023 performance period/2025 MIPS payment year based on previously finalized policies for the CY 2023 performance period/CY 2025 MIPS payment year. Examples of previously finalized policies are an increase in the APM qualified participants threshold

and the removal of the additional MIPS payment adjustment for exceptional performance and additional performance threshold. The proposed policies model builds off the baseline model and incorporates the MIPS policy proposals for the CY 2023 MIPS performance period/2025 MIPS payment year included in this rule. The aim of the proposed policies model is to estimate the incremental impacts of the proposed policies in this proposed rule. There were two major updates to the modeling approach used in this RIA.

First, we changed the MIPS modeling tool that we used in order to incorporate the same scoring engine as the one used to determine actual MIPS payment adjustments. We generally applied the same assumptions as our previous RIA analyses, but this update ensures that the clinician population and final scores in our model align as much as possible with actual MIPS scoring and minimizes differences between projections and policy implementation. It should be noted, data limitations and assumptions which may impact model results still remain and are described below.

Second, we modeled participation, scoring, and payment adjustments for the MIPS Value Pathways (MVPs). The CY 2023 performance period/2025 MIPS payment year is the first year where clinicians can voluntarily submit MVPs. Although we are modeling MVPs, we are not modeling subgroup reporting. A more detailed discussion of the approach used to model MVPs can be found in section VII.E.16.d.(2) of this RIA.

(2) Assessing Which Data To Use To Estimate Future MIPS Performance

This RIA uses the 2019 MIPS performance period submissions that were used for the CY 2022 PFS final rule RIA (86 FR 65617 through 65660). We discussed in the 2022 PFS final rule (86 FR 65637), how we assessed the use of 2020 performance period submissions and why we believed the 2019 performance period submissions would be a better data source, for the purposes of estimating future performance for the entire population of MIPS eligible clinicians. The submissions for the 2021 MIPS performance period were not available in time to assess whether the data can be used to predict future performance. For the final rule, we will evaluate whether it is appropriate to use the 2021 performance period data and whether adjustments would need to be made if CY 2021 performance category submissions data were used. For these reasons, we again used CY 2019 data to estimate the MIPS eligible clinician population and their associated final

scores for the CY 2023 MIPS performance period/CY 2025 MIPS payment year.

b. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2024, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP Performance Period for a year and the corresponding payment year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and does not meet any another exemption category, the eligible clinician would be subject to the MIPS reporting requirements and would receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B covered professional services in a payment year based on

performance during a prior performance period.

We incorporated this change into our baseline eligibility determination. In addition, the thresholds to achieve QP status beginning in the 2023 QP Performance Period will increase to 75 percent for payment amount, and 50 percent for patient count. Overall, we estimate that for the 2023 QP Performance Period between 144,700 and 186,000 eligible clinicians would become QPs, and therefore be excluded from MIPS.

In section VII.F.17.a. of this proposed rule, we projected the number of eligible clinicians that would be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that would be operating during the 2023 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2023 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2023 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Basic Track Level E, and the ENHANCED Track);
- Primary Care First (PCF) Model;
- Radiation Oncology Model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) on the 2021 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2023 QP Performance Period. We examined the extent to which Advanced APM

participants would meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Estimated Number of Clinicians Eligible for MIPS for the CY 2023 Performance Period/2025 MIPS Payment Year

(1) Clinicians Included in the Model Prior To Applying the Low-Volume Threshold Exclusion

For the baseline and proposed policies models, we generally used the same eligibility files, assumptions, and rules as described in the CY 2022 PFS final rule (86 FR 65639 through 65642), with the following updates:

- We used the eligibility determination file that aligned with the performance period of our submission data. Previously, in the CY 2021 PFS final rule (85 FR 85013), we noted we used a combination of data from the first determination period for the 2020 MIPS performance period (from October 1, 2018 to September 30, 2019) and data from the end of calendar year 2019 (from October 1, 2019 to December 31, 2019). We additionally noted that we used the determination period from the 2020 MIPS performance period eligibility file because it was the most recent eligibility file available. As we updated our model, we now believe using the final eligibility file from 2019, which reconciles information from the two eligibility determination periods would be a better data source to pair with our performance period submission data.

- Our new RIA models, based off of actual MIPS submissions and scores estimates scores for clinicians for NextGen ACOs and CPC+ (which were previously excluded from our CY 2022 PFS final rule RIA models (citation). The NextGen ACOs and CPC+ are both no longer available in the CY 2023 MIPS performance period, but we included these participants in our models because they comprised 18,892 MIPS eligible clinicians who we assume would continue to participate in MIPS.

- We incorporated the QP thresholds for the 2025 payment year as defined at § 414.1430.

We are not proposing any modifications to eligibility, therefore our eligibility assumptions apply to both the baseline and proposed policies models. Our analysis resulted in 1.6 million clinicians who had PFS claims from October 1, 2018 to September 30, 2019 as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2019 through December 31, 2019.

(2) Estimation of MIPS Eligible Clinicians After Applying Assumptions Related To Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted to MIPS. A clinician or group that exceeds at least one, but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment.

We describe below the estimated MIPS eligibility status and the

associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians for the proposed policies model. We applied the same assumptions presented in the CY 2022 PFS final rule RIA (86 FR 65617 through 65660) to apply the low-volume threshold and to determine whether clinicians participate as a group, virtual group, APM entity, or as individuals. Table 144 summarizes our eligibility estimates for the proposed policies model. We identify approximately 198,250 clinicians as having “required eligibility.” These clinicians will be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. These clinicians may ultimately choose to participate in MIPS as an individual, group, virtual group or APM entity or to not participate. Regardless of participation method, these clinicians will be considered MIPS eligible. We estimate approximately 646,749 MIPS eligible clinicians as having “group eligibility” in Table 144. These clinicians belong to a group or virtual group that meets the low-volume threshold and submits to MIPS. If they were not associated with the group or virtual group submission, these clinicians would not be eligible for MIPS. Finally, we estimate about 10,933 clinicians will be eligible through “opt-in eligibility” through the “opt-in” policy for a total MIPS eligible clinician population of approximately 865,116. This leads to an associated \$6.8 billion allowed PFS charges estimated to be included in the CY 2023 performance period/2025 MIPS payment year.

BILLING CODE 4120-01-P

TABLE 144: Description of MIPS Eligibility Status for CY 2023 Performance Period/2025 MIPS Payment Year Using the CY 2023 PFS Proposed Rule Assumptions**

		CY 2023 PFS Proposed Rule Estimates	
Eligibility Status	Predicted Participation Status in MIPS Among Clinicians*	Number of Clinicians	PFS allowed charges (\$ in mil)***
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	179,322	\$45,466
	Do not participate in MIPS	18,928	\$ 4,686
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	646,749	\$ 17,166
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	10,933	\$ 574
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		*865,116	\$ 67,899
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	424,752	\$10,063
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	107,995	\$ 694
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	207,477	\$ 9,880
Total Number of Clinicians Not MIPS Eligible		740,224	\$ 20,637
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,596,340	\$ 88,536

* Estimated MIPS Eligible Population

** This table does not include clinicians impacted by the automatic extreme and uncontrollable policy prior to the PHE for COVID-19. (Approximately 6,000 clinicians and \$527 million in PFS allowed charges.)

*** Allowed charges estimated using 2019 dollars. Low-volume threshold is calculated using allowed charges.

BILLING CODE 4120-01-C

Furthermore, we estimate there would be approximately 424,752 clinicians who are not MIPS eligible, but could be if the clinician or their group elects to opt-in. We describe this group as "Potentially MIPS eligible" in Table 144. These clinicians would be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the

maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1,280,868 clinicians. Finally, we estimate approximately 107,995 clinicians would not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 207,477 would not be MIPS eligible because they are categorically excluded regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the 2023 MIPS performance period is closed. For the remaining analysis, we use the estimated population of 865,116 MIPS eligible clinicians described above.

d. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2023 Performance Period/2025 MIPS Payment Year

(1) Summary of Approach for MVPs, Traditional MIPS and APM Performance Pathway

In sections IV.A.3.a. through IV.A.3.F. of this proposed rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.E.16.d.(3) of this RIA as we describe our methodology to estimate MIPS payments for the CY 2023 performance period/2025 MIPS payment year. We then present the impact of the overall proposed policies on the CY 2023 performance period/2025 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2023 performance period/2025 MIPS payment year. By comparing the baseline model to the proposed policies model, we are able to estimate the incremental impact of the proposed policies for the CY 2023 performance period/2025 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway or through an MVP in the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity but are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. As discussed in section VII.E.16.a.(2) of this RIA, we generally used the most recently available submissions data from the Quality Payment Program, however, due to the automatic extreme and uncontrollable policy applied in the CY 2020 performance period, for the purposes of this RIA we used data submitted for the CY 2019 MIPS performance period. In the final rule, when data from the CY 2021 performance period will be available, we will revisit this decision. The average percentage change in total revenues that clinicians earn is less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does

not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that would not be affected by MIPS payment adjustment factors.

(2) Methodology To Assess Impact for MIPS Value Pathways

In the 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MVPs beginning in the CY 2023 MIPS performance period/2025 MIPS payment year. In updating our MIPS RIA model, we have made some assumptions for both the baseline and proposed policies model to simulate MVP participants and their MVP final score which are described in the following sections.

(a) MVP Participant Assumptions

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup or APM entity) to register prior to submitting an MVP. As we do not yet have information on who will register, we assume for purposes of this model, that MVP Participants are individual clinicians or groups that currently submit at least 4 quality measures that are in an MVP. For these MVP Participants, we calculate both an MVP and a traditional MIPS score and take the highest score consistent with the scoring hierarchy as finalized in the CY 2022 PFS final rule 86 FR 65537). For the baseline model, we looked for the quality measures finalized for MVPs in the 2022 PFS final rule (86 FR 65441 through 65443):

- Advancing Rheumatology Patient Care
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes
- Advancing Care for Heart Disease MVP
- Optimizing Chronic Disease Management MVP
- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine
- Improving Care for Lower Extremity Joint Repair
- Patient Safety and Support of Positive Experiences with Anesthesia MVP

For the proposed policies model, we incorporate the proposed quality measure revisions for the above MVPs and use the quality measures to model scores for the new MVPs as proposed in Appendix X of this proposed rule:

- Advancing Cancer Care

- Optimal Care for Kidney Health
- Optimal Care for Neurological Conditions
- Supportive Care for Cognitive-Based Neurological Conditions
- Promoting Wellness

Our MVP Participant assumptions have limitations: we are not incorporating subgroups due to lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we seek comment on this assumption.

(b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to rules finalized in § 414.1365(d) and § 414.1365(e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the 2019 MIPS performance period (upon which our model is based.) Therefore, we scored any improvement activities the MVP Participants submitted in 2019 as if those improvement activities are in the MVP inventory.

(3) Methodology To Assess Impact For Traditional MIPS

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the CY 2019 MIPS performance period submissions data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, testing data for the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures which were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), testing data for the new episode cost measures, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2023 performance period/2025 MIPS payment year for the baseline and proposed policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where

each are described in detail in the following sections.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2022 PFS final rule (86 FR 65642 through 65643) for the baseline and proposed policies RIA models for the CY 2023 MIPS performance period/2025 MIPS payment year.

To create the baseline policies RIA model, which does not reflect the proposed policies for the CY 2023 performance period/2025 MIPS payment year, we made the following modifications to the CY 2022 PFS final rule finalized policies model to reflect the previously finalized quality performance category policies for the CY 2023 performance period/2025 MIPS payment year:

- As discussed in the CY 2022 PFS final rule (86 FR 65440), we finalized the removal of Web Interface measures after the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate a quality performance category score for clinicians in groups who previously used the CMS Web Interface as a collection type in 2019, we assumed these groups will use the other two other collection types (MIPS CQMs and eCQMs) available in the CY 2023 performance period/2025 MIPS payment year. We then applied the same methodology described in the CY 2021 PFS proposed rule using CY 2019 MIPS submissions data when the removal of Web Interface as a collection type was previously proposed (85 FR 50387 through 50388).

- As discussed in the CY 2022 PFS final rule (86 FR 65497 through 65498), we finalized removing the 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points starting with the CY 2023 performance period/2025 MIPS payment year. We implemented these changes. Due to technical limitation we were not able to simulate the removal of the special scoring policy of scoring 3 points for class 2 measures for clinicians not in a small practices beginning with the CY 2023 performance period/2025 MIPS payment year. We note that this limitation does not change our findings regarding the incremental impact of our proposed policies since it is a change that effects both the baseline and proposed policies models.

- In the CY 2022 PFS final rule (86 FR 65429), we also finalized extending

the use of the CMS Web Interface as a reporting option under the APM Performance Pathway into the CY 2024 MIPS performance period/2026 MIPS payment year. Under this policy, for the CY 2023 MIPS performance period/2025 MIPS payment year, Web Interface reporting would work in the same manner as for the CY 2021 MIPS performance period/2023 MIPS payment year, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both. In this baseline model, we calculated both a quality performance category score assuming APP submitted measures and another using Web Interface measures and took the highest score. To estimate a quality performance category for APP measures, we used the same methodology described in the CY 2021 PFS proposed rule when the Web Interface was not included in the APP (85 FR 50388).

- Similar to the CY 2022 PFS final rule model (86 FR 65642), we utilized the most recent benchmark file: the CY 2021 MIPS performance period historical benchmarks; however for this baseline model, we calculated a performance period benchmark if a historical benchmark was not available.

For the proposed policies model, we made the following modifications to the baseline model to reflect the newly proposed quality performance category policies for the CY 2023 MIPS performance period/2025 MIPS payment year:

- As discussed in section IV.A.10.d.(1)(b)(i) of this proposed rule, we proposed to score administrative claims quality measures using a benchmark calculated from the performance period data. To simulate this policy in our proposed policies model, we used CY 2019 performance period data to score administrative claims measures.

- In Appendix 1 of this proposed rule, we added 9 new MIPS quality measures, removed 15 MIPS quality measures, partially removed 2 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs, and proposed 75 substantially modified MIPS quality measures. Consistent with prior rules, (83 FR 50053), our RIA estimates assume that clinicians who reported Medicare Part B claims, eCQM, MIPS CQM and QCDR measures that are removed would find alternate measures; therefore, we assign points to the measures that were submitted and included them in our scoring model.

- In Appendix A, we propose one new administrative claims measure,

Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System, for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities that include at least 1 cardiologist. We included the test data for this measure into our model but we were not able to implement this model into our RIA estimation.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a similar methodology described in the CY 2022 PFS final rule (86 FR 65643) for the baseline and the proposed policies RIA models described in this section.

The baseline policies RIA model used the same methodology as the finalized policies model in the CY 2022 PFS final rule (86 FR 65643) since there are no previously finalized cost performance category policies that will apply beginning with the CY 2023 MIPS performance period.

In section IV.A.10.c.(2)(b) of this proposed rule, we are proposing to revise the operational list of care episode and patient condition groups and codes by adding the Medicare Spending Per Beneficiary (MSPB) clinician cost measure as a care episode group. This recategorization of the MSPB measure does not affect the scoring of the cost performance category. Additionally, in section IV.A.10.d.(1)(c)(i) of this proposed rule, we are proposing to establish a maximum cost improvement score of 1 percentage point out of 100 percentage points available for the cost performance category starting with the CY 2022 performance period/2024 MIPS payment year. Due to data limitations, we do not have multiple years of cost measures to model improvement scoring. Therefore, we did not make any modifications between the proposed policies and baseline model for the cost performance category scoring.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

For the baseline model, we estimated the facility-based score using the scoring policies finalized in the CY 2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169) incorporating the change to the facility-based scoring hierarchy described in the CY 2022 PFS final rule (86 FR 65526 through 65527). In our proposed policies model, we included two changes to facility-based scoring:

- As discussed in section IV.A.10.d.(2)(b)(i)(A) of this proposed rule, virtual groups would be able to receive a facility-based score.

- Additionally, as discussed in section IV.A.10.d.(2)(a)(i) of this proposed rule, facility-based clinicians would be eligible to receive a complex patient bonus.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

For the baseline RIA model, we used the CY 2019 MIPS Promoting Interoperability performance period submissions data to estimate CY 2023 MIPS performance for the Promoting Interoperability performance category. We did not make modifications to the Promoting Interoperability performance category baseline RIA model beyond what we finalized in the CY 2022 final rule (86 FR 64996).

For the proposed rule model, we considered the following policy proposals as potential modifications to the baseline RIA model:

- Require and modify the Query of PDMP measure for MIPS eligible clinicians participating in the Promoting Interoperability performance category and maintain the associated points at 10 points.

- Expand the Query of PDMP measure to include not only Schedule II opioids but also Schedule III, and IV drugs.

- Change the scoring for the e-Prescribing measure to 10 points available and the maximum total points available for the Electronic Prescribing Objective would remain at 20 points for CY 2023.

- Adding Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) measure as an optional alternative measure in the Health Information Exchange (HIE) objective.

- Modify the scoring methodology for the Promoting Interoperability performance category. We refer readers to section IV.A.10.c.(4) of this proposed rule, Table 87: Scoring Methodology for the Performance Period in CY 2023 of this proposed rule for further information on the scoring.

- Consolidate the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective and to require the reporting of active engagement for the measures under the objective

- Removing the automatic reweighting of NPs, PAs, CRNAs, or CNSs.

Due to limitations in our scoring engine-based model, we are unable to fully incorporate all of these changes into the proposed policies model. We incorporated into the model the modification to the scoring methodology for the Promoting Interoperability performance category and the removal of the automatic reweighting of NPs, PAs, CRNAs, and CNSs. We continue to use the scores for the e-Prescribing measure in the model as we only have data for the optional Query of PDMP measure. Due to the high submission rate for the optional measure and the expansion of the availability of PDMPs in all 50 States and several localities, we anticipate that clinicians who do not currently submit this newly required measure would now submit the measure or submit one of the associated exclusions. Because we lack CY 2019 MIPS submissions data for the Enabling Exchange Under TEFCA measure and the Health Information Exchange Bi-Directional exchange measure, previously finalized to be required beginning with the CY 2021 performance period, we only used past reporting on the existing Health Information Exchange Objective measures to estimate CY 2023 Promoting Interoperability performance for the proposed rule model. This may result in underestimating the Promoting Interoperability performance category scores if clinicians chose to report the bi-directional exchange measure for the CY 2021 performance period.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2019 MIPS performance period data and APM participation identified in section IV.A.10.d.(1)(c)(i) of this proposed rule. For clinicians and groups not participating in a MIPS APM, we used their CY 2019 improvement activities score. We did not model the policy finalized in the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit since we did not have data to determine the proportion of clinicians in a group that completed the improvement activity. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VII.F.17.c.(1) of this proposed rule, we assigned an improvement activity

performance category score of 100 percent.

(f) Methodology To Estimate the Complex Patient Bonus Points

For the baseline and proposed policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996). We calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap described at section IV.A.10.d.(2)(a) of this proposed rule. In section IV.A.10.d.(2)(a)(ii) of this proposed rule, we propose to allow facility based clinicians to receive a complex patient bonus. We incorporated this change in our RIA policies model.

(g) Methodology To Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and proposed policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2022 PFS final rule (86 FR 65519 through 65524).

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

(h) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold finalized in

the 2022 PFS final rule (86 FR 65527) of 75 points finalized at § 414.1405. For the proposed policies model, we applied the performance threshold of 75 points proposed in section IV.A.10.e.(2) of this proposed rule. We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Impact of Payments by Practice Size

We noticed minimal changes to the mean and median final score between our baseline and proposed policies model. In our baseline model, the mean and median final scores are 73.63 and 77.48, respectively. In the proposed policies model, the mean final score is 73.57 and the median final score is 77.52. Because these mean and median final scores are so close to our performance threshold of 75, many clinicians are only slightly above or slightly below the performance threshold. For instance, in the proposed policies model, 284,000 clinicians have a final score between 70 and 80 points. We recognize that, because many scores are clustered around the performance threshold of 75, any variation in scoring or submissions data such as the presence of submission data for the Trusted Exchange Framework and Common Agreement (TEFCA) measure and the Health Information Exchange bi-directional exchange measures, discussed in section VII.E.16.d.(3)(d) of this RIA, can have a significant impact on the proportion of clinicians receiving a positive or a negative payment adjustment. Between the baseline and proposed policies model we observe a slight difference in the percentage and distribution of clinicians receiving a negative payment adjustment. Overall, we project 66.5 percent of engaged clinicians⁵⁴⁷ would receive a positive or neutral adjustment in our proposed policies model up from 62 percent in the baseline model.

We observe a slight difference in payment adjustments by practice size. Note that in the CY 2021 PFS final rule

we did not report the solo clinician's category. This category, which encompasses 21,955 clinicians, has a slightly larger share receiving a negative payment adjustment compared to other practice sizes. We note an increase in the percentage of clinicians receiving a positive or neutral payment adjustment between the baseline and proposed policies model for all practice sizes except for large practices where we see a slight decrease.

Because many clinicians scores are close to the performance threshold, many of these clinician's payment adjustments are fairly small and many negative adjustments are much lower in magnitude than the statutory maximum negative adjustment of 9 percent. In our proposed policies model, we project a payment adjustment of negative 9 percent for clinicians with a score of 18 points or below and we project only 3,481 clinicians would receive a score of 18 points or below and thus be subject to the maximum negative payment adjustment.

In our baseline model, the average positive payment adjustment among engaged clinicians is 2.50 percent and the average negative payment adjustment is -1.68 percent. In our proposed policies model, the average positive payment adjustment among engaged clinicians is 2.49 percent and the average negative payment adjustment among engaged clinicians is -1.64 percent. Only 6.84 percent of clinicians receive a score of less than 50 points and therefore a negative payment adjustment of more than 3 percent. Because there is only a slight difference in the proportion of clinicians receiving a negative payment adjustment between the proposed policies and baseline model, we anticipate only a modest change in the amount of funds redistributed due to budget neutrality (from \$1 billion to \$998 million) and a modest change in the maximum positive payment adjustment from 6.8 percent in the baseline to 6.9 percent in the proposed policies model, however, we recognize that a modest change in final scores could influence the amount of funds available for redistribution.

These findings and proposed policies reflect movement away from the transition policies implemented during the early years of MIPS and how MIPS

is focusing on value rather than primarily on engagement. However, a large proportion of those who are non-engaged, or not submitting data to MIPS, are clinicians in small practices. Among those who we estimate would not engage with MIPS, 79.8 percent are in small practices (16,614 out of 20,810 clinicians who do not engage). We intend to continue working with interested parties to improve engagement in MIPS among clinicians in small practices.

We want to highlight we are using 2019 MIPS performance period submissions data to simulate a CY 2023 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2023 performance period/2025 MIPS payment year. This is because the PHE for COVID-19 may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID-19 for the CY 2019 MIPS performance period. Therefore, engagement levels in MIPS for the CY 2023 performance period/2025 MIPS payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the CY 2019 performance period/2021 MIPS payment year, which is associated with a performance threshold of 30 points, and that participation may change since the proposed performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments as a percent of allowed charges among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS.

BILLING CODE 4120-01-P

⁵⁴⁷ We define engaged MIPS clinicians as those who have submitted data for at least one MIPS performance category or are facility-based.

TABLE 145: Estimated CY 2023 Performance Period/2025 MIPS Payment Year Impact on Total Estimated Allowed Charges by Participation Status and Practice Size**

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we are proposing several policies that have an impact on burden in the CY 2023 performance

period/2025 MIPS payment year. In section VII.E.16.e. of this proposed rule, we outline estimates of the costs of data collection that includes both the effect of proposed policy updates and adjustments due to the use of updated data sources. For each proposal

included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 147. We also provide proposed additional burden discussions that we are not able to quantify.

TABLE 147: Incremental Burden from Associated Proposed Policies

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden associated with the proposal to continue the policies and ICRs set forth in the CY 2022 PFS final rule into the CY 2023 MIPS performance period/2025 MIPS payment year (as discussed in section V.B.9.p of this proposed rule).	1,476,903	\$157,603,546
Burden change for MVP registration ICR due to the proposal of additional MVPs (as discussed in section V.B.9.e.(7)(a)(i) of this proposed rule). *	+684	+\$67,223
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the proposal of additional MVPs (as discussed in section V.B.9.e.(4) of this proposed rule). *	-8,719	\$922,695
Burden change for Quality Data Submission by Clinicians: CQM/QCQR Collection Type ICR for capturing reduced number of quality submissions due to the proposal of additional MVPs (as discussed in section V.B.9.e.(5) of this proposed rule). *	-9,828	-\$1,063,579
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the proposal of additional MVPs (as discussed in section V.B.9.e.(6) of this proposed rule). *	-8,320	-\$911,269
Burden change for MVP Quality Submission ICR submissions due to the proposal of additional MVPs (as discussed in section V.B.9.e.(7)(a)(iii) of this proposed rule). *	+14,048	+\$1,508,672
Burden change for Promoting Interoperability Submission ICR due to the proposed requirement for clinicians to submit their level of active engagement for the Public Health and Clinical Data Exchange Objective (as discussed in section V.B.9.g.(3) of this proposed rule).	+1,096	+\$107,715
Total change in burden due to policy for CY 2023	-11,039	-\$1,213,933
Total burden set forth in the CY 2023 PFS proposed rule	1,465,864	\$156,389,613

* The total change in burden due to this proposal includes an increase in burden due to an anticipated increase in the number of respondents that would participate in MVP reporting based on the proposed addition of 5 new MVPs. Therefore, there would be a decrease in burden in the “Quality Data Submission: MIPS CQM and QCQR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the increase in the number of respondents for “MVP registration.” See section V.B.9.e.(7)(a)(i) of this proposed rule.

BILLING CODE 4120-01-C**(2) Additional Impacts to Clinicians****(a) MVP Maintenance and Development Process**

In section IV.A.8.a. of this rule, we propose updates to the previously finalized policies for the MVP development and maintenance process in the CY 2021 and 2022 PFS final rules (85 FR 84849 through 84856 and 86 FR 65410). Specifically, we propose to modify the MVP development process such that we would evaluate a submitted candidate MVP through the MVP development process and if we determine it is “ready” for feedback, we would post a draft version of the MVP on the Quality Payment Program

website (<https://qpp.cms.gov/>) and solicit feedback for a 30-day period. Interested parties and the general public would have the opportunity to submit feedback on the candidate MVP for CMS’s consideration through an email inbox. We would review the feedback received, and determine if any changes should be made to the candidate MVP prior to potentially including the MVP in a notice of proposed rulemaking. If we determine changes should be made to the candidate MVP, we would not notify the interested party who originally submitted the candidate MVP for CMS consideration in advance of the rulemaking process.

We also propose that beginning with the CY 2023 performance period/2025

MIPS payment year, to modify the MVP maintenance process such that interested parties and the general public would be able to submit their recommendations for potential revisions to established MVPs on a rolling basis throughout the year. We would then review the submitted recommendations and determine whether any are potentially feasible and appropriate. If we identify any submitted recommendations that are potentially feasible and appropriate, we would host a public facing webinar, open to interested parties and the general public, through which they may offer their feedback on the potential revisions we have identified. We would publish details related to the timing and

registration process for the webinar through our Quality Payment Program Listserv.

We acknowledge that there is administrative burden associated with the monitoring and review of the candidate MVPs. However, we are unable to estimate the impact of these proposals and quantify the number of interested parties and members of the general public that would review and submit their feedback for a candidate MVP. Similarly, we are uncertain on the number of interested parties and members of the general public that would submit their recommendations for potential revisions to established MVPs for an applicable performance period and if CMS would be hosting a public webinar based on the review of the recommendations. In summary, we are unable to quantify the impact associated with the proposed changes to the MVP development and maintenance process.

(b) Subgroup Registration

In section IV.A.8.e.(3) of this rule, we propose that as part of the subgroup registration process, in addition to the previously established registration requirements, group TINs must provide a description of each subgroup that is registered. Under this proposed policy, we would identify some key scenarios for subgroups to select from that we expect might reflect a typical subgroup, but also wish to offer an opportunity for group TINs to describe how they constructed their subgroups by providing a narrative in a text-only field, if the options we provide do not correctly describe the subgroup. We recognize that there may be additional burden associated with the proposed description requirement for subgroup registration. However, we assume that the burden associated with choosing a key scenario would minimize the time required for subgroups to provide a narrative description. Additionally, we anticipate the narratives to be short descriptions of the nature of a group practice and appropriately reflect the subgroup composition. We are unable to quantify the additional impact for the proposed subgroup description requirement.

(c) Impact on Third Party Intermediaries

In section IV.A.10.g.(3)(a) of this rule, we propose to revise the corrective action plan (CAP) requirement at § 414.1400(e)(1)(i)(B) to address the impact to any affected parties, as appropriate. We also propose to add § 414.1400(e)(1)(i)(E) to require the detailed communication plan for communicating the issues that

contributed to the non-compliance and the impact to any affected parties, as appropriate. We anticipate administrative burden associated with the proposed requirement for third party intermediaries to submit a detailed communication plan. Because of the relatively low number (fewer than 10 per year historically) of CAPs that we anticipate receiving from QCDRs for the CY 2023 performance period/2025 MIPS payment year, we are unable to quantify the burden associated with the development of a communication plan for third party intermediaries.

(d) Compare Tools: Public Reporting

In section IV.A.10.h.(1) of this rule, we propose to identify clinicians who perform telehealth services using Place of Service Code 02 (indicating telehealth) on paid physician & ancillary service (that is, carrier) claims, or modifier 95 appended on paid claims. Additionally, we propose publicly reporting Medicare procedural utilization data on the Compare tool clinician and group profile pages in a way that is understandable to patients and caregivers, based on user testing, and helps them make healthcare decisions. We would begin publicly reporting procedural utilization data no earlier than CY 2023. We will use a 12-month lookback period and bi-monthly data refresh frequency, as technically feasible. While the Compare tool proposals do not increase the burden of collections, we note that the PRA package may require relevant modification to reflect the Compare tool's new uses and public display.

(e) Administrative Claims Measure

As discussed in appendix 1, we are proposing to add one new administrative claims quality measure beginning in the CY 2023 performance period/2025 MIPS payment year and for future performance periods: Risk-standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or

organization may experience. In summary, we are acknowledging that while there are no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(f) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.10.b of this proposed rule, we are proposing changes to the improvement activities inventory for the CY 2023 performance period/2025 MIPS payment year and future years as follows: adding four new improvement activities; modifying five existing improvement activities; and removing six previously adopted improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. We do not believe these proposed changes to the inventory will significantly impact time or financial burden on interested parties because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We recognize that different activities may require differing amount of time to complete, but for the purposes of the COI, we focus on the amount of time it takes to submit the associated information into the system. We do not expect these proposed changes to the inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies in this proposed rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2023 MIPS performance period.

g. Assumptions & Limitations

In section VII.E.16.d.(4) of this RIA we noted the limitation that, because many scores are clustered near the performance threshold of 75 points, minor variations in clinicians final scores relative to our estimations could have significant impacts on the proportion of clinicians receiving a positive or negative payment adjustment. In addition to this limitation, we note several other

limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY 2023 performance period/2025 MIPS payment year. Due to the PHE for COVID-19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the CY 2023 performance period/2025 MIPS payment year that we are not able to model with our historic data sources. The scoring model results presented in this proposed rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2023 Quality Payment Program data submissions and performance. The estimated performance for the CY 2023 performance period/2025 MIPS payment year using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the CY 2019 performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the proposed performance threshold for the CY 2023 performance period/2025 MIPS payment year (75 out of 100). We anticipate clinicians may submit more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and submitted data would continue to elect to opt-in in the CY 2023 performance period/2025 MIPS payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policies.

There are additional limitations to our estimates. In addition to the limitations described throughout the methodology sections: (1) to the extent that there are year-to-year changes in the data submission, volume and mix of services

provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 144 and (2) our data for the cost performance category does not overlap with CY 2019 so we may not be capturing performance for all clinicians. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

F. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we propose to exercise agency discretion, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we present above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)

As discussed in section II.B. of this proposed rule, “(5) PE RVU Methodology,” Steps 3, 10, and 18, and “3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)”, we hold the work RVUs constant and adjust the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the Medicare Economic Index (MEI) cost shares are updated, we typically propose to modify steps 3 and 10 described in section II.B. of this proposed rule to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the rebased and revised MEI cost share

weights, as previously described in the CY 2014 PFS final rule (78 FR 74236 and 74237), and to recalibrate the relativity adjustment that we apply in step 18 described in section II.B. of this proposed rule. The most recent recalibration was done for the CY 2014 RVUs, when the MEI was last updated.

As an alternative to adjusting the aggregate pools of direct and indirect PE costs and using a relativity adjustment based on the current CY 2014 MEI update, we considered using the proposed rebased and revised MEI cost share weights for CY 2023, as discussed in detail in section II.M. of this proposed rule, for purposes of adjusting the RVUs to match PE share of the MEI for CY 2023. We considered using the rebased and revised cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, shifting over a 4 year transition to reach the proportions of work, PE, and MP, as proposed in section II.M. of this proposed rule.

Table 148 illustrates specialty-specific impacts for the proposed rule if we were to use the proposed rebased and revised MEI cost share weights to adjust the RVUs to match the PE share of the MEI. Column C represents specialty level impacts of our proposals for CY 2023 without the recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights, shown for comparison to the alternatives considered (same impacts as shown in Table 139). Column E represents the specialty level impacts of our proposals for CY 2023 with Year 1 of a 4-year phased in recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights. Column F represents the specialty level impacts of our proposals for CY 2023 with the recalibration of RVU proportions based on the proposed rebased and revised MEI cost share weights, without a 4-year phase in, but rather, a full implementation for CY 2023.

BILLING CODE 4120-01-C

The majority of specialties would experience shifts of 1 percent or greater if we used the proposed rebased and revised MEI cost share weights, as opposed to the current weights, displayed in Table 148, for proportioning work, PE, and MP RVUs. Several specialties shifted by greater than 3 percent, particularly the specialties with relatively higher PE costs, which are mostly realizing a positive shift, or relatively higher physician work costs, which are realizing a negative shift. As shown in Column F, the shifts are amplified, both negatively and positively, when use of the proposed rebased and revised MEI cost share weights is not phased in over several years; therefore, we did not consider this a viable alternative for consideration. We note that there are

significant shifts in specialty level payments if we used the proposed rebased and revised MEI cost share weights, some of which counter other CY 2023 proposals (that is, changes to Evaluation and Management (E/M) services, chronic pain management, and behavioral health services).

We have proposed to delay the adjustments to allow public comment and finalization of the proposed rebased and revised MEI, and to maintain use of the current MEI cost share weights while presenting the information in section II.M. of this proposed rule and the specialty level impacts in Table 148. We are also soliciting comment on the use of a transition to phase in use of the proposed rebased and revised MEI cost share weights, if and as finalized, for potential future rulemaking. Because there are significant proposed

methodological and data source changes to the MEI for CY 2023 and significant time has elapsed since the last rebasing and revision of the MEI, we believe it is important to allow public comment and finalization of the proposed MEI changes based on the review of public comment before we incorporate the updated MEI into PFS ratesetting, and we believe this is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. Similarly, we are proposing to delay the implementation of the proposed rebased and revised MEI for use in the PE geographic practice cost index (GPCI) to allow public comment and finalization of the proposed MEI changes based on the review of public comment before we incorporate the updated MEI into the PE GPCIs.

2. Alternatives Considered for the Practice Expense (PE) Geographic Practice Cost Index (GPCI)

As discussed in section II.G. of this proposed rule, we use the MEI cost share weights to weight the four components of the PE GPCI: employee compensation, the office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses. As the MEI cost shares are updated, we have historically updated the GPCI cost share weights to make them consistent with the most recent update to the MEI. Instead, we are proposing to maintain the use of the current 2006-based MEI cost share weights for the CY 2023

proposed GPCIs, allowing interested parties the opportunity to review and comment on, and for us to respond to comments and finalize, the proposed rebased and revised MEI cost share weights. Because there are significant proposed methodological and data source changes to the MEI for CY 2023 and significant time has elapsed since the last rebasing and revision of the MEI, we believe it is important to allow public comment and finalization of the proposed MEI changes based on the review of public comment before we incorporate the updated MEI into the PE GPCI.

As an alternative to using the current 2006-based cost share weights, we considered using the proposed rebased

and revised Medicare Economic Index (MEI) cost share weights for CY 2023, as discussed in detail in section II.M. of this proposed rule for purposes of weighting the four components of the CY 2023 PE GPCI. Specifically, within the four components of the PE GPCI, we considered proposing to update the employee compensation component from 16.553 percent to 24.716 percent, the office rent component from 10.223 percent to 5.893 percent, the purchased services component from 8.095 percent to 13.914 percent, and the medical equipment, supplies, and other miscellaneous expense component from 9.968 percent to 6.819 percent, as shown in Table 149.

TABLE 149: Weighting of the PE GPCI Based on the Cost Share Weights for CY 2023

Expense Category	Current Cost Share Weights	Proposed CY 2023 Cost Share Weights	Rebased and Revised Cost Share Weights as Proposed in Section II.M.
Practice Expense	44.839%	44.839%	51.341%
- Employee Compensation	16.553%	16.553%	24.716%
- Office Rent	10.223%	10.223%	5.893%%
- Purchased Services	8.095%	8.095%	13.914%
- Equipment, Supplies, Other	9.968%	9.968%	6.819%

The use of the proposed rebased and revised MEI cost share weights only impacts the PE GPCI. When the PE GPCI was calculated using the proposed rebased and revised MEI cost share weights, 10 of the 112 PE GPCI values remained the same compared to the calculated PE GPCI using the current 2006-based MEI cost share weights. Three of the 112 PE GPCI values differed by ± 0.001 and 68 of the 112 PE GPCI values differ less than or equal to ± 0.009 . Therefore, the proposal to maintain the use of the current 2006-based MEI cost share weights has little to no effect on over 70 percent of the localities' PE GPCIs. Of the remaining 31 localities with a difference of greater than ± 0.009 between the proposed PE GPCI and the alternative considered, 10 realize an increased PE GPCI when the current 2006-based MEI cost share weights were used, ranging from an increase of 0.010 to 0.012, as compared to the PE GPCI if the proposed rebased and revised MEI cost share weights were incorporated. The remaining 21 localities realize a decrease in PE GPCI when the current 2006-based MEI cost share weights were used, ranging from

a decrease of 0.010 to 0.028. We note that we are seeking comment in section II.G. of this proposed rule on the proposal to maintain the use of the current 2006-based MEI cost share weights and postpone the implementation of the proposed rebased and revised MEI cost share weights for consideration through potential future rulemaking. See Alternate Addenda D and E to this proposed rule for the CY 2023 GPCIs and summarized GAFs if the rebased and revised MEI cost share weights proposed in section II.M. of this proposed rule, were incorporated to weight the proposed CY 2023 PE GPCIs (for comparison to Addenda D and E with the proposal to maintain the current 2006-based MEI cost share weights for the PE GPCIs). Because the PE GPCIs factor into the GAF equation, we created an Alternate Addendum D to show the recalculated GAFs if the rebased and revised MEI cost share weights were incorporated to weight the CY 2023 PE GPCIs as well. These alternative addenda are available on the CMS website under the supporting documents section of the CY 2023 PFS proposed rule at <https://www.cms.gov/>

Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html. We note that only the PE GPCI and GAF values differ between Addenda D and E, and Alternate Addenda D and E, as the proposed rebased and revised cost share weights do not impact the work or MP GPCIs.

3. Alternatives Considered Related to Payment for E/M Services

In developing our policies for other E/M visits effective January 1, 2023, we considered a number of alternatives. For reasons discussed in our E/M policy section (section II.F. of this proposed rule) we considered several refinements for the RUC-recommended work RVUs for several of the codes in the families based on survey time changes to include Hospital Inpatient or Observation Care, Nursing Facility visits, and Home or Residence Services. We proposed to accept the RUC recommendations for the work RVUs because we believe they are more accurate values. For some of these codes the overall times changed and the RUC recommended work RVUs accurately reflect changes based on changes in the times for the service. For

some of the codes, changes were noted in the total time and intra-service times which was reflected in the intra-time and total time ratios that led to an increase. Given our interest in maintaining continuity in the overall code set, we are proposing to accept the RUC recommendations for the work time values and work RVUs for these codes and are seeking public comment on our concerns for specific codes.

We considered adopting the CPT coding for prolonged services as an alternative but after thoughtful consideration we are proposing to develop Medicare-specific coding (three G-codes, one per setting) to avoid potentially substantial overpayment, provide administrative simplification, enable CMS to determine how much time is being spent with patients using claims data, and facilitate program integrity. Allowing for CMS to determine how much time is being spent with patients using claims data is important for future valuation of services on the PFS, and for program integrity. If we proposed to merely accept the CPT prolonged service coding changes, we would not be able to identify the time spent with patients in the claims data alone, because we might not know which primary service is the companion code to the prolonged service code(s) due to the wide service timespan (for prolonged services without direct patient contact) and non-specific care settings within the prolonged CPT code descriptors. We considered two options in coming to our proposal. First, we considered using the descriptor time plus 15 minutes which would allow for prolonged services to be reportable once the practitioner spends 15 additional minutes beyond the ceiling time of the primary service. Or, our second option was to use total time plus 15 minutes allowing for prolonged services to be reportable once the practitioner spends 15 additional minutes beyond the total time of the primary service. Both of these options would allow for time to be counted on any day within the survey period with no frequency limit. However, we decided to take the same approach we did for the office/outpatient E/M visits by proposing Medicare specific coding (GXXX1 through GXXX3) for prolonged services for other E/Ms. We proposed to value the G codes similarly to the parallel CPT codes, and require total time to be met before prolonged time starts. Reporting this way, through the use of a G code for each of the specified code families, allows for administrative simplicity and payment accuracy.

4. Alternatives Considered Related to Proposal To Allow Audiologists To Furnish Diagnostic Tests, as Appropriate Without a Physician Order

As discussed in section II.K. of this proposed rule, interested parties have told us that our regulatory requirement for a physician or NPP order for diagnostic audiology services may be impeding access to audiologists. More recently they have requested that we eliminate the treating physician (or NPP) order requirement for the diagnostic hearing and balance assessment services furnished by audiologists—via notice and comment rulemaking—to enable greater access to these services.

As we also discussed in section II.K. of the proposed rule, we are concerned that direct access of audiologists' services, that is the removal of the order requirement for these hearing and balance services furnished by audiologists, might lead to payment for services that are not medically necessary because the results are not being used by a treating physician or NPP in the management of the patient's medical condition. Nonetheless, after careful consideration of the interested parties' requests, we have proposed to amend the regulation at § 410.32(a)(4) to remove the order requirement for certain audiology services furnished personally by an audiologist once per beneficiary per 12-month period for non-acute hearing conditions. We also propose to create HCPCS code GAUDX (*Audiology service(s) furnished personally by an audiologist without a physician/NPP order for non-acute hearing assessment unrelated to disequilibrium or hearing aids or examinations for the purpose of prescribing, fitting, or changing hearing aids; may be performed on an annual basis*) to describe audiology services furnished without the order of a treating physician or practitioner.

When developing our proposed policy, we considered adding audiologists to § 410.32(a)(2), under the provision that permits nonphysician practitioners to order diagnostic tests. However, unlike audiologists, the practitioners identified in this provision are all required to accept payment on an assignment-related basis under section 1842(b)(18)(C) of the Act and must accept the Medicare payment amount as payment in full. Medicare payment for audiology services provided by audiologists who do not accept assignment would result in higher out-of-pocket expense (that is, the balance billed amount) than if they did accept assignment. In addition, Medicare Part

B does not recognize audiologists to treat or manage patients, unlike PAs, NPs or CNSs who may bill for E/M services, and for whom Medicare Part B covers services and supplies incident to their own professional services as provided in the regulation at § 410.26. Rather, because audiology services furnished by audiologists include only diagnostic hearing and balance assessment services, we concluded that adding audiologists with the NPPs listed in § 410.32(a)(2) was inappropriate.

We also considered alternatively removing the requirement for the order of a treating physician or practitioner for audiology services without the annual limitation. However, we had concerns about the possibility of overutilization of HCPCS code GAUDX if the results of audiology testing are not used by a treating clinician to manage the patient's medical condition. Additionally, we do not have the ability to predict the behavioral response of audiologists to removal of order requirements. Therefore, we believe that adding an annual limitation would serve to address some of our concerns of overutilization. To monitor for the appropriate use of HCPCS code GAUDX, we will establish system edits through our usual change management process to ensure that GAUDX is only paid once every 12 months per each beneficiary. This will also help address program integrity concerns about audiologists billing GAUDX more frequently, furnishing services that are not reasonable or necessary for the treatment of the beneficiary's illness or injury, or billing more than one unit of GAUDX on a claim. Finally, because we are concerned about beneficiaries with acute onset conditions that require immediate medical intervention, and the potential loss of valuable time for medical intervention if the patient sees an audiologist first, we are limiting the direct access to audiology services to non-acute hearing conditions and conditions for which patients' experience disequilibrium symptomology. To help address these safety concerns about direct access to audiologists, we want to stress the importance that such hearing conditions with a rapid onset and balance conditions with disequilibrium symptoms are to be referred directly to the primary care physician, ENT or other physician or NPP treating the beneficiary.

5. Alternatives Related to Proposals for Medicare Part A and B Payment for Dental Services and Request for Information

As explained in this proposed rule, we believe there are instances where the medical services necessary for treating the individual's underlying medical condition and clinical status may require the performance of certain dental or oral health services. In these instances, we believe that the dental and oral health services are not in connection with the care, treatment, filling, removal or replacement of teeth or structures directly supporting teeth, and instead are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services such that the dental or oral health services are not subject to the statutory payment preclusion under section 1862(a)(12) of the Act. We also believe that there are circumstances where the dental or oral health services are in connection with the care, treatment, filling, removal or replacement of teeth or structures directly supporting teeth, and are not inextricably linked to the clinical success of an otherwise covered medical service such that Medicare payment for the dental or oral health services is precluded by section 1862(a)(12) of the Act. And we believe that there may be circumstances where, because of the patient's underlying medical condition and clinical status or because the severity of the dental procedure, the patient requires hospitalization to receive services in connection with the care, treatment, filling, removal or replacement of teeth or structures directly supporting teeth such that payment could be made under Medicare Part A for inpatient hospital services in connection with the dental or oral health services under the exception provided under section 1886(a)(12) of the Act.

In section II.L.2. of this proposed rule, we are: (1) proposing to clarify our interpretation of section 1862(a)(12) of the Act, and clarify and codify certain of our current Medicare FFS payment policies for medically necessary dental services; (2) proposing and seeking comment on payment for other dental services, such as dental examinations, including necessary treatment, performed as part of a comprehensive workup prior to organ transplant surgery, or prior to cardiac valve replacement or valvuloplasty procedures, that are similarly inextricably linked to, and substantially related and integral to the clinical success of, certain other covered

medical services; (3) requesting comments on other types of clinical scenarios where the dental services may be inextricably linked and substantially related and integral to the clinical success of other covered medical services; (4) requesting comments on the potential establishment of a process to identify for our consideration and review submissions of additional dental services that are inextricably linked and substantially related and integral to the clinical success of other covered medical services; (5) requesting comment on other potentially impacted policies; and (6) requesting comment on potential future payment models for dental and oral health care services.

We note that we are open to considering and finalizing payment under Medicare Parts A and B for dental services under additional circumstances to those for which payment is already made under our current policy or for which we are specifically proposing to make payment beginning in CY 2023. Specifically, we would consider finalizing Medicare Part A and Part B payment for dental services if there are other circumstances in which such dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal or replacement of teeth or structures directly supporting teeth; but rather, are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services. In that case, the dental services would not be subject to the Medicare payment exclusion provided under section 1862(a)(12) of the Act. We considered whether to propose Medicare payment for the performance of other services where a comprehensive dental or oral health exam, and potential treatment, might be considered a standard of care prior to the performance of an otherwise covered medical service, such as before certain treatment of head and neck cancers, such as radiation therapy with or without chemotherapy, before the initiation of medically necessary immunosuppressant therapy, such as those used during cancer treatments, prior to joint replacement surgery (such as total hip and knee arthroplasty surgery). However, we decided not to specifically propose payment in these circumstances because we believe more clinical data is necessary to determine whether the dental services would be inextricably linked to, and substantially related and integral to the clinical success of, these medically necessary services. We welcome public comments

on all of these alternatives discussed, including whether Medicare payment should be specified for other types of services where the dental services may be so inextricably linked to the clinical success of an otherwise covered medical service that they are not in connection with the care, treatment, filling, removal or replacement of teeth or structures directly supporting the teeth. We welcome public comments on these alternatives and others, which we may consider finalizing in the CY 2023 PFS final rule, or through future rulemaking after considering the comments received.

In section II.L.2.c.(ii) of this proposed rule, we seek comment on the potential establishment of a process to accept, review and consider additional clinical scenarios where payment may be permitted under Medicare Part A and Part B for certain additional dental services. We note that we considered establishing categorical clinical criteria and review process for submissions in order to consider whether these dental services are inextricably linked to an otherwise covered medical service, and therefore not subject to the Medicare payment exclusion provided under section 1862(a)(12) of the Act. However, we decided not to establish specific review criteria at this time because we believed a more open-ended clinical review process was preferable as we began to carefully consider payment policies for dental services in light of our longstanding interpretation of section 1862(a)(12) of the Act. We seek comment on alternative approaches to reviewing these submissions if we finalize the proposed process, such as outlining the specific types of medical literature needed to support the inclusion of services for Medicare FFS payment purposes, or legal and clinical analysis needed to consider whether the services do or do not fall within the statutory exclusion for dental services under section 1862(a)(12) of the Act based on our proposed interpretation within this proposed rule. We welcome public comments on these alternatives and others, which we may consider finalizing in the CY 2023 PFS final rule or future rulemaking after considering the comments received.

If we were to finalize a change in the CY 2023 PFS rulemaking to expand the types of dental services for which payment can be made under Medicare Parts A and B, we remain open to adjusting any finalized policy through future rulemaking, and conducting further impact analysis while also providing an opportunity for public comment on such analysis.

6. Alternatives Considered Related to Medicare Shared Savings Program

One purpose of the proposed prior savings adjustment is to mitigate the rebasing ratchet effect on an ACO's benchmark in order to improve the incentive for higher spending ACOs to reduce spending in advance of eventual rebasing and to encourage their renewal for successive agreement periods. It remains a possibility, however, that even with this provision, higher spending ACOs that are effective in reducing spending may eventually drop out of the Shared Savings Program absent the opportunity to participate in a one-sided model in the succeeding agreement period. While we project only 1 to 5 percent of new ACOs dropping out before the end of their first agreement period, the dropout rate could reach as high as 30 percent during the second agreement period. Signaling that risk will eventually be mandatory could prevent the formation of low-revenue ACOs for whom a sharing-only incentive has proven to be effective. We considered an alternative in which low revenue ACOs would be permitted to participate in a one-sided model for a second full agreement period and estimate it would further increase program savings by at least \$1 billion because it would increase retention for the type of ACO that has favorably responded to a moderate upside-only incentive in the past. This additional savings would result from (1) about a 60 percent reduction in the projected dropout rate by the end of the second agreement period for new and re-entering ACOs and (2) an assumed incremental increase in the share of ACOs that would form as low revenue (a type that is assumed to be more effective at reducing spending). This alternative estimate is likely conservative, as the savings impact could be significantly greater if such signaling regarding the second agreement period were to prove to be a key factor motivating a significant increase in the overall number of ACOs that enter a first agreement period under the Shared Savings Program (instead of just the proportion that form as low revenue versus high revenue).

Commenters may support also adding guardrails for calculating shared savings by limiting the difference the ACPT may be allowed to show (in either direction) from actual national assignable trend. Setting a prospective symmetric threshold for correcting extreme projection error would automatically correct for bias in either direction and prevent the need for CMS to address pressure to correct projection error on

an ad hoc basis. Public pressure to correct for projection error would be strongest in situations where actual growth eclipses the ACPT by a significant margin. If CMS were assumed to only update the ACPT in years where such pressures were magnified because a change would favor ACOs, this impact estimate would show \$1.3 billion in additional spending over 10 years. This estimate presumes that CMS would limit deviation in ACPT from actual national trend to no more than 2 percent in years where the ACPT understates national trend. The cost of such policy to asymmetrically correct for unfavorable projection error would grow if the threshold for making such adjustments were assumed to move lower than 2 percent.

7. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran separate proposed policies RIA models based on the actual mean for the CY 2019 performance period/2021 MIPS payment year and the CY 2020 performance period/2022 MIPS payment year with a performance threshold of 86 and 89, respectively which are potential values that may be used for the performance threshold for CY 2023 performance period/2025 MIPS payment year. The models have the same mean and median final score as our proposed policies RIA model since the performance threshold does not change the final score. In the iteration with a performance threshold of 86, 82.3 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data. In the model with a performance threshold of 89 points, 89.1 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

We report the findings for the baseline RIA model which describes the impact for the CY 2023 MIPS performance period/2025 MIPS payment year if this proposed regulation did not exist. The baseline RIA model has a mean final score of 73.63 and median final score of 77.48. We estimate that \$1 billion would be redistributed through budget neutrality. There would be a maximum payment adjustment of 6.8 percent after considering the MIPS payment adjustment. In addition, 39.4 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

G. Impact on Beneficiaries

1. Shared Savings Program Provisions

As noted previously, a number of changes in this proposed rule collectively aim to increase participation in a more sustainable way for ACOs serving medically complex, high cost beneficiaries. The proposed policies are designed to reverse recent trends where growth has plateaued in the Shared Savings Program, higher spending populations are increasingly underrepresented in the program since the change to regionally-adjusted benchmarks, and access to ACOs appears inequitable as evidenced by data indicating that Black (or African American), Hispanic, Asian/Pacific Islander, and American Indian/Alaska Native beneficiaries are less likely to be assigned to a Shared Savings Program ACO than their Non-Hispanic White counterparts, and to encourage growth of ACOs in underserved communities.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. In addition, ACOs have consistently demonstrated their ability to improve quality with 64 percent of ACOs participating during both 2019 and 2020 receiving Quality Improvement Reward points with the majority of ACOs showing the greatest improvement in the Preventive Health domain.

Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management, and would stave off the risk apparent in the current trajectory of the Shared Savings Program where ACO participants and ACO providers/suppliers may feel pressure to avoid engaging with beneficiaries in high needs communities in order to avoid assignment of high cost beneficiaries to their ACO and to improve their performance relative to a regional expenditures. In combination with proposed new participation options that are expected attract a mix of new participants, targeted proposals such as using an offset factor to reduce the negative regional adjustment for ACOs serving high risk and high dual populations, aim to increase the reach of ACO care coordination to more beneficiaries with high needs.

2. Quality Payment Program

There are several changes in this proposed rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and

subgroup proposals, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the proposed new quality measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's rule will be the number of reviewers of last year's rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters will be a fair estimate of the number of reviewers of last year's rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$115.22 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it will take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$921.76 (8.0 hours × \$115.22). Therefore, we estimated that the total cost of reviewing this regulation is \$32,657,957 (\$921.35 × 35,430 reviewers on last year's proposed rule).

I. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 150 through 152 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President's Budget baseline.

TABLE 150: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2023 Annualized Monetized Transfers	Estimated increase in expenditures of -\$2.2 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 151: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2023 Annualized Monetized Transfers of beneficiary cost coinsurance.	-\$0.6 billion
From Whom to Whom?	Beneficiaries to Federal Government.

TABLE 152: Accounting Statement for Proposals for Medicare Shared Savings Program (CYs 2023-2034)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
Transfers From the Federal Government to ACOs				
Annualized monetized: Discount rate: 7%	-1,139 million	-458 million	-1,744 million	Table 142
Annualized monetized: Discount rate: 3%	-1,197 million	-484 million	-1,876 million	

Notes: Negative values reflect reduction in federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects will be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure,

Administrator of the Centers for Medicare & Medicaid Services, approved this document on June 21, 2022.

42 CFR Part 455

Fraud, Grant programs—health, Health facilities, Health professions, Investigations, Medicaid, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.2463 is amended by revising paragraph (b)(3) introductory text to read as follows:

§ 405.2463 What constitutes a visit.

* * * * *

(b) * * *

(3) *Visit—Mental health.* A mental health visit is a face-to-face encounter or

an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning 152 days after the end of the COVID–19 public health emergency, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

* * * * *

■ 3. Section 405.2469 is amended by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit

a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. Additionally, beginning 152 days after the end of the COVID-19 public health emergency, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 4. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 5. Amend § 410.10 by revising paragraphs (l) and (p) to read as follows—

§ 410.10 Medical and other health services: Included services.

* * * * *

(l) Pneumococcal, influenza, and COVID-19 vaccines and their administration.

* * * * *

(p) Hepatitis B vaccine and its administration, as defined in § 410.63(a) of this subchapter.

* * * * *

■ 6. Amend § 410.26 by revising paragraph (b)(5) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

* * * * *

(b) * * *

(5) In general, services and supplies must be furnished under the direct supervision of the physician (or other practitioner). Designated care management services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided incident to the services of a physician (or other practitioner). Behavioral health

services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner). The physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) who is treating the patient more broadly. However, only the supervising physician (or other practitioner) may bill Medicare for incident to services.

* * * * *

■ 7. Amend § 410.32 by adding paragraph (a)(4), as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory test, and other diagnostic tests: Conditions.

(a) * * *

(4) *Application to audiologists.* Except as otherwise provided in this paragraph, audiologists may personally furnish diagnostic audiology tests for a patient once per patient per 12-month period without an order from the physician or nonphysician practitioner treating the patient. Such diagnostic audiology tests can be for non-acute hearing conditions, but may not include audiology services that are related to disequilibrium, or hearing aids or examinations for the purpose of prescribing, fitting, or changing hearing aids that are outlined at § 411.15(d). Audiology services furnished without an order from the treating physician or practitioner are billed using a code CMS designates for this purpose.

* * * * *

■ 8. Amend § 410.37—

■ a. In paragraph (c)(1), by removing the phrase “under age 50” and adding in its place the phrase “under age 45”;

■ b. In paragraph (c)(2), by removing the phrase “individual 50 years of age” and adding in its place the phrase “individual 45 years of age”;

■ c. In paragraph (e)(1), by removing the phrase “under age 50” and adding in its place the phrase “under age 45”;

■ d. In paragraph (e)(2), by removing the phrase “individual 50 years of age” and adding in its place the phrase “individual 45 years of age”;

■ e. In paragraph (i)(1), by removing the phrase “individual age 50” and adding in its place the phrase “individual age 45”; and

■ f. By adding paragraph (k).

The addition reads as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(k) *A complete colorectal cancer screening.* Effective January 1, 2023,

colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test returns a positive result. The frequency limitations described for screening colonoscopy in paragraph (g) of this section shall not apply in the instance of a follow-on screening colonoscopy test described in this paragraph.

■ 9. Amend § 410.40 by revising paragraph (e)(2)(ii) to read as follows:

§ 410.40 Coverage of ambulance services.

* * * * *

(e) * * *

(2) * * *

(ii) In all cases, the provider or supplier must keep appropriate documentation on file and, upon request, present it to CMS. The ambulance service must meet all program coverage criteria including vehicle and staffing requirements. While a signed physician certification statement (PCS), does not alone demonstrate that transportation by ground ambulance was medically necessary, the PCS and additional documentation from the beneficiary's medical record may be used to support a claim that transportation by ground ambulance is medically necessary. The PCS and additional documentation must provide detailed explanations, that are consistent with the beneficiary's current medical condition, that explains the beneficiary's need for transport by an ambulance, as described at § 410.41(a), that includes observation or other services rendered by qualified ambulance personnel, as described in § 410.41(b).

* * * * *

■ 10. Amend § 410.57 by—

■ a. Revising the section heading and paragraph (a); and

■ b. Adding paragraph (d).

The revisions and addition read as follows:

§ 410.57 Preventive vaccines.

(a) Medicare Part B pays for the pneumococcal vaccine and its administration.

* * * * *

(d) Medicare Part B pays for the Hepatitis B vaccine and its administration, as defined in § 410.63(a).

§ 410.63 [Amended]

■ 11. Amend § 410.63 in the introductory text by removing the phrase “vaccines (see § 405.310 of this chapter)” and adding in its place the phrase “vaccines (see § 411.15 of this chapter)”.

- 12. Amend § 410.67 by—
- a. Revising paragraphs (b)(6) and (d)(2)(i)(B)(2);
- b. Adding paragraph (d)(2)(iv); and
- c. Revising paragraph (d)(4)(ii).

The revisions and addition read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

(6) Intake activities, including initial medical examination services required under § 8.12(f)(2) of this title and initial assessment services required under § 8.12(f)(4) of this title. Services to initiate treatment with buprenorphine may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. In cases where audio-video communications technology is not available to the beneficiary, services to initiate treatment with buprenorphine may be furnished using audio-only telephone calls if all other applicable requirements are met.

* * * * *

(d) * * *

(2) * * *

(i) * * *

(B) * * *

(2) For CY 2022, the payment amount for methadone is the payment amount determined under paragraph (d)(2)(i)(B)(1) of this section for methadone in CY 2021. For CY 2023 and subsequent years, the payment amount for methadone will be based on the payment amount determined under paragraph (d)(2)(i)(B)(1) of this section for methadone in CY 2021 and updated by the PPI for Pharmaceuticals for Human Use (Prescription).

* * * * *

(iv) *Increased level of psychotherapy.* For CY 2023 and subsequent years, the payment for the non-drug component of the bundled payment for an episode of care under paragraph (d)(2) of this section is adjusted to reflect the CY 2019 Medicare physician fee schedule non-facility rate for psychotherapy, 45 minutes with patient.

* * * * *

(4) * * *

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the

Geographic Adjustment Factor described in § 414.26 of this subchapter. For purposes of this adjustment, OUD treatment services that are furnished via an OTP mobile unit will be treated as if they were furnished at the physical location of the OTP registered with the Drug Enforcement Administration (DEA) and certified by SAMHSA.

* * * * *

§ 410.78 [Amended]

■ 13. Amend § 410.78 in paragraph (b)(3)(xiv), by removing the phrase “the first day” and adding in its place the phrase “the day that is the 152nd day”.

■ 14. Amend § 410.152—

■ a. By revising paragraph (h);

■ b. In paragraph (l)(1), by removing the phrase “(as specified in paragraph (h) of this section)”.

The revision reads as follows:

§ 410.152 Amounts of payment.

* * * * *

(h) *Amount of payment: Preventive vaccine administration.* For the administration of the preventive vaccines described in paragraph (l)(1) of this section, as furnished by providers described in §§ 409.100 and 410.150 of this subchapter, Medicare Part B pays the following amounts, except as otherwise provided under this subchapter:

(1) Effective January 1, 2022, for administration of an influenza, hepatitis B or pneumococcal vaccine, \$30 per dose.

(2) Effective January 1, 2022, for administration of a COVID-19 vaccine, \$40 per dose.

(3) For services furnished on or after January 1 of the year following the year in which the Secretary ends the Emergency Use Authorization for drugs and biologicals issued pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3), for administration of a COVID-19 vaccine, an amount equal to the amount that would be paid for the administration of a preventive vaccine described in paragraph (h)(1).

(4) The payment amount for the administration of a preventive vaccine described in paragraphs (h)(1) through (3) of this section is adjusted to reflect geographic cost variations:

(i) For services furnished before January 1, 2023, using the Geographic Practice Cost Indices (GPCIs) established for the year, as described in section 1848(e)(1) of the Act and §§ 414.2 and 414.26 of this subchapter.

(ii) For services furnished on or after January 1, 2023, using the Geographic Adjustment Factor (GAF) established for the year as described in section

1848(e)(2) of the Act and §§ 414.2 and 414.26 of this subchapter.

(5) The payment amount for administration of a preventive vaccine described in paragraphs (h)(1) through (3) of this section is updated annually using the percentage change in the Medicare Economic Index (MEI) as described in section 1842(i)(3) of the Act and § 405.504(d) of this subchapter.

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 15. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w-101 through 1395w-152, 1395hh, and 1395nn.

■ 16. Section 411.15 is amended by revising paragraph (i) to read as follows:

§ 411.15 Particular services excluded from coverage.

* * * * *

(i) *Dental services.*—(1) *Basic rule.* Dental services in connection with the care, treatment, filling, removal, or replacement of teeth, or structures directly supporting the teeth,

(2) *Exception.* Except for inpatient hospital services in connection with such dental procedures when hospitalization is required because of—

(i) The individual's underlying medical condition and clinical status; or

(ii) The severity of the dental procedures.¹

(3) *Inapplicability.* (i) Dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service are not excluded; payment may be made under Medicare Part A and B for services furnished in the inpatient or outpatient setting. Such services include, but are not limited to:

(A) Dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered organ transplant, cardiac valve replacement, or valvuloplasty procedures; and, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to the organ transplant, cardiac valve replacement, or valvuloplasty procedure.

(B) The reconstruction of a dental ridge performed as a result of and at the same time as the surgical removal of a tumor.

¹ Before July 1981, inpatient hospital care in connection with dental procedures was covered only when required by the patient's underlying medical condition and clinical status.

(C) The wiring or immobilization of teeth in connection with the reduction of a jaw fracture.

(D) The extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease.

(E) Dental splints only when used in conjunction with covered treatment of a covered medical condition.

(ii) Ancillary services and other supplies furnished incident to covered dental services are not excluded, and Medicare payment may be made under Part A or Part B, as applicable, whether the service is performed in the inpatient or outpatient setting, including, but not limited to the administration of anesthesia, diagnostic x-rays, use of operating room, and other related procedures.

* * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 17. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395r(b)(1).

■ 18. Amend § 414.502 by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

§ 414.502 Definitions.

* * * *

Data collection period is the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2023 through March 31, 2023, the data collection period is January 1, 2019 through June 30, 2019.

Data reporting period is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2023 through March 31, 2023.

* * * *

§ 414.504 [Amended]

■ 19. Amend § 414.504 in paragraph (a)(1) by removing the reference “January 1, 2022” and adding in its place the reference “January 1, 2023”.

■ 20. Amend § 414.507 by—

■ a. Revising paragraph (d) introductory text and paragraph (d)(5);

■ b. Adding paragraph (d)(8); and

■ c. Removing paragraph (f).

■ d. Redesignating paragraphs (g) and (h) as paragraphs (f) and (g), respectively.

The revisions and addition read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * *

(d) Phase-in of payment reductions.

For years 2018 through 2025, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * *

(5) 2022—0.0 percent of the payment rate established in 2021.

* * * *

(8) 2025—15 percent of the payment rate established in 2024.

* * * *

■ 21. Section § 414.523 is added to subpart G to read as follows:

§ 414.523 Payment for laboratory specimen collection fee and travel allowance.

(a) *Specimen collection fee and travel allowance.* In addition to the payment amounts provided under this subpart for CDLTs, new CDLTs, and new ADLTs, CMS pays a specimen collection fee, as set forth in paragraph (a)(1) of this section, and a travel allowance, as set forth in paragraph (a)(2) of this section.

(1) *Payment for specimen collection.* Except as provided in paragraph (a)(1)(iv) of this section, CMS pays \$3 for all specimens collected in one patient encounter, where the specimen(s) is:

(i) Used to perform a CDLT paid under this subpart G;

(ii) Collected by a trained technician from a Medicare beneficiary who is—

(A) Homebound as described in 42 CFR 424.22(a)(1)(ii).

(B) A non-hospital inpatient, but only when no qualified personnel are available at the facility to collect the specimen;

(iii) Of the following type—

(A) Blood specimen collected through venipuncture.

(B) A urine sample collected by catheterization.

(iv) Beginning April 1, 2014, for a specimen collected from a Medicare beneficiary in a skilled nursing facility or on behalf of a home health agency, the specimen collection fee otherwise paid under paragraph (a)(1) of this section is increased by \$2.

(2) *Payment for travel allowance—(i) General requirement.* CMS pays a travel allowance, as calculated under paragraph (a)(2)(iii) of this section,

where the specimen is one for which a specimen collection fee is paid under paragraph (a)(1) of this section.

(ii) *Travel allowance basis.* CMS pays a travel allowance on the following bases:

(A) *Flat-rate travel allowance.* The flat-rate travel allowance applies when the trained technician travels 20 eligible miles or less (calculated in accordance with paragraph (a)(2)(iii)(A) of this section) to and from one location for specimen collection from one or more Medicare beneficiaries; or

(B) *Per-mile travel allowance.* The per-mile travel allowance applies when:

(1) The trained technician travels more than 20 eligible miles (calculated in accordance with paragraph (a)(2)(iii)(A) of this section) to and from one location for specimen collection from one or more Medicare beneficiaries; or

(2) The trained technician travels to more than one location for specimen collection from more than one Medicare beneficiary.

(iii) *Travel allowance amount—(A) Eligible miles.* Eligible miles begin at the laboratory and end at the laboratory where the trained technician returns the specimen(s) for testing. Eligible miles do not include miles traveled for any purpose unrelated to specimen collection as specified in paragraph (a)(1) of this section, such as collecting specimens from non-Medicare beneficiaries or for personal reasons.

(B) *Travel allowance mileage rate.* The travel allowance mileage rate is equal to the IRS standard mileage rate plus an amount to cover expenses for a trained technician equal to the most recent median hourly wage for phlebotomists, as published by the United States Bureau of Labor Statistics, divided by 40 to represent an average miles-per-hour driving speed.

(C) *Travel allowance amount calculation.* (1) For the flat-rate travel allowance basis specified in paragraph (a)(2)(ii)(A) of this section, the travel allowance amount is the travel allowance mileage rate specified in paragraph (a)(2)(iii)(B) of this section multiplied by ten, divided by the number of beneficiaries for whom a specimen collection fee is paid under paragraph (a)(1) of this section.

(2) For the per-mile travel allowance basis specified in paragraph (a)(2)(ii)(B) of this section, the travel allowance amount is the number of eligible miles multiplied by the travel allowance mileage rate specified in paragraph (a)(2)(iii)(B) of this section, divided by the number of beneficiaries for whom a specimen collection fee is paid under paragraph (a)(1) of this section.

(b) [Reserved]

§ 414.626 [Amended]

■ 22. Amend § 414.626—

■ a. In paragraph (d)(1) introductory text, by removing the phrase “must submit a request form (accessed on the Ambulances Services Center website (<https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>) to CMS” and adding in its place the phrase “must submit a request to CMS, in the form and manner specified by CMS.”; and

■ b. In paragraph (e)(2) introductory text, by removing the phrase “by submitting all of the following information:” and adding in its place the phrase “by submitting a request to CMS, in the form and manner specified by CMS, that includes all of the following information:”.

§ 414.707 [Amended]

■ 23. Amend § 414.707 in paragraph (a)(2)(iii), by removing the phrase “(as determined by the Secretary)” and adding in its place the phrase “(as defined in § 410.63(a) of this subchapter).”

■ 24. Amend § 414.902 by adding the definition of “Refundable single-dose container or single-use package drug” in alphabetical order to read as follows:

§ 414.902 Definitions.

* * * * *

Refundable single-dose container or single-use package drug means a single source drug or biological or a biosimilar biological product for which payment is made under this part and that is furnished from a single-dose container or single-use package based on FDA-approved labeling or product information. The term “refundable single-dose container or single-use package drug” excludes—

(1) A drug that is a therapeutic radiopharmaceutical, a diagnostic radiopharmaceutical, or an imaging agent as identified in the drug’s FDA-approved labeling.

(2) A drug for which the FDA-approved labeling for any National Drug Code assigned to a billing and payment code of such drug requires filtration during the drug preparation process, prior to dilution and administration and that any unused portion of such drug after the filtration process be discarded after the completion of such filtration process.

(3) A drug approved or licensed by the FDA on or after November 15, 2021, until the last day of the sixth full quarter for which the drug has been marketed (as reported to CMS) for the first

National Drug Code assigned to the billing and payment code of such drug.

* * * * *

§ 414.904 [Amended]

■ 25. Amend 414.904 in paragraph (e)(1), by removing the phrase “(as determined by the Secretary)” and adding in its place the phrase “(as defined in § 410.63(a) of this subchapter).”

■ 26. Section § 414.940 is added to subpart K to read as follows:

§ 414.940 Refund for certain discarded single-dose container or single-use package drugs.

(a) *Provision of information to manufacturers*—(1) *In general*. For each calendar quarter beginning on or after January 1, 2023, CMS reports to each manufacturer (as defined in § 414.802) of a refundable single-dose container or single-use package drug the following for the calendar quarter:

(i) Information on the total number of billing units of the billing and payment code of such drug, if any, that were discarded during such quarter, as determined by the JW modifier (or any successor modifier that includes the same data).

(ii) The refund amount that the manufacturer is liable for pursuant to paragraph (a)(3) of this section.

(iii) For purposes of this section, the term billing unit means the identifiable quantity associated with a billing and payment code, as established by CMS.

(2) *Exclusion of units of packaged drugs*. The total number of billing units of the billing and payment code of a refundable single-dose container or single-use package drug of a manufacturer furnished during a calendar quarter for purposes of paragraph (a)(1) of this section, and the determination of the estimated total allowed charges for the drug in the quarter for purposes of paragraph (c)(2) of this section, shall not include such units that are packaged into the payment amount for an item or service and are not separately payable.

(3) *Reports*. Reports are sent once annually in the following manner:

(i) For 2023, the report is sent no later than October 1 of that year and includes only the first calendar quarter of 2023.

(ii) Beginning in 2024 and for all subsequent years, the report is sent no later than October 1 of the given year and includes the second, third, and fourth calendar quarters of the prior year and the first calendar quarter of the current year.

(iii) Beginning in 2024 and for all subsequent years, the report includes new information (as described in

paragraph (a)(1)(i) of this section) for the second, third, and fourth calendar quarter of the year that is 2 years prior and the first calendar quarter of the prior year that was not reflected in the previous year’s report.

(b) *Manufacturer requirement*. For each calendar quarter beginning on or after January 1, 2023, the manufacturer of a refundable single-dose container or single-use package drug shall, for such drug, pay a refund that is equal to the amount determined in accordance with paragraph (c) of this section for such drug for such quarter.

(1) Refund amounts that the manufacturer is liable for pursuant to this paragraph are paid in 12-month intervals no later than December 31 of the year in which the report was sent to the manufacturer, in a manner specified by CMS.

(2) Amounts paid as refunds pursuant to this paragraph shall be deposited into the Federal Supplementary Medical Insurance Trust Fund established under section 1841 of the Act.

(c) *Refund amount*. The amount of the refund specified in this paragraph is, with respect to a refundable single-dose container or single-use package drug of a manufacturer assigned to a billing and payment code for a calendar quarter beginning on or after January 1, 2023, an amount equal to the estimated amount (if any) by which—

(1) The product of:

(i) The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

(ii) The amount of payment determined for such drug or biological under this section for such quarter.

(2) Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such drug for the quarter.

(3) For purposes of paragraph (c)(1)(ii) of this section, the term “applicable percentage” means 10 percent.

(d) *Dispute resolution*. Each manufacturer has an opportunity to dispute information in the report described in paragraph (a) of this section by submitting an error report as described in this paragraph.

(1) *Error report information*. To assert that there have been one or more errors in the report, a manufacturer must submit a dispute with each asserted error and provide the following information—

(i) Manufacturer name and address;

(ii) The name, telephone number, and email address of one or more employees or representatives of the manufacturer.

(iii) For a mathematical calculation error, the specific calculation element(s)

that the manufacturer disputes and its proposed corrected calculation;

(iv) For any other asserted error, an explanation of the nature of the error, how the error affects the refund calculation, an explanation of why the manufacturer believes that an error occurred, the proposed correction to the error, and an explanation of why CMS should use the proposed corrected data.

(2) *Form, manner, and timing of submission.* Each manufacturer asserting an error must submit its error report(s), in the form and manner specified by CMS, within 30-days after the issuance of the report.

(e) *Enforcement.* (1) *Manufacturer audits.* Each manufacturer of a refundable single-dose container or single-use package drug that is required to provide a refund under this subsection shall be subject to periodic audit with respect to such drug and such refunds.

(2) *Civil money penalty.* The Secretary shall impose a civil money penalty on a manufacturer of a refundable single-dose container or single-use package drug who has failed to comply with the requirement under paragraph (b) of this section for such drug for a calendar quarter in an amount equal to the sum of—

(i) The amount that the manufacturer would have paid under such paragraph with respect to such drug for such quarter; and

(ii) 25 percent of such amount.

■ 27. Section § 414.1305 is amended by—

- a. Adding the definition of “Facility-based group”;
- b. Revising the definitions of “Facility-based MIPS eligible clinician”, “High priority measure”, “Multispecialty group”, “Single specialty group”, and “Third party intermediary” to read as follows:

§ 414.1305 Definitions.

* * * * *

Facility-based group means a group that CMS determines meets the criteria specified in § 414.1380(e)(2)(ii).

Facility-based MIPS eligible clinician means an individual MIPS eligible clinician who CMS determines meets the criteria specified in § 414.1380(e)(2)(i).

* * * * *

High priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure.

* * * * *

Multispecialty group means a group as defined at § 414.1305 that consists of two or more specialty types as determined by CMS using Medicare Part B claims.

* * * * *

Single specialty group means a group as defined at § 414.1305 that consists of one specialty type as determined by CMS using Medicare Part B claims.

* * * * *

Third party intermediary means an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories.

* * * * *

■ 28. Amend § 414.1318 by—

■ a. Revising paragraph (a)(1);

■ b. Adding paragraphs (a)(3) and (4); and

■ c. Revising paragraphs (b) and (c)(2).

The revisions and addition read as follows:

§ 414.1318 Subgroups.

(a) * * *

(1) *General.* Except as provided under paragraph (a)(2) of this section and subject to paragraph (a)(4) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for a subgroup is determined at the group level in accordance with §§ 414.1305 and 414.1310.

* * * * *

(3) *Single subgroup per eligible clinician.* An individual eligible clinician (as represented by a TIN–NPI combination) may register for no more than one subgroup within a group’s TIN.

(4) *Subgroup determination period.* CMS will apply the low-volume threshold criteria for a subgroup as described under paragraph (a)(1) of this section using information from the initial 12-month segment of the applicable MIPS determination period.

(b) *Final score.* Except as provided under § 414.1317(b) and paragraph (b)(1) of this section, each MIPS eligible clinician in the subgroup receives a final score based on the subgroup’s combined performance.

(1) CMS will not assign a final score for a subgroup that registers and does not submit data as a subgroup for the applicable performance period.

(2) [Reserved]

(c) * * *

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all

the MIPS performance categories based on an MVP in accordance with § 414.1365. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

■ 29. Amend § 414.1340 by adding paragraphs (a)(4) and (b)(4) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(4) At least 75 percent of the MIPS eligible clinician or group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2026 and 2027.

* * * * *

(b) * * *

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026 and 2027.

* * * * *

■ 30. Amend § 414.1365 by—

■ a. Adding paragraphs (b)(2)(iii);

■ b. Revising paragraph (d)(3)(i)(A)(1);

■ c. Adding paragraph (d)(3)(i)(B)(1);

■ d. Reserving paragraph (d)(3)(i)(B)(2);

■ e. Adding paragraph (d)(3)(ii)(A); and

■ f. Reserving paragraph (d)(3)(ii)(B).

The additions and revisions read as follows:

§ 414.1365 MIPS Value Pathways.

* * * * *

(b) * * *

(2) * * *

(iii) TINs must provide a description of each subgroup that is registered.

* * * * *

(d) * * *

(3) * * *

(i) * * *

(A) * * *

(1) A subgroup is scored on each selected population health measure based on its affiliated group score, if available. If the subgroup’s affiliated group score is not available, each such measure is excluded from the subgroup’s total measure achievement points and total available measure achievement points.

* * * * *

(B) * * *

(1) A subgroup is scored on each selected outcomes-based administrative claims measure based on its affiliated group score, if available. If the subgroup’s affiliated group score is not available, each such measure will receive zero measure achievement points.

(2) [Reserved]

(ii) * * *

(A) A subgroup is scored on each cost measure included in the MVP that it

selects and reports based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v).

(B) [Reserved]

* * * * *

■ 31. Amend § 414.1380 by—

- a. Adding paragraph (b)(1)(ii)(D); and
- b. Revising paragraphs (b)(2)(iv)(E), (b)(4)(ii)(B) and (C), (c)(2)(i)(A)(4)(i) and (iii), (c)(3) introductory text, (e)(2) introductory text, (e)(2)(ii), (e)(4), (e)(5)(i) and (ii), (e)(6)(iv) and (v), and (e)(6)(vi)(A) and (B).

The addition and revisions read as follow:

§ 414.1380 Scoring.

* * * * *

- (b) * * *
- (1) * * *
- (ii) * * *

(D) Beginning with the CY 2023 performance period/2025 MIPS payment year, CMS will calculate a benchmark for an administrative claims quality measure using the performance on the measures during the current performance period.

* * * * *

- (2) * * *
- (iv) * * *

(E) The maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points. The maximum cost improvement score beginning with the 2024 MIPS payment year is 1 percentage point.

* * * * *

- (4) * * *
- (ii) * * *

(B) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each required measure is worth 10, 20, or 40 points, as specified by CMS. For the 2023 performance period/2025 MIPS payment year and subsequent years, each required measure is worth 10, 15, 25 or 30 points, as specified by CMS.

(C) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each optional measure is worth five or ten bonus points, as specified by CMS. For the 2023 performance period/2025 MIPS payment year and subsequent years, each optional measure is worth five bonus points, as specified by CMS.

- (c) * * *
- (2) * * *
- (i) * * *
- (A) * * *
- (4) * * *

(i) For the 2021 through 2025 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(iii) For the 2024 through 2025 MIPS payment years, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(3) *Complex patient bonus.* For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (iv) of this section. For the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii) of this section. Beginning with the CY 2023 MIPS performance period/CY 2025 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, or is a facility-based MIPS eligible clinician, a complex patient bonus will be added to the final score for the MIPS payment year, if

applicable, as described in paragraphs (c)(3)(v) through (viii) of this section.

* * * * *

- (e) * * *

(2) *Eligibility for facility-based measurement.* A MIPS eligible clinician is eligible for facility-based measurement for a MIPS payment year if CMS determines the MIPS eligible clinician to be facility-based as an individual clinician or as part of a group, or beginning with the 2023 performance period/2025 MIPS payment year, a virtual group, as follows:

* * * * *

(ii) *Facility-based MIPS eligible group determination.* A facility-based MIPS eligible group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements under paragraph (e)(2)(i) of this section.

* * * * *

(4) *Data submission for facility-based measurement.* There are no data submission requirements for a MIPS eligible individual clinician to be scored under facility-based measurement. A MIPS eligible group must submit data in the improvement activities or Promoting Interoperability performance categories in order to be scored as a facility-based MIPS eligible group.

(5) * * *

(i) A facility-based MIPS eligible clinician is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the clinician provided services to the most Medicare beneficiaries during the period the claims are drawn from in paragraph (e)(2) of this section. If there is an equal number of Medicare beneficiaries treated at more than one facility, the value-based purchasing score for the highest scoring facility is used.

(ii) A facility-based MIPS eligible group is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under paragraph (e)(5)(i) of this section.

(6) * * *

(iv) *Quality.* The quality performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category score for those MIPS-eligible clinicians who are not

eligible to be scored using facility-based measurement for the MIPS payment year. A MIPS eligible clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality performance category.

(v) *Cost*. The cost performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A MIPS eligible clinician or MIPS eligible group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS cost performance category.

* * * * *

(vi) * * *

(A) For the CY 2019 MIPS performance period/2021 MIPS payment year, through the CY 2021 MIPS performance period/2023 MIPS payment year, a MIPS eligible clinician or group receives a higher combined MIPS quality and cost performance category score through another MIPS submission.

(B) Beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, a MIPS eligible clinician or group receives a higher MIPS final score through another MIPS submission.

■ 32. Amend § 414.1400 by—

■ a. Revising paragraphs (b)(4)(i)(B),

(b)(4)(iii)(A)(3), and (e)(1)(i)(B);

■ b. Adding paragraphs (e)(1)(i)(E);

■ c. Revising paragraph (e)(2)

introductory text and (e)(3);

■ d. Adding paragraph (e)(5); and

■ e. Revising paragraph (f)(1).

The revisions and additions read as follows:

§ 414.1400 Third party intermediaries.

* * * * *

(b) * * *

(4) * * *

(i) * * *

(B) For a QCDR measure, the entity must submit for CMS approval measure specifications including: Name/title of measure, NQF number (if NQF—endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following

CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

* * * * *

(iii) * * *

(A) * * *

(3) Beginning with the CY 2022 performance period/2024 MIPS payment year, CMS may approve a QCDR measure only if the QCDR measure meets face validity. Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR measure approved for a previous performance year must be fully developed and tested, with complete testing results at the clinician level, prior to self-nomination.

* * * * *

(e) * * *

(1) * * *

(i) * * *

(B) The impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program, and any QCDRs that were granted licenses to the measures of a QCDR upon which a CAP has been imposed.

* * * * *

(E) The communication plan for communicating the impact to the parties identified in paragraph (e)(1)(i)(B) of this section.

(2) CMS may immediately or with advance notice terminate a third party intermediary for one or more of the following reasons:

* * * * *

(3) A data submission that contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

* * * * *

(5) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii) of this section, will be terminated.

(f) * * *

(1) The entity must make available to CMS the contact information of each

MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email.

* * * * *

■ 33. Amend § 414.1405 by revising paragraph (b)(9) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) Pursuant to the methodology established at paragraph (g) of this section:

(i) The performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

(ii) The performance threshold for the 2025 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

■ 34. Amend § 414.1415 by—

■ a. Revising paragraphs (b)(3),

■ b. Adding paragraph (b)(4); and

■ c. Revising paragraphs (c)(3)(i)(A) and (c)(7).

The revisions and addition read as follows:

§ 414.1415 Advanced APM criteria.

* * * * *

(b) * * *

(3) The quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must include at least one measure that is an outcome measure unless CMS determines that there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM's first QP Performance Period. Beginning January 1, 2020, the included outcome measure must satisfy the criteria in paragraph (b)(2) of this section.

(4) A single quality measure that meets the criteria under both paragraphs (b)(2) and (3) of this section may be used to satisfy the requirements of paragraph (b)(1) of this section.

(c) * * *

(3) * * *

(i) * * *

(A) For QP Performance Periods beginning in 2023, 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities; or

* * * * *

(7) *Medical Home Model 50 eligible clinician limit.* Beginning in the 2023 QP Performance Period, notwithstanding paragraphs (c)(2) and (4) of this section, if an APM Entity participating in a Medical Home Model is comprised of more than 50 eligible clinicians, as determined by that APM Entity's Participation List on any of the three QP determination dates (March 31, June 30, and August 31 of the QP Performance Period), the requirements of paragraphs (c)(1) and (3) of this section apply.

- 35. Amend § 414.1420 by—
- a. Revising paragraph (c)(3)(ii);
- b. Adding paragraph (c)(4); and
- c. Revising paragraphs (d)(3)(i) and (d)(8).

The revisions and addition read as follows:

§ 414.1420 Other payer advanced APM criteria.

* * * * *

(c) * * *

(3) * * *

(ii) For QP Performance Periods on or after January 1, 2020, use at least one measure that is an outcome measure and meets the criteria in paragraph (c)(2)(ii) of this section if there is such an applicable outcome measure on the MIPS quality measure list.

(4) A single quality measure that meets the criteria under both paragraphs (c)(2) and (3) of this section may be used to satisfy the requirements of paragraph (c)(1) of this section.

(d) * * *

(3) * * *

(i) For QP Performance Periods beginning in 2023, 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement if financial risk is expressly defined in terms of revenue; or, 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement.

* * * * *

(8) *Aligned Other Payer Medical Home Model and Medicaid Medical Home Model 50 eligible clinician limit.* Beginning with the 2023 QP Performance Period, notwithstanding paragraphs (d)(2) and (4) of this section, if an APM Entity participating in an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model is comprised of 50 or more eligible clinicians is comprised of more than 50 eligible clinicians, as determined by the information submitted for any of the three QP determination dates (March 31, June 30, and August 31 of the QP Performance Period) as specified in § 414.1440(e), the

requirements of paragraphs (d)(1) and (3) of this section apply.

- 36. Amend § 414.1430 by—
- a. Revising paragraphs (a)(2)(iii);
- b. Removing the second paragraph (a)(3)(ii);
- c. Adding paragraphs (a)(3)(iii) and (iv);
- d. Revising paragraph (a)(4)(iii);
- e. Adding paragraph (a)(4)(iv); and
- f. Revising paragraphs (b)(3)(i)(A) and (B), and (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(2) * * *

(iii) 2023 and 2024: 40 percent.

* * * * *

(3) * * *

(iii) 2023 and 2024: 35 percent.

(iv) 2025 and later: 50 percent.

(4) * * *

(iii) 2023 and 2024: 25 percent.

(iv) 2025 and later: 35 percent.

(b) * * *

(3) * * *

(i) * * *

(A) 2021 through 2024: 35 percent.

(B) 2025 and later: 50 percent.

* * * * *

(4) * * *

(i) * * *

(A) 2021 through 2024: 25 percent.

(B) 2025 and later: 35 percent.

* * * * *

- 37. Amend § 414.1440 by revising paragraph (e)(2) to read as follows:

§ 414.1440 Qualifying APM participant determination: All-payer combination option.

* * * * *

(e) * * *

(2) To request a QP determination under the All-Payer Combination Option, for each payment arrangement submitted as set forth in paragraph (e)(1) of this section, the APM Entity or eligible clinician must include:

(i) The amount of revenue for services furnished through the payment arrangement, the total revenue received from all payers except those excluded as provided in paragraph (a)(2) of this section, the number of patients furnished any service through the arrangement, and the total number of patients furnished any services, except those excluded as provided in paragraph (a)(2) of this section; and

(ii) In the case of an APM Entity or eligible clinician requesting a QP determination under either a Medicaid Medical Home Model or Aligned Other Payer Medical Home Model pursuant to

the criteria in § 414.1420, information specified by CMS for purposes of compliance with the 50 eligible clinician limit specified at § 414.1420(d)(8).

* * * * *

§ 414.1450 [Amended]

- 38. Amend § 414.1450(c)(8) by removing the reference “November 1” and adding in its place the reference “September 1”.

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

- 39. The authority for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

§ 415.140 [Amended]

- 40. Amend § 415.140 by redesignating this section from subpart D to subpart C in numerical order.

- 41. Amend § 415.140(a) in the definition of “Substantive portion” by removing the reference “2022” and adding in its place the reference “2022 and 2023”.

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

- 42. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

- 43. Amend § 423.160 by revising paragraphs (a)(5)(ii) and (iii) to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) * * *

(ii) Prescriber issues 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data with dates of service as of December 31st of the current year.

(iii) Prescriber has an address in PECOS in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. If a prescriber does not have an address in PECOS, prescriber has an address in NPES in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 44. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 45. Amend § 424.57 by adding paragraph (b)(6) to read as follows:

§ 424.57 Special payment rules for items furnished by DMEPOS suppliers and issuance of DMEPOS supplier billing privileges.

* * * * *

(b) * * *

(6) The supplier is in compliance with all conditions of payment in paragraph (b) of this section, as well as with paragraph (c)(1)(ii)(A) of this section, at the time the item or service is furnished.

* * * * *

■ 46. Amend § 424.502 by adding the definitions of “Director”, “Managing organization” and “Officer” in alphabetical order to read as follows:

§ 424.502 Definitions.

* * * * *

Director means a director of a corporation, regardless of whether the provider or supplier is a non-profit entity. This includes any member of the corporation’s governing body irrespective of the precise title of either the board or the member.

* * * * *

Managing organization means an entity that exercises operational or managerial control over, or who directly or indirectly conducts, the day-to-day operations of the provider or supplier, either under contract or through some other arrangement.

* * * * *

Officer means an officer of a corporation, regardless of whether the provider or supplier is a non-profit entity.

* * * * *

■ 47. Amend § 424.518 by—

- a. Revising the introductory text;
- b. Removing paragraph (a)(1)(xviii);
- c. Adding paragraphs (b)(1)(xiv);
- d. Revising paragraph (c)(1) introductory text; and
- e. Adding paragraphs (c)(1)(v) and (vi), and (c)(4).

The revision and additions read as follows:

§ 424.518 Screening levels for Medicare providers and suppliers.

A Medicare contractor is required to screen all initial applications, revalidation applications, change of ownership applications pursuant to 42 CFR 489.18, applications to add a new practice location, and applications to

report any new owner (regardless of ownership percentage) pursuant to a change of information or other enrollment transaction under title 42, based on a CMS assessment of risk and assignment to a level of “limited,” “moderate,” or “high.”

* * * * *

(b) * * *

(1) * * *

(xiv) Revalidating skilled nursing facilities (SNFs)

* * * * *

(c) * * *

(1) *High categorical risk: Provider and supplier categories.* CMS has designated the following provider and supplier types as “high” categorical risk:

* * * * *

(v) Prospective (newly enrolling) skilled nursing facilities (SNFs).

(vi) Enrolled OTPs that have not been fully and continuously certified by SAMHSA since October 23, 2018, DMEPOS suppliers, MDPP suppliers, HHAs, and SNFs that are submitting a change of ownership application pursuant to 42 CFR 489.18 or reporting any new owner (regardless of ownership percentage) pursuant to a change of information or other enrollment transaction under title 42.

* * * * *

(4) Any screening level adjustment under paragraph (c)(3) of this section also applies to all other enrolled and prospective providers and suppliers that have the same legal business name and tax identification number as the provider or supplier for which the screening level under paragraph (c)(3) of this section was originally raised.

* * * * *

■ 48. Amend § 424.530 by—

- a. Revising paragraph (a)(2) and paragraph (a)(3) introductory text;
- b. Adding paragraph (a)(3)(iii); and
- c. Revising paragraph (c).

The revisions and addition read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(2)(i) *Provider or supplier conduct.*

The provider or supplier, or any owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

(A) Excluded from the Medicare, Medicaid, and any other Federal health care program, as defined in § 1001.2 of

this chapter, in accordance with section 1128, 1128A, 1156, 1842, 1862, 1867 or 1892 of the Act.

(B) Debarred, suspended, or otherwise excluded from participating in any other Federal procurement or nonprocurement activity in accordance with section 2455 of the Federal Acquisition Streamlining Act (FASA).

(ii) The individuals and organizations identified in paragraph (a)(2)(i) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

(3) *Felonies.* The provider, supplier, or any owner, managing employee, managing organization, officer, or director of the provider or supplier was, within the preceding 10 years, convicted (as that term is defined in 42 CFR 1001.2) of a Federal or State felony offense that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries.

* * * * *

(iii) The individuals and organizations identified in paragraph (a)(3) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

* * * * *

(c) *Reversal of denial.* If the denial was due to adverse activity (sanction, exclusion, debt, felony) of an owner, managing employee, managing organization, officer, director, an authorized or delegated official, medical director, supervising physician, or other health care personnel of the provider or supplier furnishing Medicare reimbursable services, the denial may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual or organization within 30 days of the denial notification.

* * * * *

■ 49. Amend § 424.535 by—

- a. Revising paragraphs (a)(2) and (a)(3)(i);
- b. Adding paragraph (a)(3)(iv); and
- c. Revising paragraphs (a)(12)(ii) and (e).

The revisions and addition read as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(2)(i) *Provider or supplier conduct.*

The provider or supplier, or any owner, managing employee, managing organization, officer, director, authorized or delegated official, medical

director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

(A) Excluded from the Medicare, Medicaid, and any other Federal health care program, as defined in § 1001.2 of this chapter, in accordance with section 1128, 1128A, 1156, 1842, 1862, 1867 or 1892 of the Act.

(B) Debarred, suspended, or otherwise excluded from participating in any other Federal procurement or nonprocurement activity in accordance with section 2455 of the Federal Acquisition Streamlining Act (FASA).

(ii) The individuals and organizations identified in paragraph (a)(2)(i) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

(3) * * *

(i) The provider, supplier, or any owner, managing employee, managing organization, officer, or director of the provider or supplier was, within the preceding 10 years, convicted (as that term is defined in 42 CFR 1001.2) of a Federal or State felony offense that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries.

* * * * *

(iv) The individuals and organizations identified in paragraph (a)(3) of this section include, but are not limited to, W–2 employees and contracted individuals and organizations of the provider or supplier.

* * * * *

(12) * * *

(ii) Medicare may not revoke unless and until a provider or supplier has exhausted all applicable appeal rights or the timeframe for filing an appeal has expired without the provider or supplier filing an appeal.

* * * * *

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship

with that individual within 30 days of the revocation notification.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 50. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jj.

§ 425.20 [Amended]

■ 51. Amend § 425.20 by—

■ a. In paragraph (2) of the definition of “Experienced with performance-based risk Medicare ACO initiatives” by removing the phrase “prior to the agreement start date”;

■ b. In paragraph (2) of the definition of “Inexperienced with performance-based risk Medicare ACO initiatives” by removing the phrase “prior to the agreement start date”

■ c. Revising paragraph (1)(i) in the definition of “Performance-based risk Medicare ACO initiative”;

■ d. Redesignating paragraphs (1)(ii) and (1)(iii) as paragraphs (1)(iii) and (1)(iv), respectively; in the definition of “Performance-based risk Medicare ACO initiative” by and

■ e. Adding paragraph (1)(ii) in the definition of “Performance-based risk Medicare ACO initiative”.

§ 425.20 Definitions.

* * * * *

Performance-based risk Medicare ACO initiative

* * * * *

(1) * * *

(i) For performance years beginning prior to January 1, 2023, BASIC track (Levels A through E).

(ii) For performance years beginning January 1, 2023 and in subsequent years, BASIC track (Levels C through E).

* * * * *

■ 52. Amend § 425.100 by—

■ a. Revising paragraph (b)(1); and

■ b. Adding paragraph (d).

The revision and addition read as follows:

§ 425.100 General.

* * * * *

(b) * * *

(1) The ACO meets or exceeds the applicable minimum savings rate established under §§ 425.604, 425.605 (except as provided under § 425.605(h)), 425.606, 425.609, or 425.610.

* * * * *

(d) An ACO is eligible to receive advance investment payments if it meets the criteria under § 425.630(b).

§ 425.204 [Amended]

■ 53. Amend § 425.204(g) by removing the references “§ 425.601, § 425.602, or § 425.603” and adding in its place the references “§§ 425.601, 425.602, 425.603, or 425.652”.

§ 425.224 [Amended]

■ 54. Amend § 425.224(a)(4) by removing the phrase “, or a one-sided model of the BASIC track’s glide path (Level A or Level B).”.

■ 55. Amend § 425.302 by adding paragraph (a)(3)(iv) to read as follows:

§ 425.302 Program requirements for data submission and certifications.

(a) * * *

(3) * * *

(iv) That the ACO has moved all advance investment payments received during that performance year into a designated advance investment payments account established under § 425.630(e) and the advance investment payments have been dispersed only for allowable uses.

* * * * *

■ 56. Amend § 425.308 by adding paragraph (b)(8) to read as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(8) Information, updated annually about the ACO’s use of advance investment payments under § 425.630, for each performance year, including the following:

(i) The ACO’s spend plan.

(ii) The total amount of any advance investment payments received from CMS.

(iii) An itemization of how advance investment payments were spent during the year, including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan submitted under § 425.630(d), and such other information as may be specified by CMS.

* * * * *

■ 57. Section 425.310 is revised to read as follows:

§ 425.310 Marketing requirements.

(a) *Requirements.* Marketing materials and activities must:

(1) Use template language developed by CMS, if available.

(2) Not be used in a discriminatory manner or for discriminatory purposes.

(3) Comply with § 425.304 regarding beneficiary incentives.

(4) Not be materially inaccurate or misleading.

(b) *Monitoring.* (1) CMS may request the submission of marketing materials

and activities at any time. If CMS determines that the marketing materials and activities do not comply with the requirements of paragraph (a) of this section, CMS will issue written notice of disapproval to the ACO.

(2) The ACO shall discontinue, and require its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities to discontinue, use of any marketing materials or activities disapproved by CMS.

(c) *Sanctions.* Failure to comply with this section will subject the ACO to the penalties set forth in § 425.216, termination under § 425.218, or both.

■ 58. Amend § 425.312 by revising paragraph (a)(2) to read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) Notification of the information specified in paragraph (a)(1) of this section must be carried out through the following methods:

(i) By an ACO participant posting signs in all of its facilities.

(ii) By an ACO participant making standardized written notices available upon request in all settings in which beneficiaries receive primary care services.

(iii) In the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, by the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all fee-for-service beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

(iv) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished during the performance year for which the beneficiary is prospectively assigned to the ACO.

(v) Following the provision of the standardized written notice to a beneficiary, as specified in paragraphs (a)(2)(iii) and (iv) of this section, the ACO or ACO participant must provide a verbal or written follow-up communication to the beneficiary.

(A) The follow-up communication must occur no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided.

(B) The ACO must retain a record of all beneficiaries receiving the follow-up communication, and the form and manner in which the communication was made available to the beneficiary. The ACO must make these records available to CMS upon request.

* * * * *

■ 59. Amend § 425.316 by adding paragraph (e) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(e) *Monitoring ACO eligibility for advance investment payments.* (1) CMS monitors an ACO that receives advance investment payments pursuant to § 425.630 for changes in its ACO participants that may cause the ACO to no longer meet the standards specified in § 425.630(b)(3) and (4).

(2) If CMS determines that an ACO receiving advance investment payments is experienced with performance-based risk Medicare ACO initiatives or is a high revenue ACO, CMS—

(i) Will cease payment of advance investment payments, starting the quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

(ii) May take compliance action as specified in §§ 425.216 and 425.218.

(3) If an ACO remains an ACO experienced with performance-based risk Medicare ACO initiatives or a high revenue ACO after a deadline specified by CMS pursuant to compliance action under this section, the ACO must repay all advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

■ 60. Amend § 425.400 by—

■ a. Revising paragraph (c)(1)(vi) introductory text; and

■ b. Adding paragraph (c)(1)(vii).

The addition and revision read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(vi) For the performance year starting on January 1, 2022 as follows:

* * * * *

(vii) For the performance year starting on January 1, 2023, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(3) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vii)).

(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(8) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(9) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(10) 99439 (code for non-complex chronic care management).

(11) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(12) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(13) 99495 and 99496 (codes for transitional care management services).

(14) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

(4) G0443 (code for alcohol misuse counseling service).

(5) G0444 (code for annual depression screening service).

(6) G0463 (code for services furnished in ETA hospitals).

(7) G0506 (code for chronic care management).

(8) G2010 (code for the remote evaluation of patient video/images).

(9) G2012 and G2252 (codes for virtual check-in).

(10) G2058 (code for non-complex chronic care management).

(11) G2064 and G2065 (codes for principal care management services).

(12) G2212, GXXX2, and GXXX3 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(13) G2214 (code for psychiatric collaborative care model).

(14) GYYY1 and GYYY2 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vii)(A) of this section or a HCPCS code specified in paragraph (c)(1)(vii)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 61. Amend § 425.402 by adding paragraph (f) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(f) For performance year 2023 and subsequent performance years, CMS employs the following process to identify services furnished by FQHCs, RHCs, Method II CAHs, and ETA hospitals for purposes of the beneficiary assignment methodology under this section.

(1) Prior to the start of the performance year and periodically during the performance year, CMS will determine the CCNs for all FQHCs, RHCs, Method II CAHs, and ETA hospitals enrolled under the TIN of an ACO participant, including all CCNs with an active enrollment in Medicare and all CCNs with a deactivated enrollment status.

(2) CMS uses the CCNs identified in paragraph (f)(1) of this section in determining assignment for the performance year.

(3) CMS accounts for changes in CCN enrollment status during the performance year as follows:

(i) If a CCN with no prior Medicare claims experience enrolls under the TIN of an ACO participant after the ACO certifies its ACO participant list for a performance year as required under § 425.118(a)(3), CMS will consider services furnished by that CCN in determining beneficiary assignment to the ACO for the applicable performance year for ACOs under preliminary prospective assignment with retrospective reconciliation.

(ii) Services furnished by a CCN with a deactivated enrollment status that is

enrolled under an ACO participant at the start of a performance year will be considered in determining beneficiary assignment to the ACO for the applicable performance year or benchmark year.

(iii) If a CCN enrolled under the TIN of an ACO participant at the start of the performance year enrolls under a different TIN during a performance year, CMS will continue to treat services billed by the CCN as services furnished by the ACO participant it was enrolled under at the start of the performance year for purposes of determining beneficiary assignment to the ACO for the applicable performance year.

■ 62. Amend § 425.512—

■ a. In paragraph (a)(4)(i)(A), by removing the phrase “quality performance score” and adding in its place the phrase “health equity adjusted quality performance score”;

■ b. By redesignating paragraph (a)(4)(ii) as paragraph (a)(4)(iii);

■ c. By adding new paragraph (a)(4)(ii);

■ d. Revising newly redesignated paragraph (a)(4)(iii);

■ e. By revising paragraph (a)(5)(i);

■ f. By redesignating paragraph (a)(5)(ii) as paragraph (a)(5)(iii);

■ g. By adding new paragraph (a)(5)(ii);

■ h. By revising newly redesignated paragraph (a)(5)(iii);

■ i. By adding paragraph (a)(6);

■ j. By redesignating paragraph (b) as paragraph (c);

■ k. By adding new paragraph (b);

■ l. In newly redesignated paragraph (c)(2) introductory text, by removing the reference “paragraph (b)(1) of this section” and adding in its place the reference “paragraph (c)(1) of this section”; and

■ m. By revising newly redesignated paragraph (c)(3).

The revisions and additions read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(4) * * *

(ii) For performance year 2023, CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraphs (a)(2) or (a)(4)(i) of this section, but reports quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set.

(iii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.

* * * * *

(5) * * *

(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this subchapter, according to the method of submission established by CMS and the following:

(A) For performance year 2024—

(1) Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(2) If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter for all three eCQMs/MIPS CQMs, achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

(B) For performance year 2025 and subsequent years—Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraphs (a)(2) or (a)(5)(i) of this section, but reports quality data via the APP established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set.

(iii) An ACO will not meet the quality performance standard or the alternative quality performance standard if:

(A) For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP.

(B) For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs and does not administer a CAHPS for MIPS survey under the APP.

(6) For performance years 2022, 2023, and 2024, CMS designates a performance benchmark and minimum attainment level for each CMS Web Interface measure and establishes a point scale for the measure as described in § 425.502(b).

(b) *Calculation of ACO's health equity adjusted quality performance score for performance year 2023 and subsequent performance years.*

(1) For an ACO that reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and administers the CAHPS for MIPS survey, CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(2) of this section. The sum of these values may not exceed 100 percent.

(2) CMS calculates the ACO's health equity adjustment bonus points as follows:

(i) For each measure in the APP measure set, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(2)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates an underserved multiplier for the ACO.

(A) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered

underserved based on the higher value of either the proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index national percentile rank of at least 85 or the proportion of the ACO's assigned beneficiaries that are dually eligible for Medicare and Medicaid.

(B) If the proportion determined in accordance with paragraph (b)(2)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for health equity adjustment bonus points.

(v) Except as specified in paragraph (b)(2)(iv)(B) of this section, CMS calculates the ACO's health equity adjustment bonus points as the product of the measure performance scaler determined under paragraph (b)(2)(iii) of this section and the underserved multiplier determined under paragraph (b)(2)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's health equity adjustment bonus points is set equal to 10.

(3) The ACO's health equity adjusted quality performance score, determined in accordance with paragraphs (b)(1) and (b)(2) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), and (a)(5)(i)(B) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraphs (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i) and (a)(5)(i) of this section or the alternative quality performance standard established in paragraphs (a)(4)(ii) of this section.

(iv) In determining the quality performance score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) and (iii) of this section.

(c) * * *

(3) If the ACO reports quality data via the APP and meets data completeness and case minimum requirements:

(i) For performance years 2021 and 2022, CMS will use the higher of the

ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(iii) For performance year 2024 and subsequent performance years, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

* * * * *

■ 63. Amend § 425.600—

■ a. By revising paragraph (a)(4)(i)(B) introductory heading;

■ b. In paragraph (a)(4)(i)(B)(2)(ii), revise the last sentence.

■ c. In paragraph (a)(4)(i)(B)(2)(iv), by removing the phrase “For performance year 2023, the ACO is automatically advanced to the level of the BASIC track's glide path to which the ACO would have automatically advanced absent the election to maintain its participation level for performance year 2022” and adding in its place the phrase “Except as provided in paragraph (a)(4)(i)(B)(2)(vi) of this section, for performance year 2023, the ACO is automatically advanced to the level of the BASIC track's glide path to which the ACO would have automatically advanced absent the election to maintain its participation level for performance year 2022”;

■ d. By adding paragraphs (a)(4)(i)(B)(2)(vi) and (vii), and (a)(4)(i)(C);

■ e. In paragraph (a)(4)(ii), by removing the reference “paragraph (d) of this section” and adding in its place the references “paragraph (d) or paragraph (g)(2) of this section, as applicable”;

■ f. In paragraph (d) introductory text, by removing the phrase “beginning on July 1, 2019, and in subsequent years” and adding in its place the phrase “beginning on or after July 1, 2019, and before January 1, 2024”;

■ g. By revising paragraph (e) introductory text;

■ h. In paragraph (f)(4)(ii), by removing the reference “§ 425.601(f)” and adding in its place the references “§§ 425.601(f), and 425.656(d)”;

■ i. In paragraph (f)(4)(iii), by removing the reference “§ 425.601(e)” and adding in its place the references “§§ 425.601(e), and 425.652(c)(2)”;

■ j. By adding paragraphs (g) and (h).

The revisions and additions read as follows:

§ 425.600 Selection of risk model.

(a) * * *

(4) * * *

(i) * * *

(B) *Glide path progression for agreement periods beginning on or after July 1, 2019 and before January 1, 2024.*

* * * * *

(2) * * *

(ii) * * * In the case of an ACO that elects to remain in Level B for an additional performance year pursuant to the second sentence of paragraph (a)(4)(i)(B)(2)(ii) of this section, and except as provided in paragraph (a)(4)(i)(B)(2)(vi) of this section, the ACO is automatically advanced to Level E under paragraph (a)(4)(i)(A)(5) of this section at the start of performance year 4 (or performance year 5 in the case of ACOs entering an agreement period beginning on July 1, 2019).

* * * * *

(vi) For performance year 2023, an ACO in Level A under paragraph (a)(4)(i)(A)(1) of this section or in Level B under paragraph (a)(4)(i)(A)(2) of this section may elect to remain in the same level of the BASIC track's glide path in which it participated during performance year 2022, for the remainder of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i). If the ACO does not elect to remain under Level A or Level B, for performance year 2023, the ACO is automatically advanced to the next level of the BASIC track's glide path to which the ACO would have automatically advanced absent any election to maintain its participation level for performance year 2022 under paragraph (a)(4)(i)(B)(2)(iv) of this section and, if applicable, the election to maintain its participation level for performance year 2021 under paragraph (a)(4)(i)(B)(2)(iii) of this section, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i). A voluntary election by an ACO under this paragraph must be made in the form and manner and by a deadline established by CMS.

(vii) For performance year 2024, an ACO with an agreement period beginning January 1, 2023 in Level A under paragraph (a)(4)(i)(A)(1) of this section or in Level B under paragraph (a)(4)(i)(A)(2) of this section may elect to remain in the same level of the BASIC track's glide path in which it participated during performance year 2023, for the remainder of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i). If the ACO does not elect to remain under Level A or Level B, for performance year 2024, the ACO is automatically advanced to the next level of the BASIC track's glide path, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i). A voluntary election by an ACO under this paragraph must be made in the form and manner and by a deadline established by CMS.

* * * * *

(C) *Glide path progression for agreement periods beginning on or after January 1, 2024.*

(1) *Level of glide path entry.* An ACO eligible to enter the BASIC track's glide path as determined under paragraph (g)(1) of this section may elect to enter its agreement period at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(1) through (5) of this section.

(2) *Automatic advancement.* An ACO is automatically advanced to the next level of the BASIC track's glide path at the start of each subsequent performance year of the agreement period, if a higher level of risk and potential reward is available under the BASIC track, except as follows:

(i) The ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i).

(ii) The ACO elects to maintain its level of participation as provided in paragraph (a)(4)(i)(C)(3) of this section.

(iii) The ACO is automatically advanced to Level E pursuant to paragraph (h)(2)(i) of this section.

(3) *Election to remain under a one-sided model.* An eligible ACO that enters the BASIC track's glide path at Level A under paragraph (a)(4)(i)(A)(1) of this section and is currently at Level A may elect to remain in Level A under paragraph (a)(4)(i)(A)(1) of this section for all subsequent performance years of the agreement period.

(i) To be eligible to participate under Level A of the BASIC track as described

in this paragraph, the ACO must meet the following requirements: the ACO is participating in its first agreement period under the BASIC track under paragraph (a)(4) of this section, and is not participating in an agreement period under the BASIC track as a renewing ACO (as defined at § 425.20) or a re-entering ACO (as defined in § 425.20) that previously participated in the BASIC track's glide path under paragraph (a)(4) of this section; and the ACO is inexperienced with performance-based risk Medicare ACO initiatives (as defined in § 425.20).

(ii) A voluntary election by an ACO under this paragraph (a)(4)(i)(C)(3) must be made in the form and manner and by a deadline established by CMS.

(iii) The ACO's election to remain in Level A applies for the entirety of the agreement period, unless the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided in § 425.226(a)(2)(i).

(4) Prior to entering performance-based risk, an ACO must meet all requirements to participate under performance-based risk, including establishing an adequate repayment mechanism as specified under § 425.204(f) and selecting a MSR/MLR from the options specified under § 425.605(b).

(5) If the ACO fails to meet the requirements to participate under performance-based risk under paragraph (a)(4)(i)(C)(4) of this section, the agreement is terminated.

(6) If, in accordance with § 425.226(a)(2)(i), the ACO elects to transition to a higher level of risk and reward available under paragraphs (a)(4)(i)(A)(3) through (5) of this section, then the automatic transition to levels of higher risk and reward specified in paragraph (a)(4)(i)(C)(2) of this section applies to all subsequent performance years of the agreement period.

* * * * *

(e) For performance years beginning on or after July 1, 2019 and before January 1, 2024, CMS monitors low revenue ACOs identified as experienced with performance-based risk Medicare ACO initiatives, during an agreement period in the BASIC track, for changes in the revenue of ACO participants that would cause the ACO to be considered a high revenue ACO and ineligible for participation in the BASIC track. If the ACO meets the definition of a high revenue ACO (as specified in § 425.20)—

* * * * *

(g) For agreement periods beginning on or after January 1, 2024, CMS

determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

(1) If an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward under paragraphs (a)(4)(i)(A)(1) through (5) of this section, or the ENHANCED track under paragraph (a)(3) of this section.

(i) An ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of two agreement periods, as specified in paragraph (a)(4)(i)(C) of this section.

(ii) An ACO that enters an agreement under the BASIC track's glide path at either Level A under paragraph (a)(4)(i)(A)(1) of this section or Level B under paragraph (a)(4)(i)(A)(2) of this section is deemed to have completed one agreement under the BASIC track's glide path and is only eligible to enter a second agreement under the BASIC track's glide path if the ACO continues to meet the definition of inexperienced with performance-based risk Medicare ACO initiatives and satisfies either of the following:

(A) The ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track's glide path only one time.

(B) For a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path only one time.

(iii) An ACO that is determined to be inexperienced with performance-based risk Medicare ACO initiatives but is not eligible to enter the BASIC track's glide path as specified in paragraph (a)(4)(i)(C) of this section may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section.

(2) If an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section.

(h)(1) For performance years beginning on or after January 1, 2024, CMS monitors ACOs identified as

inexperienced with performance-based risk Medicare ACO initiatives and participating in the BASIC track under a one-sided model during an agreement period pursuant to an election under paragraph (a)(4)(i)(B)(2)(vi), paragraph (a)(4)(i)(B)(2)(vii), or paragraph (a)(4)(i)(C)(3) of this section for changes to their certified list of ACO participants that would cause the ACO to be considered experienced with performance-based risk Medicare ACO initiatives and ineligible for participation in a one-sided model.

(2) If the ACO meets the definition of experienced with performance-based risk Medicare ACO initiatives (under § 425.20)—

(i) The ACO is permitted to complete the performance year for which it met the definition of experienced with performance-based risk Medicare ACO initiatives in a one-sided model of the BASIC track, but is ineligible to continue participation in the one-sided model after the end of that performance year if it continues to meet the definition of experienced with performance-based risk Medicare ACO initiatives. The ACO will be automatically advanced to Level E within the BASIC track under paragraph (a)(4)(i)(A)(5) of this section at the start of the next performance year and will remain in Level E for all subsequent performance years of the agreement period; and

(ii) Prior to entering performance-based risk, the ACO must meet all requirements to participate under performance-based risk, including establishing an adequate repayment mechanism as specified under § 425.204(f) and selecting a MSR/MLR from the options specified under § 425.605(b), in accordance with paragraph (a)(4)(i)(B)(2)(v) of this section or paragraph (a)(4)(i)(C)(4) of this section, as applicable. If the ACO fails to meet the requirements to participate under performance-based risk, the agreement is terminated in accordance with paragraph (a)(4)(i)(B)(3) of this section or paragraph (a)(4)(i)(C)(5) of this section, as applicable.

■ 64. Amend § 425.601 by—

■ a. Revising the section heading, and paragraphs (a)(1)(i) and (c)(2)(i);

■ b. Removing paragraph (d)(3);

■ c. In paragraph (f)(5)(ii), by removing the reference “paragraph (f)(4)(i) of this section”, and adding in its place the reference “paragraph (f)(5)(i) of this section”; and

■ d. In paragraph (f)(5)(iv), by removing the references “paragraphs (f)(1) and (2) of this section”, and adding in their

place the references “paragraphs (f)(1) through (3) of this section”.

The revisions read as follows:

§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on or after July 1, 2019, and before January 1, 2024.

* * * * *

(a) * * *

(1) * * *

(i) This calculation excludes indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

* * * * *

(c) * * *

(2) * * *

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and

* * * * *

■ 65. Amend § 425.605—

■ a. By revising paragraph (a) introductory text, paragraphs (a)(1)(i) and (ii), paragraph (a)(2) introductory text, and paragraphs (a)(5)(i) and (a)(6);

■ b. By adding paragraph (b)(2)(ii)(E);

■ c. By revising paragraphs (b)(3), and (c)(2);

■ d. In paragraph (d)(1) introductory text, by removing the reference “§ 425.600(d)” and adding in its place the references “§ 425.600(d) or § 425.600(g)”;

■ e. By revising paragraph (d)(1)(i)(A)(2) introductory heading;

■ f. By adding paragraphs (d)(1)(i)(A)(3) and (4);

■ g. By revising paragraph (d)(1)(i)(B)(1);

■ h. By revising the paragraph heading of paragraph (d)(1)(ii)(A)(2);

■ i. By adding paragraphs (d)(1)(ii)(A)(3) and (4);

■ j. By revising paragraph (d)(1)(ii)(B)(1);

■ k. By revising the paragraph heading of paragraph (d)(1)(iii)(A)(2);

■ l. By adding paragraphs (d)(1)(iii)(A)(3) and (4);

■ m. By revising paragraph (d)(1)(iii)(B)(1);

■ n. In paragraph (d)(1)(iii)(D)(2), by removing the reference “§ 425.601” and adding in its place the references “§ 425.601 or § 425.652”;

■ o. By revising the paragraph heading of paragraph (d)(1)(iv)(A)(2);

■ p. By adding paragraphs (d)(1)(iv)(A)(3) and (4);

■ q. By revising paragraph (d)(1)(iv)(B)(1);

■ r. In paragraph (d)(1)(iv)(D)(2), by removing the reference “§ 425.601” and adding in its place the references “§ 425.601 or § 425.652”;

- s. By revising the paragraph heading of paragraph (d)(1)(v)(A)(2);
- t. By adding paragraphs (d)(1)(v)(A)(3) and (4);
- u. By revising paragraph (d)(1)(v)(B)(1);
- v. In paragraph (d)(1)(v)(D)(2), by removing the reference “§ 425.601” and adding in its place the references “§ 425.601 or § 425.652”;
- w. In paragraph (d)(2), by removing the reference “§ 425.600(d)” and adding in its place the references “§ 425.600(d) or § 425.600(g)”;
- x. By adding paragraph (h).

The revisions and additions read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

(a) *General rules.* For each performance year, CMS determines whether the estimated average per capita Medicare Parts A and B fee-for-service expenditures for Medicare fee-for-service beneficiaries assigned to the ACO are above or below the updated benchmark determined under § 425.601 or § 425.652, as applicable. In order to qualify for a shared savings payment under the BASIC track, or to be responsible for sharing losses with CMS, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below or above the updated benchmark, respectively, by at least the minimum savings or loss rate under paragraph (b) of this section except as provided in paragraph (h) of this section.

(1) * * *

(i) For agreement periods beginning before January 1, 2024:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(B) This cap is the maximum increase in risk scores for each agreement period, such that any positive adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent.

(ii) For agreement periods beginning on January 1, 2024, and in subsequent years:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points.

(B) The cap described in paragraph (a)(1)(ii)(A) of this section will apply to prospective HCC risk score growth for a population described in paragraph (a)(2) of this section only if the ACO's

aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the populations described in paragraph (a)(2) of this section exceeds this cap. If the cap described in paragraph (a)(1)(ii)(A) of this section is determined to apply, the value of the cap is the maximum increase in risk scores for the applicable performance year, such that any positive adjustment between BY3 and the performance year cannot be larger than the value of the cap for any of the populations described in paragraph (a)(2) of this section.

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(1)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(1)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(2) of this section. To calculate aggregate growth in demographic risk scores or prospective HCC risk scores, as applicable, CMS does the following:

(1) Multiplies the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) by the applicable proportion of total historical benchmark dollars associated with that population.

(2) Sums the amounts determined in paragraph (a)(1)(ii)(C)(1) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(2) In risk adjusting the benchmark as described in §§ 425.601(a)(10) and 425.652(a)(10), CMS makes separate adjustments for each of the following populations of beneficiaries:

* * * * *

(5) * * *

(i) These calculations exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

* * * * *

(6) In order to qualify for a shared savings payment, the ACO's average per capita Medicare Parts A and B fee-for-service expenditures for the performance year must be below the applicable updated benchmark by at

least the minimum savings rate established for the ACO under paragraph (b) of this section except as provided in paragraph (h) of this section.

(b) * * *

(2) * * *

(ii) * * *

(E) Automatic transition from Level A to Level E of the BASIC track's glide path under § 425.600(h)(2).

(3) Except as provided in paragraph (h) of this section, in order to qualify for a shared savings payment, an ACO's average per capita Medicare Parts A and B fee-for-service expenditures for its assigned beneficiary population for the performance year must be below its updated benchmark by at least the MSR established for the ACO.

* * * * *

(c) * * *

(2) *For performance years beginning on or after January 1, 2021.* To qualify for shared savings, an ACO must—

(i) Meet either the minimum savings rate requirement established under paragraph (b) of this section, or the criteria described in paragraph (h) of this section;

(ii) Meet either the quality performance standard or alternative quality performance standard established under § 425.512; and

(iii) Otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) * * *

(1) * * *

(i) * * *

(A) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section). The percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO

that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) * * *

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(i)(A) of this section applies to an ACO's savings on a first dollar basis.

* * * * *

(ii) * * *

(A) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section). The percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section).

Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 40 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 40 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) * * *

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(ii)(A) of this section applies to an ACO's savings on a first dollar basis.

* * * * *

(iii) * * *

(A) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality

performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) * * *

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(iii)(A) of this section applies to an ACO's savings on a first dollar basis.

* * * * *

(iv) * * *

(A) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) * * *

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as

provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(iv)(A) of this section applies to an ACO's savings on a first dollar basis.

* * * * *

(v) * * *

(A) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). The percentage is as follows:

(i) 50 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(i) 50 percent for an ACO that that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 50 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(B) * * *

(1) If an ACO qualifies for savings by meeting or exceeding the MSR, or as provided in paragraph (h) of this section, the final sharing rate specified in paragraph (d)(1)(v)(A) of this section applies to an ACO's savings on a first dollar basis.

* * * * *

(h) *Calculation of shared savings for certain BASIC track ACOs not meeting*

MSR requirement. An ACO that does not meet the minimum savings rate requirement established under paragraph (b) of this section but meets the other criteria described in paragraphs (c)(2)(ii) and (iii) of this section may qualify for a shared savings payment as provided in this paragraph.

(1) To qualify for a shared savings payment under this paragraph, an ACO must meet all of the following criteria:

(i) The ACO has average per capita Medicare Parts A and B fee-for-service expenditures for the performance year below the updated benchmark determined under § 425.652.

(ii) The ACO is a low revenue ACO as defined in § 425.20 as determined at the time of financial reconciliation for the performance year.

(iii) The ACO has at least 5,000 assigned beneficiaries for the relevant performance year as determined at the time of financial reconciliation for the performance year.

(iv) The ACO is participating in an agreement period beginning on January 1, 2024, or in subsequent years.

(2) The ACO's shared savings payment will be calculated as described in paragraph (d) of this section according to the ACO's applicable level of the BASIC track with the exception that the final sharing rate applied will equal one-half of the applicable percentage described in paragraph (d)(1)(i)(A)(4), (d)(1)(ii)(A)(4), (d)(1)(iii)(A)(4), (d)(1)(iv)(A)(4), or (d)(1)(v)(A)(4) of this section.

■ 66. Amend § 425.610—

■ a. In paragraph (a) introductory text, by removing the references “§ 425.601, § 425.602 or § 425.603” and adding in its place the references “§ 425.601, § 425.602, § 425.603, or § 425.652”;

■ b. By revising paragraphs (a)(2)(i) and (ii), (a)(3) introductory text, (a)(6)(i) and (d)(2) paragraph heading;

■ c. By adding paragraphs (d)(3) and (4);

■ d. By revising paragraph heading of paragraph (f)(2);

■ e. By adding paragraphs (f)(3) and (4); and

■ f. In paragraph (g), by removing the references “§ 425.601, § 425.602 or § 425.603” and adding in its place the references “§ 425.601, § 425.602, § 425.603 or § 425.652”.

The revisions and additions read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

(a) * * *

(2) * * *

(i) For agreement periods beginning before January 1, 2024:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap of 3 percent.

(B) This cap is the maximum increase in risk scores for each agreement period, such that any positive adjustment between BY3 and any performance year in the agreement period cannot be larger than 3 percent.

(ii) For agreement periods beginning on January 1, 2024, and in subsequent years:

(A) Positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points.

(B) The cap described in paragraph (a)(2)(ii)(A) of this section will apply to prospective HCC risk score growth for a population described in paragraph (a)(3) of this section only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the populations described in paragraph (a)(3) of this section exceeds this cap. If the cap described in paragraph (a)(2)(ii)(A) of this section is determined to apply, the value of the cap is the maximum increase in risk scores for the applicable performance year, such that any positive adjustment between BY3 and the performance year cannot be larger than the value of the cap for any of the populations described in paragraph (a)(3) of this section.

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(2)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(2)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(3) of this section. To calculate aggregate growth in demographic risk scores or prospective HCC risk scores, as applicable, CMS does the following:

(1) Multiplies the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) by the applicable proportion of total historical benchmark dollars associated with that population.

(2) Sums the amounts determined in paragraph (a)(2)(ii)(C)(1) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(3) In risk adjusting the benchmark as described in §§ 425.601(a)(10), 425.602(a)(9), 425.603(c)(10), and 425.652(a)(10) CMS makes separate adjustments for each of the following populations of beneficiaries:

* * * * *

(6) * * *

(i) These calculations will exclude indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

* * * * *

(d) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section). The percentage is as follows:

(i) 75 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i).

(ii) 75 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(4) *For performance years beginning on or after January 1, 2024.* An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section). The percentage is as follows:

(i) 75 percent for an ACO that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(ii) 75 percent multiplied by the ACO's health equity adjusted quality performance score calculated according to § 425.512(b) for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

* * * * *

(f) * * *

(2) *For performance years beginning on January 1, 2021, or January 1, 2022.*

* * *

(3) *For the performance year beginning on January 1, 2023.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets either the quality performance standard established in § 425.512 applicable for the performance year by meeting the criteria specified in § 425.512(a)(2) or (a)(4)(i), or the alternative quality performance standard established in § 425.512(a)(4)(ii), CMS determines the shared loss rate as follows:

(A) Calculate the product of 75 percent and the ACO's health equity adjusted quality performance score calculated according to § 425.512(b).

(B) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(3)(i)(A) of this section. The shared loss rate—

(1) May not exceed 75 percent; and

(2) May not be less than 40 percent.

(ii) If the ACO fails to meet either the quality performance standard or the alternative quality performance standard established in § 425.512 applicable for the performance year, the shared loss rate is 75 percent.

(4) *For performance years beginning on or after January 1, 2024.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets either the quality performance standard established in § 425.512 applicable for the performance year by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i), or the alternative quality performance standard established in § 425.512(a)(5)(ii), CMS determines the shared loss rate as follows:

(A) Calculate the product of 75 percent and the ACO's health equity adjusted quality performance score calculated according to § 425.512(b).

(B) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(4)(i)(A) of this section. The shared loss rate—

(1) May not exceed 75 percent; and

(2) May not be less than 40 percent.

(ii) If the ACO fails to meet either the quality performance standard or the alternative quality performance standard established in § 425.512 for the applicable performance year, the shared loss rate is 75 percent.

* * * * *

■ 67. Amend § 425.611—

■ a. In paragraph (c)(2)(i), by removing the references “§§ 425.601(c) and 425.603(e)” and adding in its place the

references “§§ 425.601(c), 425.603(e), and 425.654(a)”;

■ b. In paragraph (c)(2)(ii)(A), by removing the references “§§ 425.601(a)(4), 425.602(a)(4), and 425.603(c)(4)” and adding in its place the references “§§ 425.601(a)(4), 425.602(a)(4), 425.603(c)(4), and 425.652(a)(4)”;

■ c. In paragraph (c)(2)(ii)(B), by removing the references “§§ 425.601(c)(3) and 425.603(e)(3)” and adding in its place the references “§§ 425.601(c)(3), 425.603(e)(3), and 425.654(a)(3)”;

■ d. By revising paragraph (c)(2)(iii);

■ e. In paragraph (c)(2)(v), by removing the reference “§ 425.601(a)(5)(ii)” and adding in its place the references “§§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii)”;

■ f. In paragraph (c)(2)(v), by removing the reference “§ 425.601(b)(2)” and adding in its place the references “§§ 425.601(b)(2) and 425.652(b)(2)(i)”;

and

■ g. By revising paragraph (c)(4).

The revisions read as follows:

§ 425.611 Adjustments to Shared Savings Program calculations to address the COVID-19 pandemic.

(c) * * *

(2) * * *

(iii) Determining national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), and capping the prior savings adjustment according to § 425.652(a)(8)(iv).

* * * * *

(4) Calculation of total Medicare Parts A and B fee-for-service revenue of ACO participants and total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, determining an ACO's eligibility for participation options according to § 425.600(d), and determining an ACO's eligibility to receive advance investment payments according to § 425.630.

* * * * *

■ 68. Amend § 425.612 by—

■ a. Revising paragraph (a)(1)(i)(A) introductory text; and

■ b. In paragraph (a)(1)(i)(A)(1) by removing the phrase “The communication plan” and adding in its place the phrase “A communication plan”.

The revision reads as follows:

§ 425.612 Waivers of payment rules or other Medicare requirements.

- (a) * * *
- (1) * * *
- (i) * * *

(A) An attestation that it has established and will make available to CMS upon request the following narratives describing how the ACO plans to implement the waiver:

* * * * *

§§ 425.614 through 425.629 [Reserved]

■ 69. Section 425.630 is added to subpart G to read as follows:

§ 425.630 Option to receive advance investment payments.

(a) *Purpose.* Advance investment payments are intended to encourage low-revenue ACOs that are inexperienced with risk to participate in the Shared Savings Program and to provide additional resources to such ACOs in order to support care improvement for underserved beneficiaries.

(b) *Eligibility.* An ACO is eligible to receive advance investment payments as specified in this section if CMS determines that all of the following criteria are met:

(1) The ACO is not a renewing or a re-entering ACO.

(2) The ACO has applied to participate in the Shared Savings Program under any level of the BASIC track's glide path and is eligible to participate in the Shared Savings Program.

(3) The ACO is inexperienced with performance-based risk Medicare ACO initiatives.

(4) The ACO is a low revenue ACO.

(c) *Application procedure.* To obtain a determination regarding whether an ACO may receive advance investment payments, the ACO must submit to CMS complete supplemental information as part of its application to participate in the Shared Savings Program (filed pursuant to § 425.202) in the form and manner and by a deadline specified by CMS.

(d) *Application contents and review.*

(1) *General.* An ACO must submit to CMS supplemental application information sufficient for CMS to determine whether the ACO is eligible to receive advance investment payments. In addition, the ACO must submit a proposed spend plan as part of the supplemental application information.

(2) *Spend plan.* The spend plan must:

(i) Describe how the ACO will spend its advance investment payments during the agreement period to build care coordination capabilities (including

coordination with community-based organizations, as appropriate), address specific health disparities, and meet other criteria under this section.

(ii) Identify the categories of goods and services that will be purchased with advance investment payment funds (including any allowable uses under paragraph (e) of this section), the dollar amounts to be spent on the various categories, and such other information as may be specified by CMS.

(iii) State that the ACO has established a separate designated account for the deposit and expenditure of all advance investment payments in accordance with paragraph (e)(4) of this section.

(3) *CMS review.* CMS will review the supplemental application information to determine whether an ACO meets the eligibility criteria and other requirements for advance investment payments and will approve or deny the advance investment payment application accordingly. CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the requirements of this paragraph (d) and paragraph (e) of this section.

(e) *Use and management of advance investment payments.*

(1) *Allowable uses.* An ACO must use an advance investment payment to improve the quality and efficiency of items and services furnished to beneficiaries by investing in increased staffing, health care infrastructure, and the provision of accountable care for underserved beneficiaries, which may include addressing social determinants of health. Expenditures of advance investment payments must comply with the beneficiary incentive provision at § 425.304, paragraph (e)(2) of this section, and all other applicable laws and regulations.

(2) *Prohibited uses.* Advance investment payments may not be used for any expense other than allowable uses under paragraph (e)(1) of this section. In the case of an ACO participating in Level E of the BASIC track, the repayment of any shared losses incurred as specified in a written notice in accordance with § 425.605(e)(2).

(3) *Duration for spending payments.* An ACO may spend an advance investment payment over its entire agreement period. An ACO must repay to CMS any unspent funds remaining at the end of the ACO's agreement period.

(4) *Segregation of advance investment payments.* An ACO must segregate advance investment payments from all other revenues by establishing and maintaining a separate account into

which all advance investment payments will be deposited immediately and from which all disbursements of such funds are made only for allowable uses in accordance with this paragraph.

(f) *Payment methodology.* An ACO receives two types of advance investment payments: a one-time payment of \$250,000 and quarterly payments calculated pursuant to the methodology defined in paragraph (f)(2) of this section. CMS notifies in writing each ACO of its determination of the amount of advance investment payment. If CMS does not make any advance investment payment, the notice will specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part.

(1) *Frequency of payments.* An ACO will receive the one-time payment at the beginning of Performance Year 1 of the ACO's agreement period. An ACO will receive quarterly payments each quarter for the first two performance years of the ACO's agreement period. An ACO may receive no more than eight quarterly payments.

(2) *Quarterly payment amount calculation methodology.* CMS does all of the following in determining the quarterly payment amount prior to the start of the quarter.

(i) Determines the ACO's assigned beneficiary population. The assigned beneficiaries used in determining the quarterly payment amount are the beneficiaries most recently assigned to the ACO under § 425.400(a)(2) (for an ACO under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3) (for an ACO under prospective assignment), based on the certified ACO participant list for the relevant performance year.

(ii) Assigns each beneficiary a risk factors-based score. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS applies the following requirements in assigning a risk factors-based score:

(A) The risk factors-based score will be set to 100 if the beneficiary is dually eligible for Medicare and Medicaid.

(B) The risk factors-based score will be set to the Area Deprivation Index national percentile rank matched to the beneficiary's mailing address if the beneficiary is not dually eligible for Medicare and Medicaid and sufficient data is available to match the beneficiary to an Area Deprivation Index national percentile rank.

(C) The risk factors-based score will be set to 50 if the beneficiary is not dually eligible for Medicare and Medicaid and sufficient data is not

available to match the beneficiary to an Area Deprivation Index national percentile rank.

(iii) Determines a beneficiary's payment amount. For each beneficiary

in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the payment amount that corresponds to the beneficiary's risk

factors-based score determined in paragraph (f)(2)(ii) of this section. The beneficiary payment amount is as follows:

Risk factors-based score	1–24	25–34	35–44	45–54	55–64	65–74	75–84	85–100
Payment amount	\$0	\$20	\$24	\$28	\$32	\$36	\$40	\$45

(iv) Calculates the ACO's quarterly payment amount. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to each assigned beneficiary's risk factors-based score, specified in paragraph (f)(2)(iii) of this section, capped at 10,000 beneficiaries. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest risk factors-based scores determined according to paragraph (f)(2)(ii) of this section.

(g) *Recoupment and recovery of advance investment payments, and notice of bankruptcy.*

(1) CMS will recoup advance investment payments made to an ACO from any shared savings the ACO earns until CMS has recouped in full the amount of advance investment payments made to the ACO. For both renewing and re-entering ACOs, CMS will carry forward any remaining balance owed to subsequent performance year(s) in which the ACO achieves shared savings, including in any performance year(s) in a subsequent agreement period.

(2) If the amount of shared savings earned by the ACO is revised upward by CMS for any reason, CMS will reduce the redetermined amount of shared savings by the amount of advance investment payments made to the ACO as of the date of the redetermination. If the amount of shared savings earned by the ACO is revised downward by CMS for any reason, the ACO will not receive a refund of any portion of the advance investment payments previously recouped or otherwise repaid.

(3) Except as provided for in paragraphs (g)(4) of this section and § 425.316(e)(3), for each performance year, CMS will not recover an amount of advance investment payments greater than the shared savings earned by an ACO in that performance year.

(4) If an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment

payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

(5) In the event of bankruptcy— (i) If an ACO has filed a bankruptcy petition, whether voluntary or involuntary, the ACO must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment for the agreement period has been made by either CMS or the ACO and all administrative or judicial review proceedings relating to any payments under the Shared Savings Program have been fully and finally resolved.

(ii) The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3–01–24, Baltimore, MD 21244 or such other address as may be specified on the CMS website for purposes of receiving such notices.

(h) *Termination of advance investment payments.* (1) *General.* Except as provided in paragraph (h)(2) of this section, CMS may terminate an ACO's advance investment payments if the ACO—

(i) Fails to comply with the requirements of this section; or

(ii) Meets any of the grounds for ACO termination set forth in § 425.218(b).

(2) *Eligibility sanction.* CMS will terminate an ACO's advance investment payments in accordance with § 425.316(e) if the ACO no longer meets the eligibility requirements specified in paragraphs (b)(3) and (b)(4) of this section.

(3) *No pre-termination actions.* CMS may immediately terminate an ACO's advance investment payments without taking any of the pre-termination actions set forth in § 425.216.

§§ 425.631 through 425.649 [Reserved]

■ 70. Section 425.650 is added to subpart G to read as follows:

§ 425.650 Benchmarking methodology.

(a) *Scope and purpose.* The methodology by which CMS establishes, adjusts, updates and resets an ACO's historical benchmark is described within this subpart G. The benchmarking methodology for agreement periods beginning before January 1, 2024, is specified in §§ 425.601, 425.602, and 425.603. The benchmarking methodology for agreement periods beginning on or after January 1, 2024, is specified in §§ 425.652 through 425.660.

(b) [Reserved]

■ 71. Section 425.652 is added to subpart G to read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) *Computing per capita Medicare Part A and Part B benchmark expenditures for an ACO's first agreement period.* For agreement periods beginning on January 1, 2024, and in subsequent years, in computing an ACO's historical benchmark for its first agreement period under the Shared Savings Program, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.226(a)(1). CMS does all of the following:

(1) Calculates the payment amounts included in Parts A and B fee-for-service claims using a 3-month claims run out with a completion factor.

(i) This calculation excludes indirect medical education (IME) and disproportionate share hospital (DSH) payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

(ii) This calculation includes individually beneficiary identifiable final payments made under a

demonstration, pilot or time limited program.

(2) Makes separate expenditure calculations for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) Adjusts expenditures for changes in severity and case mix using prospective HCC risk scores.

(4) Truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year in order to minimize variation from catastrophically large claims.

(5) Trends forward expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars using a blend of national and regional growth rates.

(i) To trend forward the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(ii) National growth rates are computed using CMS Office of the Actuary national Medicare expenditure data for each of the years making up the historical benchmark for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year.

(iii) Regional growth rates are computed using expenditures for the ACO's regional service area for each of the years making up the historical benchmark as follows:

(A) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the relevant benchmark year.

(B) Determine the ACO's regional expenditures as specified under § 425.654 of this section.

(iv) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(A) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area for BY3 that are assigned to the ACO in BY3, as calculated in paragraph (a)(5)(v) of this section; and

(B) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(v) CMS calculates the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO by doing all of the following:

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(B) Weighting the county-level shares according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries.

(C) Aggregating the weighted county-level shares for all counties in the ACO's regional service area.

(6) Restates BY1 and BY2 trended and risk adjusted expenditures using BY3 proportions of ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(7) Weights each year of the benchmark for an ACO's initial agreement period using the following percentages:

(i) BY3 at 60 percent.

(ii) BY2 at 30 percent.

(iii) BY1 at 10 percent.

(8) Adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period, if applicable (as specified under § 425.658), or a combination of these two adjustments. CMS does all of the following to determine the adjustment(s) applied to the historical benchmark:

(i) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(ii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), the ACO will receive the regional adjustment to its benchmark as described in § 425.656.

(iii) If an ACO is eligible to receive a prior savings adjustment, CMS compares the pro-rated positive average per capita savings amount calculated in § 425.658(b)(3)(ii) with the regional adjustment described in § 425.656(c),

expressed as a single per capita value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values.

(A) If the regional adjustment, expressed as a single value, is negative or zero, calculate the sum of the regional adjustment value and the pro-rated positive average per capita savings amount.

(1) If the sum is positive, the ACO will receive a prior savings adjustment in place of the negative regional adjustment equal to the lesser of 50 percent of the positive sum and the cap described in paragraph (a)(8)(iv) of this section. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) If the sum is negative, the ACO will receive a reduced negative regional adjustment amount equal to the negative sum. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(B) If the regional adjustment, expressed as a single value, is positive, the ACO will receive an adjustment to the benchmark equal to the higher of the following:

(1) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) A prior savings adjustment equal to the lesser of 50 percent of the pro-rated positive average per capita savings amount described in § 425.658(b)(3)(ii) and the cap described in paragraph (a)(8)(iv) of this section. The adjustment will be applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(iv) The cap on the prior savings adjustment calculated in either paragraph (a)(8)(iii)(A)(1) or paragraph (a)(8)(iii)(B)(2) of this section is equal to 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries identified for the 12-month

calendar year corresponding to BY3 using data from the CMS Office of the Actuary and expressed as single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), and for a change to the beneficiary assignment methodology specified in subpart E of this part. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.226(a)(1).

(iii) Redetermines the offset factor used in determining the negative regional adjustment amount under § 425.656(c)(4) and (5).

(iv) Redetermines the proration factor used in calculating the prior savings adjustment under § 425.658(b)(3)(ii) to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.400(a)(4)(ii), or changes to the beneficiary assignment methodology under subpart E of this part.

(v) In accordance with paragraph (a)(8) of this section, CMS redetermines the adjustment to the historical benchmark based on the redetermined regional adjustment (as specified under § 425.656), or the prior savings adjustment (as specified under § 425.658), or a combination of these two adjustments.

(10) The historical benchmark is further adjusted at the time of reconciliation for a performance year to account for changes in severity and case

mix of the ACO's assigned beneficiary population as described under §§ 425.605(a) and 425.610(a).

(b) *Updating the benchmark.* For all agreement periods beginning on January 1, 2024, and in subsequent years, CMS updates the historical benchmark annually for each year of the agreement period using a three-way blend calculated as a weighted average of a two-way blend of national and regional growth rates determined after the end of each performance year and a fixed projected growth rate determined at the beginning of the ACO's agreement period called the Accountable Care Prospective Trend (ACPT).

(1) To update the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) CMS computes the two-way blend of national and regional growth rates as follows:

(i) Computes national growth rates using CMS Office of the Actuary national Medicare expenditure data for BY3 and the performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to each year.

(ii) Computes regional growth rates using expenditures for the ACO's regional service area for BY3 and the performance year, computed as follows:

(A) Determine the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population for the year.

(B) Determine the ACO's regional expenditures as specified under § 425.654.

(iii) The national and regional growth rates are blended together by taking a weighted average of the two. The weight applied to the—

(A) National growth rate is calculated as the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the applicable performance year as specified in paragraph (b)(2)(iv) of this section; and

(B) Regional growth rate is equal to 1 minus the weight applied to the national growth rate.

(iv) CMS calculates the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO by doing all of the following:

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in

the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to the performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(B) Weighting the county-level shares according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries.

(C) Aggregating the weighted county-level shares for all counties in the ACO's regional service area.

(3) CMS computes the ACPT as described in § 425.660.

(4) The two-way blend computed under paragraph (b)(2) of this section and the ACPT are blended together by taking a weighted average of the two.

(i) Absent unforeseen circumstances, the weight applied to the components of the blend is as follows—

(A) Two-way blend is equal to two-thirds; and

(B) ACPT is equal to one-third.

(ii) CMS has sole discretion to determine whether an unforeseen circumstance exists that warrants a reduction to the weight of the ACPT and the reduced weight that will apply to the ACPT.

(5) If an ACO's average per capita Medicare expenditures for the performance year are above its updated benchmark for the year determined as described in paragraph (b)(4) of this section by at least the MLR or negative MSR established for the ACO, CMS will compute a recalculated updated benchmark using the two-way blend described in paragraph (b)(2) of this section.

(i) If the ACO's average per capita Medicare expenditures for the performance year are above the recalculated updated benchmark by a smaller amount than the amount by which they are above the updated benchmark determined as described in paragraph (b)(4) of this section, CMS will use the recalculated updated benchmark to determine the following:

(A) The ACO's responsibility for sharing losses with the Medicare program for ACOs in two-sided models as described under §§ 425.605 and 425.610.

(B) The ACO's financial performance for purposes of monitoring ACO financial performance as described under § 425.316(d).

(ii) If the ACO's average per capita Medicare expenditures for the

performance year are below the recalculated updated benchmark, the ACO will neither be responsible for sharing losses with the Medicare program nor eligible for sharing in savings.

(c) *Resetting the benchmark.* (1) An ACO's benchmark is reset at the start of each subsequent agreement period.

(2) For second or subsequent agreements periods beginning on January 1, 2024, and in subsequent years, CMS establishes, adjusts, and updates the rebased historical benchmark in accordance with paragraphs (a) and (b) of this section except that rather than weighting each year of the benchmark using the percentages provided in paragraph (a)(7) of this section, each benchmark year is weighted equally.

■ 72. Section 425.654 is added to subpart G to read as follows:

§ 425.654 Calculating county expenditures and regional expenditures.

(a) *Calculating county expenditures.* For agreement periods beginning on January 1, 2024, and in subsequent years, CMS does all of the following to determine risk adjusted county fee-for-service expenditures for use in calculating the ACO's regional fee-for-service expenditures:

(1)(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the assignment window corresponding to the relevant benchmark or performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Disabled.

(C) Aged/dual eligible Medicare and Medicaid beneficiaries.

(D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates assignable beneficiary expenditures using the payment amounts included in Parts A and B fee-for-service claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. The calculation—

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and

(ii) Considers individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program.

(3) Truncates a beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year that corresponds to the relevant benchmark or performance year, in order to minimize variation from catastrophically large claims.

(4) Adjusts fee-for-service expenditures for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores. The calculation is made according to the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(b) *Calculating regional expenditures.* For all agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates an ACO's risk adjusted regional expenditures by:

(1) Weighting the risk adjusted county-level fee-for-service expenditures determined under paragraph (a) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Aggregating the values determined under paragraph (b)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area.

■ 73. Section 425.656 is added to subpart G to read as follows:

§ 425.656 Calculating the regional adjustment to the historical benchmark.

(a) *General.* This section describes the methodology for calculating the regional adjustment to the historical benchmark based on the ACO's regional service area

expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. This section applies to regional adjustment calculations for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Calculation of an average per capita expenditure amount for the ACO's regional service area.* To compute an average per capita expenditure amount for the ACO's regional service area, CMS does all of the following:

(1) Determines the counties included in the ACO's regional service area based on the ACO's BY3 assigned beneficiary population.

(2) Determines the ACO's regional expenditures as specified under § 425.654 for BY3.

(3) Adjusts for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO's regional service area for BY3. The assignable population of beneficiaries is identified using the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(c) *Calculation of the adjustment.* To calculate the adjustment, CMS does all of the following:

(1) Determines the difference between the average per capita amount of expenditures for the ACO's regional service area as specified under paragraph (b)(1) of this section and the average per capita amount of the ACO's historical benchmark determined under § 425.652(a)(1) through (7) and (c)(2), for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Applies a percentage, as determined in paragraph (d) of this section.

(3) Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount equal to a percentage of

national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary. The cap is applied as follows:

(i) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(ii) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 1.5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(4) For negative adjustments, CMS will multiply the regional adjustments calculated in paragraphs (c)(2) or (3) of this section by 1 minus an offset factor equal to the sum of the following—

(i) Proportion of the ACO's BY3 assigned beneficiaries that are dual eligible for Medicare and Medicaid; and

(ii) The difference between the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types and 1.

(5) The offset factor described in paragraph (c)(4) of this section is subject to a minimum value of zero (representing no offset to the negative regional adjustment) and a maximum value of 1 (representing a full offset to the negative regional adjustment).

(d) *Phase-in of weights used in regional adjustment calculation.*

(1) The first time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 50 percent of the difference between the average per capita amount

of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(4) The fourth or subsequent time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment to the historical benchmark using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark.

(5) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under paragraph (c)(1) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) for BY3 of the historical benchmark.

(ii) Sums the amounts determined in paragraph (d)(5)(i) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as specified in § 425.652(a)(9), CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (d)(1) through (3) of this section used in calculating the regional adjustment.

(e) *Special rules for determining the weights used in the regional adjustment calculation for a re-entering ACO.* For a re-entering ACO whose prior agreement period benchmark was calculated according to § 425.603(c), CMS determines the weight used in the regional adjustment calculation described in paragraphs (b) through (d) of this section by considering the agreement period the ACO is entering into according to § 425.600(f) in combination with either of the following—

(1) The weight previously applied to calculate the regional adjustment to the ACO's benchmark under § 425.603(c)(9) in its most recent prior agreement period; or

(2) For a new ACO identified as a re-entering ACO, CMS considers the weight previously applied to calculate the regional adjustment to the benchmark under § 425.603(c)(9) in its most recent prior agreement period of the ACO in which the majority of the new ACO's participants were participating previously.

■ 74. Section 425.658 is added to subpart G to read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

(a) *General.* For agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates an adjustment to the historical benchmark to account for savings generated in the 3 years prior to the start of the ACO's current agreement period for renewing or re-entering ACOs that were reconciled for one or more performance

years in the Shared Savings Program during this period.

(b) *Calculate average per capita savings amount.* (1) Calculate total per capita savings or losses for each performance year during the 3 years prior to the start of the ACO's current agreement period. CMS applies the following requirements in determining the amount of per capita savings or losses for each performance year:

(i) Per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

(ii) If an ACO generated savings for a performance year but was not eligible to receive a shared savings payment for that year due to noncompliance with the requirements of this part, per capita savings for that year will be set to zero.

(iii) For a new ACO identified as re-entering ACO, per capita savings or losses will be determined based on the per capita savings or losses of the ACO in which the majority of the ACO's ACO participants were participating.

(2) Take the simple average of the per capita savings or losses calculated in paragraph (b)(1) of this section, including values of zero, if applicable.

(3) Determine the ACO's eligibility for the prior savings adjustment as follows:

(i) If the average per capita amount computed in paragraph (b)(2) of this section is less than or equal to zero, the ACO is not eligible to receive an adjustment for prior savings. The ACO will receive the regional adjustment to its benchmark as described in § 425.656.

(ii) If the average per capita amount computed in paragraph (b)(2) of this section is positive, apply a proration factor to account for any upward growth in the ACO's assigned population in the benchmark years of the ACO's current agreement period as compared to the size of the assigned population when the ACO was reconciled for the corresponding performance years in its prior agreement period.

(c) *Applicability of the prior savings adjustment.* CMS compares the prorated average per capita savings amount determined in paragraph (b)(3)(ii) of this section with the regional adjustment described in § 425.656(c), to determine the applicability of the prior savings adjustment, the regional adjustment or a combination of these two adjustments in accordance with § 425.652(a)(8).

■ 75. Section 425.660 is added to subpart G to read as follows:

§ 425.660 Accountable Care Prospective Trend (ACPT).

(a) *General.* For agreement periods beginning on January 1, 2024, and in subsequent years, CMS incorporates a

fixed projected growth rate determined at the beginning of the ACO's agreement period called the Accountable Care Prospective Trend (ACPT) into the blended update factor described in § 425.652(b) when updating an ACO's benchmark for each performance year of the agreement period.

(b) *Determination of ACPT.* An ACPT is a flat dollar amount calculated using one or more annualized growth rates based on national fee-for-service Medicare expenditures projected by the CMS Office of the Actuary. In determining the ACPT for an enrollment type for each performance year, CMS does all of the following:

(1) Projects per capita growth in Parts A and B fee-for-service expenditures for benchmark year 3 (BY3) and each performance year of the ACO's agreement period. The calculation—

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/ Tribal hospitals and Puerto Rico hospitals; and

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Aged/Disabled.

(2) Calculates one or more annualized growth rates for the population of beneficiaries described in paragraph (b)(1)(ii)(A) of this section (the ESRD ACPT) and one or more annualized growth rates for the population of beneficiaries described in paragraph (b)(1)(ii)(B) of this section (the Aged/Disabled ACPT). These annualized growth rates will remain fixed over the ACO's agreement period. The annualized growth rate is an annual rate of growth in projected expenditures during the ACO's 5-year agreement period relative to BY3, calculated as follows—

(i) Using a uniform annualized projected rate of growth over each of the 5 performance years of the 5-year agreement period; or

(ii) If annualization as specified in paragraph (b)(2)(i) of this section is determined not to reasonably fit the anticipated growth curve, CMS will apply an alternative annualization technique using two or more annualized growth rates reflecting the projected rates of growth during the 5 performance years comprising the 5-year agreement period.

(3) For each performance year, multiplies the applicable annualized growth rate described in paragraph (b)(2) of this section by BY3 truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for each Medicare enrollment type (ESRD, disabled, aged/

dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) identified for the 12-month calendar year corresponding to BY3 to express the annualized growth rate as a flat dollar amount as follows:

(i) The ESRD ACPT is used for the ESRD population.

(ii) The Aged/Disabled ACPT is used for the following populations: disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(4) Adjusts the flat dollar amounts described in paragraph (b)(3) of this section for each performance year for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each Medicare enrollment type identified for the 12-month calendar year corresponding to BY3.

(5) Divides the risk adjusted flat dollar amounts described in paragraph (b)(4) of this section by the ACO's historical benchmark expenditures described in § 425.652(a) for each Medicare enrollment type to calculate the percent increase to be included in the blended update factor described in § 425.652(b)(4).

■ 76. Amend § 425.702 by adding paragraph (c)(2)(iii) to read as follows:

§ 425.702 Aggregate reports.

* * * * *

(c) * * *

(2) * * *

(iii) As an organized health care arrangement (as defined at 45 CFR 160.103), and the request reflects the minimum data necessary for the ACO to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of the organized health care arrangement.

* * * * *

■ 77. Amend § 425.704 by—

■ a. Revising paragraph (b) introductory text; and

■ b. Adding paragraph (b)(3).

The revision and addition read as follows:

§ 425.704 Beneficiary-identifiable claims data.

* * * * *

(b) The ACO must certify that it is requesting claims data about any of the following:

* * * * *

(3) The patients of the organized health care arrangement (as defined at 45 CFR 160.103) in which the ACO is

participating with its ACO participants and ACO providers/suppliers, and the request reflects the minimum data necessary for the ACO to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of the organized health care arrangement.

* * * * *

§ 425.800 [Amended]

■ 78. Amend § 425.800 in paragraph (a)(4) by removing the references “§§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, and 425.610” and adding in its place the references “§§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, 425.610, and 425.652”.

PART 455—PROGRAM INTEGRITY: MEDICAID

■ 79. The authority citation for part 455 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 80. Amend § 455.107 by revising paragraph (b)(1)(ii) to read as follows:

§ 455.107 Disclosure of affiliations.

* * * * *

(b) * * *

(1) * * *

(ii) *Change of selection.* A State may, in consultation with CMS, change its selection after it has been made from the option in paragraph (b)(2)(ii) of this section to that in paragraph (b)(2)(i) of this section.

* * * * *

Dated: July 1, 2022.

Xavier Becerra,

Secretary,

Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

APPENDIX 1: MIPS QUALITY MEASURES

Note: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measures sets will continue to apply for the CY 2023 performance period/2025 MIPS payment year and future years. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF #/eCQM NQF #.

BILLING CODE 4120-01-P

TABLE Group A: New Quality Measures Proposed for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

A.1. Psoriasis – Improvement in Patient-Reported Itch Severity

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of patients, aged 18 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.
Measure Steward:	American Academy of Dermatology
Numerator:	Patients who achieve an assessment score that is reduced by 2 or more points (minimal clinically important difference) from the initial (index) assessment score.
Denominator:	All patients aged 18 years and older, with a diagnosis of psoriasis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.
Exclusions:	N/A
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
Measure Domain:	Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it addresses a gap in care for patients with psoriasis. This measure assesses for improvement of itch severity of symptoms from index visit to follow up visit, with an achieved score reduction of at least 2 points at follow up. This measure would represent another patient-reported outcome measure for interested parties to report within the MIPS Dermatology specialty set.</p> <p>This measure received conditional support for rulemaking from the Measures Application Partnership (MAP) pending Consensus-Based Entity (CBE) endorsement. While we agree with the MAP that CBE (for example, NQF) endorsement is preferred, we believe this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. Here, guidelines of care for the management and treatment of psoriasis established by the Joint American Academy of Dermatology-National Psoriasis Foundation (AAD-NPF) recommend an itch severity assessment to appropriately assess the degree of pruritus when present.¹ We believe patient-reported outcome performance measures such as this measure ensure that patients and families are engaged partners in their care and can be an effective way to measure the quality of care provided by clinicians.</p> <p>Psoriasis is a common condition, with some 7.5 million people affected in the U.S., leading to millions of clinical visits every year (https://www.aad.org/media/stats-numbers). Chronic pruritus, the symptom assessed in this patient-reported outcome-based measure, has a significant impact on quality of life and is associated with depression and global distress, among other effects.² We believe that completion of the measure would support the creation of an effective treatment plan for the patient.</p> <p>Though the required assessment score reduction for this proposed new quality measure is lower than current AAD-NPF guidelines, the measure's current implementation as a MIPS Qualified Clinical Data Registry (QCDR) measure shows an aggregate performance score for this measure of 43.3 percent, indicating a gap in care for achieving 2 point or more reduction in itch severity. The denominator for this measure includes an initial index score for the numeric Rating Scale (NRS) and Visual Rating Scale (VRS) and the Itchy Quant assessment score of 4 or greater. This threshold indicates a clinically realistic goal for patients with an index score of 4 or more (minimal to moderate severity) and ensures capture of a more complete denominator eligible patient population to assess for an improvement in itch severity with psoriasis treatment. Additionally, the reliability performance score was high at 0.93 for the 2-point improvement from the index score.</p> <p>Therefore, we believe that incorporating this measure into MIPS would encourage measure adoption which would support clinician adherence to the AAD-NPF clinical guidelines, leading to better symptom control and improved quality of life for patients affected by chronic pruritus. Patients and providers on a technical expert panel agreed that the quality construct measured was actionable, and the measure result could be used to evaluate quality of care.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.2. Dermatitis – Improvement in Patient-Reported Itch Severity

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of patients, aged 18 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessments performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.
Measure Steward:	American Academy of Dermatology
Numerator:	Patients who achieve an assessment score that is reduced by 2 or more points (minimal clinically important difference) from the initial (index) assessment score.
Denominator:	All patients aged 18 years and older, with a diagnosis of dermatitis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.
Exclusions:	N/A
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
Measure Domain:	Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it addresses a gap in care for patients with dermatitis. This measure assesses for improvement of itch severity of symptoms from index visit to follow up visit, with an achieved score reduction of at least 2 points at follow up. This measure would represent another patient-reported outcome measure for clinicians to report within the MIPS Dermatology specialty set.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE (for example, NQF) endorsement is preferred, we believe this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>Chronic pruritis, the symptom assessed in this measure, has a significant impact on quality of life and is associated with depression, global distress, and sleep impairment among other effects (https://www.sciencedirect.com/science/article/pii/S2666328721000122).</p> <p>Though the required assessment score reduction for this proposed new quality measure is lower than current AAD guidelines (https://www.aad.org/member/clinical-quality/guidelines/atopic-dermatitis), the measure's current implementation as a MIPS Qualified Clinical Data Registry (QCDR) measure shows an aggregate performance score for this measure of 54.9 percent, indicating a gap in care for achieving 2 point or more reduction in itch severity. The denominator for this measure includes an initial index score for the numeric Rating Scale (NRS) and Visual Rating Scale (VRS) and the Itchy Quant assessment score of 4 or greater. This threshold indicates a clinically realistic goal for patients with an index score of 4 or more (minimal to moderate severity) and ensures capture of a more complete denominator eligible patient populations to assess for an improvement in itch severity with dermatitis treatment. Additionally, reliability performance score was sufficient at 0.69 for the 2-point improvement from the index score.</p> <p>Therefore, we believe that incorporating this measure into MIPS would encourage measure adoption which would support clinician adherence to the AAD-NPF clinical guidelines, leading to better symptom control and improved quality of life for patients affected by chronic pruritis. Patients and providers on a technical expert panel agreed that the quality construct measured was actionable, and the measure result could be used to evaluate quality of care.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.3. Screening for Social Drivers of Health

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
Measure Steward:	Physicians Foundation
Numerator:	Number of patients 18 and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
Denominator:	Number of patients 18 years and older.
Exclusions:	N/A
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(ii) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it would address health equity, an important topic that is currently not included within MIPS' quality measure inventory. This measure would assess the rate at which providers screen their adult patients for certain social drivers of health (DOHs); specifically, food insecurity, housing instability, transportation problems, utility help needs, and interpersonal safety. Nearly all physicians within a recent survey indicated that their patients' health outcomes are affected by one or more DOH.¹ The most common DOHs experienced by the respondent physicians' patients were financial instability (34 percent) and transportation problems (24 percent).¹ Studies have shown that social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health.² Thus, systematically screening patients for social determinants of health and referring them to community-based resources as needed can result in improved health outcomes.^{2,3} Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, improve a patient's overall health and well-being.^{2,3} As an example, early findings from the Accountable Health Communities (AHC) model shows those patients within the 'Assistance Track' had 9 percent fewer emergency department visits as compared to their "control group counterparts during the first year following screening" (https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt). Adoption of this measure would address a significant performance gap as 84 percent of physician offices do not screen for all five needs.⁴</p> <p>Therefore, CMS has proposed this measure within the specialty sets of all clinician types to support those interested or already gathering DOH data. We believe the measure supports the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who choose to submit this measure.</p> <p>This measure is consistent with our priority to advance health equity throughout our various programs, including the Quality Payment Program. We are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our enrollees need to thrive (https://www.cms.gov/pillar/health-equity).</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that endorsement of measures is preferred, we believe that the inclusion of this measure serves an important purpose in advancing quality measurement in MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. Here, the U.S. Preventive Services Task Force (USPSTF), which is charged by section 915 of the Public Health Service Act to "review the scientific evidence related to the effectiveness, appropriateness, and cost-effectiveness of clinical preventive services for the purpose of developing recommendations," specified the screening for key DOHs in its portfolio of recommendations (https://www.acpjournals.org/doi/10.7326/M20-0730).</p> <p>In a cross-sectional study, DOH were associated with 37.7 percent of variation in price-adjusted Medicare per beneficiary spending between counties in the highest and lowest quintiles of spending in 2017, including both direct contributions and indirect contributions through other factors. DOH's direct contribution accounted for 5.8 percent of the variation after controlling for patient demographic characteristics, clinical risk, and supply of health care resources. These findings suggest that addressing DOH is important for reducing geographic spending variation and improving the value of health care. The evidence demonstrates that specific social risk factors are directly associated with patient health outcomes as well as healthcare utilization, costs, and performance in quality-based payment programs.^{5,6} Another cross-sectional study found that screening for all five social needs was reported by 15.6 percent of practices, whereas 33.3 percent of practices reported no screening, suggesting that few US physician practices screen patients for all five key social needs associated with health outcomes.⁴</p> <p>We are also proposing a similar measure for the Hospital Inpatient Quality Reporting (IQR) Program. For further information on the Social Drivers of Health measure proposed for the Hospital IQR Program in the FY2023 IPSP/LTCH PPS proposed rule (https://www.govinfo.gov/content/pkg/FR-2022-05-10/pdf/2022-08268.pdf), we refer readers to 87 FR through 28498 through 28503.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.4. Kidney Health Evaluation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.
Measure Steward:	National Kidney Foundation
Numerator:	Patients who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.
Denominator:	All patients aged 18-75 years with a diagnosis of diabetes at the start of the measurement period with a visit during the measurement period.
Exclusions:	Denominator Exclusions: 1. Patients with a diagnosis of End Stage Renal Disease (ESRD); 2. Patients with a diagnosis of Chronic Kidney Disease (CKD) Stage 5; 3. Patients who have an order for or are receiving hospice or palliative care.
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it focuses on nephrology and the critical condition of diabetes, both identified as gaps within MIPS' quality measure inventory. We identified these gaps as priorities for future quality measures. This measure would replace and improve upon the existing measure Q119: Diabetes Medical Attention for Nephropathy. This measure is more specific than measure Q119 as it requires utilizing multiple tests, estimated glomerular filtration rate (eGFR) and urine albumin creatinine ratio (uACR) tests, to assess a patient's kidney health.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE (for example, NQF) endorsement is preferred, we believe this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>Approximately 9 percent of American adults currently have CKD,¹ and it is projected that by 2030 approximately 17 percent of Americans aged 30 years and older will have CKD.^{2,3} In the U.S. from 2002-2016, the burden of CKD, defined as years of life lost, years living with disability, disability-adjusted life years, and deaths, outpaced changes in the burden of disease for other conditions.⁴ Patients with CKD are readmitted to the hospital more frequently than those without diagnosed CKD.² This public health issue is driven largely by the impact of diabetes—the most common comorbid risk factor for CKD.^{2,4}</p> <p>The intent of this process measure is to improve rates of guideline-concordant kidney health evaluation in patients with diabetes. According to the American Diabetes Association (ADA) 'Standards of Medical Care in Diabetes', "Albuminuria and eGFR should be monitored regularly to enable timely diagnosis of CKD, [and] monitor progression of CKD..."⁵ Higher rates of such evaluations are believed to improve the rate identification and, potentially, the treatment or delayed progression of CKD in this high-risk population. Early detection is critical in order to initiate timely care as the disease may silently progress to advanced stages (https://www.aafp.org/afp/2017/1215/p776.html). Annual kidney health evaluation in patients with diabetes to determine risk of CKD using estimated glomerular filtration rate (eGFR) and urine albumin creatinine ratio (uACR) is recommended by clinical practice guidelines and has been a focus of various local and national health care quality improvement initiatives, including Healthy People 2020.²</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.5. Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy

Category	Description
NQF # / eCQM NQF #:	1662 / N/A
Quality #:	TBD
Description:	Percentage of patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period.
Measure Steward:	Renal Physicians Association
Numerator:	Patients who were prescribed ACE inhibitor or ARB therapy within a 12-month period.
Denominator:	All patients aged 18 years and older with the diagnosis of CKD (Stages 1-5, not receiving RRT) and proteinuria.
Exclusions:	Denominator Exclusions: Patients receiving RRT.
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this nephrology measure because it focuses on chronic kidney disease and diabetes. We have identified both conditions as gaps within MIPS and priority areas for future quality measurement. This measure received support for rulemaking by the MAP and was endorsed by the NQF (https://www.cms.gov/files/document/2022-muc-list-program-specific-measure-needs-and-priorities.pdf).</p> <p>This measure is intended to increase the number of patients receiving high-quality nephrology care by focusing on using clinically recommended CKD therapeutic interventions to treat diabetic kidney disease and nondiabetic kidney diseases with proteinuria (albuminuria). Patients with these conditions who are treated with ACE inhibitors or ARB therapy have been shown to have lower rates of kidney failure, better cardiovascular outcomes, and lower mortality (https://pubmed.ncbi.nlm.nih.gov/23732715/).</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.6. Appropriate Intervention of Immune-Related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.
Measure Steward:	Society for Immunotherapy of Cancer (SITC)
Numerator:	Patients with immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.
Denominator:	Patients, 18 years and older, with a diagnosis of cancer and on immune checkpoint inhibitors and who have grade 2 or above diarrhea and/or grade 2 or above colitis.
Exclusions:	Denominator Exclusions: Patients with pre-existing inflammatory bowel disease (IBD) (for example, ulcerative colitis, Crohn's disease).
Measure Type:	Process
Measure Domain:	Patient Safety (section 1848(s)(1)(B)(ii) of the Act)
High Priority Measure:	No
Collection Type:	MIPS QCMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it addresses a gap in care and focuses on patient safety by enhancing early appropriate intervention for adverse effects experienced by patients diagnosed with cancer. If this proposed measure is finalized, it would represent the only quality measure in MIPS addressing gastrointestinal adverse effects from the use of immune checkpoint inhibitors as part of cancer treatment. This measure would address a gap in care for specific cancer types, leading to a potential increase in personalized care and informing quality improvement.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE (for example, NQF) endorsement is preferred, we believe this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based. This measure's intent is to promote and assess for appropriate care for immune-related diarrhea and colitis, in accordance with recommendations by clinical guidelines addressing the topic of toxicities in immunotherapy. The occurrence of diarrhea and colitis can be a normal and treatable toxicity (and is many times not immune-related), but if it is immune-related, it can become life-threatening if not addressed in a timely manner.¹</p> <p>Diarrhea and colitis are the second-most reported adverse events with immune checkpoint inhibitors. The measure is intended to support compliance with the clinical guidelines² by ensuring the eligible clinician is addressing the adverse event of diarrhea or colitis by immediately providing an intervention to prevent the adverse event from worsening.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.7. Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both.
Measure Steward:	College of American Pathologists
Numerator:	Surgical pathology reports that contain impression or conclusion of or recommendation for testing of MMR by immunohistochemistry, MSI by DNA-based testing status, or both.
Denominator:	All surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection.
Exclusions:	Denominator Exclusions: 1. Patients with an existing diagnosis of Lynch Syndrome. 2. Patients with an existing diagnosis of squamous cell carcinoma of the esophagus. 3. Hospice services provided to patient any time during the measurement period.
Measure Type:	Process
Measure Domain:	Communication and Care Coordination (section 1848(s)(1)(B)(ii) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it would address a gap in care for pathology. The measure would assess for impression/conclusion of or recommendation for biomarker testing for specific cancer types, potentially leading to an increase in the rate of proper diagnosis. This proposed measure would represent a new quality measure clinical concept within the Pathology specialty set. This measure focuses on surgical pathology reports that contain impression or conclusion of or recommendation for testing of MMR by immunohistochemistry, MSI by DNA-based testing status, or both. The measure is fully tested and exhibited definitive reliability testing.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that the CBE (for example, NQF) endorsement is preferred, we believe this measure should nonetheless be added to MIPS and that it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a consensus-based entity shall have a focus that is evidenced-based.</p> <p>This measure is intended to drive quality care, assessing for the efficient use of resources and promote increased use of personalized patient care and patient choice. Lynch syndrome can be attributed to 2-4 percent of all colorectal carcinomas and has clinical implications for treatment of the affected patient and family members.^{1,2} In the Molecular Biomarkers for the Evaluation of Colorectal Cancer guideline from the American Society for Clinical Pathology, College of American Pathologists, Association for Molecular Pathology, and American Society of Clinical Oncology it is recommended that mismatch repair status testing in patients with colorectal cancers is necessary for the identification of patients at high risk for Lynch syndrome and/or prognostic stratification.¹</p> <p>One of two different initial tests can be performed on colorectal specimens to identify individuals who might have Lynch Syndrome: 1) Immunohistochemistry (IHC) for MMR protein expression, which is often diminished because of mutation; or 2) analysis for microsatellite instability (MSI), which results from MMR deficiency. The National Comprehensive Cancer Network (NCCN) guidelines state IHC and MSI on newly diagnosed colorectal and endometrial cancers regardless of family history to determine Lynch Syndrome, is cost effective and has been confirmed for colorectal cancer and endorsed by the Evaluation of Genomic Applications in Practice and Prevention (EGAPP) working group at the CDC, the US Multi-Society Task Force on Colorectal Cancer, and the American Gastroenterological Association.^{3,4} In 2020, the average performance rate for the colorectal carcinoma only measure was 71.05 percent and the average performance rate for the endometrial carcinoma only measure was 76.63 percent.</p> <p>The detection of defective mismatch repair (MMR) or microsatellite instability (MSI) can assist with the proper diagnoses of cancer.^{2,5} Currently, there are no existing guidelines for the use of MMR/MSI for the detection of four cancer types (Colorectal Carcinoma, Endometrial, Gastroesophageal, and Small Bowel Carcinoma) and the potential utilization of Checkpoint Blockade Therapy. There are upcoming guidelines in development that will address these medical topics. This measure was developed to align with these guidelines to ensure it would drive quality outcomes.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=96698.</p>

A.8. Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System

Category	Description
NQF # / eCQM NQF #:	3612 / N/A
Quality #:	TBD
Description:	Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	<p>The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period.</p> <p>Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation.</p> <p>Acute cardiovascular-related admissions are defined using individual ICD-10-CM codes and the Agency for Healthcare Research and Quality's (AHRQ) Clinical Classification Software (CCS) diagnosis categories, which group clinically similar codes together. AHRQ CCS diagnosis categories used to define outcome: 55: Fluid and electrolyte disorders; 96: Heart valve disorders; 97: Peri-, endo-, and myocarditis; cardiomyopathy (except that caused by tuberculosis or sexually transmitted disease); 98: Essential hypertension; 100: Acute myocardial infarction; 102: Nonspecific chest pain; 104: Other and ill-defined heart disease; 105: Conduction disorders; 106: Cardiac dysrhythmias; 107: Cardiac arrest and ventricular fibrillation; 108: Congestive heart failure; non-hypertensive; 110: Occlusion or stenosis of precerebral arteries; 112: Transient cerebral ischemia; 115: Aortic; peripheral; and visceral artery aneurysms; 116: Aortic and peripheral arterial embolism or thrombosis; 157: Acute and unspecified renal failure; 245: Syncope. Subsets of the following AHRQ CCS diagnosis categories used to define outcome: 99: Hypertension with complications and secondary hypertension; 101: Coronary atherosclerosis and other heart disease; 103: Pulmonary heart disease; 109: Acute cerebrovascular disease; 114: Peripheral and visceral atherosclerosis; 117: Other circulatory disease; 130: Pleurisy; pneumothorax; pulmonary collapse; 131: Respiratory failure; insufficiency; arrest (adult); 133: Other lower respiratory disease; 237: Complication of device; implant or graft.</p> <p>The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following: LVAD implantation, home inotropic therapy, or heart transplant.</p>
Denominator:	<p>The measure includes Medicare FFS beneficiaries ≥ 65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (e.g., primary or secondary position) within the two years prior to the measurement year.</p> <ul style="list-style-type: none"> Beneficiaries must be enrolled full-time in Medicare Part A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis. <p>Provider types included for measurement (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions.</p> <p>Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a cardiologist, a PCP, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiologist if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP.</p> <ul style="list-style-type: none"> First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP. Second, if the patient has seen the PCP two or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist. <p>Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients "follow" their clinician to the TIN designated by the clinician (that is, they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.</p>
Exclusions:	<p>Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (PAA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility ("10-day buffer period"); Admissions that occur while patients are enrolled in Medicare's hospice benefit; Admissions that occur prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care).</p>

Category	Description
	<p>Denominator Exclusions: The measure excludes:</p> <ol style="list-style-type: none"> 1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period. 2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period. 3. Patients who have had no Evaluation & Management (E&M) visits to a MIPS eligible clinician. <ol style="list-style-type: none"> 4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims
Measure-Specific Case Minimum/Performance Period:	<p>MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities containing at least 1 cardiologist / 21 case minimum / 1 year performance period (January 1st – December 31st)</p> <p>*Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.</p>
Rationale:	<p>We are proposing this measure because heart failure (HF) is a leading cause of hospitalization in the United States and a major source of disease burden among older adults. There is strong evidence that ambulatory care clinicians can influence admission rates by providing high quality of care to patients with heart failure/cardiomyopathy (https://pubmed.ncbi.nlm.nih.gov/22665827/).</p> <p>We originally proposed this measure in the CY 2022 PFS proposed rule for the CY 2022 performance period/2024 MIPS payment year for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities but did not finalize this proposal or adopt the measure (86 FR 65692 through 65694). Key reasons for not finalizing the measure were concerns related to how beneficiaries would be attributed to clinicians and concerns about the appropriateness of risk adjustment for severity of heart failure (86 FR 65692 through 65694). We have subsequently worked to mitigate these concerns, and we are now re-proposing this measure for the CY 2023 performance period/2025 MIPS payment year to be initially reported only for MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities that include at least 1 cardiologist. After CY 2023, we would consider expanding reporting of this measure to include both cardiologists and PCPs.</p> <p>This HF measure was included on the 2020 Measures Under Consideration (MUC) list and evaluated by the MAP, which did not support the measure for rulemaking with potential for mitigation citing NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. We agree that NQF endorsement of measures is preferred, and this measure was subsequently submitted for NQF endorsement as part of the spring 2021 cycle and was endorsed by the NQF in January 2022. NQF currently serves as the CBE regarding certain performance measurement activities performed for CMS pursuant to sections 1890 and 1890A of the Act.</p> <p>We are proposing this administrative claims collection type outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States \$30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work.¹ The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis.² Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we are proposing this HF measure for use in MIPS, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), “Risk-standardized Acute Admission Rates for Patients with Heart Failure” (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure.</p> <p>Although concerns have been raised about the appropriateness of risk adjustment, the measure accounts for patients with more complicated or severe heart failure in several ways: by excluding patients at advanced stages of heart failure, such as those with implanted left ventricular assist device (LVAD), those who receive home inotropic therapy, or those with prior heart transplant or with end stage renal disease; by risk adjusting for AICDs (defibrillators), systolic heart failure, comorbidities (including chronic kidney disease), and for frailty/disability. Moreover, the measure does not include advanced heart failure/transplant specialists for attribution. We conducted analyses of the appropriateness of risk adjustment which demonstrated that the risk adjustment model performed well across deciles of predicted admission risk. Based on this information and the material presented to the MAP and subsequently to the NQF, we believe the measure is evidence-based and would provide important information to drive improvements in clinical practice for heart failure patients. In order to mitigate concerns about risk adjustment for clinicians with higher caseloads of patients with more complex heart failure, the measure would be initially reported only for MIPS eligible cardiology TINs (i.e., MIPS TINs with at least one cardiologist) with a 21patient case minimum. We believe this approach would allow clinicians and groups who would be scored on the measure to become familiar with the measure.</p> <p>Note: Refer to the 2020 MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.</p>

A.9. Adult Immunization Status

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
Measure Steward:	National Committee for Quality Assurance
Numerator:	Submission Criteria 1: Patients in Denominator 1 (D1) who received an influenza vaccine on or between July 1 of the year prior to the measurement period and June 30 of the measurement period. Submission Criteria 2: Patients in D2 who received at least 1 Td vaccine or 1 Tdap vaccine between 9 years prior to the encounter and the end of the measurement period. Submission Criteria 3: Patients in D3 who received at least 1 dose of the herpes zoster live vaccine or 2 doses of the herpes zoster recombinant vaccine anytime on or after the patients' 50th birthday. Submission Criteria 4: Patients in D4 who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine, on or after their 60 th birthday and before the end of the measurement period.
Denominator:	Submission Criteria 1: Patients 19 years of age and older on the date of the encounter with a visit during the measurement period. Submission Criteria 2: Patients 19 years of age and older on the date of the encounter with a visit during the measurement period. Submission Criteria 3: Patients 50 years of age and older on the date of the encounter with a visit during the measurement period. Submission Criteria 4: Patients 66 years of age or older on the date of the encounter with a visit during the measurement period.
Exclusions:	Denominator Exclusion: All submission criteria: Active chemotherapy during the measurement period; or Bone marrow transplant during the measurement period; or History of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia & HB-S disease or cerebrospinal fluid leaks any time during the patient's history prior to or during the measurement period; or In hospice or using hospice services during the measurement period
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(v) of the Act)
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this multiple performance rate measure because it supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. Evidence provided by the measure steward testing indicates a gap in performance with average performance rates of 24 percent for influenza; 35 percent for Td or Tdap; 28 percent for zoster; and 17 percent for pneumococcal.</p> <p>This robust measure assesses the quality of clinical actions regarding the administration of the influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines. The immunizations included within this measure would work to reduce the prevalence of severe diseases that may be associated with hospitalization and potentially lead to a decrease in overall health care costs. We believe the measure would improve overall vaccination rates more effectively than the current individual MIPS measures, Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults because performance is based on the administration of all four vaccinations rather than focusing on just one vaccination per measure. The measure would set a more stringent performance standard by requiring a set of adult immunizations in one composite measure compared to the prior framework, under which the administration of each vaccine was reported through a separate quality measure.</p> <p>In connection with the proposal of this measure, we are also proposing to remove measures Q110 and Q111 from traditional MIPS, while retaining those two measures for use in relevant MVPs as discussed under Table Group CC and retaining measure Q110 for the purposes of Shared Savings Program ACOs reporting through the APM Performance Pathway (APP) as discussed in section III.G.4.c.(1) of this proposed rule.</p> <p>We originally proposed this measure in the CY 2020 PFS proposed rule for the CY 2020 performance period/2022 MIPS payment year but did not finalize this proposal due to eminent changes to the pneumococcal vaccination guidelines (84 FR 63207 through 63209). We are now proposing this measure for the CY 2023 performance period/2025 MIPS payment year since it reflects the updated guidelines to include any pneumococcal conjugate vaccine or polysaccharide vaccine.</p> <p>Healthy People 2020—an initiative under the Office of Disease Prevention and Health Promotion that provides science-based, 10-year national objectives for improving the health of all Americans—recommends increasing the percentage of adults who are vaccinated against influenza, zoster, and pneumococcal disease.¹</p> <p>The CDC Advisory Committee in Immunization Practices (ACIP) makes evidence-based recommendations for vaccine use. This measure encourages compliance with the recommendations by showing how many adults within the population receive vaccines per guideline recommendations (https://www.cdc.gov/vaccines/acip/recs/grade/about-grade.html). This measure would incentivize higher rates of adoption of the ACIP's recommendations.</p> <p>We propose that submission of all 4 performance rates would be required for this measure and would be used to determine data completeness. Submission of all 4 performance rates would align with current clinical guidelines as clinicians should attempt to administer to the appropriate patient population all vaccines this measure would assess for compliance. By requiring submission of all 4 performance rates, we would capture a complete data set to show performance gaps in vaccine administration. If this measure is finalized for inclusion within MIPS, we are proposing to score this measure using a weighted average for the first 2 years of implementation. Beginning with the CY 2025 performance period/2027 MIPS payment year, we</p>

Category	Description
	would score this measure as an all-or-none composite measure to ensure a more thorough assessment of a patient's vaccination status.

¹ U.S. Department of Health and Human Services (2017). HealthyPeople.gov 2020 Topics & Objectives: Immunization and Infectious Diseases.

TABLE Group B: Previously Finalized Specialty Measures Sets Proposed for Combination and Proposed Modifications to Previously Finalized Specialty Measures Sets for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

We are proposing to add “Psychiatry” to the title of the Mental/Behavioral Health specialty set to create a combined new specialty set: Mental/Behavioral Health and Psychiatry (see Table B.21). We are also proposing to add “Optometry” to the title of the Ophthalmology specialty set to create a combined new specialty set: Ophthalmology/Optometry (see Table B.28). For both Ophthalmology/Optometry and Mental/Behavioral Health and Psychiatry Specialty Measures sets, there are no proposed changes to the measures contained within each specialty measures set. However, based upon interested parties’ feedback and the overlap in denominator eligibility of both individual specialties, we are revising the specialty measures set titles to better reflect the applicable and appropriate MIPS eligible clinician types.

We are proposing to modify the below previously finalized specialty measures sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

We are proposing in section IV.A.10.c.(1)(b)(i) to expand the definition of a high priority measure at §414.1305 to include health equity measures. Further details of these types of measures are located in the CMS Measures Management System Blueprint Version 17.0 (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>).

Note: The CMS Web Interface collection type is no longer available in MIPS, except for the purposes of APM entities reporting through the APM Performance Pathway (APP), starting with the CY 2023 performance period; therefore, this collection type is no longer listed in any specialty sets under Table Group B. The CMS Web Interface collection type will remain through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the APP, see sections III.G.4.b.(9) and III.G.4.c.(1) of this proposed rule. For information on changes to measures under the CMS Web Interface collection type proposed for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this proposed rule.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

B.1. Allergy/Immunology

MEASURES PROPOSED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	<p>Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.</p>	Physicians Foundation	<p>We propose to include this measure in the Allergy/Immunology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.</p>

B.1. Allergy/Immunology

MEASURES PROPOSED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Allergy/Immunology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Anesthesiology specialty set.

American Society of Anesthesiologis ts
! (Opioid)	N/A / N/A	477	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Multimodal Pain Management: Percentage of patients, aged 18 years and older, undergoing selected surgical procedures that were managed with multimodal pain medicine.	American Society of Anesthesiologis ts

B.2. Anesthesiology

MEASURES PROPOSED FOR ADDITION TO THE ANESTHESIOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Anesthesiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.2. Anesthesiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ANESTHESIOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
2726 / N/A	076	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Prevention of Central Venous Catheter (CVC) – Related Bloodstream Infections: Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.	American Society of Anesthesiologists	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.3. Audiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Audiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Audiology specialty set.

(Outcome)	N/A / N/A	441	N/A	MIPS CQMs Specifications	Intermedi ate Outcome	Effective Clinical Care	Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- And • Most recent tobacco status is Tobacco Free -- And • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- And • Statin Use Unless Contraindicated 	Wisconsin Collaborative for Healthcare Quality

B.4a. Cardiology

MEASURES PROPOSED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	N/A / N/A	187	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Stroke and Stroke Rehabilitation: Thrombolytic Therapy: Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within two hours of time last known well and for whom IV alteplase was initiated within three hours of time last known well.	America n Heart Associati on	We propose to include this measure in the Cardiology specialty set as it is clinically relevant to this clinician type. Given the close correlation of cardiovascular diseases and cerebral perfusion, interdisciplinary care is vital. We agree with interested parties' feedback that this measure would help to incentivize timely initiation of appropriate thrombolytic therapy for patients with stroke, which is an important component of cardiology care.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicia ns Foundati on	We propose to include this measure in the Cardiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.4a. Cardiology

MEASURES PROPOSED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Cardiology specialty set as it is generally clinically relevant to this clinician type, for those cardiologists that do not subspecialize. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.4a. Cardiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE CARDIOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	323	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Routine Testing After Percutaneous Coronary Intervention (PCI): Percentage of all stress single- photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), and cardiovascular magnetic resonance (CMR) performed in patients aged 18 years and older routinely after percutaneous coronary intervention (PCI), with reference to timing of test after PCI and symptom status.	American College of Cardiology Foundation	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Electrophysiology Cardiac Specialist specialty set.

B.4b. Electrophysiology Cardiac Specialist

PREVIOUSLY FINALIZED MEASURES IN THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SPECIALTY SET

Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.</p>

B.9. Dermatology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Dermatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Dermatology specialty set.

MEASURES PROPOSED FOR ADDITION TO THE DERMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	Psoriasis – Improvement in Patient-Reported Itch Severity: The percentage of patients, aged 18 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.	American Academy of Dermatology	We propose to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this is an important patient-centered measure that helps to address any changes in the patient's quality of life during treatment of psoriasis. This measure incorporates the patient voice, empowering patients to make the best-informed decisions about their own healthcare while also allowing clinicians to optimally adjust care as needed. See Table A.1 for rationale.
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	Dermatitis – Improvement in Patient-Reported Itch Severity: The percentage of patients, aged 18 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessments performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.	American Academy of Dermatology	We propose to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this is an important patient-centered measure that helps to address any changes in the patient's quality of life during treatment of dermatitis. This measure incorporates the patient voice, empowering patients to make the best-informed decisions about their own healthcare while also allowing clinicians to optimally adjust care as needed. See Table A.2 for rationale.

MEASURES PROPOSED FOR ADDITION TO THE DERMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Dermatology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	265	N/A	MIPS CQMs Specifications	Process	Community and Care Coordination	Biopsy Follow-Up: Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.	American Academy of Dermatology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Diagnostic Radiology specialty set.

American College of Emergency Physicians

B.11. Emergency Medicine

MEASURES PROPOSED FOR ADDITION TO THE EMERGENCY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Appropriate Use)	0069/ N/A	065	CMS15 4v11	eCQM Specification s, MIPS CQMs Specification s	Process	Efficiency and Cost Reduction	Appropriate Treatment for Upper Respiratory Infection (URI): Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance	We propose to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure would help decrease the overuse of antibiotics for the treatment of upper respiratory infections. The addition of this measure to this specialty set is feasible given the high rates that patients are assessed, treated, and managed for this condition in the emergency care setting.
* §	N/A/ N/A	134	CMS12v 12	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Community/Population Health	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that it is imperative to complete depression screenings in the emergency care setting to identify mental health conditions as well as forming appropriate treatment plans. Studies have shown depression to be more widespread in emergency departments than in the general public. Identifying patients with depression and their access to care in the emergency department is important as depression has been associated with poorer patient outcomes from care received in the emergency department, as well as increased length of stay in the emergency department and increased number of repeated emergency department visits (Abbar, et al., 2017).

B.11. Emergency Medicine

MEASURES PROPOSED FOR ADDITION TO THE EMERGENCY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	0028/0 028c	226	CMS13 8v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	<p>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user.</p> <p>Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.</p>	National Committee on Quality Assurance	We propose to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.
* §	2152 / N/A	431	N/A	MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	<p>Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.</p>	National Committee for Quality Assurance	We propose to include this measure in the Emergency Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that it is a significant public health concern, and as emergency medical professionals they can mitigate the consequences of alcohol abuse through screening, intervention, and referral. In turn, this would lower the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs.

B.11. Emergency Medicine

MEASURES PROPOSED FOR ADDITION TO THE EMERGENCY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Emergency Medicine specialty set, as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.12. Endocrinology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Endocrinology specialty set.

The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.	Oregon Urology Institute

B.12. Endocrinology

MEASURES PROPOSED FOR ADDITION TO THE ENDOCRINOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Endocrinology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
	N/A/ N/A	TBD	CMS951v1	eCQM specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundation	We propose to include this measure in the Endocrinology specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.

B.12. Endocrinology

MEASURES PROPOSED FOR ADDITION TO THE ENDOCRINOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Endocrinology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.12. Endocrinology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ENDOCRINOLOGY SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0062 / N/A	119	CMS134v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Family Medicine specialty set.

American Academy of Otolaryngology – Head and Neck Surgery Foundation
! (Opioid)	N/A / N/A	468	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California
* § ! (Appropriate Use)	N/A / 3475e	472	CMS24 9v5	eCQM Specifications	Process	Efficiency and Cost Reduction	Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture: Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual- energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services
§	N/A / N/A	475	CMS34 9v5	eCQM Specifications	Process	Community/Popul ation Health	HIV Screening: Percentage of patients aged 15–65 at the start of the measurement period who were between 15–65 years old when tested for HIV.	Centers for Disease Control and Prevention
! (Outcome)	N/A/ N/A	483	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performance Measure	Person and Caregiver- centered Experience and Outcomes	Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient- reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive interested parties' engagement and comprehensive reviews of the literature.	The American Board of Family Medicine

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCOM NQF #	Quality #	CMS eCOM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	176	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Tuberculosis Screening Prior to First Course Biologic Therapy: If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology	We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that appropriate tuberculosis screening prior to initiation of biologic therapy is an important quality of care consideration that lies within this specialty's scope of practice. Proper screening helps ensure that treatment is not adversely affecting patients with an active infection.
* ! (Outcome)	N/A	476	CMS77lv4	eCOM Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia: Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptom Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.	Large Urology Group Practice Association and Oregon Urology Institute	We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that benign prostatic hyperplasia is a common medical condition that is frequently seen in family medicine practices. Including this measure would enhance patient-centered care amongst patients and their family medicine providers. Increasing the quality of comprehensive patient care can also result in the overall improvement of the patient's functional status.

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Family Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
	N/A/ N/A	TBD	CMS95 lv1	eCQM Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundation	We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0062 / N/A	119	CMS134v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

American College of Surgeons
* ! (Care Coordination)	N/A / N/A	374	CMS50 v11	eCQM Specifications, MIPS CQMs Specifications	Process	Communicati on and Care Coordination	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services
	N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance

B.15. General Surgery

MEASURES PROPOSED FOR ADDITION TO THE GENERAL SURGERY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the General Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.16. Geriatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Geriatrics specialty set.

B.16. Geriatrics

Large Urology Group Practice Association and Oregon Urology Institute

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	N/A / N/A	134	CMS2v 12	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. Depression is a serious medical illness associated with higher rates of chronic disease, increased health care utilization, and impaired patient functioning. For the older patient population, depression is commonly diagnosed with other illnesses or as a side effect to medication. Proper depression assessment and intervention is important for the patients within the geriatric population.
* §	0028/0 028e	226	CMS13 8v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.	National Committee on Quality Assurance	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Patient Safety)	0101 / N/A	318	CMS13 9v11	eCQM Specification s	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. Complications from patient falls are the leading cause of death from injury in people over the age of 65. Screening patients for their risk of future falls can help reduce the number of patients falls per year.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Geriatrics specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	CMS95 1v1	eCQM Specification s, MIPS CQMs Specification s	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundati on	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.
	1662/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: Percentage of patients aged 18 years and older with a diagnosis of CKD (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period.	Renal Physicia ns Associati on	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure is relevant to this specialist's patient population. Along with the high burden of cardiovascular morbidity and mortality in patients with chronic kidney disease, the fact that kidney function decreases in the normal aging process, and evidence that patients over the age of 60 have a greater likelihood of resistant hypertension without proper ACE or ARB therapy, this is an important and relevant measure for this specialty. See Table A.5 for rationale.

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0213 / N/A	455	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients Who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better): Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.	American Society of Clinical Oncology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Hospitalists specialty set.

National Committee for Quality Assurance	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure would help decrease the overuse of antibiotics for the treatment of upper respiratory infections. The addition of this measure to this specialty set is feasible given the high rates that patients are assessed, treated, and managed for this condition within this specialty.
* § ! (Appropriate Use)	N/A / N/A	066	CMS14 6v11	eCQM Specification s, MIPS CQMs Specification s	Process	Efficiency and Cost Reduction	Appropriate Testing for Pharyngitis: The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.	National Committee for Quality Assurance	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that the appropriate use of antibiotics, including the avoidance of overuse of antibiotics, is an important quality of care consideration for infectious disease providers.
*	N/A / N/A	176	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Tuberculosis Screening Prior to First Course Biologic Therapy: If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that appropriate tuberculosis screening prior to initiation of biologic therapy is an important quality of care consideration relevant to this specialty. Proper screening helps ensure that treatment is not adversely affecting patients with an active infection.

B.18. Infectious Disease

MEASURES PROPOSED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	0028/0 028e	226	CMS13 8v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.	National Committee on Quality Assurance	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.
* §	N/A / N/A	240	CMS11 7v11	eCQM Specification s	Process	Communi- ty/Pop- ulation Health	Childhood Immunization Status: Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DtaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.	National Committee for Quality Assurance	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that appropriate childhood immunization is an important public health priority in reducing infectious disease incidence and is relevant to the scope of practice of infectious disease providers.
	N/A / N/A	387	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users: Percentage of patients, regardless of age, who are active injection drug users who received screening for HCV infection within the 12-month reporting period.	American Gastroenterologic Association	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that screening for hepatitis C infection is an important public health priority in reducing infectious disease incidence and is relevant to the scope of practice of infectious disease providers.

B.18. Infectious Disease

MEASURES PROPOSED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	N/A / N/A	394	N/A	MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Immunizations for Adolescents: The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13 th birthday.	National Commit- tee for Quality Assuranc e	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that appropriate adolescent immunization is an important public health priority in reducing infectious disease incidence and is relevant to the scope of practice of infectious disease providers.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicia ns Foundati on	We propose to include this measure in the Infectious Disease specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.18. Infectious Disease

MEASURES PROPOSED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Infectious Disease specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.18. Infectious Disease

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INFECTIOUS DISEASE SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Internal Medicine specialty set.

Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive interested parties' engagement and comprehensive reviews of the literature.	The American Board of Family Medicine

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	176	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Tuberculosis Screening Prior to First Course Biologic Therapy: If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology	We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that appropriate tuberculosis screening prior to initiation of biologic therapy is an important quality of care consideration relevant to this specialty. Proper screening helps ensure that treatment is not adversely affecting patients with an active infection.
* ! (Outcome)	N/A / N/A	476	CMS77 1v4	eCQM Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experiences and Outcomes	Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia: Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptom Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.	Large Urology Group Practice Association and Oregon Urology Institute	We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that benign prostatic hyperplasia is a common condition among older men and inclusion of this measure in the internal medicine specialty set would promote patient-centered care with the goal of functional status improvement among primary care providers.

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Internal Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
	N/A/ N/A	TBD	CMS95 1v1	eCQM specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundation	We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0062 / N/A	119	CMS134v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

(Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Interventional Radiology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.20. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERVENTIONAL RADIOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
2726 / N/A	076	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Prevention of Central Venous Catheter (CVC) – Related Bloodstream Infections: Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.	American Society of Anesthesiologists	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.21. Mental/Behavioral Health and Psychiatry

As indicated in the introductory language of Table Group B of the appendix to this proposed rule, we are proposing to add “Psychiatry” to the title of the Mental/Behavioral Health specialty set to create a combined new specialty set: Mental/Behavioral Health and Psychiatry. The Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Mental/Behavioral Health and Psychiatry set, as well as comments on the proposal to create this combined set.

	N/A / N/A	402	NA	MIPS CQMs Specifications	Process	Community/ Population Health	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance
* §	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
! (Opioid)	N/A / N/A	468	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California

B.21. Mental/Behavioral Health and Psychiatry

MEASURES PROPOSED FOR ADDITION TO THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Opioid)	N/A / N/A	305	CMS137 v11	eCQM Specifications	Process	Effective Clinical Care	<p>Initiation and Engagement of Alcohol and Other Drug Dependence Treatment: Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <p>a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</p>	National Committee for Quality Assurance	<p>We propose to include this measure in the Mental/Behavioral Health and Psychiatry specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback and the importance of including measures addressing substance use disorders, which are complex mental and behavioral health challenges. Inclusion of this measure would incentivize the appropriate screening and treatment for substance use disorders.</p>

B.21. Mental/Behavioral Health and Psychiatry

MEASURES PROPOSED FOR ADDITION TO THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Mental/Behavioral Health and Psychiatry specialty as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nephrology specialty set.

B.22. Nephrology

1 (Outcome)	N/A/ N/A	482	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate: Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.	Centers for Medicare & Medicaid Services

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	0028/0 028e	226	CMS13 8v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.	National Committee on Quality Assurance	We propose to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Nephrology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
	N/A/ N/A	TBD	CMS951v1	eCQM specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundation	We propose to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	1662/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: Percentage of patients aged 18 years and older with a diagnosis of CKD (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period.	Renal Physicia ns Associati on	We propose to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that considering the high burden of cardiovascular morbidity and mortality in patients with chronic kidney disease, the decrease of kidney function in the normal aging process, and evidence that patients over the age of 60 have a greater likelihood of resistant hypertension without proper ACE or ARB therapy, validates the importance of this measure in the overall management of adult kidney disease. This measure is relevant and lies within the scope of care for this clinician type. See Table A.5 for rationale.
	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Communi ty/Pop ulation Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to- date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NEPHROLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0062 / N/A	119	CMS134v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18- 75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Neurology specialty set.

Minnesota Community Measurement

B.24. Neurosurgical

MEASURES PROPOSED FOR ADDITION TO THE NEUROSURGICAL SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Neurosurgical specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.24. Neurosurgical

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NEUROSURGICAL SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	260	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2): Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.	Society for Vascular Surgeons	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.
N/A / N/A	460	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performanc e Measure	Person and Caregiver- Centered Experience and Outcomes	Back Pain After Lumbar Fusion: For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.	Minnesota Community Measurement	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.
N/A / N/A	469	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performanc e Measure	Person and Caregiver- Centered Experience and Outcomes	Functional Status After Lumbar Fusion: For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.	Minnesota Community Measurement	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.
N/A / N/A	473	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performanc e Measure	Person and Caregiver- Centered Experience and Outcomes	Leg Pain After Lumbar Fusion: For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.	Minnesota Community Measurement	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nutrition/Dietician specialty set.

B.25. Nutrition/Dietician

PREVIOUSLY FINALIZED MEASURES IN THE NUTRITION/DIETICIAN SPECIALTY SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
* §	N/A / N/A	128	CMS69 v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services
* § ! (Patient Safety)	N/A / N/A	130	CMS68 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* ! (Patient Safety)	N/A / N/A	181	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Elder Maltreatment Screen and Follow-Up Plan: Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	239	CMS15 5v11	eCQM Specifications	Process	Community / Population Health	Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents: Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported. • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.	National Committee for Quality Assurance
* §	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community / Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance

B.25. Nutrition/Dietician

MEASURES PROPOSED FOR ADDITION TO THE NUTRITION/DIETICIAN SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Outcome)	0059 / N/A	001	CMS12 2v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Intermedi ate Outcome	Effective Clinical Care	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.	National Committ ee for Quality Assuranc e	We propose to include this measure in the Nutrition/Dietician specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that Hemoglobin A1c is an important factor in the determination of risk stratification and management strategies for individuals with prediabetes, and it is a typical clinical indicator in the management of diabetes care.
* §	0028/0 028e	226	CMS13 8v11	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi ty/Pop ulation Health	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.	National Committ ee on Quality Assuranc e	We propose to include this measure in the Nutrition/Dietician specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.

B.25. Nutrition/Dietician

MEASURES PROPOSED FOR ADDITION TO THE NUTRITION/DIETICIAN SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Nutrition/Dietician specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.25. Nutrition/Dietician

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NUTRITION/DIETICIAN SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0417 / N/A	126	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation: Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.	American Podiatric Medical Association	This measure is being proposed for removal from the Nutrition/Dietician specialty set. Per the measure specifications, the neurological lower extremity exam must consist of documentation of sensory abilities and should include 10-g monofilament plus testing any one of the following: vibration using 128-Hz tuning fork, pinprick sensation, ankle reflexes, or vibration perception threshold; however, the clinician should perform all necessary tests to make the proper evaluation. We agree with interested parties' feedback that this clinician type lacks the required education and training to properly perform the quality action of this measure and it is out of the scope of their practice.
0416 / N/A	127	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear: Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.	American Podiatric Medical Association	This measure is being proposed for removal from the Nutrition/Dietician specialty set. Per the measure specifications, the proper evaluation of footwear must be completed, including a foot examination documenting the vascular, neurological, dermatological, and structural/biomechanical findings. The foot should also be measured using a standard measuring device, and counseling on appropriate footwear should be based on risk categorization. We agree with interested parties' feedback that this clinician type lacks the required education and training to properly perform the quality action of this measure and it is out of the scope of their practice.

B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Obstetrics/Gynecology specialty set.

Centers for Medicare & Medicaid Services
§	N/A / N/A	475	CMS34 9v5	eCQM Specifications	Process	Community/ Population Health	HIV Screening: Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.26. Obstetrics/Gynecology

MEASURES PROPOSED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	0046 / N/A	039	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Screening for Osteoporosis for Women Aged 65-85 Years of Age: Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis.	National Committee for Quality Assurance	We propose to include this measure in the Obstetrics/Gynecology specialty set as it is clinically relevant to this clinician type. Osteoporosis is an important public health issue requiring attention as it can lead to co-morbidities and decreased quality of life. Screenings are typically encouraged for women who are post-menopausal and, therefore, relevant to the patient population of this specialty.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Obstetrics/Gynecology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.26. Obstetrics/Gynecology

MEASURES PROPOSED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Obstetrics/Gynecology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	265	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Biopsy Follow-Up: Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.	American Academy of Dermatology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Oncology/Hematology specialty set.

B.27a. Oncology/Hematology

The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.	Oregon Urology Institute

B.27a. Oncology/Hematology

MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	N/A / N/A	134	CMS2v 12	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Oncology/ Hematology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that depression screening and intervention is an essential care process for patients diagnosed with cancer, including patients with breast cancer. Depression can be a disabling co-morbidity in cancer patients and it's vital to incorporate this assessment and intervention in their comprehensive care.
* ! (Patient Safety)	0022 / N/A	238	CMS15 6v11	eCQM specification s, MIPS CQMs specification s	Process	Patient Safety	Use of High-Risk Medications in Older Adults: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.	National Committee for Quality Assurance	We propose to include this measure in the Oncology/ Hematology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that medications used for supportive care for patients with cancer diagnoses, such as anti-depressants or pain medications, may be associated with increased risk of harm from drug side-effects and toxicity. Cancer care management between specialists heightens the need for closer collaboration of medication management for this patient population.

B.27a. Oncology/Hematology

MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Patient Experience)	0005 / N/A	321	N/A	CMS- approved Survey Vendor	Patient Engagem ent/Exper ience	Person and Caregive r- Centered Experien ce and Outcome s	CAHPS for MIPS Clinician/Group Survey: The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows: • Getting Timely Care, Appointments, and Information; (Not endorsed by NQF) • How well Providers Communicate; (Not endorsed by NQF) • Patient's Rating of Provider; (NQF endorsed # 0005) • Access to Specialists; (Not endorsed by NQF) • Health Promotion and Education; (Not endorsed by NQF) • Shared Decision-Making; (Not endorsed by NQF) • Health Status and Functional Status; (Not endorsed by NQF) • Courteous and Helpful Office Staff; (NQF endorsed # 0005) • Care Coordination; (Not endorsed by NQF) • Stewardship of Patient Resources. (Not endorsed by NQF)	Agency for Healthca re Research & Quality	We propose to include this measure in the Oncology/Hematology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that the inclusion of this patient-centered CAHPS survey measure can incentivize the evaluation of patient-centered domains relevant to cancer care (for example, timely care, provider communication, access to specialists, health promotion and education, shared decision making, functional status, care coordination).

B.27a. Oncology/Hematology

MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Oncology/Hematology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
	TBD	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Appropriate Intervention of Immune-related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors: Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.	Society for Immunotherapy of Cancer (SITC)	We propose to include this measure in the Oncology/Hematology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this patient-centered measure focuses on the appropriate management of adverse events that may reduce unnecessary utilization and improve quality of life (QOL) for patients taking checkpoint inhibitors. See Table A.6 for rationale.

B.27a. Oncology/Hematology

MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Oncology/Hematology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.27a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0213 / N/A	455	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients Who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better): Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.	American Society of Clinical Oncology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Radiation Oncology specialty set.

B.27b. Radiation Oncology

PREVIOUSLY FINALIZED MEASURES IN THE RADIATION ONCOLOGY SPECIALTY SET

Centers for Medicare & Medicaid Services
* § ! (Patient Experience)	0384 / 0384e	143	CMS15 7v11	eCQM Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcome	Oncology: Medical and Radiation – Pain Intensity Quantified: Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	American Society of Clinical Oncology
! (Patient Experience)	0383 / N/A	144	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Oncology: Medical and Radiation – Plan of Care for Pain: Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	American Society of Clinical Oncology

B.27b. Radiation Oncology

MEASURES PROPOSED FOR ADDITION TO THE RADIATION ONCOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* §	0028/00 28e	226	CMS138 v11	Medicare Part B Claims Measure Specifications , eCQM Specifications , MIPS CQMs Specifications	Process	Communi- ty/Pop- ulation Health	<p>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user.</p> <p>Three rates are reported:</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period.</p> <p>b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months.</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.</p>	National Committ- ee on Quality Assuran- ce	We propose to include this measure in the Radiation Oncology specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.

B.27b. Radiation Oncology

MEASURES PROPOSED FOR ADDITION TO THE RADIATION ONCOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Radiation Oncology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.28. Ophthalmology/Optometry

As indicated in the introductory language of Table Group B of the appendix to this proposed rule, we are proposing to add “Optometry” to the title of the Ophthalmology specialty set to create a combined new specialty set: Ophthalmology/Optometry. The Ophthalmology/Optometry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Ophthalmology/Optometry set, as well as comments on the proposal to create this combined set.

B.28. Ophthalmology/Optometry

MEASURES PROPOSED FOR ADDITION TO THE OPHTHALMOLOGY/OPTOMETRY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Ophthalmology/Optometry specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.29. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Orthopedic Surgery specialty set.

The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.

B.29. Orthopedic Surgery

MEASURES PROPOSED FOR ADDITION TO THE ORTHOPEDIC SURGERY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	3493 / N/A	480	N/A	Administrative Claims	Outcome	Patient Safety	<p>Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS):</p> <p>This measure is a re-specified version of the measure, “Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)” (National Quality Forum 1550), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups (“provider”) and assesses each provider’s complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.</p>	Centers for Medicare & Medicaid Services	<p>We propose to include this measure in the Orthopedic Surgery specialty set as it is clinically relevant to this clinician type. We agree with interested parties’ feedback that the management and avoidance of surgical and post-surgical complications is a critical component of high-quality, patient-centered care. Post-operative complications after THA/TKA can delay a patient’s recovery time, prolong hospitalizations, increase readmission rates, and increase disability or rates of mortality. Effective supportive care management can reduce the risk for complications, improve patient outcomes, and reduce overall healthcare costs. See Table A.8 for rationale.</p>

B.29. Orthopedic Surgery

MEASURES PROPOSED FOR ADDITION TO THE ORTHOPEDIC SURGERY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundatio n	We propose to include this measure in the Orthopedic Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.29. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	375	CMS66v1 1	eCQM Specifications	Process	Person and Caregiver- Centered Experience and Outcomes	Functional Status Assessment for Total Knee Replacement: Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) and completed a functional status assessment within 90 days prior to the surgery and in the 270- 365 days after the surgery.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.30. Otolaryngology

MEASURES PROPOSED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Appropriate Use)	N/A / N/A	066	CMS14 6v11	eCQM Specification s, MIPS CQMs Specification s	Process	Efficiency and Cost Reduction	Appropriate Testing for Pharyngitis: The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.	National Committee for Quality Assurance	We propose to include this measure in the Otolaryngology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure is specific to chronic pharyngeal diagnoses that are commonly treated by the otolaryngology clinician type.
* ! (Patient Safety)	0022 / N/A	238	CMS15 6v11	eCQM specification s, MIPS CQMs specification s	Process	Patient Safety	Use of High-Risk Medications in Older Adults: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.	National Committee for Quality Assurance	We propose to include this measure in the Otolaryngology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that medications should be assessed to ensure safe use among the older patient population. Reducing the number of inappropriate prescriptions can lead to improved patient safety and significant cost savings.
§ ! (Outcome)	N/A / N/A	355	N/A	MIPS CQMs Specification s	Outcome	Patient Safety	Unplanned Reoperation within the 30 Day Postoperative Period: Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period.	American College of Surgeons	We propose to include this measure in the Otolaryngology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that the measure includes specialty-specific coding (i.e., thyroid, parathyroid, etc. surgeries) and supports positive outcomes for otolaryngology surgical patients.

B.30. Otolaryngology

MEASURES PROPOSED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Otolaryngology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.30. Otolaryngology

MEASURES PROPOSED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Otolaryngology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OTOLARYNGOLOGY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0069 / N/A	065	CMS154v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Efficiency and Cost Reduction	Appropriate Treatment for Upper Respiratory Infection (URI): Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance	This measure is being proposed for removal from the Otolaryngology specialty set. Per interested parties' feedback, the patients that fall within this measure's denominator are not typically treated by this clinician type. An otolaryngologist's practice focuses more on specific/chronic diagnosis coding rather than the diagnosis associated with this measure. This measure focuses on the appropriate treatment of the common cold which is not typical care that an otolaryngologist provides.
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	265	N/A	MIPS CQMs Specifications	Process	Communic ation and Care Coordination	Biopsy Follow-Up: Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.	American Academy of Dermatology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pathology specialty set.

College of American Pathologists
* ! (Care Coordination)	N/A / N/A	440	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician: Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.	American Academy of Dermatology

B.31. Pathology

MEASURES PROPOSED FOR ADDITION TO THE PATHOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.
! (Care Coordination)	TBD	TBD	TBD	MIPS CQMs Specifications	Process	Communication and Care Coordination	Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma: Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both	College of American Pathologists	We propose to include this measure in the Pathology specialty set as it is clinically relevant to this clinician type. This measure addresses a gap in care regarding biomarker testing for specific cancer types. Biomarker testing is an important part of personalized medicine. It provides vital, individualized pathological data to clinicians utilized necessary for guidance in diagnosing and treating their patients, that can be tailored to the specific biomarkers that are found. See Table A.7 for rationale.

B.32. Pediatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pediatrics specialty set.

American Academy of Otolaryngology – Head and Neck Surgery Foundation

B.32. Pediatrics

MEASURES PROPOSED FOR ADDITION TO THE PEDIATRICS SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Pediatrics specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.32. Pediatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PEDIATRICS SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	379	CMS74v1 2	eCQM Specifications	Process	Effective Clinical Care	Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists: Percentage of children, 6 months – 20 years of age, who received a fluoride varnish application during the measurement period.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the Pediatrics specialty set beginning with the CY 2023 performance period/2025 MIPS payment year. Specialty specific coding is being removed from this quality measure for the 2023 performance period. Therefore, this measure is no longer relevant to this clinician type.

B.33. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Medicine specialty set.

B.34. Physical Therapy/Occupational Therapy

MEASURES PROPOSED FOR ADDITION TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	048	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	We propose to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure falls within the scope of care for a physical or occupational therapist to assess patients for urinary incontinence symptoms during their medical history intake. Physical and occupational therapists are trained through their education and experience to assess for and treat various patient symptoms and conditions.
	N/A / N/A	178	N/A	MIPS CQMs Specification s	Process	Effective Clinical Care	Rheumatoid Arthritis (RA): Functional Status Assessment: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.	American College of Rheumatology	We propose to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that functional assessment tools can and should be completed by physical and occupational therapists for patients they are treating who are also diagnosed with rheumatoid arthritis. Physical and occupational therapists work with rheumatoid arthritis patients for physical therapy in both land-based and/or aquatic-based programs. These clinicians help to teach patients energy conservation techniques as well as gait, self-care and activities of daily living (ADL) techniques to reduce the stress and load on one's joints.

B.34. Physical Therapy/Occupational Therapy

MEASURES PROPOSED FOR ADDITION TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundatio n	We propose to include this measure in the Physical Therapy/Occupational Therapy specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.35. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Plastic Surgery specialty set.

American College of Surgeons

B.35. Plastic Surgery

MEASURES PROPOSED FOR ADDITION TO THE PLASTIC SURGERY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Plastic Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.36. Podiatry

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Podiatry specialty set.

B.37. Preventive Medicine

MEASURES PROPOSED FOR ADDITION TO THE PREVENTIVE MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Care Coordination)	0643 / N/A	243	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Cardiac Rehabilitation Patient Referral from an Outpatient Setting: Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.	American Heart Association	We propose to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that this measure complements other measures within their set. Adding this measure to this specialty set would elevate the importance of secondary prevention in cardiovascular disease.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Preventive Medicine specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.37. Preventive Medicine

MEASURES PROPOSED FOR ADDITION TO THE PREVENTIVE MEDICINE SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	CMS95 lv1	eCQM specification s, MIPS CQMs Specification s	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundati on	We propose to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.
	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Communi ty/Pop ulation Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committ ee for Quality Assuranc e	We propose to include this measure in the Preventive Medicine specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.37. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
0062 / N/A	119	CMS134v 11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18- 75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.38. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable. We request comment on the measures available in the proposed Pulmonology specialty set.

! (Outcome)	N/A / N/A	398	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Optimal Asthma Control: Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.	Minnesota Community Measurement
* §	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance

B.38. Pulmonology

MEASURES PROPOSED FOR ADDITION TO THE PULMONOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	402	N/A	MIPS CQMs Specification s	Process	Communi- ty/Pop- ulation Health	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committ- ee for Quality Assuranc- e	We propose to include this measure in the Pulmonology specialty set as it is clinically relevant to this clinician type. The addition of this quality measure to this specialty set reinforces the importance that all clinicians should be actively addressing tobacco use across all patient care settings. Decreasing the usage of tobacco would reduce risk of heart disease, lung disease and stroke, lower the prevalence of severe diseases that may be associated with hospitalization, and decrease overall health care costs.
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specification s	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicia- ns Foundati- on	We propose to include this measure in the Pulmonology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.38. Pulmonology

MEASURES PROPOSED FOR ADDITION TO THE PULMONOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance	We propose to include this measure in the Pulmonology specialty set as it is clinically relevant to this clinician type. It supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for the general population. This quality measure aligns with the evidence-based recommendations of the Advisory Committee on Immunization Practices (ACIP). Broadening immunization status awareness to this clinician type is valuable as it can help drive an increase in the adult immunization rates. The immunizations included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. See Table A.9 for rationale.

B.38. Pulmonology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PULMONOLOGY SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0041 / N/A	110	CMS147v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.
N/A / N/A	111	CMS127v 11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group CC for rationale.

B.39. Rheumatology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Rheumatology specialty set.

B.41. Speech Language Pathology

MEASURES PROPOSED FOR ADDITION TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Speech Language Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.42. Thoracic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Thoracic Surgery specialty set.

* §	N/A/ N/A	134	CMS2v1 2	Med Part B Claims, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that depression screening and intervention is an essential care process for patients diagnosed with cancer, including patients with urological cancers. Depression can be a disabling co-morbidity in cancer patients and it's vital to incorporate this assessment and intervention in their comprehensive care.
* ! (Patient Safety)	0022/ N/A	238	CMS156 v11	eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	Use of High-Risk Medications in Older Adults: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class	National Committee for Quality Assurance	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that medications used for supportive care for patients with cancer diagnoses (including urological cancers), such as anti-depressants or pain medications, may be associated with increased risk of harm from drug side-effects and toxicity. Cancer care management between specialists (for example, urologists and oncologists) heightens the need for closer collaboration of medication management for this patient population.

B.44. Urology

MEASURES PROPOSED FOR ADDITION TO THE UROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Patient Experience)	0005/ N/A	321	N/A	CMS-approved Survey Vendor	Patient Engagement/Experience	Person and Caregiver-Centered Experiences	CAHPS for MIPS Clinician/Group Survey: The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows: • Getting Timely Care, Appointments, and Information; (Not endorsed by NQF) • How well Providers Communicate; (Not endorsed by NQF) • Patient's Rating of Provider; (NQF endorsed # 0005) • Access to Specialists; (Not endorsed by NQF) • Health Promotion and Education; (Not endorsed by NQF) • Shared Decision-Making; (Not endorsed by NQF) • Health Status and Functional Status; (Not endorsed by NQF) • Courteous and Helpful Office Staff; (NQF endorsed # 0005) • Care Coordination; (Not endorsed by NQF) • Stewardship of Patient Resources. (Not endorsed by NQF)	Agency for Healthcare Research & Quality	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that inclusion of this patient-centered CAHPS survey measure in this specialty set would incentivize evaluation of patient-centered domains relevant to urological cancer care (for example, timely care, provider communication, access to specialists, health promotion and education, shared decision making, functional status, care coordination).
* § ! (Appropriate Use)	0210/ N/A	453	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better): Percentage of patients who died from cancer receiving chemotherapy in the last 14 days of life.	American Society of Clinical Oncology	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that end-of-life care measures can provide meaningful feedback and create incentives to improve patient-centered, appropriate care to cancer patients, including patients with urological cancers. End-of-life care decisions may extend beyond oncologists to other specialty providers on the care team, including urologists for bladder or prostate cancers.

B.44. Urology

MEASURES PROPOSED FOR ADDITION TO THE UROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
§ ! (Outcome)	0216/ N/A	457	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better): Percentage of patients who died from cancer, and admitted to hospice and spent less than 3 days there.	American Society of Clinical Oncology	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. We agree with interested parties' feedback that end-of-life care measures can provide meaningful feedback and create incentives to improve patient-centered, appropriate care to cancer patients, including patients with urological cancers. End-of-life care decisions may extend beyond oncologists to other specialty providers on the care team, including urologists for bladder or prostate cancers.

B.44. Urology

MEASURES PROPOSED FOR ADDITION TO THE UROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Urology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.44. Urology

MEASURES PROPOSED FOR ADDITION TO THE UROLOGY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	TBD	CMS951 v1	eCQM Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the 12-month measurement period.	National Kidney Foundation	We propose to include this measure in the Urology specialty set as it is clinically relevant to this clinician type. This measure focuses on nephrology and diabetes care. This measure encourages an annual visit where estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) results are reviewed in patients with diabetes to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the comorbidities of diabetes and chronic kidney disease. See Table A.4 for rationale.

B.44. Urology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE UROLOGY SPECIALTY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0062 / N/A	119	CMS134v11	MIPS CQMs Specifications, eCQM Specifications	Process	Effective Clinical Care	Diabetes: Medical Attention for Nephropathy: The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee of Quality Assurance	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.
N/A / N/A	265	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Biopsy Follow-Up: Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.	American Academy of Dermatology	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

B.45. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Vascular Surgery specialty set.

B.45. Vascular Surgery

MEASURES PROPOSED FOR ADDITION TO THE VASCULAR SURGERY SPECIALTY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Process	Patient Safety	Screening for Social Drivers of Health: Percent of beneficiaries 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Physicians Foundation	We propose to include this measure in the Vascular Surgery specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. Improving the clinician's understanding of the social obstacles their patients face can provide critical insight into predicting negative health outcomes and improving a patient's health status. Social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health. Therefore, screening patients for social drivers is a priority topic for us and we believe this quality measure should be implemented across the spectrum of clinician specialties. The addition of this quality measure to this specialty set reinforces our commitment that all clinicians should be actively engaging in activities that address the screening of social drivers of health of their patients and is in alignment with our priorities to support overall patient health. See Table A.3 for rationale, including clinical evidence supporting the proposal for inclusion of this measure in MIPS.

B.45. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE VASCULAR SURGERY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	258	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7): Percent of patients undergoing open repair of small or moderate sized non-ruptured infrarenal abdominal aortic aneurysms (AAA) who do not experience a major complication (discharge to home no later than post-operative day #7).	Society for Vascular Surgeons	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.
N/A / N/A	260	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2): Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.	Society for Vascular Surgeons	This measure is being proposed for removal beginning with the CY 2023 performance period/2025 MIPS payment year. See Table Group C for rationale.

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

In this proposed rule, we propose to remove 15 previously finalized quality measures from MIPS for the CY 2023 performance period/2025 MIPS payment year and future years under Table Group C. These measures are discussed in detail below. Our process measure removal criteria were discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) to implement an approach to incrementally remove process measures.

Under measure removal criteria, consideration is given to the following, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- If they do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
- After factoring in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcomes; consideration of the measure in developing MVPs).
- If we determine the measure is not available for MIPS reporting by or on behalf of all MIPS eligible clinicians.

Under Table Group CC, we propose to partially remove 2 additional measures from traditional MIPS and propose only to retain these 2 measures for MVP use and retain 1 of these measures for purposes of Shared Savings Program ACOs reporting through the APP.

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion that we use for the removal of measures includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent.

For a measure that is proposed for removal due to criteria relating to the benchmark and performance data, further information regarding MIPS benchmarking data can be located at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip>.

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

C.1. Prevention of Central Venous Catheter (CVC) - Related Bloodstream Infections

Category	Description
NQF # / eCOM NQF #:	2726 / N/A
Quality #:	076
CMS eCOM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.
Measure Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.2. Diabetes: Medical Attention for Nephropathy

Category	Description
NQF # / eCQM NQF #:	0062 / N/A
Quality #:	119
CMS eCQM ID:	CMS134v11
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Measure Description:	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the Kidney Health Evaluation measure being proposed in Table A.4. The Kidney Health Evaluation measure focuses on patients with diabetes and encourages annual evaluation of estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) to prevent or delay chronic kidney disease. Early detection can reduce associated health risk of the co-morbidity of diabetes and CKD. The Kidney Health Evaluation measure, if finalized, would support the clinical conditions of kidney disease and diabetes, both identified as gaps within MIPS and considered priority areas for future measure development.
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the 2023 PFS final rule, we propose to apply the following substantive changes to the measure specifications: 1) the initial patient population and the denominator exclusion for the eCQM Specifications collection type would be revised to change the age anchor from the start of the measurement period to the end of the measurement period so that it aligns with the HEDIS measure requirements and creates consistency for implementation across programs; 2) the logic and logic definitions related to hospice care for the eCQM Specifications collection type would also be updated to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely and 3) the denominator note for the MIPS CQMs Specifications collection type would be revised to assess the age for exclusions on the date of the encounter to reduce clinician burden and ensure alignment with guidelines when utilizing this collection type.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C. The substantive changes outlined above would be applied to the measure specifications.</p>

C.3. Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	258
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percent of patients undergoing open repair of small or moderate sized non-ruptured infrarenal abdominal aortic aneurysms (AAA) who do not experience a major complication (discharge to home no later than post-operative day #7).
Measure Steward:	Society for Vascular Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.4. Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	260
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.
Measure Steward:	Society for Vascular Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.5. Referral for Otologic Evaluation for Patients with Acute or Chronic Dizziness

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	261
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged birth and older referred to a physician (preferably a physician specially trained in disorders of the ear) for an otologic evaluation subsequent to an audiologic evaluation after presenting with acute or chronic dizziness.
Measure Steward:	Audiology Quality Consortium
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.6. Biopsy Follow-Up

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	265
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.7. Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	275
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients with a diagnosis of inflammatory bowel disease (IBD) who had Hepatitis B Virus (HBV) status assessed and results interpreted prior to initiating anti-TNF (tumor necrosis factor) therapy.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.8. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Routine Testing After Percutaneous Coronary Intervention (PCI)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	323
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of all stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), and cardiovascular magnetic resonance (CMR) performed in patients aged 18 years and older routinely after percutaneous coronary intervention (PCI), with reference to timing of test after PCI and symptom status.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle (82 FR 53640). Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.87 percent for the MIPS CQMs Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and should be a standard of care. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.9. Functional Status Assessment for Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	375
CMS eCQM ID:	CMS66v11
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	eCQM Specifications
Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to measure Q470: Functional Status After Primary Total Knee Replacement. The process measure Q375 is only assessing whether pre- and post-assessments were completed; however, outcome measure Q470 requires a certain post-surgical PRO-PM score to meet performance.
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the 2023 PFS final rule, we propose to apply the following substantive changes to the measure specifications: (1) the measure description would be revised to capture the measure intent and logic surrounding the age requirement to provide clarity and alignment across the header and logic; (2) the denominator exclusion would be updated so that the timing of the lower body fracture in relation to the THA would align with intent of exclusion; and (3) the logic and logic definitions related to hospice care would be updated to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C. The substantive changes outlined above would be applied to the measure specifications.</p>

C.10. Photodocumentation of Cecal Intubation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	425
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	The rate of screening and surveillance colonoscopies for which photodocumentation of at least two landmarks of cecal intubation is performed to establish a complete examination.
Measure Steward:	American Society for Gastrointestinal Endoscopy
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because we believe this process measure represents performance outcomes that are clinically a standard of care and does not drive quality outcomes for patients.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.11. Age Appropriate Screening Colonoscopy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	439
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has a very low adoption rate which does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the 2023 PFS final rule, we propose that the measure denominator, denominator criteria and numerator options would be updated to align with USPSTF guidance that screening colonoscopies should start at age 45.</p> <p>If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C. The substantive changes outlined above would be applied to the measure specifications.</p>

C.12. Percentage of Patients Who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better)

Category	Description
NQF # / eCQM NQF #:	0213 / N/A
Quality #:	455
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. Additionally, interested parties' feedback has consistently indicated that retrieval of data from the ICU is difficult, which makes this measure hard to submit. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.13. Back Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	460
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal	We propose the removal of this measure (finalized in 82 FR 53968) as a quality measure from MIPS because this measure is duplicative to measure Q459: Back Pain After Lumbar Discectomy/Laminectomy. We are proposing in Table D.65 substantive changes to measure Q459: Back Pain After Lumbar Discectomy/Laminectomy that would encompass the eligible patient population and clinical quality action represented within measure Q460.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.14. Functional Status After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	469
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal	We propose the removal of this measure (finalized in 83 FR 60098 through 60099) as a quality measure from MIPS because this measure is duplicative to measure Q471: Functional Status after Discectomy/Laminectomy. We are proposing in Table D.69 substantive changes to measure Q471: Functional Status After Lumbar Discectomy/Laminectomy that would encompass the eligible patient population and clinical quality action represented within measure Q469.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

C.15. Leg Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	473
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal	We propose the removal of this measure (finalized in 83 FR 60106) as a quality measure from MIPS because this measure is duplicative to measure Q461: Leg Pain After Lumbar Discectomy/Laminectomy. We are proposing in Table D.66 substantive changes to measure Q461: Leg Pain After Lumbar Discectomy/ Laminectomy that would encompass the eligible patient population and quality action represented within measure Q473.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the 2023 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C.

TABLE Group CC: Proposed Partial Removal of 2 Previously Finalized Quality Measures as Component Measures in Traditional MIPS and Proposed Retention of These 2 Measures for Use in Relevant MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

Beginning with the CY 2023 performance period/2025 MIPS payment year and future years, we propose to maintain measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults for MVP development and implementation, and maintain measure Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this proposed rule. We believe the clinical concepts represented by these MIPS quality measures would support some specialties in a more targeted approach rather than the broader clinical concept of multiple vaccinations represented within the proposed Adult Immunization Measure proposed under Table A.9 of this appendix. The tables within this section offer the rationale of the removal of measures Q110 and Q111 from traditional MIPS reporting.

Therefore, we are proposing to remove these 2 previously finalized quality measures from traditional MIPS due to the proposal of adding the Adult Immunization Status measure under Table A.9 of this appendix. We simultaneously propose to retain Q110 and Q111 for use in MVPs, and retain Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this proposed rule. See Table Group E for proposed changes to the CMS Web Interface collection type of this measure.

Measures Q110 and 111 are currently proposed as quality measures within the proposed Optimal Care for Kidney Health MVP (see Appendix 3: MVP Inventory Table A.2). Measure Q111 is available in the previously finalized Advancing Rheumatology Patient Care MVP (86 FR 66002).

We request comments on this proposal.

CC.1. Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / N/A
Quality #:	110
CMS eCQM ID:	CMS147v12
National Quality Strategy Domain:	Community/Population Health
Collection Type:	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we are proposing a more robust measure under Table A.9: Adult Immunization Status that would help improve complete vaccination rates for patients. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q110 only focuses on the administration of the influenza immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. However, the clinical quality action assessed within measure Q110 may be appropriate and applicable for some MVP topics where the proposed Adult Immunization Status measure may not be as it contains more clinical quality actions for assessment that may not apply to the clinician types submitting that MVP. Therefore, we propose the removal of this measure from traditional MIPS, but propose retention of this measure for use in relevant MVPs, and use by Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this proposed rule. See Table Group E for proposed changes to the CMS Web Interface collection type for this measure.
In the Circumstance the Measure is Retained	If measure A.9: Adult Immunization Status is not finalized for the CY 2023 performance period/2025 MIPS payment year and future years, we would retain measure Q110 in traditional MIPS in all relevant specialty sets under Table Group B. See Table Group DD for any substantive changes proposed for this measure.

CC.2. Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	111
CMS eCQM ID:	CMS127v11
National Quality Strategy Domain:	Community/Population Health
Collection Type:	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we are proposing a more robust measure under Table A.9: Adult Immunization Status that would help improve complete vaccination rates for patients. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q111 only focuses on the administration of the pneumococcal vaccination rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Therefore, we propose the removal of this measure from traditional MIPS, but propose retention of this measure for use in relevant MVPs, because the clinical quality action assessed within measure Q111 may be appropriate and applicable for some MVP topics where the proposed Adult Immunization Status measure may not be as it contains more clinical quality actions for assessment that may not apply to the clinician types submitting that MVP.
In the Circumstance the Measure is Retained	If measure A.9: Adult Immunization Status is not finalized for the CY 2023 performance period/2025 MIPS payment year and future years, we would retain measure Q111 in traditional MIPS in all applicable specialty sets under Table Group B. See Table Group DD for any substantive changes proposed for this measure.

**TABLE Group D: Previously Finalized Quality Measures with Substantive Changes
Proposed for the CY 2023 Performance Period/2025 MIPS Payment Year and Future
Years**

NOTE: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within this proposed rule provide the substantive changes proposed for the quality measures in CY 2023. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2023 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2024. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at <https://qpp.cms.gov/about/resource-library>.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2023 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2023 quality measure specifications, in the form of an 'Instructions Note' to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible would the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: The CMS Web Interface collection type is no longer available in MIPS, except for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period; therefore, this collection type is no longer listed in any tables under Table Group D. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the CMS Web Interface collection type for APP reporting, see sections III.G.4.b.(9) and III.G.4.c.(1) of this proposed rule. For information on changes to measures under the CMS Web Interface collection type proposed for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this proposed rule.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0 percent during the measurement period.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Removed: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 18-75 years of age by the end of the measurement period, with diabetes with a visit during the measurement period.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</p> <ol style="list-style-type: none"> 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period. 2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: <ul style="list-style-type: none"> - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior <p>Updated denominator criteria: For all collection types: Added: coding for nutrition and dietitian.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to update the guidance/numerator instructions for all collection types to remove "Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included" because it does not align with the intent of the measure, which is to ensure hemoglobin A1c control in all patients with any diagnosis of diabetes. These updates would allow the measure to better reflect its clinical intent, in accordance with the given diabetes diagnoses codes within the denominator criteria of the measure.</p> <p>We propose to update multiple components of the measure for the eCQM Specifications collection type so that the patient age is determined as of the end of the measurement period and aligns with Healthcare Effectiveness Data and Information Set (HEDIS) measure requirements and creates consistency in implementation.</p> <p>We propose to add encounter codes for MIPS eligible nutrition and dietitian clinicians, for all collection types, based upon interested parties' feedback, as they may provide nutrition counseling or therapy to patients to help manage diabetes and to ensure hemoglobin A1c control. The American Diabetes Association (ADA) emphasizes the need for medical nutrition therapy (MNT) as fundamental for diabetes management and the overall care plan.¹ "Strong evidence supports the effectiveness of MNT interventions provided by RDNs [registered dietitian nutritionist/registered dietitian] for improving A1C, with absolute decreases up to 2.0% (in type 2 diabetes) and up to 1.9% (in type 1 diabetes) at 3–6 months. Ongoing MNT support is helpful in maintaining glycemic improvements."²</p> <p>We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored, as this would allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0081 / 0081e
Quality#:	005
CMS eCQM ID:	CMS135v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HIF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) <=40% who were prescribed or already taking ACE inhibitor or ARB or ARNI therapy during the measurement period.</p> <p>For the MIPS CQMs Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of heart failure (HIF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: This eCQM is to be reported as patient-based. To satisfy this measure, it must be reported for all heart failure patients at least once during the measurement period if seen in the outpatient setting.</p> <p>The requirement of two or more visits is used to establish that the eligible professional or eligible clinician has an existing relationship with the patient.</p> <p>A range value should satisfy the logic requirement for 'Ejection Fraction' as long as the ranged observation value clearly meets the less than or equal to 40% threshold noted in the denominator logic. A range that is greater than 40% would not meet the measure requirement.</p> <p>Updated rate aggregation: For the eCQM Specifications collection type: Removed: rate aggregation.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: All patients aged 18 years and older with two qualifying encounters during the measurement period and a diagnosis of heart failure.</p> <p>Updated denominator: For all collection types: Revised: LVEF threshold to <= 40%.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to <= 40%.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to <= 40%.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Added: Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD) prior to the end of the outpatient encounter with Moderate or Severe LVSD.</p> <p>For the MIPS CQMs Specifications collection type: Added: Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD).</p> <p>Updated definition: For the eCQM Specifications collection type: Removed: Prescribed-Inpatient setting; prescription given to the patient for ACE inhibitor or ARB or ARNI therapy at discharge OR ACE inhibitor or ARB or ARNI therapy to be continued after discharge as documented in the discharge medication list.</p> <p>Revised: LVEF threshold to <= 40%.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients who were prescribed or already taking ACE inhibitor or ARB or ARNI therapy during the measurement period.</p> <p>Updated denominator exception: For all collection types: Removed: Documentation of system reason(s) for not prescribing ACE inhibitor or ARB or ARNI therapy (e.g., other system reasons).</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description and numerator language for the eCQM Specifications collection type by changing the "12-month" verbiage to "measurement period" to harmonize language with other MIPS quality measures for consistency and clarity in implementation.</p> <p>We propose to revise the description, numerator, and guidance, and to remove a definition and rate aggregation from the eCQM Specifications collection type in order to remove the inpatient population to resolve logic issues such as implementing two populations with different intended reporting frequencies. Additionally, we propose to revise the initial patient population to add clarity around the required number of qualifying encounters and to align with the measure logic. The measure logic requires patients to have 2 qualifying visits during the measurement period to establish that the eligible clinician has an existing relationship with the patient.</p> <p>We propose to update LVEF value for all collection types from <40 percent to <=40 percent to ensure all patients considered to have heart failure with reduced ejection fraction are included in the denominator, by including patients with a LVEF value of 40 percent, and add a denominator exclusion for patients with left ventricular assist device or a history of heart transplant, as these patients were not included in clinical treatment trials for low LVEF heart failure. We also propose the removal of the denominator exception for system reasons for all collection types as the medication is widely available.¹ These revisions would help to ensure a complete and appropriate patient population is being assessed for the quality action resulting in meaningful data.</p>

Category	Description
	<p>We propose to revise the numerator for the eCQM Specifications collection type to accurately reflect the clinical actions allowed in the current technical specification to ensure alignment between the measure logic, description, and numerator fields.</p> <p>Please note, if the revisions to the eCQM Specifications collection type are finalized, the MIPS version of the measure would not align with the NQF endorsed version of the measure.</p>

American College of Cardiology Foundation (2012). 2012 ACCF/AHA/ACP/AATS/PCNA/SCAI/STS Guideline for the Diagnosis and Management of Patients with Stable Ischemic Heart Disease: Executive Summary [Published Correction Appears in Circulation. 2014 Apr 22;129(16):e462]. *Circulation*, 126(25), 3097–3137. <https://doi.org/10.1161/CIR.0b013e3182776f83>.

D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy

Category	Description
NQF # / eCQM NQF #:	0067 / N/A
Quality#:	006
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
Substantive Change:	Updated denominator criteria: Removed: coding for Dressler's Syndrome.
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to remove coding for Dressler's Syndrome from the denominator, as it is not a conclusive diagnosis to indicate coronary artery disease. Experts believe Dressler's syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with continued antiplatelet therapy, which would not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with antiplatelets (https://www.ncbi.nlm.nih.gov/books/NBK441988/). This revision would ensure the patients captured within the measure denominator are appropriate.</p>

D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.
Substantive Change:	<p>The measure title is revised from 'Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)' to: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%).</p> <p>The measure description is revised to read: For all collection types: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.</p> <p>Updated instructions: For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated rate aggregation: For the eCQM Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: All patients aged 18 years and older with two qualifying encounters during the measurement period and a diagnosis of coronary artery disease.</p> <p>Updated denominator: For all collection types: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated definition: For all collection types: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic to ensure patients who satisfy both denominator eligibility criteria are only counted once.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Removed: coding for Dressler's Syndrome.</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update LVEF value from <40 percent to ≤40 percent to better align with current clinical guidelines¹, and to ensure all patients considered to have heart failure with reduced ejection fraction are included in the denominator eligible patient population, by including patients with a LVEF value of 40 percent. This revision is reflected in the measure title, description, denominator, and definitions for all collection types; in the instructions, denominator criteria, and denominator note for the MIPS CQMs Specifications collection type; and in the guidance for the eCQM Specifications collection type. This would help to ensure a complete and appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to revise the initial patient population for the eCQM Specifications collection type to add clarity around the required number of qualifying encounters and to align with the measure logic. The measure logic requires patients to have 2 qualifying visits during the measurement period to establish that the eligible clinician has an existing relationship with the patient. We propose to update measure logic and logic definitions for the eCQM Specifications collection type to avoid counting a patient more than once if the patient satisfies both denominator criteria. This is in alignment with the guidance and the intent of the measure to only count patients who fit both denominator criteria in Population Criteria 1.</p> <p>We propose to remove coding for Dressler's Syndrome from the denominator for the MIPS CQMs Specifications collection type as it is not a conclusive diagnosis to indicate coronary artery disease, which would align with revisions previously made to the eCQM Specifications collection type in the 2022 PFS final rule (86 FR 65895). Experts believe Dressler's syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with beta blocker therapy, which would not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with beta blocker therapy (https://www.ncbi.nlm.nih.gov/books/NBK441988/). This revision would ensure the patients captured within the measure denominator are appropriate.</p>

D.5 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0083 / 0083e
Quality#:	008
CMS eCQM ID:	CMS144v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed or already taking beta-blocker therapy during the measurement period.</p> <p>For the MIPS CQMs Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: This eCQM is to be reported as patient-based. To satisfy this measure, it must be reported for all heart failure patients at least once during the measurement period. A range value should satisfy the logic requirement for 'Ejection Fraction' as long as the ranged observation value clearly meets the less than or equal to 40% threshold noted in the denominator logic. A range that is greater than 40% would not meet the measure requirement.</p> <p>Beta-blocker therapy: -For patients with prior LVEF ≤ 40%, beta-blocker therapy should include bisoprolol, carvedilol, or sustained release metoprolol succinate. The requirement of two or more visits is to establish that the eligible professional or eligible clinician has an existing relationship with the patient.</p> <p>Updated rate aggregation: For the eCQM Specifications collection type: Removed: rate aggregation.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: All patients aged 18 years and older with two qualifying encounters during the measurement period and a diagnosis of heart failure.</p> <p>Updated denominator: For all collection types: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Added: Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD) prior to the end of the outpatient encounter with Moderate or Severe LVSD.</p> <p>For the MIPS CQMs Specifications collection type: Patients with a history of heart transplant or with a Left Ventricular Assist Device (LVAD).</p> <p>Updated definition: For the eCQM Specifications collection type: Removed: Prescribed-Outpatient setting: prescription given to the patient for beta-blocker therapy at one or more visits in the measurement period OR patient already taking beta-blocker therapy as documented in current medication list.</p> <p>Prescribed-Inpatient setting: prescription given to the patient for beta-blocker therapy at discharge OR beta-blocker therapy to be continued after discharge as documented in the discharge medication list.</p> <p>Revised: LVEF threshold to ≤ 40%.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients who were prescribed or already taking beta-blocker therapy during the measurement period.</p> <p>Updated numerator definition: For the MIPS CQMs Specifications collection type: Revised: Beta-blocker Therapy definition LVEF threshold to ≤ 40%.</p> <p>Updated denominator exception: For all collection types: Removed: denominator exception for system reasons.</p> <p>For the MIPS CQMs Specifications collection type: Revised: LVEF threshold to ≤ 40%.</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description and numerator language for the eCQM Specifications collection type by changing the "12-month" verbiage to "measurement period" to harmonize the language with other MIPS quality measures for consistency and clarity in implementation of this measure. Additionally, we propose to revise multiple components of the eCQM Specifications collection type to include only the outpatient population, in an effort to resolve measure logic issues such as implementing two populations with different intended reporting frequencies.</p> <p>We propose to revise the initial patient population of the eCQM Specifications collection type to add clarity around the required number of qualifying encounters and to align with the measure logic. Measure logic requires patients to have 2 qualifying visits during the measurement period to establish that the eligible clinician has an existing relationship with the patient.</p> <p>We propose to update multiple components of the measure, across all collection types, to reflect an LVEF value of ≤ 40 percent, to better align with current clinical guidelines, and to ensure all patients considered to have heart failure with reduced ejection fraction are included in the measure denominator, by including patients with a LVEF value of 40 percent, and add a denominator exclusion for patients with left ventricular assist device or a history of heart transplant as these patients were not included in</p>

Category	Description
	<p>clinical treatment trials for low LVEF heart failure.¹ These revisions ensure a clinically appropriate patient population is assessed for the quality action of prescribing beta-blocker pharmacotherapy resulting in meaningful data. We also propose the removal of the denominator exception for system reasons for all collection types as the medication is widely available.</p> <p>We propose to revise the numerator for the eCQM Specifications collection type to accurately reflect the clinical actions allowed in the current technical specification to ensure alignment between the measure logic, description, and numerator fields.</p> <p>Please note, if the revisions to the eCQM Specifications collection type are finalized, the MIPS version of the measure would not align with the NQF endorsed version of the measure.</p>

D., Krumholz, H. M., Kwong, R. Y., Lim, M. J., Linderbaum, J. A., Mack, M. J., Munger, M. A., Prager, R. L., Sabik, J. F., ... American College of Cardiology Foundation (2012). 2012 ACCF/AHA/ACP/AATS/PCNA/SCAI/STS Guideline for the Diagnosis and Management of Patients with Stable Ischemic Heart Disease: Executive Summary [Published Correction Appears in Circulation. 2014 Apr 22;129(16):e462]. *Circulation*, 126(25), 3097–3137. <https://doi.org/10.1161/CIR.0b013e3182776f83>.

D.6 Anti-Depressant Medication Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	009
CMS eCQM ID:	CMS128v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported.</p> <p>a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks).</p> <p>b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).</p>
Substantive Change:	<p>The measure initial patient population is revised to read: Patients 18 years of age and older as of April 30 of the measurement period who were dispensed antidepressant medications during the Intake Period, and were diagnosed with major depression 60 days prior to, or 60 days after the dispensing event and had a visit 60 days prior to, or 60 days after the dispensing event.</p> <p>The measure definition is revised to read: Intake Period: The 12-month window starting on May 1 of the year prior to the measurement period and ending on April 30 of the measurement period. Index Prescription Start Date (IPSD): The date of the earliest prescription dispensing event for an antidepressant medication during the Intake Period. The "continuous treatment" described in this measure allows for gaps in medication treatment up to a total 31 days during the 115-day period (numerator 1) or 52 days during the 232-day period (numerator 2). Gaps can include either gaps used to change medication, or treatment gaps to refill the same medication.</p> <p>Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>The measure numerator is revised to read: Numerator 1: Patients who have received antidepressant medication for at least 84 days (12 weeks) of continuous treatment beginning on the IPSD through 114 days after the IPSD (115 total days). Numerator 2: Patients who have received antidepressant medications for at least 180 days (6 months) of continuous treatment beginning on the IPSD through 231 days after the IPSD (232 total days).</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure definition to define and clarify the intake period. Additionally, to align with the updated definition, we propose to revise the initial patient population and patient age to ensure that patients meet the measure's age requirement. Additionally, we propose to update the logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored, as this would allow for different workflows and systems to align with exclusion criteria more closely ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We are proposing additional revisions to the language and logic to improve transparency of timing related to Index Prescription Start Date that would clarify that the continuous treatment period to include the IPSD, ensuring consistent implementation and improving readability.</p>

D.7 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation

Category	Description
NQF # / eCQM NQF #:	N/A / 0086e
Quality#:	012
CMS eCQM ID:	CMS143v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months.
Substantive Change:	Updated value set/coding: Added: encounter class attribute for non-telehealth eligible encounters.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.

D.8 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	019
CMS eCQM ID:	CMS142v11
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Substantive Change:	Updated value set/coding: For the eCQM Specifications collection type: Added: encounter class attribute for non-telehealth eligible encounters.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the value set/coding for the eCQM Specifications collection type to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.

D.9 Screening for Osteoporosis for Women Aged 65-85 Years of Age

Category	Description
NQF # / eCQM NQF #:	0046 / N/A
Quality#:	039
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis.
Substantive Change:	Updated denominator criteria: For all collection types: Removed: AND NOT Diagnosis of osteoporosis on date of encounter. Updated denominator exclusion: For all collection types: Added: diagnosis of osteoporosis on date of encounter. Updated definitions: For all collection types: Added: definition including coding for diagnosis of osteoporosis that would suffice.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to move the diagnosis of osteoporosis from the denominator criteria to a denominator exclusion. While this would not change the intent or intended patient population of the measure, it would clarify how to capture the denominator eligible patient population and ensure only patients who are appropriate for quality action assessment are included.

D.10 Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	050
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.
Substantive Change:	Updated denominator criteria: Added: coding for occupational therapy.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add coding for occupational therapy to this measure as this measure is applicable to their scope of care. Non-surgical interventions can be utilized to improve quality of life for patients with urinary incontinence ¹ , which has been demonstrated in a preliminary study showing clinically significant improvement for patients receiving occupational therapy interventions. ²

² Cunningham, R., & Valasek, S. (2019). Occupational Therapy Interventions for Urinary Dysfunction in Primary Care: A Case Series. *The American Journal of Occupational Therapy*, 73(5), 7305185040p1-7305185040p8. <https://doi.org/10.5014/ajot.2019.038356>.

D.11 Appropriate Treatment for Upper Respiratory Infection (URI)

Category	Description
NQF # / eCQM NQF #:	0069 / N/A
Quality#:	065
CMS eCQM ID:	CMS154v11
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.
Substantive Change:	Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored. Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised: URI episodes when the patient had an active prescription of antibiotics (Table 1) in the 30 days prior to the episode date or is still active the same day of the encounter.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. We propose to revise the denominator exclusion for the MIPS CQMs Specifications collection type to add clarity regarding those patients that should not be included within the denominator population due to active or previous antibiotic prescriptions, as this patient population would impact the performance calculated for the measure as the intent is to assess whether an antibiotic is prescribed.

D.12 Appropriate Testing for Pharyngitis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	066
CMS eCQM ID:	CMS146v11
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.
Substantive Change:	<p>The measure denominator instructions are revised to read: For the MIPS CQMs Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. The intent is to determine whether antibiotics are being ordered appropriately. Antibiotics should only be ordered if a strep test has been performed to confirm a bacterial infection. Antibiotics should not be ordered for viral infections. Antibiotics should be ordered on the episode date through three days after the episode date.</p> <p>An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order during the measurement period.</p> <p>If a patient has more than one eligible episode in a 31-day period, include only the first eligible episode.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added: The test must be performed to confirm a bacterial infection prior to the antibiotic order.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: timing of antibiotic to align with measure intent and current narrative for the denominator exclusion.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator and numerator instructions for the MIPS CQMs Specifications collection type to clarify the intent of the measure which is to ensure appropriate antibiotic dispensing following confirmation of a bacterial infection.</p> <p>We propose to update the logic and logic definitions for the eCQM Specifications collection type related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to align with exclusion intent and criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. We propose to revise the denominator exclusion for the MIPS CQMs Specifications collection type to add clarity regarding those patients that should not be included within the denominator eligible patient population due to active or previously prescribed antibiotic. This patient population would impact the performance calculated for this measure as the intent is to assess that a group A streptococcus test is completed prior to prescribing an antibiotic. Patients actively on an antibiotic would most likely not benefit from this test due to the recommended treatment for the group A streptococcus infection is common, inexpensive antibiotics (https://www.cdc.gov/groupastrep/diseases-hep/strep-throat.html).</p>

D.13 Adult Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 0104e
Quality#:	107
CMS eCQM ID:	CMS161v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.
Substantive Change:	<p>The measure description is revised to read: Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.</p> <p>Updated guidance: Revised: This eCQM is an episode-based measure and should be reported for each instance of a new or recurrent episode of major depressive disorder (MDD) during the measurement period. This measure should be reported for each eligible encounter during which a new or recurrent episode of MDD is identified in adults that turn 18 or older during the measurement period.</p> <p>The measure initial patient population is revised to read: Patient visits for patients that turn 18 or older during the measurement period during which a new diagnosis of MDD, single or recurrent episode, was identified.</p>
Measure Steward:	Mathematica
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the language for the measure description, guidance, and initial patient population to accurately capture the adult population by including patients that turn 18 years of age or older during the measurement period.

D.14 Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Women 52-74 years of age by the end of the measurement period with a visit during the measurement period</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period. 2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure, for the eCQM Specifications collection types, so that the patient age would be determined as of the end of the measurement period and aligns with HEDIS measure requirements and creates consistency in implementation.</p> <p>We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.15 Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of adults 45-75 years of age who had appropriate screening for colorectal cancer.</p> <p>The measure description is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.</p> <p>Updated stratification: For the eCQM Specifications collection type: Added: Report a total rate, and each of the following age strata: Stratum 1: Patients age 46-49 by the end of the measurement period Stratum 2: Patients age 50-75 by the end of the measurement period</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 46-75 years of age by the end of the measurement period with a visit during the measurement period.</p> <p>The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients 45-75 years of age with a visit during the measurement period</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Patients 45 to 75 years of age on date of encounter.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period. 2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description and multiple measure components for all collection types to align with the 2021 U.S. Preventive Services Task Force (USPSTF) guidelines that recommend Colorectal Cancer Screenings begin at age 45 rather than beginning at age 50.</p> <p>We propose to add stratification for the eCQM Specifications collection type to monitor performance of the newly recommended 45-49 year age group, and to continue monitoring the previously established population of patients aged 50-75 years.</p> <p>We propose to update multiple components of the measure, for the eCQM Specifications collection type, so that the patient age is determined as of the end of the measurement period and aligns with the HEDIS measure requirements and creates consistency in implementation.</p> <p>We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.16 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis

Category	Description
NQF # / eCQM NQF #:	0058 / N/A
Quality#:	116
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.
Substantive Change:	Updated numerator instructions: Revised: Table 1 - Antibiotic Medications by removing Erythromycin stearate, Erythromycin ethylsuccinate, and Erythromycin lactobionate from Macrolides AND Nitrofurantoin macrocrystals from Urinary anti-infectives.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the numerator instructions in order to standardize the medication names.

D.17 Diabetes: Eye Exam

Category	Description
NQF # / eCQM NQF #:	0055 / N/A
Quality#:	117
CMS eCQM ID:	CMS131v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	<p>Modified collection type: eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 18-75 years of age by the end of the measurement period, with diabetes with a visit during the measurement period.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period. 2. Exclude patients 66 and older by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to remove the Medicare Part B Claims Measure Specifications collection type as it is extremely topped out and at the end of the topped-out lifecycle as finalized in 82 FR 53640. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip.</p> <p>We propose to update multiple components of the measure, for the eCQM Specifications collection type, so that the patient age is determined as of the end of the measurement period and aligns with the HEDIS measure requirements and creates consistency in implementation.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes would be reflected within this collection type specification.</p>

D.18 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0066 / N/A
Quality#:	118
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy.
Substantive Change:	<p>The measure title is revised from 'Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)' to: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy – Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%).</p> <p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB therapy.</p> <p>Updated instructions: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator criteria: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator definition: Revised: LVEF threshold to ≤ 40%.</p> <p>Updated denominator criteria: Removed: coding for Dressler's Syndrome.</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure to reflect LVEF to ≤40 percent to align with current clinical guidelines.¹</p> <p>We also propose to remove coding for Dressler's Syndrome from the denominator as it is not a definitive diagnosis for CAD. Experts believe Dressler's syndrome, a form of secondary pericarditis with or without a pericardial effusion, is an immune system response following heart tissue and/or pericardium damage, which includes causes that may be outside of CAD, such as chest trauma. Additionally, this condition is not typically treated with ACE or ARB therapy, which would not be in alignment with the intent of this measure as it is assessing for the appropriate treatment of CAD with ACE or ARB therapy (https://www.ncbi.nlm.nih.gov/books/NBK441988/). This revision would ensure the patients captured within the measure denominator are appropriate.</p>

D.19 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	128
CMS eCQM ID:	CMS69v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the performance period AND who had a follow-up plan documented if BMI was outside of normal parameters</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: BMI Measurement Guidance:</p> <ul style="list-style-type: none"> * Height and Weight – An eligible professional or their staff is required to measure both height and weight. Both height and weight must be measured during the measurement period. Self-reported values cannot be used. * The BMI may be documented in the medical record of the provider or in outside medical records obtained by the provider. * If the documented BMI is outside of normal parameters, then a follow-up plan is documented during the encounter or during the measurement period. * If more than one BMI is reported during the measurement period, and any of the documented BMI assessments are outside of normal parameters, documentation of an appropriate follow-up plan will be used to determine if performance has been met. * Review the exclusions and exceptions criteria to determine those patients that BMI measurement may not be appropriate or necessary. <p>Follow-Up Plan Guidance:</p> <ul style="list-style-type: none"> * The documented follow-up plan must be based on the documented BMI, outside of normal parameters, example: “Patient referred to nutrition counseling for BMI above or below normal parameters.” <p>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type: 1. Patients who are pregnant at any time during the measurement period. 2. Patients receiving palliative or hospice care at any time during the measurement period.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Removed: sort function.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: encounter class attribute for non-telehealth eligible encounters.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients with a documented BMI during the encounter or during the measurement period, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the measurement period.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Height and Weight – An eligible clinician or their staff is required to measure both height and weight. Both height and weight must be measured within 12 months of current encounter. Self-reported values cannot be used.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: Plenity, Saxenda, Contrave, Naltrexone-bupropion, Benzphetamine, Phendimetrazine, and Wegovy to the “Medications for Above Normal BMI” value set (OID: 2.16.840.1.113883.3.526.3.1561).</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description and numerator for the eCQM Specifications collection type to correct the misalignment between the updated logic performed in 2021 and the measure description. Therefore, we are proposing to change the timing associated with BMI calculation and intervention to reduce implementation burden on clinicians. We also propose this change for the measure guidance for the eCQM Specifications collection type.</p> <p>We propose to revise the measure denominator exclusion language for the eCQM Specifications collection type to incorporate timing elements that we believe would improve clarity for implementation and reduce ambiguity.</p> <p>We propose to update the numerator instructions for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types to remove the language allowing for measurements to be obtained from separate encounters to ensure both height and weight are associated for utilization in obtaining a BMI. This would ensure the most accurate BMI is being assessed aligning with the intent of the measure, which is to screen all adults for BMI to initiate further evaluation and follow-up plan if necessary.</p> <p>We propose to update the value set/coding for the eCQM Specifications collection type by adding other weight loss management medications to the “Medications for Above Normal BMI” value set (OID: 2.16.840.1.113883.3.526.3.1561) for numerator compliance.</p>

D.20 Documentation of Current Medications in the Medical Record

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	130
CMS eCQM ID:	CMS68v12
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	<p>Modified collection type: eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: This list must include all known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements, cannabis/cannabidiol products AND must contain the medications' name, dosage, frequency and route of administration.</p> <p>Updated numerator definition: For the MIPS CQMs Specifications collection types: Revised: Current Medications – Medications the patient is presently taking including all prescriptions, over-the- counters, herbals, vitamins, minerals, dietary (nutritional) supplements, and cannabis/cannabidiol products with each medication's name, dosage, frequency and administered route.</p> <p>Updated numerator note: For the MIPS CQMs Specifications collection types: Revised: This list must include ALL known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements, cannabis/cannabidiol products AND must contain the medications' name, dosage, frequency and route of administration.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped-out lifecycle as finalized in 82 FR 53640. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip. However, the benchmarking data continues to show a gap for the eCQM Specifications and MIPS CQMs Specifications collection types, as such, we propose to retain the measure for eCQM Specifications and MIPS CQMs Specifications collection types.</p> <p>We propose to update the guidance for the eCQM Specifications collection type, as well as the numerator note and numerator definition for the MIPS CQMs Specifications collection type to add recommendations to assess patient's usage of cannabis/cannabidiol/etc., as use of these drugs can affect the metabolization of other medications but is often not included in the medical record.</p> <p>In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes would be reflected within this collection type specification.</p>

D.21 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v12
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days (48 hours) after the eligible date of the qualifying encounter.</p> <p>The measure description is revised to read: For the MIPS CQMs Specifications collection type: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two days (48 hours) after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression.</p> <p>Updated definition: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: coding for manic episodes to the denominator exclusions definition for bipolar depression.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days (48 hours) after the date of the qualifying encounter</p> <p>The measure numerator is revised to read: For the MIPS CQMs Specifications collection type: Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Revised: A depression screen is completed on the date of the encounter or up to 14 calendar days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two calendar days after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. An example to illustrate the follow-up plan documentation timing: if the encounter is on a Monday from 3-4 pm (day 0) and the patient screens positive, the clinician has through anytime on Wednesday (day 2) to complete follow-up plan documentation.</p> <p>Added: The follow-up plan MUST still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician or provider's practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: coding for manic episodes to the Bipolar Diagnosis value set (2.16.840.1.113883.3.600.450).</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise multiple components of the measure for the eCQM Specifications and the MIPS CQMs Specifications Collection types to add a grace period after the end of the encounter to document the follow-up plan, which would allow more flexibility in the clinical workflow giving clinician's time for documentation. This would ensure that those clinicians who meet the intent of the measure, which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>We propose to update the measure definition for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to improve alignment with measure intent which is to screen for new cases of depression in patients who have never had a diagnosis of depression or bipolar disorder, as well as to clarify the timing requirements of diagnoses for the measure exclusions.</p> <p>We propose to add coding for manic episodes to the Bipolar Diagnosis value set for the eCQM Specifications collection type to align with measure intent.</p>

D.22 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
NQF # / eCQM NQF #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v11
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	<p>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Added: The two chemotherapy administrations must occur on different days within the timeframe of on or within 30 days before the denominator eligible encounter and on or within 30 days after the denominator eligible encounter. Two chemotherapy administrations performed on the same day will not meet the patient procedure requirement.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic to only apply lookback period for radiation treatment management code.</p> <p>Revised: logic related to chemotherapy treatments to further constrain the two unique chemotherapy treatments and data collection requirements to not extend beyond the measurement period.</p>
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator instructions for the MIPS CQMs Specifications collection type and logic related to chemotherapy treatments for the eCQM Specifications collection type to clarify that two chemotherapy administrations performed on the same day would not meet the patient procedure requirement. Additionally, we propose to update the logic and logic definitions for the eCQM Specifications collection type to only apply lookback period for radiation treatment management code to meet the numerator intent of ensuring the intensity of pain experienced by patients is quantified during face-to-face or telehealth encounters, as required. This revision would also assist implementers in these instances, ensuring alignment with measure intent of quantifying a patient's pain severity so that those patients experiencing moderate to severe pain can be identified as the National Comprehensive Cancer Network (NCCN, 2021) suggests there is an undertreatment of pain in a subset of this patient population.

D.23 Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	145
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).
Substantive Change:	<p>The measure title is revised from 'Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy' to: For all collection types: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy</p> <p>The measure description is revised to read: For all collection types: Final reports for procedures using fluoroscopy that document radiation exposure indices.</p> <p>Updated denominator criteria: For all collection types: Removed: coding related to procedures that do not use fluoroscopy.</p> <p>The measure numerator is revised to read: For all collection types: Final reports for procedures using fluoroscopy that include radiation exposure indices.</p> <p>The measure numerator definition is revised to read: For all collection types: Radiation exposure indices – For the purposes of this measure, “radiation exposure indices” should include at least one of the following:</p> <ol style="list-style-type: none"> 1. Reference air kerma (Ka,r) in Gy or mGy 2. Kerma-area product (PKA) or Dose area product (DAP) in uGy*m², mGy*cm² (or similar) 3. Peak skin dose (PSD) in Gy or mGy <p>When reporting indices the report must clearly state what radiation quantity is being submitted, that is only reporting dose in mGy is insufficient. PSD in mGy is very different from Ka,r in mGy. As an example, PSD = 10 mGy or Ka,r = 10 mGy would meet numerator performance, but “10 mGy” alone would not.</p> <p>Note: When reporting reference air kerma or kerma-area product for biplane systems, the value should be reported as the sum of both planes (or the value for each plane should be reported individually).</p> <p>The measure numerator instructions are revised to read: For all collection types: Documentation: Dose information in the final report may be located in a variety of sources and should be available to the referring physician on receipt of report.</p> <p>The measure numerator note is revised to read: For all collection types: In interventional radiology procedures with runs, dose indices are displayed on the console and in the radiation dose structured report (RDSR).</p> <p>The measure numerator options are revised to read: For all collection types: Performance Met: Radiation exposure indices documented in final report for procedure using fluoroscopy. Performance Not Met: Radiation exposure indices not documented in final report for procedure using fluoroscopy, reason not given.</p>
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise multiple components to better align with forthcoming AAPM Medical Physics Practice Guideline for Fluoroscopy Dose Management by Fisher, et al.¹ which indicates that exposure time and number of images is the least useful index for predicting potential tissue effects related to radiation exposure. Therefore, multiple components of the measure, across all collection types, would be updated to reflect the removal of exposure time and number of images as being numerator compliant. The measure steward indicated, and we believe it is reasonable, to expect practices providing fluoroscopy services to document one of the three accepted exposure indices in the radiology report, based upon the aforementioned guidelines. Additionally, we propose to revise the numerator definition to include the common units of measurement to emphasize our requirement that the report should include both the dose index AND the measurement.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.24 Tuberculosis Screening Prior to First Course Biologic Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	<p>The measure title is revised from 'Tuberculosis Screening Prior to First Course Biologic Therapy' to: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy.</p> <p>The measure description is revised to read: If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.</p> <p>Updated instructions: Revised: This measure is to be submitted a minimum of once per performance period for patients who are being considered or prescribed a first course of a biologic and/or immune response modifier therapy seen during the performance period.</p> <p>The measure denominator is revised to read: All patients aged 18 years and older who are receiving a first course of therapy using a biologic and/or immune response modifier (such as kinase inhibitors) that includes a warning for potential reactivation of a latent infection.</p> <p>Updated denominator criteria is revised to read: Patient receiving first-time biologic and/or immune response modifier therapy.</p> <p>Updated denominator instructions: Revised: Patients are considered to be receiving a first course of therapy using a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection only if they have been prescribed such a biologic and/or immune response modifier during the performance period and also have not been prescribed any such biologic and/or immune response modifier in the 15 months preceding the encounter at which the biologic and/or immune response modifier was newly started. A biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection includes:</p> <p>Added:</p> <ul style="list-style-type: none"> - Adalimumab-adbm (Cyltezo) - Adalimumab-atto (Amjevita) - Brodalumab (Siliq) - Risankizumab-rzaa (Skyrizi) - Tildrakizumab (Ilumya) <p>Revised:</p> <p>The list of therapies is subject to change as new therapies are approved by the FDA.</p> <p>To be included in the denominator, patient must have an encounter and a prescription for a biologic and/or immune response modifier in the performance period (1/1/2023-12/31/2023) WITHOUT a prior prescription for a biologic and/or immune response modifier within the 15 months prior to the biologic and/or immune response modifier prescribed during the performance period.</p> <p>The measure numerator is revised to read: Patients for whom any record of TB testing is documented or performed (PPD, IFN-gamma release assays, or other appropriate method) in the medical record in the 12 months preceding the biologic and/or immune response modifier prescription.</p> <p>Updated numerator options: Revised:</p> <p>Performance Met: TB screening performed and results interpreted within twelve months prior to initiation of first-time biologic and/or immune response modifier therapy.</p>
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise multiple components of the measure to be more inclusive of non-rheumatology specialties so the measure may be used to evaluate additional clinician types, such as dermatology. We propose to revise the measure to include biologics rather than just immune response modifier therapies in order to support the variety of clinicians that may be able to report the measure. Additionally, we propose to revise the list of pharmacological agents that would meet the denominator criteria of the measure to more completely capture patients appropriate for the assessment of the quality action and intent of the measure, which is to ensure that all patients receiving a first course of biologic and/or immune response modifier that may cause latent TB reactivation are tested for TB appropriately.¹</p>

D.25 Elder Maltreatment Screen and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	181
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.</p> <p>The measure denominator is revised to read: For all collection types: All patients aged 60 years and older.</p> <p>Updated denominator criteria: For all collection types: Revised: Patients aged ≥ 60 years on date of encounter.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise multiple components of this measure for all collection types to include patients aged 60 years of age and older, which expands the intended patient population and allows clinicians to screen a broader patient population for elder maltreatment. The American College of Obstetricians and Gynecologists (ACOG) published a Committee Opinion in 2021 stating that ACOG “supports screening of patients older than 60 years to help identify victims of abuse and provide them with appropriate medical and psychosocial care and referrals (https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2021/03/elder-abuse-and-womens-health).”

D.26 Functional Outcome Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	182
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
Substantive Change:	<p>The measure description is revised to read: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.</p> <p>The measure numerator is revised to read: Visits where patient has a documented current functional outcome assessment using a standardized tool AND a documented care plan based on the identified functional outcome deficiencies within two days of the assessment</p> <p>Updated numerator definition: Revised: Patient unable to participate in administration of the functional outcome assessment(s) within the 'Not Eligible (Denominator Exception)' definition.</p> <p>Updated numerator instructions: Added: The follow-up plan must still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician's practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p> <p>Updated numerator options: Revised:</p> <p>Performance Met: Functional outcome assessment documented as positive using a standardized tool AND a care plan based on identified deficiencies is documented within two days of the functional outcome assessment.</p> <p>Performance Met: Functional outcome assessment using a standardized tool is documented within the previous 30 days and a care plan, based on identified deficiencies is documented within two days of the functional outcome assessment.</p> <p>Performance Not Met: Documentation of a positive functional outcome assessment using a standardized tool; care plan not documented within two days of assessment, reason not given.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure to allow flexibility in the clinical workflow by allowing two days following the functional outcome assessment for the clinician to document a care plan based on the identified deficiencies for their patients. This update was recommended by the American Physical Therapy Association (APTA). This would ensure that those clinicians who meet the intent of the measure, which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>Additionally, we propose to update the definition for 'Not Eligible (Denominator Exception)' to generalize the process of administering the assessment to the patient. Rather than only allowing an exception for patients who are unable to complete the assessment, the measure would allow the denominator exception to be utilized in clinical situations where the patient is not able to participate in the administration of the assessment. We also propose to add language to the numerator instructions to clarify the additional two-day documentation period and determine if the clinician meets the intent of the measure.</p>

D.27 Stroke and Stroke Rehabilitation: Thrombolytic Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	187
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within two hours of time last known well and for whom IV alteplase was initiated within three hours of time last known well.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic was initiated within 4.5 hours of time last known well.</p> <p>Updated instructions: Revised: This measure is to be submitted for each episode of acute ischemic stroke for patients who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic was initiated within 4.5 hours of time last known well.</p> <p>The measure denominator is revised to read: All patients aged 18 years and older with a diagnosis of acute ischemic stroke whose time of arrival is within 3.5 hours (≤ 210 minutes) of time last known well.</p> <p>Updated denominator criteria: Revised: Time last known well to hospital arrival less than or equal to 3.5 hours (≤ 210 minutes).</p> <p>The measure numerator is revised to read: Patients for whom IV thrombolytic therapy was initiated at the hospital within 4.5 hours (≤ 270 minutes) of time last known well.</p> <p>Updated numerator note: Added: Updated clinical practice guidelines recommend this extended timeframe for thrombolytics, however, earlier intervention is preferred and leads to better outcomes. Patients who are eligible for thrombolytics should receive treatment as quickly as possible after arrival at the hospital.</p> <p>The measure numerator options are revised to read: Performance Met: IV thrombolytic therapy initiated within 4.5 hours (≤ 270 minutes) of time last known well. Denominator Exception: IV thrombolytic therapy not initiated within 4.5 hours (≤ 270 minutes) of time last known well for reasons documented by clinician (e.g., patient enrolled in clinical trial for stroke, patient admitted for elective carotid intervention, patient received tenecteplase (TNK)). Performance Not Met: IV thrombolytic therapy not initiated within 4.5 hours (≤ 270 minutes) of time last known well, reason not given.</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose revisions to this measure to align with the 2021 Guideline for the Prevention of Stroke in Patients With Stroke and Transient Ischemic Attack: A Guideline From the American Heart Association/American Stroke Association. ¹ We propose to update the measure to reflect the updated guidelines for appropriate treatment with IV thrombolytic for the clinical situation when the patient presents with acute ischemic stroke. These updates would be consistently applied to multiple components throughout the measure and a numerator note would be added to address timeliness of intervention.

N., Pollak, P. M., Santangeli, P., Sharrief, A. Z., Smith, S. C., Jr, Turan, T. N., & Williams, L. S. (2021). 2021 Guideline for the Prevention of Stroke in Patients with Stroke and Transient Ischemic Attack: A Guideline from the American Heart Association/American Stroke Association. *Stroke*, 52(7), e364–e467. <https://doi.org/10.1161/STR.0000000000000375>.

D.28 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
NQF # / eCQM NQF #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added: coding for traction retinal detachment to Table 1 “Retinal Detachment with Retinal Defect” coding. Updated value set/coding: For the eCQM Specifications collection type: Added: coding for heteronymous bilateral field defects to valueset “Visual Field Defects” (2.16.840.1.113883.3.526.3.1446) and tractional retina detachment to valueset “Retinal Detachment with Retinal Defect” (2.16.840.1.113883.3.526.3.1478).
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the denominator exclusion of this measure to include coding for traction retinal detachment. Additionally, we propose to update the value set for the eCQM Specifications collection type to encompass this update as well as heteronymous bilateral field defects. This would allow for better alignment with the intent of the denominator exclusions which remove eye conditions that may hinder the best corrected visual acuity of 20/40 or better within the 90 days following cataract surgery allowing a homogenous patient population to support equitable and clinically realistic outcomes. The expansion of the coding ensures the appropriate patient population is included within the denominator eligible patient population. We believe these significant ocular conditions, which can negatively impact the visual outcome of surgery, can also potentially impact a clinician’s performance on this measure.

D.29 Functional Status Change for Patients with Knee Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	Updated denominator criteria: Revised: coding for Skilled Nursing Facilities. Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding. Added: LEPF PROM score: The LEPF PROM score may be achieved using one of three forms: the FOTO LEPF PROM computer adaptive test, the FOTO LEPF PROM short form, or an alternative PROM score that is cross-walked to the FOTO LEPF PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods. For more information about the LEPF PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures. Updated numerator definition: Revised: Functional Status (FS) Score – This is the LEPF PROM score as described under Instructions Definitions.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definitions to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition ‘Patient’s Functional Status (FS) Score’ to ‘Functional Status (FS) Score’ along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.30 Functional Status Change for Patients with Hip Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	218
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p>Added:</p> <p>LEPF PROM score: The LEPF PROM score may be achieved using one of three forms: the FOTO LEPF PROM computer adaptive test, the FOTO LEPF PROM short form, or an alternative PROM score that is cross-walked to the FOTO LEPF PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the LEPF PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the LEPF PROM score as described under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.31 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle or lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p>Added:</p> <p>LEPF PROM score: The LEPF PROM score may be achieved using one of three forms: the FOTO LEPF PROM computer adaptive test, the FOTO LEPF PROM short form, or an alternative PROM score that is cross-walked to the LEPF PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the LEPF PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the LEPF PROM score as described in the introduction under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.32 Functional Status Change for Patients with Low Back Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	220
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the FOTO Low Back FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p>Added:</p> <p>The Low Back FS PROM score: The Low Back FS PROM score may be achieved using one of three forms: the FOTO Low Back FS PROM computer adaptive test, the FOTO Low Back FS PROM short form, or an alternative PROM score that is cross-walked to the Low Back FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets acceptable scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the Low Back FS PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the Low Back FS PROM score as described under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.33 Functional Status Change for Patients with Shoulder Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	221
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the FOTO Shoulder FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p>Added:</p> <p>The Shoulder FS PROM: The Shoulder FS PROM score may be achieved using one of three forms: the FOTO Shoulder FS PROM computer adaptive test, the FOTO Shoulder FS PROM short form, or an alternative PROM score that is cross-walked to the FOTO Shoulder FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the Shoulder FS PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the Shoulder PROM score as described under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definition to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.34 Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	222
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with elbow, wrist, or hand impairments. The change in functional status (FS) is assessed using the FOTO Elbow/Wrist/Hand FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding.</p> <p>Added:</p> <p>The Elbow/Wrist/Hand FS PROM score: The Elbow/Wrist/Hand FS PROM score may be achieved using one of three forms: the FOTO Elbow/Wrist/Hand FS PROM computer adaptive test, the FOTO Elbow/Wrist/Hand FS PROM short form, or an alternative PROM score that is cross-walked to the FOTO Elbow/Wrist/Hand FS PROM, using a cross-walk form developed by the measure steward. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the Elbow/Wrist/Hand FS PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the Elbow/Wrist/Hand FS PROM score as described under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure definitions to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure. We propose to expand the denominator criteria of this measure to include encounters within a skilled nursing facility at the request of physiatrists who care for patients in the nursing home setting. We propose to revise the definition to provide clarity regarding the addition of the skilled nursing facility to the denominator criteria. Additionally, we propose to update the numerator definition 'Patient's Functional Status (FS) Score' to 'Functional Status (FS) Score' along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.

D.35 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / eCQM NQF #:	0028 / 0028e
Quality#:	226
CMS eCQM ID:	CMS138v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user.</p> <p>Three rates are reported:</p> <ol style="list-style-type: none"> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Three rates are reported:</p> <ol style="list-style-type: none"> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period Percentage of patients aged 18 years and older who were identified as a tobacco user during the measurement period who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user <p>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding.</p> <p>This measure will be calculated with 3 performance rates:</p> <ol style="list-style-type: none"> 1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period 2) Percentage of patients aged 18 years and older who were identified as a tobacco user during the measurement period who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period 3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user <p>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: THERE ARE THREE SUBMISSION CRITERIA FOR THIS MEASURE:</p> <ol style="list-style-type: none"> 1) All patients who were screened for tobacco use <p>AND</p> <ol style="list-style-type: none"> 2) All patients who were identified as a tobacco user during the measurement period and who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period <p>AND</p> <ol style="list-style-type: none"> 3) All patients who were screened for tobacco use and, if identified as a tobacco user received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period, or identified as a tobacco non-user <p>This measure contains three submission criteria which aim to identify patients who were screened for tobacco use (submission criteria 1), patients who were identified as tobacco users during the measurement period and who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period (submission criteria 2), and a comprehensive look at the overall performance on tobacco screening and cessation intervention (submission criteria 3).</p> <p>Updated denominator: For the eCQM Specifications collection type: Revised: Population 2: Equals Initial Population who were screened for tobacco use during the measurement period and identified as a tobacco user.</p> <p>Updated denominator criteria: For all collection types: Added: coding for nutrition and dietitian.</p> <p>Updated denominator exclusion: For all collection types: Added: denominator exclusion for all submission criteria for patients receiving hospice any time during the measurement period.</p> <p>The measure definition is revised to read: For all collection types: Tobacco Use – use of any tobacco product The 2021 USPSTF recommendation references the US Food and Drug Administration definition of tobacco which includes “any product made or derived from tobacco intended for human consumption (except products that meet the definition of drugs).</p>

Category	Description
	<p>including, but not limited to, cigarettes, cigars (including cigarillos and little cigars), dissolvables, hookah tobacco, nicotine gels, pipe tobacco, roll-your-own tobacco, smokeless tobacco products (including dip, snuff, snus, and chewing tobacco), vapes, electronic cigarettes (e-cigarettes), hookah pens, and other electronic nicotine delivery systems.”</p> <p>The 2021 USPSTF recommendation describes smoking as generally referring to “the inhaling and exhaling of smoke produced by combustible tobacco products such as cigarettes, cigars, and pipes.”</p> <p>The 2021 USPSTF recommendation describes vaping as “the inhaling and exhaling of aerosols produced by e-cigarettes.” In addition, it states, “vaping products (i.e., e-cigarettes) usually contain nicotine, which is the addictive ingredient in tobacco. Substances other than tobacco can also be used to smoke or vape. While the 2015 USPSTF recommendation statement used the term ‘electronic nicotine delivery systems’ or ‘ENDS,’ the USPSTF recognizes that the field has shifted to using the term ‘e-cigarettes’ (or ‘e-cigs’) and uses the term e-cigarettes in the current recommendation statement. E-Cigarettes can come in many shapes and sizes, but generally they heat a liquid that contains nicotine (the addictive drug in tobacco) to produce an aerosol (or ‘vapor’) that is inhaled (‘vaped’) by users.”</p> <p>Tobacco Cessation Intervention – Includes brief counseling (3 minutes or less), and/or pharmacotherapy –</p> <p>For the eCQM Specifications collection type:</p> <p>Note: Concepts aligned with brief counseling (e.g., minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the value set for the numerator. Other concepts such as written self-help materials (e.g., brochures, pamphlets) and complementary/alternative therapies are not included in the value set and do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</p> <p>Note: Concepts aligned with brief counseling (for example, minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the numerator. Other concepts such as written self-help materials (e.g., brochures, pamphlets) and complementary/alternative therapies do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p>Updated numerator: For the eCQM Specifications collection type: Revised: Population 2: Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period. Population 3: Patients who were screened for tobacco use at least once during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Updated numerator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: For Submission Criteria 2: Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period. For Submission Criteria 3: Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: For Submission Criteria 2 and Submission Criteria 3: language to reflect the tobacco cessation intervention needing to be completed during the measure period or in the six months prior.</p> <p>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: For Submission Criteria 3: language to reflect the tobacco cessation intervention needing to be completed during the measure period or in the six months prior.</p> <p>Updated denominator exception: For all collection types: Removed: denominator exceptions for all submission criteria.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: Encounter Inpatient value set.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure for all collection types to better define and align the lookback period for tobacco cessation intervention and to allow a lookback of 6-months prior to the current measurement period.</p> <p>We propose to update the denominator statement for Population 2 for all collection types to clarify the timing of the screening for tobacco cessation intervention and to align with the logic timing in the eCQM Specifications collection type. We are proposing to update the denominator criteria to include encounter codes for MIPS eligible registered dietitians and nutritionists to allow them to screen for tobacco use as part of a comprehensive patient assessment. Additionally, we propose to add denominator exclusions for all collection types for patients receiving hospice care during the measurement period and remove all denominator exceptions. This would lessen clinician burden as those patients for whom it would not be appropriate to complete the quality action would be removed for the denominator eligible patient population. We also propose to update the measure definition to align with 2021 USPSTF recommendations.</p> <p>We propose to update the value set/coding for the eCQM Specifications collection type to include inpatient encounter codes as this patient population is appropriate for the denominator and should be assessed for the clinical quality action. Smoking increases the risk for many adverse health effects and though many patients that use tobacco abstain during hospitalization, they relapse upon discharge and as health crises can be a powerful motivator, this represents an important setting for completing tobacco cessation intervention.¹</p>

Helping Hospitalized Smokers: A Factorial RCT of Nicotine Patches and Counseling. *American journal of preventive medicine*, 51(4), 578–586. <https://doi.org/10.1016/j.amepre.2016.06.021>.

D.36 Controlling High Blood Pressure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Revised: Do not include BP readings taken during an acute inpatient stay or an ED visit.</p> <p>Added: Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 18-85 years of age by the end of the measurement period who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients 66 and older by the end of the measurement period who are living long term in a nursing home any time on or before the end of the measurement period. 2. Exclude patients 66-80 by the end of the measurement period with an indication of frailty for any part of the measurement period who also meet any of the following advanced illness criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior 3. Exclude patients 81 and older by the end of the measurement period with an indication of frailty for any part of the measurement period.</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>Updated instructions and numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to update the measure guidance for the eCQM Specifications collection type to streamline and clarify language regarding blood pressure readings and which readings are appropriate to utilize for the purposes of assessing the quality action for this measure. Additionally, this revision would better align with the logic and intent of the measure which is to control high blood pressure in an effort to reduce adverse health effects such as cardiovascular disease and mortality.</p> <p>We propose to update multiple components of the measure, for the eCQM Specifications and MIPS CQMs Specifications collection types, so that the patient age is determined as of the end of the measurement period and would align with Healthcare Effectiveness Data and Information Set (HEDIS) measure requirements and creates consistency in implementation.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p> <p>We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to update the numerator note for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types to provide additional guidance around multiple blood pressure readings taken on the same day.</p> <p>We propose to add language to all collection types to ensure that only distinct numeric results are being utilized for the purpose of this measure as ranges and thresholds do not meet the measure's intent.</p>

D.37 Use of High-Risk Medications in Older Adults

Category	Description
NQF # / eCQM NQF #:	0022 / N/A
Quality#:	238
CMS eCQM ID:	CMS156v11
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Revised: Calculate average daily dose for each prescription event. To calculate average daily dose, multiply the quantity of pills prescribed by the dose of each pill and divide by the days supply. For example, a prescription for the 30-days supply of digoxin containing 15 pills, 0.25 mg each pill, has an average daily dose of 0.125 mg. To calculate average daily dose for elixirs and concentrates, multiply the volume prescribed by daily dose and divide by the days supply. Do not round when calculating average daily dose.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 65 years and older at the end of the measurement period who had a visit during the measurement period.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Added: For Submission Criteria 1: coding for hospital/hospital observation discharge, outpatient observation, inpatient, and emergency department. For Submission Criteria 2: coding for emergency department.</p> <p>Updated definition: For the MIPS CQMs Specifications collection type: Added: For Submission Criteria 1: • At least two high-risk medications from the same drug class in Table 3 on different dates of service, each exceeding average daily dose criteria. /And Calculate average daily dose for each prescription event. To calculate average daily dose, multiply the quantity of pills prescribed by the dose of each pill and divide by the days supply. For example, a prescription for the 30-days supply of digoxin containing 15 pills, 0.25 mg each pill, has an average daily dose of 0.125 mg. To calculate average daily dose for elixirs and concentrates, multiply the volume prescribed by daily dose and divide by the days supply. Do not round when calculating average daily dose. Added: For the definition of "Cumulative Medication Duration": Table 3: High-Risk Medications With Average Daily Dose Criteria.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added: A prescription for medications classified as high risk exceeding average daily dose criteria listed in Table 3.</p> <p>Updated definition: For the eCQM Specifications collection type: Revised: Index Prescription Start Date (IPSD) – The start date of the earliest prescription ordered for a high-risk medication during the measurement period. A high-risk medication is identified by any one of the following: a. A prescription for medications classified as high risk at any dose and for any duration. b. A prescription for medications classified as high risk at any dose with greater than a 90 day supply. c. A prescription for medications classified as high risk exceeding average daily dose criteria. An order is identified by either a prescription order or a prescription refill.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Rate 1: Patients with at least two orders of high-risk medications from the same drug class on different days. a. At least two orders of high-risk medications from the same drug class. b. At least two orders of high-risk medications from the same drug class with summed days supply greater than 90 days. c. At least two orders of high-risk medications from the same drug class each exceeding average daily dose criteria. Rate 2: Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines) on different days. Total rate (the sum of the two previous numerators, deduplicated).</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Revised: to group drugs by class rather than medication. Added: belladonna alkaloids, chlorthalidone, clonidine, glimepiride. Removed: naloxone/pentazocine, pentazocine, ticlopidine hydrochloride.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the initial patient population for the eCQM Specifications collection type to change the age anchor to the end of the measurement period so that it would align with HEDIS measure requirements and create consistency for implementation across programs.</p> <p>We propose to update the definition, guidance, and numerator language for the eCQM Specifications collection type to incorporate average daily dose criteria for determining the numerator submission criteria 1 option for submission. Additionally, we propose to revise the numerator language and correct the logic to account for at least two orders from same drug class rather than two orders of the same medication to support patient safety when prescribing high risk medications.</p>

Category	Description
	<p>We propose to update the definitions and numerator instructions for the MIPS CQM Specifications collection type to incorporate average daily dose criteria for determining the numerator submission criteria 1 option for submission and clarify calculations.</p> <p>We propose to update the definition for the eCQM Specifications collection type to add definition for 'order' to align with updates to the logic and to look for multiple orders OR an order with a refill for determining numerator submission criteria 2 option for submission.</p> <p>We propose to update logic and logic definitions related to hospice care for the eCQM Specifications collection type to add flexibility to how data may be captured or stored to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.38 Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	239
CMS eCQM ID:	CMS155v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported.</p> <ul style="list-style-type: none"> • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.
Substantive Change:	<p>Updated stratification: Revised: Stratum 1 – Patients age 3-11 years at the end of the measurement period Stratum 2 – Patients age 12-17 years at the end of the measurement period</p> <p>The measure initial patient population is revised to read: Patients 3-17 years of age by the end of the measurement period, with at least one outpatient visit with a primary care physician (PCP) or an obstetrician/gynecologist (OB/GYN) during the measurement period.</p> <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the stratification and initial patient population for the eCQM Specifications collection type to change the age anchor from the start of the measurement period to the end of the measurement period so that it aligns with HEDIS measure requirements and creates consistency for implementation across programs. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.39 Childhood Immunization Status

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	240
CMS eCQM ID:	CMS117v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DtaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
Substantive Change:	<p>Updated guidance: Removed: Numerator criteria includes evidence of receipt of the recommended vaccine or the following:</p> <ul style="list-style-type: none"> -- DtaP: Adverse reaction to the DtaP or Td vaccine; or encephalopathy due to DtaP or Td vaccination -- Polio (IPV) vaccine: Adverse reaction to the IPV vaccine, streptomycin, polymyxin B, or neomycin -- MMR Vaccination: Immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; history of measles, mumps, or rubella; or a seropositive result for the antigens -- Hib: Adverse reaction to the Hib vaccine -- Hepatitis B: Seropositive result for the antigen, adverse reaction to the hepatitis B vaccine, adverse reaction to common baker's yeast, or a history of hepatitis B illness -- Chicken pox (varicella zoster): Seropositive result for the antigen; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; or a history of varicella zoster -- Pneumococcal: Adverse reaction to the pneumococcal vaccine -- Hepatitis A: Seropositive result for the antigen, adverse reaction to the hepatitis A vaccine, or a history of hepatitis A illness -- Rotavirus: Adverse reaction to the rotavirus vaccine, severe combined immunodeficiency, or a history of intussusception -- Influenza: Adverse reaction to the influenza vaccine; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; or adverse reaction to neomycin <p>Updated denominator exclusion: Added: Exclude children with any of the following on or before the child's second birthday:</p> <ul style="list-style-type: none"> • Severe combined immunodeficiency • Immunodeficiency • HIV • Lymphoreticular cancer, multiple myeloma or leukemia • Intussusception <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>The measure numerator is revised to read: Diphtheria, tetanus, and pertussis (DtaP) vaccination</p> <p>Children with any of the following on or before the child's second birthday meet criteria:</p> <ul style="list-style-type: none"> • At least four DtaP vaccinations, with different dates of service. Do not count a vaccination administered prior to 42 days after birth. • Anaphylaxis due to the diphtheria, tetanus or pertussis vaccine. • Encephalitis due to the diphtheria, tetanus or pertussis vaccine. <p>Poliovirus vaccination (IPV)</p> <p>At least three IPV vaccinations, with different dates of service on or before the child's second birthday. Do not count a vaccination administered prior to 42 days after birth.</p> <p>Measles, mumps, and rubella vaccination (MMR)</p> <p>Children with either of the following meet criteria:</p> <ul style="list-style-type: none"> • At least one MMR vaccination on or between the child's first and second birthdays. • All of the following anytime on or before the child's second birthday (on the same or different date of service): <ul style="list-style-type: none"> o History of measles o History of mumps o History of rubella <p>Haemophilus influenzae type b vaccination (HiB)</p> <p>Children with either of the following meet criteria on or before the child's second birthday:</p> <ul style="list-style-type: none"> • At least three HiB vaccinations, with different dates of service. For example, if the member's date of birth is December 1, the newborn hepatitis B vaccination must be on or between December 1 and December 8. • Anaphylaxis due to the hepatitis B vaccine.

Category	Description
	<ul style="list-style-type: none"> • History of hepatitis B illness. <p>Varicella vaccination (VZV)</p> <p>Children with either of the following meet criteria:</p> <ul style="list-style-type: none"> • At least one VZV vaccination, with a date of service on or between the child's first and second birthdays. • History of varicella zoster (e.g., chicken pox) illness on or before the child's second birthday. <p>Pneumococcal Conjugate</p> <p>At least four pneumococcal conjugate vaccinations, with different dates of service on or before the child's second birthday. Do not count a vaccination administered prior to 42 days after birth.</p> <p>Hepatitis A</p> <p>Children with either of the following meet criteria:</p> <ul style="list-style-type: none"> • At least one hepatitis A vaccination, with a date of service on or between the child's first and second birthdays. • History of hepatitis A illness on or before the child's second birthday. <p>Rotavirus</p> <p>Children with any of the following meet criteria:</p> <ul style="list-style-type: none"> • At least two doses of the two-dose rotavirus vaccine on different dates of service on or before the child's second birthday. Do not count a vaccination administered prior to 42 days after birth. • At least three doses of the three-dose rotavirus vaccine on different dates of service on or before the child's second birthday. Do not count a vaccination administered prior to 42 days after birth. • At least one dose of the two-dose rotavirus vaccine and at least two doses of the three-dose rotavirus vaccine, all on different dates of service, on or before the child's second birthday. Do not count a vaccination administered prior to 42 days after birth. • Anaphylaxis due to the rotavirus vaccine on or before the child's second birthday. <p>Influenza</p> <p>At least two influenza vaccinations, with different dates of service on or before the child's second birthday. Do not count a vaccination administered prior to 6 months (180 days) after birth.</p> <ul style="list-style-type: none"> • One of the two vaccinations can be an LAIV vaccination administered on the child's second birthday. Do not count an LAIV vaccination administered before the child's second birthday.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure guidance to remove the numerator criteria related to adverse reactions to vaccines, as these do not align with intent of the measure which is to ensure children receive the CDC-recommended appropriate vaccines by age 2 to prevent disease, which is more cost effective than treatment, and to protect the health of their community. We also propose to update the denominator exclusions by moving the numerator inclusion criteria for children who are immunocompromised to the denominator exclusion, as this patient population is not appropriate for assessment of the quality action. Additionally, we propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment data and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Furthermore, we propose to update the numerator to remove seropositive test results as the CDC does not specifically recommend conducting antibody testing to determine immunity to disease in lieu of vaccination.</p>

D.40 Sleep Apnea: Severity Assessment at Initial Diagnosis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	277
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.</p> <p>The measure numerator is revised to read: Patients who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.</p> <p>Updated numerator definition: Added: Respiratory Event Index (REI) – is a measure of respiratory events per unit of time for a home sleep apnea test.</p> <p>Updated numerator note: Revised: The quality data codes below should be used for assessment of a MIPS eligible clinician's actions within 2 months of the initial evaluation for obstructive sleep apnea.</p> <p>The measure numerator options are revised to read: Performance Met: Apnea hypopnea index (AHI), respiratory disturbance index (RDI) or respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea Denominator Exception: Documentation of reason(s) for not measuring an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) within 2 months of initial evaluation for suspected obstructive sleep apnea (e.g., medical, neurological, or psychiatric disease that prohibits successful completion of a sleep study, patients for whom a sleep study would present a bigger risk than benefit or would pose an undue burden, dementia, patients who decline AHI/RDI/REI measurement, patients who had a financial reason for not completing testing, test was ordered but not completed, patients decline because their insurance (payer) does not cover the expense) Performance Not Met: Apnea hypopnea index (AHI), respiratory disturbance index (RDI), or respiratory event index (REI) not documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea, reason not given</p>
Measure Steward:	American Academy of Sleep Medicine
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure description and numerator options language to harmonize the description with the revised numerator language. We propose to revise the numerator to add a respiratory event index (REI) assessment and a 2-month timeframe within which a sleep study would be performed to determine the severity of suspected obstructive sleep apnea as the REI is appropriate for determining sleep apnea severity and the extended time frame will allow the clinicians flexibility in clinical workflow. We propose to update the numerator definition to include a definition of REI to provide clarity and consistency. We also propose to update the numerator note to provide further guidance on meeting numerator compliance.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.41 Rehabilitative Therapy Referral for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	293
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.
Substantive Change:	Updated denominator criteria: Removed: coding for Physical and Occupational Therapy and Speech Language Pathology.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove coding for Physical and Occupational Therapy and Speech Language Pathology from the denominator eligible encounters. While these clinicians may treat patients with Parkinson's disease, the required quality actions cannot be feasibly implemented for these clinician types as it requires a referral.

D.42 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	305
CMS eCQM ID:	CMS137v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <p>a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</p>
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 13 years of age and older with a new substance use disorder (SUD) episode who received the following (Two rates are reported):</p> <p>a. Percentage of patients who initiated treatment, including either an intervention or medication for the treatment of SUD, within 14 days of the new SUD episode.</p> <p>b. Percentage of patients who engaged in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.</p> <p>Updated guidance: Removed: The new episode of alcohol and other drug dependence should be the first episode of the measurement period that is not preceded in the 60 days prior by another episode of alcohol or other drug dependence.</p> <p>The measure stratification is revised to read: Report a total score, and each of the following strata:</p> <p>Stratum 1: Patients age 13-17 at the start of the measurement period</p> <p>Stratum 2: Patients age 18-64 at the start of the measurement period</p> <p>Stratum 3: Patients age 65 and older at the start of the measurement period</p> <p>The measure initial patient population is revised to read: Patients age 13 years of age and older as of the start of the measurement period who were diagnosed with a new SUD episode during a visit between January 1 and November 14 of the measurement period.</p> <p>The denominator exclusions are revised to read: Removed: Exclude patients with a negative diagnosis history, defined as an encounter or medication treatment for a diagnosis of alcohol, opioid or other drug abuse or dependence in the 60 days prior to the first episode of alcohol or drug dependence.</p> <p>The measure definition is revised to read: The new SUD episode is the first encounter during the Intake Period with a diagnosis of SUD with no encounter or medication treatment for a diagnosis of SUD in the 60 days prior.</p> <p>The initiation of treatment is the first SUD treatment within 14 days of a new SUD episode.</p> <p>Treatment includes inpatient SUD admissions, outpatient visits, intensive outpatient encounters or partial hospitalizations, and medications for the treatment of SUD.</p> <p>The Intake Period: January 1-November 14 of the measurement year. The Intake Period is used to capture new SUD episodes. The November 14 cut-off date ensures that all services can occur before the measurement period ends.</p> <p>Updated logic and logic definitions: Removed: emergency department visits and medically managed withdrawals from the negative lookback rules.</p> <p>Revised: to account for instances when there are multiple qualifying initiation events.</p> <p>Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>The measure numerator is revised to read:</p> <p>Numerator 1: Initiation of treatment includes either an intervention or medication for the treatment of SUD within 14 days of the new SUD episode</p> <p>Numerator 2: Engagement in ongoing SUD treatment within 34 days of initiation includes:</p> <ol style="list-style-type: none"> 1. A long-acting SUD medication on the day after the initiation through 34 days after the initiation of treatment 2. One of the following options on the day after the initiation of treatment through 34 days after the initiation of treatment: a) two engagement visits, b) two engagement medication treatment events, c) one engagement visit and one engagement medication treatment event
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description, initial patient population, numerator, denominator exclusions, and definition to remove any reference to 'substance abuse' with the measure as the terms "abuse and dependence" have been replaced by 'substance use disorder (SUD)' in the Diagnostic and Statistical Manual of Mental Disorders 5 (DSM-5). This would align terminology within the measure to current clinical terminology.</p> <p>We propose to update the measure guidance and definition to clarify what defines an episode of SUD and update the stratification from 2 age groups to 3 age groups.</p> <p>We propose to update the measure logic and logic definitions to remove emergency department visits and medically managed withdrawals from the negative lookback rules to align with the measure intent since the emergency department may not represent the best setting for the initiation of SUD treatment and the measure would not be applicable for patients already receiving SUD therapy. We also propose an additional revision to the measure logic and logic definitions to specify how data should be handled when there are multiple qualifying initiation events to ensure data collection accuracy. Additionally, we propose to update the</p>

Category	Description
	logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.43 Cervical Cancer Screening

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	309
CMS eCQM ID:	CMS124v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years
Substantive Change:	Updated guidance: Removed: Patient self-report for procedures as well as diagnostic studies should be recorded in 'Procedure, Performed' template or 'Diagnostic Study, Performed' template in QRDA-1. The measure initial patient population is revised to read: Women 24-64 years of age by the end of the measurement period with a visit during the measurement period. Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure guidance to remove statements related to QRDA-1 as we publish separate QRDA implementation guides. We also propose to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it would align with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.44 Chlamydia Screening for Women

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	310
CMS eCQM ID:	CMS153v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.
Substantive Change:	The measure stratification is revised to read: Stratum 1: Patients age 16-20 by the end of the measurement period Stratum 2: Patients age 21-24 by the end of the measurement period. The measure initial patient population is revised to read: Women 16 to 24 years of age by the end of the measurement period who are sexually active and who had a visit in the measurement period. Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the measure stratification and initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it would align with HEDIS measure requirements and creates consistency for implementation across programs. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.45 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
Substantive Change:	Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic to ensure there are values captured for both diastolic and systolic blood pressure when evaluating criteria. And to avoid blood pressure values falling into multiple categories. Updated value set/coding: For the eCQM Specifications collection type: Added: encounter class attribute for non-telehealth eligible encounters.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	For the eCQM Specifications collection type we propose to revise the logic for the second hypertensive blood pressure reading (systolic blood pressure (SBP) 130-139 or diastolic blood pressure (DBP) 80-89) to avoid blood pressure values falling into multiple categories and to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.

D.46 Falls: Screening for Future Fall Risk

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality#:	318
CMS eCQM ID:	CMS139v11
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
Substantive Change:	The measure initial patient population is revised to read: Patients aged 65 years and older at the start of the measurement period with a visit during the measurement period. Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored. Updated value set/coding: Added: coding for physical and occupational therapy.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it would align with HEDIS measure requirements and creates consistency for implementation across programs. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Additionally, we propose to add occupational and physical therapy evaluation visits as applicable encounters as these clinicians interact with older adults that may be more susceptible to falls. Occupational therapists are "uniquely qualified to address the multifactorial nature of falls, given their knowledge of factors that influence occupational performance." ¹ There is a strong body of evidence that supports the role of physical therapists in reducing fall risk and fall prevention as outlined within the American Physical Therapy Association (APTA) handout: https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls# .

¹ Peterson, E. W., & Clemson, L. (2008). Understanding the role of occupational therapy in fall prevention for community-dwelling older adults. OT Practice, 13(3), CE1–CE8.
https://www.researchgate.net/publication/286974169_Understanding_the_role_of_occupational_therapy_in_fall_prevention_for_community-dwelling_older_adults.

D.47 Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients

Category	Description
NQF # / eCQM NQF #:	0658 / N/A
Quality#:	320
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 50 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.</p> <p>The measure denominator is revised to read: For all collection types: All patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy.</p> <p>Updated denominator criteria: For all collection types: Revised: Patients aged 45 to 75 on date of encounter.</p>
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description, denominator, and denominator criteria for all collection types to expand the denominator eligible patient population to reflect USPSTF guidance that screening colonoscopies begin at age 45.

D.48 CAHPS for MIPS Clinician/Group Survey

Category	Description
NQF # / eCQM NQF #:	0005 / N/A
Quality#:	321
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	CMS-approved Survey Vendor
Current Measure Description:	<p>The Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey is comprised of 10 Summary Survey Measures (SSMs) and measures patient experience of care within a group practice. The NQF endorsement status and endorsement id (if applicable) for each SSM utilized in this measure are as follows:</p> <ul style="list-style-type: none"> • Getting Timely Care, Appointments, and Information; (Not endorsed by NQF) • How well Providers Communicate; (Not endorsed by NQF) • Patient's Rating of Provider; (NQF endorsed # 0005) • Access to Specialists; (Not endorsed by NQF) • Health Promotion and Education; (Not endorsed by NQF) • Shared Decision-Making; (Not endorsed by NQF) • Health Status and Functional Status; (Not endorsed by NQF) • Courteous and Helpful Office Staff; (NQF endorsed # 0005) • Care Coordination; (Not endorsed by NQF) • Stewardship of Patient Resources. (Not endorsed by NQF)
Substantive Change:	<p>Updated case-mix adjustor: Removed: Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey item specific to the case-mix adjustor for "Asian language survey completion".</p> <p>Added: language other than English spoken at home.</p>
Measure Steward:	Agency for Healthcare Research & Quality
High Priority Measure:	Yes
Measure Type:	Patient Engagement/Experience
Rationale:	We propose to update the case-mix adjustor as only a small percentage of patients who report speaking a language other than English at home actually complete the survey in that language. By capturing the language that is actually spoken within the patient's home, we believe this will more accurately capture their language preference. For more information please refer to section IV.A.10.c.(1)(b)(ii)(A) of this proposed rule.

D.49 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
NQF # / eCQM NQF #:	1525 / N/A
Quality#:	326
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	Updated denominator exception: Revised: Documentation of medical reason(s) for not prescribing an FDA-approved anticoagulant (e.g., present or planned atrial appendage occlusion or ligation).
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the denominator exception by revising the language to account for the removal of patients that do not get prescribed an FDA-approved anticoagulant based on medical reason(s) from the performance rate as prescribing medication may not be appropriate in the instance a patient has or may undergo an atrial appendage occlusion or ligation. This procedure would eliminate the patient's need to take oral anticoagulation (OAC) therapy as left atrial appendage occlusion (LAAO) has shown similar efficacy to OAC on stroke rate (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7189129/#).

D.50 Follow-Up Care for Children Prescribed ADHD Medication (ADD)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	366
CMS eCQM ID:	CMS136v12
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported.</p> <p>a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase.</p> <p>b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</p>
Substantive Change:	<p>Updated definition: Revised: Index Prescription Start Date (IPSD): The earliest prescription dispensing date for an ADHD medication where the date is in the Intake Period and an ADHD medication was not dispensed during the 120 days prior. Continuation and Maintenance Phase: The 300 days following the IPSD.</p> <p>The measure initial patient population is revised to read: Initial Population 1: Children 6-12 years of age as of the Intake Period who were prescribed an ADHD medication during the Intake Period and who had a visit during the measurement period. Children are removed if they were actively on ADHD medication in the 120 days prior to the IPSD, or had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Initiation Phase. Initial Population 2: Children 6-12 years of age as of the Intake Period who were prescribed an ADHD medication during the Intake Period and remained on the medication for at least 210 days during the 301-day period, beginning on the IPSD through 300 days after the IPSD, and who had a visit during the measurement period. Children are removed if they were actively on ADHD medication in the 120 days prior to the IPSD, or had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Continuation and Maintenance Phase.</p> <p>The measure denominator exclusion is revised to read: Exclude patients diagnosed with narcolepsy at any point in their history or during the measurement period. Exclude patients who are in hospice care for any part of the measurement period.</p> <p>The measure numerator is revised to read: Numerator 1: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase. Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits during the 31-300 days after the IPSD.</p> <p>Updated logic and logic definitions: Revised: For Numerator 2: logic to allow for only one of the two qualifying follow up visits to be an online assessment visit. Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure to extend the intake period to 12-months to allow for the assessment to follow-up for patients newly prescribed ADHD medications to occur at any time during the year. We propose to align the definitions with the 12-month intake period as well as adding clarity to the definitions. We propose to revise the denominator exclusions, repositioning criteria listed within the denominator exclusion to the initial patient population to streamline measure logic. Additionally, we propose to revise the initial patient population to align with definitions and to revise the anchor for age calculation to be based off of the intake period, as this is when patients can start taking ADHD medication. We propose to revise the logic and logic definitions for numerator two to ensure that only one of the two qualifying follow up visits be an online assessment for numerator compliance. We believe this revision would align with current clinical care which may not occur as an in-office visit. We propose to update logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.</p>

D.51 Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality#:	370
CMS eCQM ID:	CMS159v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	<p>The measure denominator exclusion is revised to read: For the eCQM Specifications collection type: 1: Patients who died any time prior to the end of the measure assessment period. 2: Patients who received hospice or palliative care services between the start of the denominator period and the end of the measurement assessment period. 3: Patients who were permanent nursing home residents between the start of the denominator period and the end of the measurement assessment period. 4: Patients with a diagnosis of bipolar disorder any time prior to the end of the measure assessment period. 5: Patients with a diagnosis of personality disorder emotionally labile any time prior to the end of the measure assessment period. 6: Patients with a diagnosis of schizophrenia or psychotic disorder any time prior to the end of the measure assessment period. 7: Patients with a diagnosis of pervasive developmental disorder any time prior to the end of the measure assessment period.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Added: coding for preventive medicine encounters.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Adolescent patients 12 to 17 years of age and adult patients 18 years of age and older who achieved remission at 12 months as demonstrated by the most recent 12 month (+/- 60 days) PHQ-9 or PHQ-9M score of less than five.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: coding to "Contact or Office Visit" value set for preventive encounters.</p>
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the denominator exclusion statements for the eCQM Specifications collection type by adding relevant interval periods to clarify timing associated with each denominator exclusion in the logic. We also propose to revise the numerator statement to provide clarity around the measure's intent to evaluate the most recent PHQ-9 or PHQ-9M assessment and to align with measure logic, which better expressed our intent. The intent of the measure is to facilitate improved response and remission scores through appropriate and effective treatment for patients diagnosed with depression. Additionally, we propose to update the value set/coding for the denominator criteria for all collection types to include preventive medicine encounters to engage patients and assess remission of depression.

D.52 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v11
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Revised: Only the first referral made between January 1 – October 31 of the measurement period will be considered for this measure to allow adequate time for the referring clinician to collect the consult report by the end of the measurement period.</p> <p>Revised: The consultant report that will successfully close the referral loop should be related to the first referral for a patient during the measurement period. If there are multiple consultant reports received by the referring clinician which pertain to a particular referral, use the first consultant report to satisfy the measure. Eligible clinicians reporting on this measure should note that all data for the reporting year is to be submitted by the deadline established by CMS. Therefore, eligible clinicians who refer patients towards the end of the reporting period (i.e., October), should request that clinicians to whom they referred their patients share their consult reports as soon as possible in order for those patients to be counted in the measure numerator during the measurement period. When clinicians to whom patients are referred communicate the consult report as soon as possible with the referring clinician, it ensures that the communication loop is closed in a timely manner and that the data are included in the submission to CMS.</p> <p>The measure instructions are revised to read: For the MIPS CQMs Specifications collection type: This measure is to be submitted a minimum of once per performance period for the first referral for all patients during the measurement period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure for the patients for whom a referral was made during the measurement period based on the services provided and the measure-specific denominator coding. The clinician who refers the patient to another clinician is the clinician who should be held accountable for the performance of this measure. All MIPS eligible clinicians reporting on this measure should note that all data for the reporting year is to be submitted by the deadline established by CMS, however, only first referrals made between January 1 – October 31 (the measurement period) will count towards the denominator to allow adequate time for the referring clinician to collect the consult report by the end of the performance period. When clinicians to whom patients are referred communicate the consult report as soon as possible with the referring clinicians, it ensures that the communication loop is closed in a timely manner and that the data is included in the submission to CMS.</p> <p>Updated initial patient population: For the eCQM Specifications collection type: Revised: Number of patients, regardless of age, who had an encounter during the measurement period and the first referral occurred by one clinician to another clinician on or before October 31.</p> <p>The measure denominator is revised to read: For the MIPS CQMs Specifications collection type: Number of patients, regardless of age, who had an encounter during the performance period and were referred by one clinician to another clinician on or before October 31.</p> <p>The measure numerator is revised to read: For all collection types: Number of patients with a referral on or before October 31, for which the referring clinician received a report from the clinician to whom the patient was referred.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise multiple components of the measure, across all collection types, to allow for a 2-month period to close the referral loop in alignment with interested parties' feedback and published literature. This revision would allow adequate time for the referring clinician to collect the consult report prior to the end of the performance period. Additionally, we propose to shorten the timeframe to determine denominator eligibility to account for the extension in timeframe for numerator compliance. We propose to add language to multiple components of the measure for all collection types to clarify that only the first referral should be utilized for denominator eligibility.

D.53 Functional Status Assessment for Total Hip Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	376
CMS eCQM ID:	CMS56v11
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270 – 365 days after the surgery.</p> <p>Updated denominator exclusion: Revised:</p> <ol style="list-style-type: none"> 1. Exclude patients with two or more fractures indicating trauma in the 24 hours before or at the start of the total hip arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period. <p>Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description to clarify the logic associated with the age requirement, as described above in the revised measure description. We propose to revise the denominator exclusion so the timing of the lower body fracture in relation to the THA is clearly reflected. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.54 Functional Status Assessments for Heart Failure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	377
CMS eCQM ID:	CMS90v12
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older with heart failure who completed initial and follow-up patient-reported functional status assessments.
Substantive Change:	Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update logic and logic definitions related to hospice care to add flexibility to how data may be captured or stored to allow for different workflows and systems and more closely align with exclusion criteria, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.55 Children Who Have Dental Decay or Cavities

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period.
Substantive Change:	<p>The measure description is revised to read: Percentage of children, 6 months – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.</p> <p>The measure initial patient population is revised to read: Children, 6 months – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p>Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the measure description and initial patient population to add context and clarify that the measure is to be reported by dentists. We propose to revise the age criteria in the initial patient population logic to clarify the measure's intent to include patients that are 20 years of age at the start of the measurement period, to ensure the appropriate patient population is being assessed for tooth decay or cavities. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population.

D.56 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	379
CMS eCQM ID:	CMS74v12
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months – 20 years of age, who received a fluoride varnish application during the measurement period.
Substantive Change:	<p>The measure description is revised to read: Percentage of children, 6 months – 20 years of age, who received a fluoride varnish application during the measurement period as determined by a dentist</p> <p>Updated guidance: Added: Telehealth encounters are not eligible for this measure because the measure does not contain telehealth-eligible codes and requires a clinical action that cannot be conducted via telehealth.</p> <p>The measure stratification is revised to read: Population 1: Patients age 6 months – 5 years at the start of the Measurement Period Population 2: Patients age 6-12 years at the start of the Measurement Period Population 3: Patients age 13-20 years at the start of the Measurement Period</p> <p>The measure initial patient population is revised to read: Children, 6 months – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p>Updated logic and logic definitions: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>Updated value set/coding: Removed: value sets for Preventive Care, Telephone Visits, Online Assessments, and Office Visits.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the measure description and initial patient population to capture patients who are 20 years old at the start of the measurement period, which would align with the measure narrative and intent of being reported by a dentist. We propose to clarify that telehealth encounters are not eligible. We propose to make further revisions to the guidance and initial patient population based on USPSTF recommendations and reimbursement practices that primary care providers are unlikely to perform the clinical action of providing a fluoride varnish, therefore the measure intent, as described in the revised measure description, is for dentists to report this measure. We propose to update the stratification to provide clarity on the age anchor timing and align with measure intent and incorporate the recommended format into the stratification logic. We also propose to update the logic and logic definitions related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion criteria more closely, ensuring those patients not appropriate for the assessment of the quality action are removed from the denominator eligible patient population. Additionally, we propose to remove value set/coding for preventive medicine encounters, telephone visits and online assessments.

D.57 Immunizations for Adolescents

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	394
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.
Substantive Change:	<p>Updated denominator exclusion: Removed:</p> <ol style="list-style-type: none"> 1. Meningococcal, Tdap and/or HPV vaccine contraindicated OR patient allergic to the meningococcal, Tdap, and/or HPV vaccine. 2. Encephalopathy due to Tdap vaccine. <p>Updated numerator options: Added: denominator exception option for each submission criteria to reflect patients who had anaphylaxis due to the vaccine(s) being assessed.</p> <p>Added:</p> <p>For Submission Criteria 2: denominator exception option for patients who had encephalitis due to the tetanus, diphtheria or pertussis vaccine.</p> <p>Updated numerator: Revised: For Submission Criteria 3: Adolescents who completed the HPV vaccine series on or between the patient's 9th and 13th birthdays.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the denominator exclusions for anaphylaxis and encephalopathy as patients associated with these clinical conditions should still be assessed for administration of the meningococcal, Tdap and/or HPV vaccines. We propose to revise the numerator options to add additional parameters for denominator exceptions for those patient populations that would not be appropriate for the clinical quality action of vaccine administration. We also propose to update the numerator for Submission Criteria 3 to require completion of the HPV vaccine series on or between the 9th and 13th birthday to align with the measure's intent as described in the current measure description which is to ultimately improve adolescent immunization rates and prevent disease which is more cost effective than treatment of the disease.

D.58 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	416
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
Substantive Change:	Modified collection type: MIPS CQMs Specifications collection type.
Measure Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type for this measure due to an insufficient volume of data as indicated in the 2022 Quality Benchmarks. The current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/608/2022%20Quality%20Benchmarks.zip . The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.

D.59 Osteoporosis Management in Women Who Had a Fracture

Category	Description
NQF # / eCQM NQF #:	0053 / N/A
Quality#:	418
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the language for the denominator note for the MIPS CQMs Specifications collection type to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.

D.60 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling

Category	Description
NQF # / eCQM NQF #:	2152 / N/A
Quality#:	431
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.
Substantive Change:	<p>Updated denominator exclusion: Added: For all submission criteria:</p> <ol style="list-style-type: none"> 1. Patients with dementia any time during the patient's history through the end of the measurement period. 2. Patients who use hospice services any time during the measurement period. <p>Updated denominator criteria: Added: coding for audiology.</p> <p>Updated numerator definition: Revised: For Submission Criteria 1: AUDIT Screening Instrument (score > 8)</p> <p>Updated numerator options: Removed: For all submission criteria: all denominator exceptions.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure to add denominator exclusions and remove denominator exceptions to reduce burden by removing patients from the denominator eligible patient population as the clinical quality action may not be appropriate. This revision would allow clinicians to identify the measure's intended patient population prior to numerator compliance being determined, which would reduce the denominator patient population applicable for reporting. Additionally, we propose to revise the AUDIT screening instrument score as this would align with the World Health Organization (WHO) guidelines. We also propose to update the denominator criteria to include coding for audiology as this measure is applicable to their scope of care. Studies have shown a positive correlation between hearing loss and alcohol consumption, more markedly with heavy alcohol consumption, making this concept important for audiologists to assess (https://academicworks.cuny.edu/cgi/viewcontent.cgi?article=5338&context=gc_etds).

D.61 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> *All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR *Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR *Patients aged 40-75 years with a diagnosis of diabetes
Substantive Change:	<p>The measure description is revised to read: For the eCQM Specifications collection type: Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • All patients with an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR • Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40-75 years with a diagnosis of diabetes. <p>Updated guidance: For the eCQM Specifications collection type: Revised: Initial Population 1: All patients who have an active diagnosis of clinical ASCVD anytime during the measurement period or ever had an ASCVD procedure. Added: Millimoles per liter (mmol/L) should be converted to milligrams per deciliter (mg/dL) for reporting this measure.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Population 1: All patients who have an active diagnosis of clinical ASCVD or ever had an ASCVD procedure.</p> <p>Updated denominator exclusion: For all collection types: Removed: For all submission criteria: Patients who have a diagnosis of pregnancy at any time during the measurement period.</p> <p>Updated definition: For the MIPS CQMs Specifications collection type: Added: Ezetimibe / Rosuvastatin – Roszet – Fixed Dose Combination* to Table 1 – Statin Medication Therapy List. Revised: Lipoprotein Density Cholesterol (LDL-C) result – A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used.</p> <p>Updated denominator exception: For the eCQM Specifications collection type: Added: Patients with documentation of a medical reason for not being prescribed statin therapy.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure, for the eCQM Specifications collection type, to revise the timing associated with a clinical ASCVD diagnosis to align with the measure intent of only including patients with an active diagnosis. We also propose to remove the pregnancy exclusion for all collection types to align with U.S Food and Drug Administration (FDA) recommendations that pregnancy be removed as a contraindication in prescribing statins (https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol).</p> <p>We propose to revise the eCQM Specifications collection type in order to standardize the method that represents the lab value for low-density lipoprotein cholesterol (LDL-C). We propose to revise the measure to request that Millimoles per liter (mmol/L) should be converted to milligrams per deciliter (mg/dL). We also propose to update the definitions for the MIPS CQMs Specification collection type by adding another medication to the statin medication therapy list for completeness and to clarify which test results should be used for both direct and calculated test results for fasting or non-fasting LDL-C test if they happen to be available on the same day.</p> <p>We propose to update the denominator exceptions for the eCQM Specification collection type by adding a medical reason for not being prescribed statin therapy to align with American College of Cardiology/American Heart Association (ACC/AHA) guidelines (https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention).</p>

D.62 Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	440
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.
Substantive Change:	Updated denominator note: Removed: denominator note. Updated denominator exception: Added: Pathology report for tissue specimens produced from wide local excisions or re-excisions.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the denominator note and add a denominator exception to simplify identifying the denominator eligible patient population and better address cases of excisions and re-excisions that may be included via the pathology CPT codes 88304 & 88305.

D.63 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	441
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) – Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg – AND • Most recent tobacco status is Tobacco Free – AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated – AND • Statin Use Unless Contraindicated
Substantive Change:	The measure numerator note is revised to read: For Component 1: <ul style="list-style-type: none"> • Submit G9789 for blood pressures recorded during Inpatient Stays, Emergency Room Visits, or Urgent Care Visits. In order to meet performance, the most recent blood pressure should be recorded within the performance period. • Home BP results which can be obtained digitally, in writing or verbally, and are able to be stored in the EMR in a discrete field can be included. Accepting these BP results is at the discretion of the provider. Updated denominator exception: Revised: For Component 1: Blood pressure recorded during inpatient stays, Emergency Room Visits, or Urgent Care Visits
Measure Steward:	Wisconsin Collaborative for Healthcare Quality
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to revise the numerator note to capture additional blood pressure results as a response to the impact COVID-19 has had on the availability of in-office blood pressure results. Additionally, we propose to revise the denominator exception with the removal of self-reported blood pressure results. This revision allows clinicians to utilize patient reported blood pressures, documented in the electronic medical record, for the determination of numerator compliance.

D.64 Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better)

Category	Description
NQF # / eCQM NQF #:	0210 / N/A
Quality#:	453
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who died from cancer receiving chemotherapy in the last 14 days of life.
Substantive Change:	<p>The measure title is revised from ‘Percentage of Patients who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better)’ to: Percentage of Patients who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)</p> <p>The measure description is revised to read: Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.</p> <p>The measure numerator is revised to read: Patients who received systemic cancer-directed therapy in the last 14 days of life.</p> <p>Updated numerator note: Added: Definition of systemic cancer-directed therapy includes:</p> <ul style="list-style-type: none"> • All traditional cytotoxic chemotherapy (such as alkylating agents, antimetabolites, plant alkaloids and terpenoids, topoisomerase inhibitors, and antitumor antibiotics); • Immunotherapy; • Biologics (such as Herceptin, Rituxan); and • Targeted agents <p>Do not include supportive care therapies (e.g., growth factors, bisphosphonates, RANK ligand inhibitors, nausea medications or fluids if these are not given in association with “systemic cancer-directed therapy”). Hormonal therapies and steroids are not included in this systemic cancer directed therapy definition.</p> <p>The measure numerator options are revised to read:</p> <p>Performance Met: Patient received systemic cancer-directed therapy in the last 14 days of life.</p> <p>Performance Not Met: Patient did not receive systemic cancer-directed therapy in the last 14 days of life.</p>
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise multiple components of the measure to reflect the measure intent to only include systemic cancer-directed therapy for the purposes of this measure. We propose to clarify the terminology and revise the numerator note to include a definition for systemic cancer-directed therapy to allow for precise implementation of the measure. This ensures that the denominator eligible patient population aligns with the treatments that have been shown to not only negatively impact the patient’s experience at the end of life, but also have not been shown to improve outcomes (https://ascopubs.org/doi/full/10.1200/JCO.2016.70.1474). ASCO advocates that “curtailing unnecessary treatments at the end of life will help drive down end-of-life resource utilization costs” and that “early integration of palliative care/hospice services for patients with late stage cancer in order to avoid aggressive measures at the end-of-life.”</p>

D.65 Back Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	459
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	<p>The measure title is revised from 'Back Pain After Lumbar Discectomy/Laminectomy' to: Back Pain After Lumbar Surgery</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar discectomy/laminectomy or fusion procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale or a numeric pain scale at three months (6 to 20 weeks) postoperatively for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type; lumbar discectomy/laminectomy or fusion procedure.</p> <p>Updated instructions: Revised: to include lumbar fusion and numeric pain scale.</p> <p>Updated denominator: Revised: DENOMINATOR (SUBMISSION CRITERIA 1): Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period. Added: DENOMINATOR (SUBMISSION CRITERIA 2): Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p>Updated denominator criteria: Added: For Submission Criteria 2: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years by October 1 of the Denominator Identification Period Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p>Updated denominator exclusion: Removed: For Submission Criteria 1: Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy. Added: For Submission Criteria 1: Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure. For Submission Criteria 2: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p>Updated denominator definition: Added: For Submission Criteria 2: Denominator Identification Period – The 12-month period in which eligible patients have a procedure. This allows for enough time for a follow-up assessment to occur during the performance period. The “denominator identification period” includes dates of procedure 10/1/2021 to 9/30/2022.</p> <p>Updated numerator: Revised: NUMERATOR (Submission Criteria 1): All eligible patients whose back pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS or Numeric Pain scale at three months (6 to 20 weeks) postoperatively. Added: NUMERATOR (Submission Criteria 2): All eligible patients whose back pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively.</p> <p>Updated numerator definition: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance and allow for telephone screenings. Added: For Submission Criteria 1: Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (e.g., phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable. For Submission Criteria 2: Measure Assessment Period (Performance Period) – The period of time following the procedure date that is in which a postoperative VAS or Numeric pain scale score is obtained. Preoperative Assessment VAS or Numeric Pain – A preoperative VAS or Numeric pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS or Numeric score was obtained, use the VAS or Numeric score that is the most recent and prior to the procedure. Postoperative Assessment VAS or Numeric Pain – A postoperative VAS or Numeric pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS or Numeric score was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.</p>

Category	Description
	<p>Visual Analog Scale (VAS) – A “visual analog scale” is a continuous line indicating the continuum between two states of being. A copy of the tool can be obtained below or at the following link Visual Analog Scale Tool.</p> <p>Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (e.g., phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable.</p> <p>Back Pain Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their back pain as less than or equal to 3.0.</p> <p>Back Pain Target #2 – A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement in back pain is greater than or equal to 5.0 points.</p> <p>Updated numerator note: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance, replace ‘change’ with ‘improvement’, and updated to allow for telephone screenings.</p> <p>Added:</p> <p>For Submission Criteria 2:</p> <p>It is recommended that both a preoperative and postoperative assessment tool be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9946 or G2139 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain or Numeric Scale is not administered postoperatively at one year (9 to 15 months) • Back pain is measured using a different patient reported tool • Postop VAS or Numeric Pain Scale is administered less than nine months or more than 15 months (1 year window) • Postoperative VAS or Numeric value is greater than 3.0 and no valid preop to measure improvement • Postoperative VAS or Numeric value is greater than 3.0 and preoperative VAS or Numeric Pain Scale (to measure improvement) is administered beyond the 3-month timeframe prior to and including the date of procedure (e.g., 6 months before procedure) <p>Updated numerator options: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance.</p> <p>Added:</p> <p>For Submission Criteria 2:</p> <p>Performance Met: Back pain as measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was less than or equal to 3.0 OR Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 5.0 points or greater.</p> <p>Performance Not Met: Back pain was not measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively.</p> <p>Performance Not Met: Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was greater than 3.0 AND Back pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated less than an Improvement of 5.0 points.</p>
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	<p>We propose to revise this measure to expand the eligible procedures to include lumbar fusion, to capture a more complete patient population for lumbar surgery. This would be accomplished by stratifying the measure to create a submission criterion for lumbar discectomy/laminectomy procedures and a submission criterion for lumbar fusion. This revision would be reflected within multiple components within the specification. Additionally, we propose to add the Numeric Pain scale as an option for numerator compliance. Inclusion of this tool would allow flexibility by allowing virtual visits for completion of the assessment.</p> <p>We propose to update the denominator to reflect the stratified procedure types by renaming the original denominator to Denominator (Submission Criteria 1). We are also proposing to revise the Submission Criteria 1 exclusion to remove patients who had additional spine procedures on the same date and add patients who had a lumbar fusion on the same date. Additionally, we propose to add patients who had cancer, acute fracture or infection related to the lumbar spine to the denominator exclusions. These proposed revisions would align with the measure intent and combining of two lumbar procedures as stated in the revised measure description.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.66 Leg Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	461
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	<p>The measure title is revised from 'Leg Pain After Lumbar Discectomy/ Laminectomy' to: Leg Pain After Lumbar Surgery</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar discectomy/laminectomy or fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale or a numeric pain scale at three months (6 to 20 weeks) for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type; lumbar discectomy/laminectomy or fusion procedure.</p> <p>Updated instructions: Revised: to include lumbar fusion and numeric pain scale.</p> <p>Updated denominator: Revised: DENOMINATOR (SUBMISSION CRITERIA 1): Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period.</p> <p>Added: DENOMINATOR (SUBMISSION CRITERIA 2): Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p>Updated denominator criteria: Added: For Submission Criteria 2: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years by October 1 of the Denominator Identification Period Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p>Updated denominator exclusion: Removed: For Submission Criteria 1: Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy.</p> <p>Added: For Submission Criteria 1: Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure. For Submission Criteria 2: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p>Updated denominator definition: Added: For Submission Criteria 2: Denominator Identification Period – The 12- month period in which eligible patients have a procedure. This allows for enough time for a follow-up assessment to occur during the performance period. The “denominator identification period” includes dates of procedure 10/1/2021 to 9/30/2022.</p> <p>Updated numerator: Revised: NUMERATOR (Submission Criteria 1): All eligible patients whose leg pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS or Numeric Pain scale at three months (6 to 20 weeks) postoperatively.</p> <p>Added: NUMERATOR (Submission Criteria 2): All eligible patients whose leg pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) or Numeric Pain scale at one year (9 to 15 months) postoperatively.</p> <p>Updated numerator definition: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance and allow for telephone screenings.</p> <p>Added: For Submission Criteria 1: Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (e.g., phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable. For Submission Criteria 2: Measure Assessment Period (Performance Period) – The period of time following the procedure date that is in which a postoperative VAS or Numeric pain scale score is obtained. Preoperative Assessment VAS or Numeric Pain – A preoperative VAS or Numeric pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS or Numeric score was obtained, use the VAS or Numeric score that is the most recent and prior to the procedure. Postoperative Assessment or Numeric VAS Pain – A postoperative VAS or Numeric pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS or Numeric score was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.</p>

Category	Description
	<p>Visual Analog Scale (VAS) – A “visual analog scale” is a continuous line indicating the continuum between two states of being. A copy of the tool can be obtained below and at the following link Visual Analog Scale Tool.</p> <p>Numeric Pain Scale- a numeric pain scale is one that asks the patient to rate their pain on a scale of 0 to 10 where zero is “No Pain” and 10 is pain that is intolerable. This type of pain score tool can be administered verbally to the patient and because it does not involve a visual line, multiple modes of administration (e.g., phone, virtual visit, patient portal, verbally in-person, etc.) are acceptable.</p> <p>Leg Pain Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their leg pain as less than or equal to 3.0.</p> <p>Leg Pain Target #2 – A patient who does not meet Leg Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively one year (9 to 15 months) after the procedure AND the improvement in leg pain is greater than or equal to 5.0 points.</p> <p>Updated numerator note: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance, replace ‘change’ with ‘improvement’, and updated to allow for telephone screening.</p> <p>Added: For Submission Criteria 2: It is recommended that both a preoperative and postoperative assessment tool be administered to the patient increasing chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1052 or G2147 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain or Numeric Scale is not administered postoperatively at one year (9 to 15 months) • Leg pain is measured using a different patient reported functional pain tool • Postoperative VAS or Numeric Pain scale is administered less than 9 months or greater than 15 months (1 year window) • Postoperative VAS or Numeric value is greater than 3.0 and no valid preoperative VAS Pain scale to measure improvement • Postoperative VAS or Numeric value is greater than 3.0 and preoperative VAS or Numeric Pain scale (to measure improvement) is administered beyond the 3-month timeframe prior to and including the date of procedure (e.g., 6 months before procedure) <p>Updated numerator options: Revised: For Submission Criteria 1: to reflect inclusion of Numeric Pain scale for numerator compliance.</p> <p>Added: For Submission Criteria 2: Performance Met: Leg pain as measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was less than or equal to 3.0 OR Leg pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 5.0 points or greater.</p> <p>Performance Not Met: Leg pain was not measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively.</p> <p>Performance Not Met: Leg pain measured by the Visual Analog Scale (VAS) or Numeric pain scale at one year (9 to 15 months) postoperatively was greater than 3.0 AND Leg pain measured by the Visual Analog Scale (VAS) or Numeric pain scale within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated less than an improvement of 5.0 points.</p>
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	<p>We propose to revise this measure to expand the eligible procedures to include lumbar fusion, in order to capture a more complete patient population for lumbar surgery. This would be accomplished by stratifying the measure to create a submission criterion for lumbar discectomy/laminectomy procedures and a submission criterion for lumbar fusion. This revision would be reflected within multiple components within the specification. Additionally, we propose to add the Numeric Pain scale as an option for numerator compliance. Inclusion of this tool would allow flexibility by allowing virtual visits for completion of the assessment.</p> <p>We propose to update the denominator to reflect the stratified procedure types by renaming the original denominator to Denominator (Submission Criteria 1). As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.67 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	462
CMS eCQM ID:	CMS645v6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	Updated denominator exception: Revised: Patient refused the bone density evaluation at the time ordered or did not have it performed within 3 months after the start of ADT.
Measure Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the denominator exception to align with the measure logic and intent of receiving an initial bone density evaluation prior to the start or within 3 months of ADT.

D.68 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	463
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.
Substantive Change:	<p>The measure denominator definition is revised to read: Risk factors for POV –</p> <ul style="list-style-type: none"> • Surgery \geq 30 minutes • Age \geq 3 years • Strabismus surgery • History of POV or Post-Operative Nausea and Vomiting (PONV)/motion sickness in patient • Family History of POV/PONV • Post-pubertal female • Adenotonsillectomy • Otoplasty • Anticholinesterases • Long-acting opioids
Measure Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure denominator definition to reflect the 2020 clinical guidance for the management of postoperative nausea and vomiting.

D.69 Functional Status After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	471
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.
Substantive Change:	<p>The measure title is revised from 'Functional Status After Lumbar Discectomy/Laminectomy' to: Functional Status After Lumbar Surgery</p> <p>The measure description is revised to read: For patients age 18 and older who had lumbar discectomy/laminectomy or fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively for discectomy/laminectomy or at one year (9 to 15 months) postoperatively for lumbar fusion patients. Rates are stratified by procedure type: lumbar discectomy/laminectomy or fusion procedure.</p> <p>Updated instructions: Revised: to include lumbar fusion.</p> <p>Updated denominator: Revised: DENOMINATOR (SUBMISSION CRITERIA 1): Patients 18 years of age or older as of January 1 of the denominator identification period who had a lumbar discectomy/laminectomy procedure performed during the denominator identification period.</p> <p>Added: DENOMINATOR (SUBMISSION CRITERIA 2): Patients 18 years of age or older as of October 1 of the denominator identification period who had a lumbar fusion procedure performed during the denominator identification period.</p> <p>Updated denominator criteria: Added: For Submission Criteria 2: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years by October 1 of the Denominator Identification Period Patient procedure during the Denominator Identification Period – lumbar fusion</p> <p>Updated denominator exclusion: Removed: For Submission Criteria 1: Patient had any additional spine procedures performed on the same date as the lumbar discectomy/laminectomy.</p> <p>Added: For Submission Criteria 1: Patient had a lumbar fusion on the same date as the discectomy/ laminectomy procedure. For Submission Criteria 2: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic, or congenital lumbar scoliosis.</p> <p>Updated denominator definition: Added: For Submission Criteria 2: Denominator Identification Period – The twelve month period in which eligible patients have a denominator eligible procedure. This allows for enough time for a follow-up assessment to occur during the twelve month performance period. The denominator identification period includes dates of procedure 10/1/2021 to 9/30/2022.</p> <p>Updated numerator: Added: NUMERATOR (Submission Criteria 2): All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI Version 2.1a) patient reported outcome tool at one year (9 to 15 months) postoperatively.</p> <p>Updated numerator definition: Added: For Submission Criteria 2: Measure Assessment Period (Performance Period) – The period of time following the procedure date that a postoperative Oswestry Disability Index (ODI version 2.1a) functional status score can be obtained. Preoperative Assessment Oswestry Disability Index (ODI version 2.1a)- A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure. Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) – A postoperative ODI functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to nine months and after fifteen months postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe. Oswestry Disability Index (ODI version 2.1a) Patient Reported Outcome Tool – An ODI patient reported outcome tool (also known as the Oswestry Low Back Pain Disability Questionnaire) is an extremely important tool that researchers and disability evaluators use to measure a patient's permanent functional disability. The test is considered the "gold standard" of low back functional outcome tools. A copy of the tool can be obtained below or at the following link: https://cprovide.mapi-trust.org/instruments/oswestry-disability-index. Functional Status Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status as less than or equal to 22. Functional Status Target #2 – A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement is demonstrated as a decrease in ODI score by greater than or equal to 30 points.</p>

Category	Description
	<p>Updated numerator note: Added: For Submission Criteria 2:</p> <p>It is recommended that both a preoperative and postoperative assessment tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 or G2143 is submitted.</p> <ul style="list-style-type: none"> • ODI is not administered postoperatively at one year (9 to 15 months) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement • Postoperative ODI is greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g., 6 months before procedure.) <p>Updated numerator options: Added: For Submission Criteria 2:</p> <p>Performance Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 30 points or greater.</p> <p>Performance Not Met: Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.</p> <p>Performance Not Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.</p>
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	<p>We propose to revise this measure to expand the eligible procedures to include lumbar fusion, in order to capture a more complete patient population for lumbar surgery. Additionally, we propose to add patients who had cancer, acute fracture or infection related to the lumbar spine to the denominator exclusions. These proposed revisions would align with the measure intent and combining of two lumbar procedures.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.70 Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
NQF # / eCQM NQF #:	N/A / 3475e
Quality#:	472
CMS eCQM ID:	CMS249v5
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.
Substantive Change:	<p>Updated guidance: Revised: Patients are excluded from the measure if they have one or more risk factors for osteoporosis, including a result indicating that the patient should be considered for bone density testing on one of the following risk assessment instruments:</p> <ul style="list-style-type: none"> • 10-year probability of major osteoporotic fracture of 8.4 percent or higher as determined by the FRAX • ORAI score of ≥ 9 • OSIRIS score of <1 • OST score of <2 <p>The measure initial patient population is revised to read: Female patients ages 50 to 63 years at the start of the measurement period with an encounter during the measurement period.</p> <p>The measure denominator exclusion is revised to read:</p> <ol style="list-style-type: none"> 1. Exclude patients with one of the following risk factors. 2. Risk factors are grouped by when they occur in relation to the measurement period. 3. The following risk factors must be active during the measurement period: BMI ≤ 20 kg/m² (must be the first BMI of the measurement period) Alcohol consumption ($>$ two units per day (one unit is 12 oz. of beer, 4 oz. of wine, or 1 oz. of liquor)) 4. The following risk factors may occur at any time in the patient's history prior to the start of the measurement period: Osteoporosis Osteopenia 5. The following risk factors may occur at any time in the patient's history prior to the start of the measurement period, but do not need to be active during the measurement period: Gastric bypass Aromatase inhibitors Documentation of history of hip fracture in parent 6. The following risk factors may occur at any time in the patient's history or during the measurement period: Glucocorticoids [cumulative medication duration ≥ 90 days] Osteoporotic fracture Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption Chronic malnutrition Chronic liver disease Rheumatoid arthritis Hyperthyroidism Type I Diabetes End stage renal disease Osteogenesis imperfecta Ankylosing spondylitis Psoriatic arthritis Ehlers-Danlos syndrome Cushing's syndrome Hyperparathyroidism Marfan syndrome Lupus Chemotherapy Multiple myeloma Premature menopause Double or bilateral oophorectomy Eating disorder Amenorrhea Organ transplant <p>The measure definition is revised to read: The measure allows for clinicians to use 4 tools to assess osteoporosis or osteoporotic fracture risk.</p> <ol style="list-style-type: none"> 1. The Fracture Risk Assessment Tool (FRAX[R]) is used to calculate 10-year absolute fracture risk. The FRAX evaluates a patient's 10-year probability of hip fracture and major osteoporotic fracture (clinical spine, forearm, hip, or shoulder fracture). It is applicable to people aged 40-90 years. 2. The Osteoporosis Risk Assessment Instrument (ORAI) is used to calculate osteoporosis risk. It is applicable to women ≥ 45 years. 3. The Osteoporosis Index of Risk (OSIRIS) is used to calculate osteoporosis risk. It is applicable to patients of any age. 4. The Osteoporosis Self-Assessment Tool (OST) is used to calculate osteoporosis risk. It is applicable to patients of any age." <p>Updated logic and logic definitions: Revised: the glucocorticoid active medication duration to calculate number of calendar days covered.</p>

Category	Description
	<p>Updated numerator exclusion: Added: Exclude patients with a result on one of the following tools, which indicates the patient should be considered for bone density testing, anytime in the patient's history prior to the time of the first DXA scan during the measurement period:</p> <p>FRAX[R] ten-year probability of all major osteoporosis related fracture ≥ 8.4 percent</p> <p>ORAI score of ≥ 9</p> <p>OSIRIS score of < 1</p> <p>OST score of < 2</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the measure guidance to remove 'combination risk factors' and add 3 additional risk assessment tools to align with USPSTF recommendations (https://www.uspreventiveservicestaskforce.org/Home/GetFileByID/3427). Additionally, we propose to reflect the addition of the 3 risk assessment tools within the measure definition and numerator exclusions through revision of the measure.</p> <p>We propose to revise the initial patient population to change the time anchor from the start of the measurement period to the end of the measurement period so that it aligns with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we propose to revise the denominator exclusion to align exclusion timing of osteoporosis with the timing of osteopenia, so the same exclusion criteria would be applied to both within the narrative and logic.</p> <p>We propose to update the measure logic and logic definitions to evaluate the number of calendar days active on glucocorticoids to align the cumulative medication duration logic with the intent of the measure to identify patients appropriate for denominator exclusion.</p>

D.71 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v4
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	<p>Updated denominator exclusion: Revised: Patients with a diagnosis of morbid obesity, or with a BMI Exam ≥ 40 before the follow up urinary symptom score.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: encounter class attribute for non-telehealth eligible encounters.</p>
Measure Steward:	Large Urology Group Practice Association and Oregon Urology Institute
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the denominator exclusions to include a body mass index value equal to 40, which would align with the Centers for Disease Control and Prevention's (CDC) guideline for morbid obesity. We also propose to update the value set/coding to implement the 'virtual' encounter class attribute for the purposes of excluding non-telehealth eligible encounters within eCQM measure logic.

D.72 Functional Status Change for Patients with Neck Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	478
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).
Substantive Change:	<p>Updated denominator criteria: Added: coding for Skilled Nursing Facilities.</p> <p>Updated definition: Revised: Initial Evaluation definition to include Skilled Nursery Facility coding. Added: Neck FS PROM score – The Neck FS PROM score may be achieved using one of three forms: the FOTO Neck FS PROM computer adaptive test the FOTO Neck FS PROM short form, or an alternative PROM score that is cross-walked to the Neck FS PROM. Computer adaptive test (CAT) is recommended to achieve best balance between reduced patient burden and score precision. At least one cross-walk form has been developed by the measure steward and meets scientific standards to successfully link a construct-equivalent PROM using advanced psychometric equating methods.</p> <p>For more information about the Neck FS PROM score forms and to access the components that are available free of charge for use with this MIPS quality measure [for example, patient-reported outcome measure(s), cross-walking, risk adjustment], visit Public Access to FOTO Measures.</p> <p>Updated numerator definition: Revised: Functional Status (FS) Score – This is the Neck FS PROM score as described under Instructions Definitions.</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	<p>We propose to update the denominator criteria to add coding for skilled nursing facilities for physiatrists who care for patients in nursing home settings. We believe this coding would provide additional opportunity for those clinicians to report this measure. We also propose to revise the definition to include Skilled Nursing Facility coding within the initial evaluation definition.</p> <p>Additionally, we propose to update the numerator definition ‘Patient’s Functional Status (FS) Score’ to ‘Functional Status (FS) Score’ along with revising the definition for consistency and clarity. This update would promote the streamlining of this concept within the specification and promote ease of reading and better comprehension of this concept.</p>

D.73 Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	481
CMS eCQM ID:	CMS646v3
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Substantive Change:	Updated logic and logic definitions: Revised: for the Initial Patient Population to capture patients whose first Bladder Cancer staging occurred during the measurement period.
Measure Steward:	Oregon Urology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the logic and logic definitions for the initial patient population to accurately capture the intended population, as stated in the current measure description. Only the first staging performed with the appropriate pathology should count for denominator eligibility for the purposes of this measure, and the first staging must occur in the measurement period. This change would better align with measure intent of capturing patients who received intravesical BCG within 6 months of bladder cancer staging, and more accurately anchor the administration of treatment.</p>

**TABLE Group DD: Previously Finalized Quality Measures with Substantive Changes
Proposed for Partial Removal as Component Measures in Traditional MIPS and Proposed
for Retention for Use in Relevant MVPs for the CY 2023 Performance Period/2025 MIPS
Payment Year and Future Years**

As noted under Table Group CC, beginning with the CY 2023 performance period/2025 MIPS payment year and future years, we propose to maintain measures Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults for MIPS Value Pathways (MVP) development, and maintain measure Q110 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.4.c.(1) of this proposed rule. These measures have proposed substantive changes under Table Group DD and Table Group E.

Note: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table DD as follows: NQF # / eCQM NQF #.

The DD Tables within this proposed rule provide the substantive changes proposed for the quality measures in CY 2023. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2023 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2024. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at <https://qpp.cms.gov/about/resource-library>.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2023 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2023 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, would the DD table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: The CMS Web Interface collection type is no longer available in MIPS, except for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period. This collection type is therefore no longer listed in any tables under Table Group DD. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP. For further information on the Shared Savings Program and reporting through the CMS Web Interface collection type for APP reporting, see sections III.G.4.b.(9) and III.G.4.c.(1) of this proposed rule. For information on changes to measures under the CMS Web Interface collection type proposed for the CY 2023 performance period/2025 MIPS payment year and future years, see Table Group E of this proposed rule.

We request comments on these substantive changes.

DD.1 Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / N/A
Quality#:	110
CMS eCQM ID:	CMS147v12
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	<p>The measure guidance is revised to read: For the eCQM Specifications collection type: To enable reporting of this measure at the close of the measurement period, this measure will only assess the influenza season that starts on October 1 of the year prior to the measurement period and ends on March 31 of the measurement period. The subsequent influenza season (ending March of the following year) will be measured and reported in the following year.</p> <p>This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.6. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The measure denominator is revised to read: For the eCQM Specifications collection type: Equals Initial Population and seen for a visit between October 1 of the year prior to the measurement period and March 31 of the measurement period.</p> <p>Updated denominator exclusion: For all collection types: Added: denominator exclusion for patients receiving hospice any time during the measurement period.</p> <p>Updated definition: For the eCQM Specifications collection type: Revised: Previous Receipt - receipt of the current season's influenza immunization from another provider OR from same provider prior to the visit to which the measure is applied (typically, prior vaccination would include influenza vaccine given since July 1st).</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients who received an influenza immunization OR who reported previous receipt of an influenza immunization between July 1 of the year prior to the measurement period to June 30 of the measurement period.</p> <p>Updated numerator instructions: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types: Removed: Due to the changing nature of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, an eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting previous receipt, 2) report a denominator exception, either as a patient reason (e.g., for patient preference) or a system reason (e.g., the institution only carries LAIV).</p> <p>Updated denominator exception: For the eCQM Specifications collection types: Removed: all denominator exceptions (medical, patient, and system reasons).</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure guidance for the eCQM Specifications collection type to remove the paragraph regarding the influenza encounter value set and replace it with individual value sets grouped into a logic definition to be more transparent about applicable encounters. We also propose to revise the denominator for the eCQM Specifications collection type to align the identification of patients with visits that coincide with the flu season as referenced by the Food and Drug Administration (FDA) approved time for licensed flu vaccination administration (https://www.cdc.gov/flu/about/season/flu-season.htm).</p> <p>We propose to add hospice as a denominator exclusion for all collection types to align with other MIPS immunization measures. Additionally, we propose to revise the definition and numerator for the eCQM Specifications collection type to align performance of the measure with the immunization timeframe of the FDA approved time for licensed flu vaccination. Furthermore, for the eCQM Specifications collection type we propose to remove the denominator exceptions for medical/patient/system reasons since the ACIP guidelines specify only life-threatening allergic reactions to vaccination (i.e., anaphylaxis) as a contraindication to vaccination. Therefore, these updates reflect the ACIP recommendations and support vaccination of patients with an allergy after careful evaluation of the patient by the clinician.</p> <p>We propose to revise the numerator instructions for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types and the guidance for the eCQM Specifications collection type to remove the language for the LAIV formulation to align with current guidelines and would allow for the use of this formulation.</p>

DD.2 Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	111
CMS eCQM ID:	CMS127v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.
Substantive Change:	<p>The measure description is revised to read: For all collection types: Percentage of patients 66 years of age and older who have received a pneumococcal vaccine.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 66 years of age and older at the start of the measurement period with a visit during the measurement period.</p> <p>Updated denominator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed: denominator note.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: coding for ESRD services, dialysis, patient counseling and/or risk factor reduction intervention services, preventive medicine, and home visit services.</p> <p>Updated definitions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: definitions and coding for the added denominator exclusions: active chemotherapy, bone marrow transplant, and history of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia & HB-S disease or cerebrospinal fluid leaks.</p> <p>Updated denominator exclusions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</p> <ol style="list-style-type: none"> 1. Active chemotherapy during the measurement period. 2. Bone marrow transplant during the measurement period. 3. History of immunocompromising conditions prior to or during the measurement period. 4. Patient had anaphylaxis due to the pneumococcal vaccine any time during or before the measurement period. <p>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic related to hospice care to add flexibility to how data may be captured or stored.</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Patients who received a pneumococcal vaccination on or after their 60th birthday and before the end of the measurement period.</p> <p>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Patients who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine on or after their 60th birthday and before the end of the measurement period...</p> <p>Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: to allow for receipt of any pneumococcal vaccine.</p> <p>Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Removed: Documentation of medical reason(s) for not administering pneumococcal vaccine (for example, adverse reaction to vaccine).</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description as this would reflect that the measure is no longer assessing for any receipt of the pneumococcal vaccination. Additionally, we propose to remove the denominator note from the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types as it no longer aligned fully with the revised timeframe for the administration of the pneumococcal vaccine.</p> <p>We propose to revise the initial patient population for the eCQM Specifications collection type to change the age determination from the start of the measurement period to the end of the measurement period so that it aligns with the HEDIS measure requirements and creates consistency for implementation.</p> <p>We propose to update the logic and logic definitions for the eCQM Specifications collection type related to hospice care to add flexibility to how assessment and encounter data may be captured or stored to allow for different workflows and systems to align with exclusion intent and criteria more closely. We also propose to revise the numerator for the eCQM Specifications collection type to remove language pertaining to patients who had an adverse reaction to vaccines from the numerator, so the quality action more accurately reflects patients who received a pneumococcal vaccination.</p> <p>We propose to update the denominator criteria for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to add coding to capture a more complete patient population as this patient population would be appropriate for the pneumococcal vaccination. We propose to update the denominator exclusions for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to add denominator exclusions as this patient population would not be appropriate for the pneumococcal vaccination. We propose to add definitions for these added denominator exclusions to outline the coding that would be sufficient to identify this patient population for consistency. Additionally, we propose to revise the numerator and numerator note to allow for receipt of any pneumococcal vaccine in</p>

Category	Description
	accordance with the current ACIP guidelines (https://www.cdc.gov/vaccines/acip/recommendations.html). We propose to remove the numerator option allowing for documentation of medical reason(s) for not administering the vaccine and add a denominator exclusion for anaphylaxis from pneumococcal vaccine as this would better align with ACIP guidelines (https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6337a4.htm).

TABLE Group E: Previously Finalized Web Interface Quality Measures with Substantive Changes Proposed for the CY 2023 Performance Period and Future Years

The E Tables within this proposed rule provide the substantive changes proposed for the Web Interface quality measures in CY 2023. The changes that are made to the code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2023 may not be identified within the proposed rule due to the availability of these changes to the public. The 2023 CMS Web Interface Measure Coding Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to interested parties. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2023 CMS Web Interface Measure Coding Release Notes once posted to review all coding changes.

The PY 2023 eCQM collection type measures had substantive changes that could prove burdensome to collect, therefore, the Web Interface specifications will align with the 2023 MIPS CQM changes for these measures. The CMS Web Interface collection type is only available for purposes of APM entities reporting through the APP, starting with the CY 2023 performance period. The CMS Web Interface collection type remains through CY 2025 for Shared Savings Program ACOs reporting through the APP.

The tables below contain proposed changes for performance year 2023 Web Interface measure specifications to be used in the Shared Savings Program quality reporting.

E.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v10
Web Interface ID:	DM-2
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	<p>Updated denominator criteria: Added: coding for nutrition and dietitian clinicians.</p> <p>Updated guidance: Removed: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p> <p>Revised to read: To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to add encounter codes for nutrition and dietitian clinicians based upon interested parties' feedback, as they may provide nutrition counseling or therapy to patients to help manage diabetes.</p> <p>We propose to update the guidance/numerator instructions to remove "Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included" because it does not align with the intent of the measure, which is to ensure hemoglobin A1c control in all patients with any diagnosis of diabetes. This update allows the measure to align with its clinical intent, in accordance with the given diabetes diagnosis codes within the denominator criteria of the measure.</p> <p>We propose to revise the language for the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p>

E.2 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v11
Web Interface ID:	PREV-12
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	<p>Updated measure description: Revised to read: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p>Updated definition: Added: coding for manic episodes to the denominator exclusions definition for bipolar depression.</p> <p>Updated measure numerator: Revised to read: Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p> <p>Updated guidance: Revised to read: A depression screen is completed on the date of the encounter or up to 14 calendar days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of or up to two calendar days after the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. An example to illustrate the follow-up plan documentation timing: if the encounter is on a Monday from 3-4 pm (day 0) and the patient screens positive, the clinician has through anytime on Wednesday (day 2) to complete follow-up plan documentation. This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. This measure requires documentation that a screening was conducted with a standardized depression screening tool. It is recommended that both a score and clinician interpretation of the score is documented, especially when a patient screens positive. At a minimum, the medical record must contain documentation of the tool's name and results of the screening with a score OR clinician interpretation of positive or negative for depression. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. A score interpreted as positive requires documentation of a follow-up plan. A score interpreted as negative does not require a follow-up plan. The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>Added: Follow-Up Plan: For a depression screen deemed positive, the follow-up plan MUST still be provided for and discussed with the patient during the qualifying encounter used to evaluate the numerator. However, documentation of the follow-up plan can occur up to two calendar days after the qualifying encounter, in accordance with the policies of an eligible clinician or provider's practice or health system. All services should be documented during, or as soon as practicable, after the qualifying encounter in order to maintain an accurate medical record.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise multiple components of the measure to add a grace period after the end of the encounter to document the follow-up plan, which would allow more flexibility in the clinical workflow giving clinicians time for documentation. This would ensure that those clinicians who meet the intent of the measure which is discussing a follow-up plan during the encounter, are not inadvertently marked as non-compliant due to delayed documentation.</p> <p>We propose to update the measure definition to improve alignment with measure intent which is to screen for new cases of depression in patients who have never had a diagnosis of depression or bipolar disorder, as well as to clarify the timing requirements of diagnoses for the measure exclusions.</p> <p>We propose to add coding for manic episodes to the Bipolar Diagnosis codes to align with measure intent which is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator.</p>

E.3 Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality#:	370
CMS eCQM ID:	CMS159v10
Web Interface ID:	MH-1
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event.
Substantive Change:	<p>Updated denominator exclusion: Revised to read: Patients with a diagnosis of bipolar disorder any time prior to the end of the measure assessment period Patients with a diagnosis of select personality disorders any time prior to the end of the measure assessment period Patients with a diagnosis of schizophrenia or psychotic disorder any time prior to the end of the measure assessment period Patients with a diagnosis of pervasive developmental disorder any time prior to the end of the measure assessment period Patients who were permanent nursing home residents any time during denominator identification period or the measure assessment period Patients with a diagnosis of personality disorder emotionally labile any time prior to the end of the measure assessment period</p> <p>Updated denominator criteria: Added: coding for preventive medicine encounters.</p>
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update coding for the denominator criteria to include preventive medicine encounters in order to engage patients and assess remission of depression. We propose to add timing information to the denominator exclusions to improve measure clarity and to align with the CQM version of the measure.

E.4 Falls: Screening for Future Fall Risk

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality#:	318
CMS eCQM ID:	CMS139v10
Web Interface ID:	CARE-2
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
Substantive Change:	<p>Updated initial population: Revised to read: Patients aged 65 years and older at the start of the measurement period with a visit during the measurement period.</p> <p>Updated value set/coding: Added: coding for physical therapy and occupational therapy visits.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the initial patient population to change the age anchor from the start of the measurement period to the end of the measurement period so that it would align with HEDIS measure requirements and creates consistency for implementation across programs. Additionally, we propose to add occupational and physical therapy evaluation visits as applicable encounters as these clinicians interact with older adults that may be more susceptible to falls. Occupational therapists are “uniquely qualified to address the multifactorial nature of falls, given their knowledge of factors that influence occupational performance.” ¹ There is a strong body of evidence that supports the role of physical therapists in reducing fall risk and fall prevention as outlined within the American Physical Therapy Association (APTA) handout: https://www.apta.org/patient-care/public-health-population-care/balance-and-falls/research-on-falls# .

¹ Peterson, E. W., & Clemson, L. (2008). Understanding the role of occupational therapy in fall prevention for community-dwelling older adults. OT Practice, 13(3), CE1–CE8.
https://www.researchgate.net/publication/286974169_Understanding_the_role_of_occupational_therapy_in_fall_prevention_for_community-dwelling_older_adults.

E.5 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v5
Web Interface ID:	PREV-13
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	<p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> *All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR *Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR *Patients aged 40-75 years with a diagnosis of diabetes
Substantive Change:	<p>Updated initial population: Revised to read: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • All patients with a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR • Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40-75 years with a diagnosis of diabetes. <p>Updated denominator: Revised to read: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • All patients with a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD) or ever had an ASCVD procedure; OR • Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40-75 years with a diagnosis of diabetes. <p>Updated submission guidance: Revised to read:</p> <ul style="list-style-type: none"> ○ Determine if the patient was previously diagnosed with or currently has a diagnosis of clinical ASCVD, including an ASCVD procedure <u>at any time up through the last day of the measurement period</u> <p>Removed: Active Diagnosis is defined as a diagnosis that is either on the patient's problem list, a diagnosis code description listed on the encounter, or is documented in a progress note indicating that the patient is being treated or managed for the disease or condition at any time during the measurement period.</p> <p>Updated denominator exclusion: Removed: Patients who have a diagnosis of pregnancy at any time during the measurement period.</p> <p>Updated definition: Added: Ezetimibe / Rosuvastatin -- Roszet -- Fixed Dose Combination' to Table 1 - Statin Medication Therapy List.</p> <p>Updated denominator exception: Added: Patients with documentation of a medical reason for not being prescribed statin therapy.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple sections to remove the word 'active' from the clinical diagnosis of ASCVD. ASCVD is a chronic condition, therefore a diagnosis of ASCVD at any time meets the intent of the initial population.</p> <p>We propose to remove the pregnancy exclusion to align with U.S Food and Drug Administration (FDA) recommendations that pregnancy be removed as a contraindication in prescribing statins (https://www.fda.gov/safety/medical-product-safety-information/statins-drug-safety-communication-fda-requests-removal-strongest-warning-against-using-cholesterol).</p> <p>We also propose to update the definitions by adding another medication to the statin medication therapy list for completeness.</p> <p>We propose to update the denominator exceptions by adding a medical reason for not being prescribed statin therapy to align with American College of Cardiology/American Heart Association (ACC/AHA) guidelines (https://www.acc.org/latest-in-cardiology/ten-points-to-remember/2019/03/07/16/00/2019-acc-aha-guideline-on-primary-prevention-gl-prevention).</p>

E.6 Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / 0041e
Quality#:	110
CMS eCQM ID:	CMS147v11
Web Interface ID:	PREV-7
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	<p>Updated measure reporting period: Revised: Evaluates qualifying encounters that occur during either January through March of the measurement year or October through December of the measurement year to determine if that patient has received the influenza immunization for the relevant influenza season</p> <p>Updated measure description: Revised to read: Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization</p> <p>Updated denominator: Revised to read: Equals initial population (All patients aged 6 months and older seen for a visit during the measurement period)</p> <p>Updated denominator note: Added: For the purposes of the program, in order to submit on the flu season 2022-2023, the patient must have a qualifying encounter between January 1 and March 31, 2023. In order to submit on the flu season 2023-2024, the patient must have a qualifying encounter between October 1 and December 31, 2023. A qualifying encounter needs to occur within the flu season that is being submitted; any additional encounter(s) may occur at any time within the measurement period.</p> <p>Updated measure guidance: Revised to read: The numerator for this measure can be met by submitting either administration of an influenza vaccination or that the patient reported previous receipt of the current season's influenza immunization. If the performance of the numerator is not met, an eligible clinician can submit a valid denominator exception for having not administered an influenza vaccination. For eligible clinicians submitting a denominator exception for this measure, there should be a clear rationale and documented reason for not administering an influenza immunization if the patient did not indicate previous receipt, which could include a medical reason (e.g., patient allergy), patient reason (e.g., patient declined), or system reason (e.g., vaccination not available). The system reason should be indicated only for cases of disruption or shortage of influenza vaccination supply. Denominator Exception(s) are determined at the time of the denominator eligible encounter during the current flu season.</p> <p>Removed: Due to the changing nature of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, an eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting previous receipt, 2) report a denominator exception, either as a patient reason (e.g., for patient preference) or a system reason (e.g., the institution only carries LAIV).</p> <p>Updated definition: Revised to read: Previous Receipt – receipt of the current season's influenza immunization from another provider OR from same provider prior to the visit to which the measure is applied</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise multiple sections of the measure to align with the CQM version of the measure. These changes allow for reporting receipt of influenza immunization for the two flu seasons that fall within a performance reporting period. Alignment with the CQM allows for reporting medical exceptions, and avoids eligible clinicians being penalized if not administering the influenza vaccine is medically and clinically appropriate.</p> <p>We propose to revise the guidance to remove the language for the LAIV formulation to align with current guidelines and would allow for the use of this formulation.</p>

E.7 Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v10
Web Interface ID:	PREV-5
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>Updated initial population: Revised to read: Women 51 - 74 years of age on the date of the encounter with a visit during the measurement period.</p> <p>Updated measure guidance: Revised to read: To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update multiple components of the measure to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data

E.8 Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v10
Web Interface:	PREV-6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	<p>Updated measure description: Revised to read: Percentage of adults 45-75 years of age who had appropriate screening for colorectal cancer</p> <p>Updated initial population: Revised to read: Patients 45 to 75 years with a visit during the measurement period</p> <p>Updated measure guidance: Revised to read: To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure description and initial population to align with the 2021 U.S. Preventive Services Task Force (USPSTF) guidelines that recommend Colorectal Cancer Screenings begin at age 45 rather than beginning at age 50.</p> <p>We propose to revise the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p>

E.9 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / eCQM NQF #:	0028 / 0028e
Quality#:	226
CMS eCQM ID:	CMS138v10
Web Interface ID:	PREV-10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Web Interface
Current Measure Description:	<p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user.</p> <p>Three rates are reported:</p> <ol style="list-style-type: none"> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.
Substantive Change:	<p>Updated measure description: Revised to read: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. Three rates are reported:</p> <ol style="list-style-type: none"> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period Percentage of patients aged 18 years and older who were identified as a tobacco user during the measurement period who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user <p>Updated denominator exception: Removed: denominator exceptions.</p> <p>Updated numerator: Revised to read: For Submission Criteria 2: Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period. For Submission Criteria 3: Patients who were screened for tobacco use at least once during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Updated measure definition: Revised to read: Tobacco Use use of any tobacco product The 2021 USPSTF recommendation references the US Food and Drug Administration definition of tobacco which includes “any product made or derived from tobacco intended for human consumption (except products that meet the definition of drugs), including, but not limited to, cigarettes, cigars (including cigarillos and little cigars), dissolvables, hookah tobacco, nicotine gels, pipe tobacco, roll-your-own tobacco, smokeless tobacco products (including dip, snuff, snus, and chewing tobacco), vapes, electronic cigarettes (e-cigarettes), hookah pens, and other electronic nicotine delivery systems.” The 2021 USPSTF recommendation describes smoking as generally referring to “the inhaling and exhaling of smoke produced by combustible tobacco products such as cigarettes, cigars, and pipes.” The 2021 USPSTF recommendation describes vaping as “the inhaling and exhaling of aerosols produced by e-cigarettes.” In addition, it states, “vaping products (that is, e-cigarettes) usually contain nicotine, which is the addictive ingredient in tobacco. Substances other than tobacco can also be used to smoke or vape. While the 2015 USPSTF recommendation statement used the term ‘electronic nicotine delivery systems’ or ‘ENDS,’ the USPSTF recognizes that the field has shifted to using the term ‘e-cigarettes’ (or ‘e-cigs’) and uses the term e-cigarettes in the current recommendation statement. e-Cigarettes can come in many shapes and sizes, but generally they heat a liquid that contains nicotine (the addictive drug in tobacco) to produce an aerosol (or ‘vapor’) that is inhaled (‘vaped’) by users.” Tobacco Cessation Intervention Includes brief counseling (3 minutes or less), and/or pharmacotherapy – Note: Concepts aligned with brief counseling (e.g., minimal and intensive advice/counseling interventions conducted both in person and over the phone) are included in the 2023 CMS Web Interface PREV-10 Coding Document for the numerator. Other concepts such as written self-help materials (for example, brochures, pamphlets) and complementary/alternative therapies are not included in the 2023 CMS Web Interface PREV-10 Coding Document and do not qualify for the numerator. Counseling also may be of longer duration or be performed more frequently, as evidence shows that higher-intensity interventions are associated with higher tobacco cessation rates (U.S. Preventive Services Task Force, 2021).</p> <p>Updated guidance: Revised to read: The requirement of two or more visits is to establish that the eligible clinician has an existing relationship with the patient for certain types of encounters. To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the measurement period. If a patient has multiple tobacco use screenings during the measurement period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements. If a patient uses any type of tobacco (i.e., smokes or uses smokeless tobacco), the expectation is that they should receive tobacco cessation intervention: either counseling and/or pharmacotherapy. As noted in Appendix III in the 2021 USPSTF recommendation statement, the current evidence is insufficient to recommend electronic cigarettes (e-cigarettes) for tobacco cessation. However, as noted above in the Definition section, the 2021 USPSTF recommendation also references the US Food and Drug Administration definition of tobacco, which includes e-cigarettes, hookah pens and other electronic nicotine delivery systems. Therefore, the measure does consider the use of e-cigarettes and other electronic nicotine delivery systems to be tobacco use.</p>

Category	Description
	<p>If a patient's tobacco use status is unknown, the patient does not meet the screening requirement and does not meet the numerator for populations 1 or 3. Instances where tobacco use status of "unknown" include: 1) the patient was not screened; or 2) the patient was screened and the patient (or caregiver) was unable to provide a definitive answer.</p> <p>In order to promote a team-based approach to patient care, the tobacco cessation intervention can be performed by another healthcare provider; therefore, the tobacco use screening and tobacco cessation intervention do not need to be performed by the same provider or clinician.</p> <p>This measure contains three reporting rates which aim to identify patients who were screened for tobacco use (rate/population 1), patients who were identified as tobacco users and who received a tobacco cessation intervention (rate/population 2), and a comprehensive look at the overall performance on tobacco screening and cessation intervention (rate/population 3). By separating this measure into various reporting rates, the eligible clinician will be able to better ascertain where gaps in performance exist, and identify opportunities for improvement. The overall rate (rate/population 3) can be utilized to compare performance to published versions of this measure prior to the 2018 performance year, when the measure had a single performance rate. For accountability reporting in the CMS Medicare Shared Savings Program, the rate for population 2 is used for performance.</p> <p>The denominator of population criteria 2 is a subset of the resulting numerator for population criteria 1, as population criteria 2 is limited to assessing if patients identified as tobacco users received an appropriate tobacco cessation intervention. For all patients, population criteria 1 and 3 are applicable, but population criteria 2 will only be applicable for those patients who are identified as tobacco users. Therefore, data for every patient that meets the initial population criteria will only be submitted for population 1 and 3, whereas data submitted for population 2 will be for a subset of patients who meet the initial population criteria, as the denominator has been further limited to those who were identified as tobacco users.</p> <p>Updated denominator criteria: Added: coding for registered dietitians and nutritionists.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update multiple components of the measure to better define and align the lookback period for tobacco cessation intervention and to allow a lookback of 6-months prior to the current measurement period.</p> <p>We propose to update the denominator statement for Population 2 to clarify the timing of the screening for tobacco cessation intervention.</p> <p>We are proposing to update the denominator criteria to include encounter codes for registered dietitians and nutritionists to allow them to screen for tobacco use as part of a comprehensive patient assessment. Additionally, we propose to remove all denominator exceptions. The measure definition is also being updated to align with 2021 USPSTF recommendations.</p>

E.10 Controlling High Blood Pressure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v10
Web Interface ID:	HTN-2
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Web Interface
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p>Updated guidance: Added:</p> <p>Ranges and thresholds do not meet criteria for this measure. A distinct numeric result for both the systolic and diastolic BP reading is required for numerator compliance.</p> <p>Revised to read: To assess the age for exclusions, the patient's age on the date of encounter should be used.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to revise the denominator guidance to allow for the age to be determined at the time of the denominator eligible encounter. This would reduce clinician burden regarding age calculations for the purposes of determining applicability of the denominator exclusions and would allow for better alignment with clinical guidelines, for age criteria, when utilizing this collection type. This would help to ensure the appropriate patient population is being assessed for the quality action resulting in meaningful data.</p> <p>We propose to add language to ensure that only distinct numeric results are being utilized for the purpose of this measure as ranges and thresholds do not meet the measure's intent.</p>

APPENDIX 2: IMPROVEMENT ACTIVITIES

NOTE: In this proposed rule, for the CY 2023 performance period/2025 MIPS payment year and future years, we are proposing to add four new improvement activities, modify five previously adopted improvement activities, and remove six previously adopted improvement activities. These proposals are discussed in detail below. We request comment on our proposals.

Table A: Proposed New Improvement Activities for the CY 2023 Performance Period/CY 2025 MIPS Payment Year and for Future Years

New Improvement Activity	
Proposed Activity ID:	IA_AHE_XX
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data
Proposed Activity Description:	Use security labeling services available in certified health Information Technology (IT) for electronic health record (EHR) data to facilitate data segmentation.
Proposed Weighting:	Medium
Rationale:	<p>Data segmentation capabilities are used to promote interoperability while preserving confidentiality, honoring consent, and respecting patient privacy preferences. This new activity would promote the adoption of technology certified to the Security tags - summary of care send and Security tags - summary of care - receive criteria at 45 CFR 170.315(b)(7) and (b)(8) in the ONC Health IT Certification Program.¹ Security tagging allows sharing of certain portions of an EHR while not sharing others, such as sensitive information related to substance use disorder treatment. This activity would involve clinicians working with their EHR vendors to implement technology meeting the security tags criteria at 45 CFR 170.315 (b)(7) and (b)(8) in practice systems and clinic workflows, and in so doing improving interoperability while protecting patient privacy. Health IT certified to these criteria is not required for participation in the Promoting Interoperability performance category.</p> <p>This improvement activity fills a gap in the Inventory, as there is no existing improvement activity that focuses on security labeling services and/or data segmentation.</p> <p>We propose weighting this activity medium because this activity may be accomplished by working with clinicians' EHR vendors to implement security tags criteria at 45 CFR 170.315 (b)(7) and (b)(8) in practice systems and clinic workflows. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the Inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_AHE_XX
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients
Proposed Activity Description:	Create and implement a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population. The plan may include an analysis of sexual orientation and gender identity (SO/GI) data to identify disparities in care for LGBTQ+ patients. Actions to implement this activity may also include identifying focused goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on SO/GI terminology (including as supported by certified health IT and the Office of the National Coordinator for Health Information Technology ² US Core Data for Interoperability [USCDI]), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories.

Proposed Weighting:	High
Rationale:	<p>LGBTQ+ individuals face health disparities and challenges navigating and accessing healthcare.^{3, 4} Due to lack of clinician training about providing care with cultural humility and sensitivity for LGBTQ+ individuals, several studies indicate that LGBTQ+ patients, especially gender minority patients, have high rates of negative healthcare experiences.⁵⁻⁷ Compared with heterosexual individuals, LGBTQ+ individuals in the U.S. generally have lower life expectancies, higher rates of cardiovascular disease, gynecologic cancer, breast cancer, body issues and eating disorders, substance use, and mental health conditions, including anxiety, depression, suicidal ideation, and non-suicidal self-injury.^{3, 8}</p> <p>In 2015, ONC issued a final rule requiring that certified health IT enable a user to record sexual orientation and gender identity (SO/GI), but users were not required to exchange these data (45 CFR Parts 170 and 171).⁹ In the first year after implementation, sexual orientation data were missing for 75% of patients and gender identity data were missing for 65% of patients.¹⁰ Clinicians have increasing opportunities to improve data collection, as adoption of the USCDI Version 2 within certified health IT will offer improved support for the exchange of SO/GI data elements. Increasing patients' and clinicians' comfort with and knowledge about SO/GI data collection can also improve data collection.^{3, 11}</p> <p>This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on improving care for LGBTQ+ patients. We believe this activity has the potential to improve clinical practice and care delivery because training clinicians about serving LGBTQ+ patients can lead to more positive care experiences.^{6, 12} Understanding disparities in care access, screenings, and health outcomes and implementing a plan to address identified health disparities can improve the care LGBTQ+ patients receive.^{11, 13}</p> <p>We propose weighting this activity high because clinicians will need considerable time and resources to develop a thorough LGBTQ+ care improvement plan that is informed by data, and to implement it throughout the practice or system. See the definition of high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_EPA_XX
Proposed Subcategory:	Expanded Practice Access
Proposed Activity Title:	Create and Implement a Language Access Plan
Proposed Activity Description:	Create and implement a language access plan to address communication barriers for individuals with limited English proficiency. The language access plan must align with standards for communication and language assistance defined in the National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care (https://thinkculturalhealth.hhs.gov/clas).
Proposed Weighting:	High
Rationale:	<p>We believe the evidence is clear that accurate patient-clinician communication, delivered and received with cultural humility, is an essential aspect of improving equity in healthcare and patient outcomes.^{14, 15} According to the 2020 U.S. Census, 8.3 percent of American households speak English "less than very well" and are thus said to be limited English-proficient (LEP).¹⁶ "The ability to communicate with a healthcare clinician can mean the difference between receiving higher or lower quality care."¹⁴ The use of properly trained medical interpreters is superior to use of ad hoc, family, or no interpreters.¹⁷ Use of professional interpreter services improves patient and clinician satisfaction with communication¹⁸ and improves patient safety.¹⁹</p> <p>A language access plan can help clinician organizations codify the process that will be used to provide services to individuals with limited English proficiency. A language access plan typically contains information on beneficiary needs, defines how interpretation will be provided, outlines how patients and families will be notified about interpretation services, and specifies staff training.²⁰ The plan may include policies and procedures regarding the use of professional interpreters, high-quality translation of</p>

	<p>patient materials, and collection of patients' language preference. The plan may also include details on communication with individuals who are deaf, hard of hearing, and deaf-blind.²¹ The National CLAS Standards include four standards on communication and language assistance that stipulate: language assistance should be timely and offered at no cost; patients should be informed that language assistance is available; competent individuals provide translation and interpretation services; and materials and signage are printed in commonly used languages.^{22, 23}</p> <p>This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on language access. We believe this activity has the potential to improve clinical practice and care delivery and is likely to result in improved patient outcomes, because research demonstrates the importance of accurate clinical communication in achieving positive patient outcomes.^{14, 15}</p> <p>We propose making this activity high-weighted because clinicians will need considerable time and resources to develop a thorough language access plan that is informed by data, and to implement it throughout the practice or system. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_ERP_XX
Proposed Subcategory:	Emergency Response and Preparedness
Proposed Activity Title:	COVID-19 Vaccine Achievement for Practice Staff
Proposed Activity Description:	Demonstrate that the MIPS eligible clinician's practice has maintained or achieved a rate of 100% of office staff in the MIPS eligible clinician's practice fully COVID-19 vaccinated according to the Center for Disease Control and Prevention's definition of fully vaccinated (https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html).
Proposed Weighting:	Medium
Rationale:	<p>COVID-19 vaccination rates in the U.S. can be improved significantly, particularly in communities that are disadvantaged and/or underserved by the healthcare system.²⁴ Disparities in COVID-19 vaccination rates have been observed specifically among healthcare workers, with physicians and advanced practiced staff being more likely to be vaccinated than nurses and support staff. Also, it has been reported that Black and younger health care workers have lower vaccination rates than other groups of healthcare workers.²⁵ We are recommending this new improvement activity be focused on achieving or maintaining 100% COVID-19 vaccination for practice staff.</p> <p>This improvement activity would fill a gap in the Inventory, which does not currently include an activity focused on COVID-19 vaccination achievement. We believe this activity has the potential to improve clinical practice and is likely to result in improved outcomes and public health, because research demonstrates the importance of vaccination in reducing the severity and spread of COVID-19.²⁶</p> <p>We propose weighting this activity medium, because this activity may be accomplished by vaccinating all staff members and tracking the vaccination status of each office staff member in practice staff records. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the Inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>

Table B: Proposed Changes to Previously Adopted Improvement Activities for the CY 2023 Performance Period/CY 2025 MIPS Payment Year and for Future Years

Current Improvement Activity	
Current Activity ID:	IA CC 13
Current Subcategory:	Care Coordination
Current Activity Title:	Practice Improvements for Bilateral Exchange of Patient Information
Current Activity Description:	Ensure that there is bilateral exchange of necessary patient information to guide patient care, such as OpenNotes, that could include one or more of the following: <ul style="list-style-type: none"> • Participate in a Health Information Exchange if available; and/or • Use structured referral notes.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized for the CY 2017 Performance Period/CY 2019 MIPS Payment Year (81 FR 77817 through 77830). We propose updating this activity to require the use of OpenNotes to reduce clinician burden because OpenNotes focuses on principles that support direct access to medical records rather than utilizing a specific software or product. OpenNotes aligns with relevant policies described in the 21 st Century Cures Act (Pub. L. 114–255) that aim to make direct access to medical records a best practice in the field. Updating this activity to require the use of OpenNotes will reflect advances in policy and practice, particularly regarding the importance of direct patient-clinician communication and ensuring that patients are at the center of their care.
Proposed Revised Activity Title:	Practice Improvements to Align with OpenNotes Principles
Proposed Revised Activity Description:	Adherence to the principles described in the OpenNotes initiative (https://www.opennotes.org) to ensure that patients have full access to their patient information to guide patient care.
Current Improvement Activity	
Current Activity ID:	IA CC 14
Current Subcategory:	Care Coordination
Current Activity Title:	Practice improvements that engage community resources to support patient health goals
Current Activity Description:	Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following: <ul style="list-style-type: none"> • Maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or • Update a guide to available community resources, or work with community partners to provide a community resource guide and provide it to patients who are found to be at risk in one or more HRSN area; or • Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRSN needed to identify and implement approaches to better serve their holistic needs through linkages with community resources. <p>HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.</p>
Current Weighting:	High
Proposed Change and Rationale:	This improvement activity was originally finalized for the CY 2017 Performance Period/CY 2019 MIPS Payment Year (81 FR 77817 through 77830). We are proposing to modify the activity title and description to refer to ‘drivers of health,’ which encompasses both ‘social determinants of health (SDOH)’ and ‘health-related social needs (HRSN)’ concepts. Drivers of health are the multitude of factors that impact each other and overall human health, which often include health behavior, social and economic environment, clinical care, and physical environment. ¹ Drivers of health may be direct, such as health behaviors or access to health care, or indirect, such as income,

	<p>education, or occupation, which may not necessarily impact health in an immediate way.^{2,3} They may also be at the individual or community level.⁴</p> <p>We are also proposing to update the list of factors in the activity description to reflect a more comprehensive array of the drivers of health that align with related activities across CMS and HHS by removing “or needs such as exercise, nutrition, or chronic disease self-management” and replacing it with “transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.”¹⁻³ We added language prior to this list noting drivers of health “are not limited” to those in the description, as eligible clinicians can select other drivers of health. We are also proposing to update the activity ID and subcategory to Achieving Health Equity (AHE) due to the connection between drivers of health, health equity, and improved health outcomes.^{5,6} We believe the proposed modifications would better enable eligible clinicians to not only improve clinical practice by screening for and addressing drivers of health, but to also receive credit for their efforts.⁴ Furthermore, we anticipate such efforts would be associated with improved clinical outcomes because of the recognized impact of drivers of health and other upstream factors on both healthcare and health status.⁵⁻⁸ Finally, these proposed modifications would also more clearly align this activity with the evidence base described above¹⁻⁶ and other CMS work in this area, including the CMS Innovation Center’s Accountable Health Communities (AHC) Model, designed to test how “addressing health-related social needs through enhanced clinical-community linkages can improve health outcomes and reduce costs.”⁷</p>
Proposed Revised Activity ID:	IA_AHE_XX
Proposed Revised Activity Subcategory:	Achieving Health Equity
Proposed Revised Activity Title:	Practice Improvements that Engage Community Resources to Address Drivers of Health
Proposed Revised Activity Description:	<p>Select and screen for drivers of health that are relevant for the eligible clinician’s population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded questions/fields for the capture of data. After screening, address identified drivers of health through at least one of the following:</p> <ul style="list-style-type: none"> • Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or • Work with community partners to provide and/or update a community resource guide for to patients who are found to have and/or be at risk in one or more areas of drivers of health; or • Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources. <p>Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.</p>
Current Improvement Activity	
Current Activity ID:	IA_PSPA_7
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of QCDR data for ongoing practice assessment and improvements
Current Activity Description:	<p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status)

	<p>assessment);</p> <ul style="list-style-type: none"> • Use of standardized processes for screening for social determinants of health such as food security, employment, and housing; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>We are proposing to consolidate IA_BE_7, IA_BE_8, and IA_PM_7 related to participation in a QCDR into a single activity, IA_PSPA_7. We note that this proposed modification is being made in conjunction with our proposals to remove IA_BE_7, IA_BE_8, and IA_PM_7 in Table C. This consolidation will reduce clinician burden by streamlining the choice for a QCDR activity and make IA_PSPA_7 more robust and offer additional examples. We believe this would help to enhance patient engagement, learning and practice improvement, progress in improving health equity, and population health management by creating standard processes to monitor, assess, and improve practice activities. We believe these proposed modifications have the potential to improve clinical practice and are likely to result in improved outcomes, because they focus on creating ongoing activities aimed at identifying gaps and improving processes to support patient safety and equitable provision of care.</p> <p>Note that the weighting of the consolidated activity would remain as medium, because the level of effort to attest to this activity would be the same as for IA_PSPA_7. See the definition for medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Proposed Revised Activity Description:	<p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools, and processes for quality improvement (for example, documented preventive health efforts, like screening and vaccinations) that can be shared across MIPS eligible clinicians or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment); • Use of standardized processes for screening for drivers of health, such as food security, housing stability, and transportation accessibility; • Generation and use of regular feedback reports that summarize local practice patterns and treatment outcomes, including for populations that are disadvantaged and/or underserved by the healthcare system; • Use of processes and tools that engage patients to improve adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision-making capabilities; • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement; • Promotion of collaborative learning network opportunities that are interactive; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement, such as comparative analysis across specific patient populations of adverse outcomes after an outpatient surgical procedure and corrective steps to address these outcomes.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_10
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Completion of training and receipt of approved waiver for provision opioid medication-assisted treatments
Current Activity Description:	Completion of training and obtaining an approved waiver for provision of medication - assisted treatment of opioid use disorders using buprenorphine.

Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized for the CY 2017 Performance Period/CY 2019 MIPS Payment Year (81 FR 77817 through 77830). We are proposing to modify this improvement activity to incorporate HHS Office of the Secretary Practice Guidelines for the Administration of Buprenorphine for Treating Opioid Use Disorder (86 FR 22439) updates that removed the 8-hour training requirement for physicians.⁹ We are also proposing to add a note limiting the attestation of this improvement activity to once for low-capacity waivers because they never expire and once every 3 years for the expanded waiver. These limitations are in line with the renewal requirements of the waiver (86 FR 22439) and ensure clinicians are able to perform the improvement activity for a 90-day continuous period as required by 42 CFR 414.1360.</p> <p>In addition, we are proposing to re-categorize this activity to the Behavioral and Mental Health subcategory, which we believe better reflects the intent of this improvement activity, because it is focused on improving treatment for opioid use disorder, a behavioral and mental health condition.</p> <p>We believe the proposed modifications to this activity have the potential to improve clinical practice and are likely to result in improved outcomes, because it will reduce clinician burden by streamlining the activity to align with federal guidance and ensure that patients are receiving medication-assisted treatment in line with medical guidelines.</p>
Proposed Activity ID	IA_BMH_XX
Proposed Subcategory:	Behavioral and Mental Health
Proposed Revised Activity Title	Obtain or Renew an Approved Waiver for Provision of Buprenorphine as Medication-Assisted Treatment for Opioid Use Disorder
Proposed Revised Activity Description:	Complete any required training and obtain or renew an approved waiver for provision of medication-assisted treatment of opioid use disorders using buprenorphine. Note: This activity may be selected once for low-capacity waivers, as these do not expire, and once every 3 years for the expanded waiver, in keeping with renewal requirements.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_19
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Implementation of formal quality improvement methods, practice changes, or other practice improvement processes
Current Activity Description:	<p>Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following, such as:</p> <ul style="list-style-type: none"> • Participate in multisource feedback; • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participate in Bridges to Excellence; • Participate in the American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized for the CY 2017 Performance Period/CY 2019 MIPS Payment Year (81 FR 77817 through 77830). In Table C below, we are proposing to remove IA_PSPA_20, "Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes" and consolidate it with IA_PSPA_19. Specifically, we are proposing to consolidate IA_PSPA_20 into IA_PSPA_19 by adding the following language about leadership from IA_PSPA_20 to IA_PSPA_19's activity description: "including leadership" after "staff." This addition will reduce clinician burden by broadening IA_PSPA_19 and</p>

	<p>making it more robust.</p> <p>Note that the weighting of the modified activity would remain as medium, because the level of effort to attest to this activity would be the same as it was previously. See the definition for medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Proposed Revised Activity Description:	<p>Adopt a formal model for quality improvement and create a culture in which all staff, including leadership, actively participates in improvement activities that could include one or more of the following, such as:</p> <ul style="list-style-type: none"> • Participation in multisource feedback; • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participation in Bridges to Excellence; • Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.

TABLE C: Improvement Activities Proposed for Removal for the CY 2023 Performance Period/CY 2025 MIPS Payment Year and for Future Years

In this rule, we are proposing to remove six previously finalized improvement activities from the CY 2023 performance period/CY 2025 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

Current Improvement Activity	
Current Activity ID:	IA_BE_7
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes use of patient engagement tools.
Current Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> • Use of processes and tools that engage patients for adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision-making capabilities; or • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Current Weighting:	Medium
Removal Rationale:	We propose to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_BE_7 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we are proposing to add “Use of processes and tools that engage patients for adherence to treatment plans; Implementation of patient self-action plans; Implementation of shared clinical decision-making capabilities; Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_BE_7. We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_8 and IA_PM_7 in Table C.
Current Improvement Activity	
Current Activity ID:	IA_BE_8
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes collaborative learning network opportunities that are interactive.
Current Activity Description:	Participation in a QCDR, that promotes collaborative learning network opportunities that are interactive.
Current Weighting:	Medium
Removal Rationale:	We propose to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_BE_8 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we are proposing to modify IA_PSPA_7 to add “promotion of collaborative learning network opportunities that are interactive” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_BE_8. We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_7 and IA_PM_7 in Table C.
Current Improvement Activity	
Current Activity ID:	IA_PM_7
Current Subcategory:	Population Management
Current Activity Title:	Use of QCDR for feedback reports that incorporate population health
Current Activity Description:	Use of a QCDR to generate regular feedback reports that summarize local practice patterns and treatment outcomes, including for vulnerable populations.
Current Weighting:	High
Removal Rationale:	We propose to remove this activity under removal factor one, improvement activity is “duplicative.” We believe IA_PM_7 is duplicative because it is similar to, but only represents a partial component of, IA_PSPA_7. In Table B above, we are proposing to

	add “generation and use of regular feedback reports that summarize local practice patterns and treatment outcomes, including for vulnerable populations” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_PM_7. We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to remove IA_BE_7 and IA_BE_8 in Table C.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_6
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Consultation of the Prescription Drug Monitoring program
Current Activity Description:	Review the history of controlled substance prescriptions for 90 percent* of patients using state prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. *Apply exceptions for patients receiving palliative and hospice care.
Current Weighting:	High
Removal Rationale:	We propose to remove this activity under removal factor one, improvement activity is “duplicative.” IA_PSPA_6 would be duplicative of the proposal to require the Query of PDMP measure for MIPS eligible clinicians in the Promoting Interoperability performance subcategory (measure PI_EP_2). The removal of this activity is contingent upon the proposal in section V.A.10.c.(4)(d)(i)(D)(ab) of this proposed rule.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_20
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes
Current Activity Description:	Ensure full engagement of clinical and administrative leadership in practice improvement that could include one or more of the following: <ul style="list-style-type: none"> • Make responsibility for guidance of practice change a component of clinical and administrative leadership roles; • Allocate time for clinical and administrative leadership for practice improvement efforts, including participation in regular team meetings; and/or • Incorporate population health, quality and patient experience metrics in regular reviews of practice performance.
Current Weighting:	Medium
Removal Rationale:	We propose to remove this activity under removal factor one, improvement activity is “duplicative.” We note that this proposed removal is being made in conjunction with our proposal to modify IA_PSPA_19 in Table B by adding the phrase “including leadership” to the activity description after “staffing” to capture the essence of IA_PSPA_20. We believe that this activity would be duplicative of IA_PSPA_20 upon the adoption that proposal because it is similar to, but would only represent a partial component of, IA_PSPA_19.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_30
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	PCI Bleeding Campaign
Current Activity Description:	Participation in the PCI Bleeding Campaign which is a national quality improvement program that provides infrastructure for a learning network and offers evidence-based resources and tools to reduce avoidable bleeding associated with patients who receive a percutaneous coronary intervention (PCI). The program uses a patient-centered and team-based approach, leveraging evidence-based best practices to improve care for PCI patients by implementing quality improvement strategies: <ul style="list-style-type: none"> • Radial-artery access, • Bivalirudin, and • Use of vascular closure devices.
Current Weighting:	High
Removal Rationale:	We propose to remove this activity under removal factor seven, improvement activity is “obsolete.” The PCI Bleeding Campaign concluded on August 31, 2021, ¹ so this

	improvement activity will no longer be available as of the conclusion of the 2022 performance period. This proposal would apply beginning with the CY 2022 performance period/CY 2024 payment year.
--	---

¹ Quality Improvement for Institutions. (n.d.). *Sunsetting the reduce the risk: Pci bleed dashboard*. <https://cvquality.acc.org/initiatives/reduce-the-risk-pci-bleed>.

APPENDIX 3: MVP INVENTORY

MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854) and CY 2022 PFS final rule (86 FR 65998 through 66031) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements and selection of measures and activities within an MVP. In addition, in section IV.A.8. of this proposed rule, we are proposing additional MVP policies, which if finalized would further explain the MVP development, maintenance, and reporting requirements.

This appendix contains two groups of proposed MVP tables: Group A, proposed new MVPs and Group B, proposed modifications to previously finalized MVPs. Group A includes five new proposed MVPs. Group B includes seven previously finalized MVPs with proposed modifications.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, each MVP includes a foundational layer that is comprised of population health measures and Promoting Interoperability performance category measures.

In the CY 2022 PFS final rule, we inadvertently omitted the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) from the MVP tables in Appendix 3 (86 FR 66002 through 66031). In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described under § 414.1375(b). The ONC Direct Review attestation requirement has been a requirement for the Promoting Interoperability performance category since the first MIPS performance period in CY 2017 (81 FR 77019 through 77028). For these reasons, we propose to add the ONC Direct Review attestation requirement described under § 414.1375(b)(3) to all previously finalized MVPs and newly proposed MVPs.

In addition, we now propose to include the IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation improvement activity in all previously finalized MVPs and newly proposed MVPs in alignment with policy finalized in the CY 2017 MIPS final rule (81 FR 77179 through 77180): MIPS eligible clinicians in a practice that is certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary and codified at 414.1480(b)(3)(ii), may attest to this activity and receive an improvement activities performance category score of 100 percent.

MVP Development Performance Category Sources

The MVP tables below contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures are located in the 2022 MIPS Quality Measures List in the QPP Resource Library.¹ In addition, see Appendix 1: MIPS Quality Measures of this proposed rule for any proposed modifications to the existing quality measures.
- Existing QCDR measures are based on the most recent publication of the 2022 QCDR Measure Specification file and is located in the QPP Resource Library.² We plan to modify the list of 2023 QCDR measures around December 2022.
- Improvement activities are located in the 2022 Improvement Activities Inventory, and the 2022 MIPS Data Validation Criteria are located in the QPP Resource Library.³ In addition, see Appendix 2: Improvement Activities of this proposed rule for any proposed removals, additions, or modifications to the existing activities.
- Existing cost measures are located in the 2022 Cost Measures Inventory.⁴
- For further details on the population health measures included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located in the QPP Resource Library.⁵ In addition, see section IV.A.10.c.(4) of this proposed rule for proposals regarding the existing Promoting Interoperability measures.

Please note that new quality and Promoting Interoperability measures proposed for inclusion in MIPS beginning with the CY 2023 performance period/2025 MIPS payment year and future years are identified with a caret symbol (^) within the MVP tables in this appendix. Existing quality measures, improvement activities, and Promoting Interoperability measures with proposed revisions are identified with an asterisk (*) within the MVP tables in this appendix. Quality measures identified with a double asterisk (**) are individual measures duplicating a component of the proposed composite Adult Immunization Status measure. If the Adult Immunization Status measure is finalized, the quality measures that include the (**) can only be submitted when included in an MVP. Please see Appendix 1: MIPS Quality Measures Table A.9 of this proposed rule for any additional information regarding the proposed Adult Immunization Status measure. Quality measures, Promoting Interoperability attestation requirements, and improvement activities that we are proposing to add to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

Quality measures that are considered high priority (as defined in § 414.1305) are noted with an exclamation point (!) and outcome measures (as defined in § 414.1305) are noted with a double exclamation point (!!). In addition, see section IV.A.10.c.(1)(b)(i) of this proposed rule for proposals regarding expansion of the definition of a high priority measure. Further details on these types of measures are located in the CMS Measures Management System Blueprint Version 17.0.⁶ Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

- QCDR measures proposed in the MVP tables below that are noted with a pound sign (#) indicate that testing data is still pending and due on or before September 1, 2022. We refer readers to the CY 2022 PFS final rule for additional details regarding requirements for QCDR measures considered for an MVP (86 FR 65407 through 65408).

- Consistent with Executive Order 13985, “Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,” each MVP includes improvement activities designed to advance health equity and address and eliminate barriers to care in underserved communities. Improvement activities that include a health equity component are noted with a tilde (~) within the MVP table. The improvement activities that include a health equity component are not required but are available as an option within the MVPs. Improvement activity medium/high weight designations are identified in parentheses after each improvement activity. IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation is noted with a percent (%) within the MVP tables below to indicate that attestation to this improvement activity provides full credit for the improvement activity performance category within the MVP.

Group A: New MVPs Proposed for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

A.1 Advancing Cancer Care MVP

In support of the Administration's Cancer Moonshot Mission⁷ and the importance of cancer care, we are proposing the Advancing Cancer Care MVP. The proposed Advancing Cancer Care MVP focuses on the clinical theme of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practice of oncology and hematology.

Quality Measures

We propose to include eleven MIPS quality measures and two QCDR measures within the quality component of this MVP, which are specific to the clinical topic of cancer by assessing three critical areas: the patient experience of care, end of life care, and appropriate diagnostics along with possible treatment options for different cancer diagnoses. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with oncologic conditions:

- Q143: Oncology: Medical and Radiation – Pain Intensity Quantified: This MIPS quality measure ensures pain intensity is assessed and quantified in those patients receiving chemotherapy or radiation.
- Q144: Oncology: Medical and Radiation – Plan of Care for Pain: This MIPS quality measure ensures a plan of care is in place for those patients experiencing pain while receiving chemotherapy or radiation.
- Q450: Appropriate Treatment for Patients with Stage I (T1c) – III HER2 Positive Breast Cancer: This MIPS quality measure ensures appropriate treatment for this patient population in accordance with guidelines.
- Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy: This MIPS quality measure strives to improve concordance with RAS (KRAS and NRAS) testing guidelines for metastatic colorectal cancer patients, by assessing if gene mutation testing was performed prior to therapy.
- Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies: This MIPS quality measure ensures patients with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation are not treated inappropriately with anti-EGFR monoclonal antibodies.
- Q453: Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better): This MIPS quality measure assesses appropriate end of life care for cancer patients by reducing the utilization of unnecessary chemotherapy.
- Q457: Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better): This MIPS quality measure assesses appropriate end of life care for cancer patients by increasing the use of hospice services sooner for patients with advanced cancer.
- Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy: This MIPS quality measure ensures proper bone density evaluation for patients with a care plan including androgen deprivation therapy for 12 or more months to promote positive bone health outcomes.
- PIMSI12: Oncology: Utilization of GCSF in Metastatic Colorectal Cancer: This QCDR measure assesses clinical practice guideline compliance regarding implementation of mutations testing to optimize diagnosis and disease management.
- PIMSH8: Oncology: Mutation testing for lung cancer completed prior to start of targeted therapy: This QCDR measure assesses the use of GCSFs in accordance with current guidelines.

In conjunction with the aforementioned cancer care measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to cancer care. The quality measures below capture the patient's voice regarding their care and support the mental health of patients that are experiencing a cancer diagnosis:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey provides direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include thirteen improvement activities that reflect actions and processes undertaken by clinicians who provide cancer care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement

activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for cancer patients. The following improvement activities are proposed for inclusion in this MVP:

- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_BE_24: Financial Navigation Program
- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_CC_17: Patient Navigator Program
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA_PM_15: Implementation of episodic care management practice improvements
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_16: Use of decision support and standardized treatment protocols

Cost Measures

Within the cost component of this MVP, we propose to include the Total Per Capita Cost (TPCC) measure because it captures the overall costs of care after establishing a primary care-type relationship. This includes the care provided to patients by medical, hematological, and gynecological oncologists. The broad focus of the measure, which includes total costs of care for patients with cancer, supports the intent of this MVP to apply to cancer care. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

⁷ See <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/02/fact-sheet-president-biden-reignites-cancer-moonshot-to-end-cancer-as-we-know-it/>.

TABLE A.1: Advancing Cancer Care MVP

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Advancing Cancer Care MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost
(!) Q047: Advance Care Plan (Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)	IA_BE_4: Engagement of patients through implementation of improvements in patient portal (Medium)	Total Per Capita Cost (TPCC)
(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)	IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings (High)

A.2 Optimal Care for Kidney Health MVP

The proposed Optimal Care for Kidney Health MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This proposed MVP would be most applicable to clinicians who treat patients within the practice of nephrology.

Quality Measures

We propose to include eight MIPS quality measures within the quality component of this MVP, which promote the management and risks associated with kidney disease. We reviewed the MIPS quality measure inventory and believe the following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with kidney disease conditions:

- Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): This MIPS quality measure assesses diabetic patients for hemoglobin A1c control.
- Q482: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate: This MIPS quality measure represents an intermediate outcome for maintenance hemodialysis patients by assessing for continuous catheter use.
- TBD: Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: This MIPS quality measure assesses for the prescribing of an ACE inhibitor or ARB therapy for patients diagnosed with chronic kidney disease (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria.

In conjunction with the aforementioned nephrological measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to kidney care. The quality measures below capture the patient's voice regarding their care, the assessment and administration of the influenza and pneumococcal vaccinations, documentation of current medications, and blood pressure control—all of which support the safety and general health of patients that are experiencing disease of the kidney:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q110: Preventive Care and Screening: Influenza Immunization: This MIPS quality measure assesses for the administration or previous receipt of the influenza immunization for pediatric and adult patients.
- Q111: Pneumococcal Vaccination Status for Older Adults: This MIPS quality measure assesses that patients receive the pneumococcal vaccinations.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q236: Controlling High Blood Pressure: This MIPS quality measure promotes controlling blood pressure in patients diagnosed with essential hypertension with a goal to maintain a systolic pressure of < 140 mmHg and diastolic pressure of < 90 mmHg.

In developing this proposal, we also considered including the following quality measure for this proposed MVP. However, we ultimately decided not to include it because the clinical action represented within this measure would most likely be performed by a primary care clinician and would support the referral of the patient to a nephrologist for their initial assessment. Therefore, this measure would likely not be appropriate for this MVP topic due to the quality action being more frequently performed by primary care rather than the nephrologist.

- TBD: Kidney Health Evaluation: This MIPS quality measure assesses patients that are diagnosed with diabetes for receipt of a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) and Urine Albumin-Creatinine Ratio (uACR).

Improvement Activities

Within the improvement activities component of this MVP, we propose to include thirteen improvement activities that reflect actions and processes undertaken by clinicians who specialize in treating patients with kidney disease conditions, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care patients with kidney disorders. The following improvement activities are proposed for inclusion in this MVP:

- IA_AIIE_3: Promote Use of Patient-Reported Outcome Tools
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_14: Engage Patients and Families to Guide Improvement in the System of Care
- IA_BE_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA_BE_16: Promote Self-management in Usual Care
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_13: Practice Improvements for Bilateral Exchange of Patient Information
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation

- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_16: Use of decision support and standardized treatment protocols

Cost Measures

Within the cost component of this MVP, we propose two measures: The Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis episode-based cost measure and Total Per Capita Cost (TPCC) measure. The AKI Requiring New Inpatient Dialysis episode-based measure applies to nephrologists and other clinicians providing hemodialysis or dialysis procedures for acute kidney failure during inpatient hospitalizations. This aligns with the intent of the MVP to focus on kidney disease. We also propose the TPCC measure because it is a broad measure that includes nephrologists and aligns with the similarly broad quality measures included in the MVP. Two episode-based cost measures are currently under development for chronic kidney disease (CKD) and end-stage renal disease (ESRD). The measures would focus on outpatient management of these conditions. The measures could be considered for future inclusion in this MVP.

TABLE A.2: Optimal Care for Kidney Health MVP

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Optimal Care for Kidney Health MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost

A.3 Optimal Care for Patients with Episodic Neurological Conditions MVP

The proposed Optimal Care for Patients with Episodic Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from episodic neurological conditions. This proposed MVP would be most applicable to clinicians who treat patients within the practice of neurology.

Quality Measures

We propose to include four MIPS quality measures and six QCDR measures within the quality component of this MVP, which focus on a variety of neurological conditions that may impact patient health. We reviewed the MIPS quality measure inventory and believe the following quality measures would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with episodic neurological conditions:

- Q268: Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy: This MIPS quality measure assesses patients, that are diagnosed with epilepsy and are of child-bearing age, to ensure they receive counseling regarding how the treatment of epilepsy may affect contraception and pregnancy.
- Q419: Overuse of Imaging for the Evaluation of Primary Headache: This MIPS quality measure assesses overuse of the head (CT or MRI) for the evaluation of primary headache.
- AAN5: Medication Prescribed for Acute Migraine Attack: This QCDR measure assesses pediatric and adult patients diagnosed with migraine that were prescribed a guideline recommended or FDA approved/cleared treatment for acute migraine attacks.
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions: This QCDR measure evaluates performance outcomes for patients with neurologic conditions. The outcomes from these assessments should reflect an improvement or maintenance of a patient's perceived quality of life. This measure includes patients diagnosed with the following neurologic conditions: amyotrophic lateral sclerosis, attention deficit disorders, autism, cerebral palsy, cognitive impairment and related dementias, developmental delays, headache and migraine, movement disorders, multiple sclerosis, muscular dystrophy, neoplasms of brain and spine, polyneuropathy, seizure and epilepsy, stroke, tic disorders, vertigo, and related neuro-otology disorders.
- AAN29: Comprehensive Epilepsy Care Center Referral or Discussion for Patients with Epilepsy: This QCDR measure assesses for patients that had referrals or a discussion of evaluation at a comprehensive epilepsy care center.
- AAN30: Migraine Preventive Therapy Management: This QCDR measure assesses pediatric and adult patients diagnosed with migraine, that occur with a frequency is greater than or equal to 6 days per month/4 attacks per month, receive evidence-based preventive migraine therapy, including therapies prescribed by another clinician.
- AAN31: Acute Treatment Prescribed for Cluster Headache: This QCDR measure ensures patients diagnosed with cluster headache were prescribed an acute treatment, including treatments prescribed by a different clinician.
- AAN32: Preventive Treatment Prescribed for Cluster Headache: This QCDR measure ensures patients diagnosed with cluster headache were prescribed short-term and/or long-term preventive treatment, including treatments prescribed by a different clinician.

In conjunction with the aforementioned neurological measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to neurological conditions. The quality measures below encourage advance care planning and documentation of current medications, which capture the patient's voice and supports safety for patients that are experiencing episodic neurological conditions:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_16: Promote Self-management in Usual Care
- IA_BE_24: Financial Navigation Program
- IA_BMH_4: Depression screening
- IA_BMH_8: Electronic Health Record Enhancements for BH data capture
- IA_CC_1: Implementation of use of specialist reports back to referring clinician or group to close referral loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_EPA_2: Use of telehealth services that expand practice access

- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_21: Implementation of fall screening and assessment programs

Cost Measures

Within the cost component of this MVP, we propose to include the Medicare Spending Per Beneficiary (MSPB) Clinician measure because it applies to clinicians providing care in inpatient hospitals, including care for patients with neurological conditions. This is in line with the intent of the MVP. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

TABLE A.3: Optimal Care for Patients with Episodic Neurological Conditions MVP

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Optimal Care for Patients with Episodic Neurological Conditions MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost

A.4 Supportive Care for Neurodegenerative Conditions MVP

The proposed Supportive Care for Neurodegenerative Conditions MVP focuses on the clinical theme of promoting quality care for patients with cognitive-based neurological disorders such as dementia, Parkinson's Disease (PD), and Amyotrophic Lateral Sclerosis (ALS). This proposed MVP would be most applicable to clinicians who treat patients with cognitive-based neurological disorders within the practice of neurology.

Quality Measures

We propose to include ten MIPS quality measures and three QCDR measures within the quality component of this MVP, which focus on a variety of cognitive-based neurological disorders that may impact patient health. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with cognitive-based neurological disorders:

- Q281: Dementia: Cognitive Assessment: This MIPS quality measure evaluates for the performance of a cognitive assessment for patients diagnosed with dementia.
- Q282: Dementia: Functional Status Assessment: This MIPS quality measure evaluates for the performance of a functional status assessment for patients diagnosed with dementia.
- Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: This MIPS quality measure assesses for the discussion of safety concerns with either the patients diagnosed with dementia or their caregivers. There are two domains of safety that should be addressed to meet performance of the measure which include dangerousness to self or others and environmental risks. If a risk is discovered, it is anticipated that the clinician would document mitigation recommendations to promote safety outcomes for these patients.
- Q288: Dementia: Education and Support of Caregivers for Patients with Dementia: This MIPS quality measure ensures clinician communication of education on dementia disease management and health behavior with the added support of referrals to additional support resources for patients diagnosed with dementia and their caregivers.
- Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease: This MIPS quality measure evaluates if patients diagnosed with Parkinson's Disease receive an assessment for depression, anxiety, apathy, and psychosis.
- Q291: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease: This MIPS quality measure assesses for the performance of a cognitive impairment or dysfunction for patients diagnosed with Parkinson's Disease.
- Q293: Rehabilitative Therapy Referral for Patients with Parkinson's Disease: This MIPS quality measure evaluates if patients, diagnosed with Parkinson's Disease, receive referrals for physical, occupational, speech, or recreational therapy.
- Q386: Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: This MIPS quality measure assesses patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) to ensure they are offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice).
- AAN9: Querying and Follow-Up About Symptoms of Autonomic Dysfunction for Patients with Parkinson's Disease: This QCDR measure evaluates if patients diagnosed with Parkinson's Disease are queried about symptoms of autonomic dysfunction and if screened positive for autonomic dysfunction receive appropriate follow-up.
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions: This QCDR measure evaluates performance outcomes for patients with neurologic conditions. The outcomes from these assessments should reflect an improvement or maintenance of a patient's perceived quality of life. This measure includes patients diagnosed with the following neurologic conditions: amyotrophic lateral sclerosis, attention deficit disorders, autism, cerebral palsy, cognitive impairment and related dementias, developmental delays, headache and migraine, movement disorders, multiple sclerosis, muscular dystrophy, neoplasms of brain and spine, polyneuropathy, seizure and epilepsy, stroke, tic disorders, vertigo, and related neuro-otology disorders.
- AAN34: Patient reported falls and plan of care: This QCDR measure assesses that patients with the diagnosis of a movement disorder, or caregivers as appropriate, have a plan of care in the instance a fall is reported. For this measure, a movement disorder includes multiple sclerosis, a neuromuscular disorder, dementia, or stroke.

In conjunction with the aforementioned cognitive-based neurological measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to cognitive-based neurological disorders. The quality measures below address advance care planning and documentation of current medications, which support the capture of the patient's voice and safety for patients that are experiencing cognitive-based neurological disorders:

- Q047: Advance Care Plan: This MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q238: Use of High-Risk Medications in Older Adults: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_16: Promote Self-management in Usual Care
- IA_BE_24: Financial Navigation Program
- IA_BMH_4: Depression screening
- IA_BMH_8: Electronic Health Record Enhancements for BH data capture
- IA_CC_1: Implementation of use of specialist reports back to referring clinician or group to close referral loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's

Medical Record

- IA_EPA_2: Use of telehealth services that expand practice access
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_21: Implementation of fall screening and assessment programs

Cost Measures

Within the cost component of this MVP, we propose to include the Medicare Spending Per Beneficiary (MSPB) Clinician measure because it applies to clinicians providing care in inpatient hospitals, including care for patients with cognitive-based neurological conditions. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

TABLE A.4: Supportive Care for Neurodegenerative Conditions MVP

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the Supportive Care for Neurodegenerative Conditions MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost

A.5 Promoting Wellness MVP

The proposed Promoting Wellness MVP focuses on the clinical theme of promoting quality care for patients. This proposed MVP would be most applicable to clinicians who treat patients within the practice of preventive medicine, internal medicine, family medicine, and geriatrics.

Quality Measures

We propose to include fourteen MIPS quality measures within the quality component of this MVP, which promote general physical and mental wellness within patients. Preventive care is vital to reducing risk of diseases, disabilities, and death; however, many people within the United States still do not receive the recommended preventive screenings and services. The quality measures below include assessments for appropriate immunization status in addition to representing screenings for cancers, sexually transmitted infections, and osteoporosis, all of which drive quality care for preventive medicine for a broad patient population. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed

within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing preventive care:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age: This MIPS quality measure assesses women, 65-85 years of age, who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.
- Q112: Breast Cancer Screening: This MIPS quality measure ensures women have a mammogram to screen and for breast cancer.
- Q113: Colorectal Cancer Screening: This MIPS quality measure ensures patients have received appropriate screening for colorectal cancer.
- Q309: Cervical Cancer Screening: This MIPS quality measure assesses women to determine if they were screened for cervical cancer.
- Q310: Chlamydia Screening for Women: This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients: This MIPS quality measure requires that patients have received a one-time screening for hepatitis C virus (HCV) infection.
- Q475: HIV Screening: This MIPS quality measure ensures patients received a one-time test for HIV.
- TBD: Adult Immunization Status: This MIPS quality measure ensures patients are assessed for and/or receive the influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines, as recommended.

In conjunction with the aforementioned promoting wellness measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to promoting wellness. The quality measures below address preventive care and screening by supporting the assessment of body mass index, mental health, tobacco, and alcohol use. Additionally, this MVP includes two quality measures that capture the patient's voice and support clinicians' care goals for optimizing the patient's experience while receiving care for comprehensive health wellness:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients, aged 18 years and older, with a BMI documented and who had a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use and if the patient is screened positive for tobacco use then they should receive tobacco cessation intervention.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey would provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: This MIPS quality measure screens patients, aged 18 years and older, for unhealthy alcohol use using a systematic screening method at least once within the last 12 months. If the patient is screened positive for unhealthy alcohol use, then they should receive brief counseling.
- Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): This MIPS quality measure evaluates the high value aspects of primary care based on a patient's relationship with the clinician or practice and allows patients the ability to communicate their perspective of the quality of care received to their clinicians and/or care team.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include fourteen improvement activities that reflect actions and processes undertaken by clinicians who provide chronic disease-preventive care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing chronic disease management or preventive care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_BMI_9: Unhealthy Alcohol Use for Patients with Co-occurring Conditions of Mental Health and Substance Abuse and Ambulatory Care Patients
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_13: Practice improvements for bilateral exchange of patient information
- IA_CC_14: Practice improvements that engage community resources to support patient health goals
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_13: Chronic Care and Preventative Care Management for Empowered Patients

- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

Cost Measures

Within the cost component of this MVP, we propose to include the Total Per Capita Cost (TPCC) measure because it captures the total costs of care. This broad cost measure aligns with the MVP scope to include a range of measures and activities to promote wellness across different clinical topics. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future.

TABLE A.5: Promoting Wellness MVP

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Promoting Wellness MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost
<p>(*) Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age (Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)</p> <p>(*) Q112: Breast Cancer Screening (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q113: Colorectal Cancer Screening (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q309: Cervical Cancer Screening (Collection Type: eCQM Specifications)</p> <p>(*) Q310: Chlamydia Screening for Women (Collection Type: eCQM Specifications)</p> <p>(*)(!) Group B: Modifications to Previously Finalized MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

Table B.1: Advancing Care for Heart Disease MVP

Table B.1 represents the measures and activities that were finalized within the Advancing Care for Heart Disease MVP in (86 FR 66014 through 66015) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

We are proposing to modify the previously finalized Advancing Care for Heart Disease MVP to include cardiovascular care in general as well as cardiology subspecialists in order to capture a more complete picture of quality care for patients who are at risk of or who have heart disease. Therefore, we are proposing to expand the Advancing Care for Heart Disease MVP to include six additional quality measures that encompass the clinical care of electrophysiology, heart failure, and interventionalist subspecialists:

- Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy: This MIPS quality measure assesses patients with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism.
- Q377: Functional Status Assessments for Heart Failure: This MIPS quality measure assesses patients with heart failure who completed initial and follow-up patient-reported functional status assessments.
- Q392: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation: This MIPS quality measure assesses the rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation.
- Q393: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision: This MIPS quality measure assesses the infection rate following CIED device implantation, replacement, or revision.
- TBD: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System: This MIPS quality measure assesses annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients with heart failure (HF) or cardiomyopathy.

In conjunction with the aforementioned heart disease measures, we propose to include the following broadly applicable MIPS quality measure that is relevant to patients receiving cardiovascular care. The quality measure below addresses preventive care and screening of patients for depression:

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan discussed for those patients who screen positive.

Also, we are proposing to add one improvement activity, IA_PM_13: Chronic care and preventative care management for empaneled patients and remove two improvement activities, IA_EPA_4: Additional improvements in access as a result of QIN/QIO TA and IA_PSPA_30: PCI Bleeding Campaign from this MVP. The proposed changes specific to IA_PM_13 and IA_EPA_4 are in response to public comments we received in the 2022 PFS final rule (86 FR 66012). One commenter believed IA_PM_13 was designed to directly address patients assigned to care teams for the purpose of population health management and encourages the adoption of practices and protocols that are essential in high-quality care for chronic diseases. After consideration, we agree that IA_PM_13 is a better choice for this MVP than IA_EPA_4 because of IA_PM_13's direct focus on preventive care and patient empanelment. The commenter also suggested the removal of IA_EPA_4 because the commenter believed it has minimal specificity for the MVP. After consideration, we agree making this change would best provide sufficient provider choice while not including an overwhelming number of improvement activity options in this MVP. The proposal to remove IA_PSPA_30 is being made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of this proposed rule and is contingent on those proposals being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we are proposing to add IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

For the reasons stated earlier in this Appendix 3, we propose to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

This MVP was previously adopted to be most applicable to clinicians who practice in the following specialties:

- Cardiology
- Internal Medicine
- Family Medicine

With the proposed modifications, these additional clinicians who practice in the following specialties may want to consider reporting this MVP:

- Electrophysiology
- Heart Failure Specialists
- Interventionalists

The proposed additions are identified with a plus sign (+) before the quality measure and improvement activity ID # and before the Promoting Interoperability title in this table.

Quality	Improvement Activities	Cost
<p>(*) Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%) (Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(*) Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM Specifications, MIPS CQMs Specifications)</p> <p>(!) Table B.2: Optimizing Chronic Disease Management MVP

Table B.2 represents the measures and activities that were finalized within the Optimizing Chronic Disease Management MVP in (86 FR 66021 through 66022) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

We are proposing to modify the previously finalized Optimizing Chronic Disease Management MVP to include Q321: CAHPS for MIPS Clinician/Group Survey. While this MVP already includes a patient experience measure, Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure, we are proposing to add an additional option for assessing the patient experience. The addition of the CAHPS for MIPS Clinician/Group survey measure to this MVP would provide primary care clinicians more flexibility when choosing a patient experience evaluation and allows for the use of a survey vendor. Capturing the patient experience is a priority of the MIPS program and this proposed addition would allow clinicians to choose a patient experience measure that best fits their clinical workflow.

For the reasons stated earlier in this Appendix 3, we propose to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

The proposed additions are identified with a plus sign (+) before the quality measure ID # and before the Promoting Interoperability title in this table.

Quality	Improvement Activities	Cost
(*) Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy (Collection Type: MIPS CQMs Specifications)	(~) IA_AHE_3: Promote use of Patient-Reported Outcome Tools (High)	Total Per Capita Cost (TPCC)
(!) Q047: Advance Care Plan (Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)	IA_BE_4: Engagement of patients through implementation of improvements in patient portal (Medium)	
(*) Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment (Collection Type: eCQM Specifications)	IA_BE_16: Promote Self-management in Usual Care (Medium)	
(*) Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%) (Collection Type: MIPS CQMs Specifications)	IA_BE_22: Improved practices that engage patients pre-visit (Medium)	
(*) Q119: Diabetes: Medical Attention for Nephropathy (Collection Type: eCQM Specifications, MIPS CQMs Specifications)	IA_CC_2: Implementation of improvements that contribute to more timely communication of test results (Medium)	
(*) Q236: Controlling High Blood Pressure (Collection Type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications)	IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings (Medium)

Table B.3: Advancing Rheumatology Patient Care MVP

Table B.3 represents the measures and activities that were finalized within the Advancing Rheumatology Patient Care MVP in (86 FR 66002 through 66003) with modifications proposed for the CY 2023 performance period/2025 MIPS payment year and future years.

We are proposing to modify the previously finalized Advancing Rheumatology Patient Care MVP to remove IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program. This proposal is being made in conjunction with our proposal to remove this improvement activity from the MIPS Improvement Activity Inventory as discussed in Appendix 2 of this proposed rule and is contingent on that proposal being finalized as proposed. In addition, for the reasons stated earlier in this Appendix 3, we are proposing to add IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation to this MVP.

Also, we are proposing to remove improvement activity, IA_BMH_4: Depression screening and add Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, which is a broadly applicable quality measure that encompasses the same concept and assesses an important aspect of care for patients with chronic diseases. We believe Q134 is better suited than IA_BMH_4 for this MVP, because it ensures that all patients without a history of depression or bipolar disorder are being screened for depression and a follow-up plan is discussed if the patient screens positive. Q134 supports depression screening for a more general patient population, allowing early detection and treatment. Additionally, we believe this clinician patient interaction is an important aspect of care for this patient population because depression is a common comorbidity in patients with various rheumatic diseases. Therefore, we propose to add measure Q134 as it ensures depression screening for each patient.

For the reasons stated earlier in this Appendix 3, we propose to add the Promoting Interoperability performance category ONC Direct Review attestation requirement described under § 414.1375(b)(3) to this MVP.

The proposed additions are identified with a plus sign (+) before the quality measure and improvement activity ID # and before the Promoting Interoperability title in this table.
